BIDDING AND CONTRACTING REQUIREMENTS

00 11 16	INVITATION TO BID
00 21 13	INSTRUCTIONS TO BIDDERS
00 31 32	GEOTECHNICAL DATA
00 39 12	NOTICE OF INTENT TO AWARD
00 39 13	NOTICE TO PROCEED
00 41 00	BID FORM
00 42 00	BID BOND
00 43 00	BID SCHEDULE
00 43 36	PROPOSED SUBCONTRACTOR FORM
00 43 38	BIDDER STATUS FORM
00 45 15	FEDERAL FUNDING REQUIREMENTS
00 45 37	STATUS VERIFICATION SYSTEM AFFIDAVIT
00 45 38	NON-COLLUSION AFFIDAVIT OF PRIME BIDDER
00 52 00	AGREEMENT
00 61 13	PERFORMANCE BOND
00 61 14	PAYMENT BOND
00 62 16	CERTIFICATE OF INSURANCE

CONDITIONS OF THE CONTRACT

00 73 00	MODIFICATIONS TO GENERAL CONDITIONS
00 91 13	ADDENDA
00 92 45	CHANGE ORDER FORM

DIVISION 01 – GENERAL REQUIREMENTS

01 11 00	SUMMARY OF WORK
01 14 14	CONTROL OF WORK
01 21 00	ALLOWANCES
01 25 00	SUBSTITUTION PROCEDURES
01 31 19	PROJECT MEETINGS
01 31 24	INTERNET BASED CONSTRUCTION MANAGEMENT SYSTEM
01 32 17	CONSTRUCTION PROGRESS SCHEDULES
01 32 33	CONSTRUCTION PHOTOGRAPHS
01 33 00	SUBMITTALS
01 35 43	PROTECTION OF ENVIRONMENT
01 41 13	FEDERAL REQUIREMENTS (TO BE PROVIDED)
01 41 20	SEISMIC AND WIND REQUIREMENTS
01 43 00	QUALITY REQUIREMENTS
01 43 49	MOCKUPS
01 45 33	STRUCTURAL TESTS AND INSPECTIONS
01 50 00	TEMPORARY FACILITIES
01 57 13	EROSION CONTROL, SEDIMENTATION AND CONTAINMENT OF CONSTRUCTION MATERIALS
01 61 00	CONTROL OF MATERIALS
01 66 10	DELIVERY, STORAGE AND HANDLING
01 71 13	MOBILIZATION
01 74 23	CLEANING UP
01 77 00	CONTRACT CLOSEOUT
01 78 23	OPERATION AND MAINTENANCE DATA
01 78 25	PLANT TESTING STARTUP AND COMMISSIONING
01 78 27	RELIABILITY TESTING
01 78 36	WARRANTIES AND BONDS

DIVISION 02 - EXISTING CONDITIONS

02 32 14	VIBRATION MONITORING
02 41 00	DEMOLITION

DIVISION 03 - CONCRETE

03 01 30	CONCRETE REPAIR
03 05 10	LEAKAGE TESTING OF CONTAINMENT STRUCTURES
03 10 00	CONCRETE FORMWORK
03 15 00	CONCRETE JOINTS AND ACCESSORIES
03 15 20	ANCHORAGE IN CONCRETE AND MASONRY
03 21 00	REINFORCEMENT BARS
03 30 00	CAST-IN-PLACE CONCRETE
03 34 00	CONTROLLED LOW STRENGTH MATERIAL (CLSM)
03 41 13	PRECAST CONCRETE HOLLOW CORE PLANKS
03 60 00	GROUT
03 64 23	CRACK REPAIR EPOXY INJECTION GROUTING

DIVISION 04 - MASONRY

04 22 00 CONCRETE UNIT MASONRY

DIVISION 05 - METALS

05 10 50 STRUCTURAL ALUMINUM
05 12 00 STRUCTURAL STEEL
05 21 00 STEEL JOISTS
05 31 00 STEEL DECK
05 40 10 COLD-FORMED STEEL FRAMING
05 50 00 MISCELLANEOUS METAL
05 51 10 STEEL AND STAINLESS STEEL LADDERS
05 51 19 METAL GRATING STAIRS
05 52 13 PIPE AND TUBE RAILINGS
05 53 00 METAL GRATING, COVER PLATES, AND ACCESS HATCHES

DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES

06 10 00 ROUGH CARPENTRY
06 16 00 SHEATHING
06 41 16 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS
06 51 00.01 FIBERGLASS REINFORCED PLASTIC (FRP) BAFFLES
06 60 10 FIBERGLASS REINFORCED PRODUCTS AND FABRICATIONS

DIVISION 07 - THERMAL AND MOISTURE PROTECTION

07 14 16 COLD FLUID-APPLIED WATERPROOFING
07 19 00 WATER REPELLENTS
07 21 00 THERMAL INSULATION
07 27 26 FLUID-APPLIED MEMBRANE AIR BARRIERS
07 42 10.11 COMPOSITE FRAMING SUPPORT SYSTEMS
07 42 13.16 MODULAR METAL WALL PANELS
07 53 23 ETHYLENE-PROPYLENE-DIENE-MONOMER (EPDM) ROOFING
07 62 00 SHEET METAL FLASHING AND TRIM
07 71 00 ROOF SPECIALTIES
07 72 00 ROOF ACCESSORIES
07 84 13 PENETRATION FIRESTOPPING
07 84 43 JOINT FIRESTOPPING
07 92 00 JOINT SEALANTS
07 92 19 ACOUSTICAL JOINT SEALANTS
07 95 13.13 INTERIOR EXPANSION JOINT COVER ASSEMBLIES
07 95 13.16 EXTERIOR EXPANSION JOINT COVER ASSEMBLIES

DIVISION 08 - OPENINGS

08 11 16 ALUMINUM DOORS AND FRAMES
08 11 19 STAINLESS-STEEL DOORS AND FRAMES
08 14 16 FLUSH WOOD DOORS
08 16 13 FIBERGLASS DOORS AND FRAMES

08 31 13	ACCESS DOORS AND FRAMES
08 33 13	COILING COUNTER DOORS
08 33 23	OVERHEAD COILING DOORS
08 34 19	INDUSTRIAL SWING DOORS
08 34 73.13	METAL SOUND CONTROL DOOR ASSEMBLIES
08 41 13	ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS
08 56 72	SOUND CONTROL WINDOWS
08 71 00	DOOR HARDWARE
08 80 00	GLAZING
08 91 19	FIXED LOUVERS

DIVISION 09 - FINISHES

09 21 16.23	GYPSUM BOARD SHAFT WALL ASSEMBLIES
09 22 16	NON-STRUCTURAL METAL FRAMING
09 29 00	GYPSUM BOARD
09 30 13	CERAMIC TILING
09 51 13	ACOUSTICAL PANEL CEILINGS
09 65 13	RESILIENT BASE AND ACCESSORIES
09 65 19	RESILIENT TILE FLOORING
09 67 23	RESINOUS FLOORING
09 68 13	TILE CARPETING

09 91 23	INTERIOR PAINTING
09 96 00	HIGH PERFORMANCE COATINGS
09 96 73	COATING SYSTEMS FOR CHEMICAL FEED AREAS

DIVISION 10 - SPECIALTIES

10 14 19	EXTERIOR SIGNAGE
10 14 23	PANEL SIGNAGE
10 28 00	TOILET, BATH, AND LAUNDRY ACCESSORIES
10 41 16	EMERGENCY KEY CABINETS
10 44 13	FIRE PROTECTION CABINETS
10 44 16	FIRE EXTINGUISHERS
10 51 13	METAL LOCKERS

DIVISION 11 - EQUIPMENT

11 11 36	VEHICLE CHARGING EQUIPMENT
11 24 29	FACILITY FALL PROTECTION
11 30 13	APPLIANCES
11 53 13	LABORATORY FUME HOODS

DIVISION 12 - FURNISHINGS

12 21 13	HORIZONTAL LOUVER BLINDS
12 35 53.13	METAL LABORATORY CASEWORK
12 36 61.16	SOLID SURFACING COUNTERTOPS

DIVISION 13 - SPECIAL CONSTRUCTION
NOT USED

DIVISION 14 - CONVEYING EQUIPMENT
NOT USED

DIVISION 21 - FIRE SUPPRESSION

- 21 10 00 FIRE PROTECTION SYSTEMS
- 21 13 00 WET-PIPE FIRE SUPPRESSION SPRINKLER SYSTEM

DIVISION 22 - PLUMBING

- 22 00 00 PLUMBING SYSTEMS
- 22 05 19 METERS AND GAUGES FOR PLUMBING
- 22 05 29 HANGERS AND SUPPORTS FOR PLUMBING PIPING
- 22 05 48 VIBRATION AND SEISMIC CONTROLS FOR PLUMBING PIPING AND EQUIPMENT
- 22 05 53 IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT
- 22 07 19 PLUMBING PIPING INSULATION
- 22 14 13 STORM DRAINAGE PIPING
- 22 14 23 STORM DRAINAGE PIPING SPECIALTIES

DIVISION 23 - HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

- 23 05 13 COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT
- 23 05 16 EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING
- 23 05 17 SLEEVES AND SLEEVE SEALS FOR HVAC PIPING
- 23 05 18 ESCUTCHEONS FOR HVAC PIPING
- 23 05 19 METERS AND GAUGES FOR HVAC PIPING
- 23 05 23.12 BALL VALVES FOR HVAC PIPING
- 23 05 23.13 BUTTERFLY VALVES FOR HVAC PIPING
- 23 05 23.14 CHECK VALVES FOR HVAC PIPING
- 23 05 23.15 GATE VALVES FOR HVAC PIPING
- 23 05 29 HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT
- 23 05 48 VIBRATION ISOLATION AND SEISMIC CONTROL
- 23 05 53 IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT
- 23 05 93 TESTING, ADJUSTING, AND BALANCING FOR HVAC
- 23 07 13 DUCT INSULATION
- 23 07 16 HVAC EQUIPMENT INSULATION
- 23 07 19 HVAC PIPING INSULATION
- 23 09 23 AUTOMATIC TEMPERATURE CONTROLS
- 23 09 23.11 CONTROL VALVES
- 23 09 23.12 CONTROL DAMPERS
- 23 09 93 AUTOMATIC CONTROL SEQUENCES
- 23 11 23 FACILITY NATURAL GAS PIPING
- 23 21 13 HYDRONIC PIPING
- 23 21 16 HYDRONIC PIPING SPECIALTIES

23 21 23	HYDRONIC PUMPS
23 23 00	REFRIGERANT PIPING SYSTEMS
23 25 13	WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS
23 31 13	METAL DUCTS
23 31 16	NONMETAL DUCTS
23 33 00	AIR DUCT ACCESSORIES
23 34 00	FANS AND ACCESSORIES
23 37 13.13	AIR DIFFUSERS
23 37 13.23	REGISTERS AND GRILLES
23 41 00	PARTICULATE AIR FILTRATION
23 51 33	INSULATED SECTIONAL CHIMNEYS
23 52 19	HOT WATER BOILERS
23 64 23	AIR COOLED, SCROLL WATER CHILLER
23 73 13	INDOOR, SEMI-CUSTOM AIR-HANDLING UNITS
23 81 26	SPLIT-SYSTEM HEAT PUMPS
23 82 19	FAN AND BLOWER COIL UNITS
23 82 39	UNIT HEATERS

DIVISION 26 - ELECTRICAL

26 05 10	ELECTRICAL WORK - GENERAL
26 05 20	ELECTRIC WIRES AND CABLES
26 05 26	GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS
26 05 29	HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS
26 05 33	RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS
26 05 36	CABLE TRAYS FOR ELECTRICAL SYSTEMS
26 05 43	UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PROJECT PLANS

END OF TABLE OF CONTENTS

SECTION 00 11 16
INVITATION TO BID

PART 1 - GENERAL

1.01 CONSTRUCTION CONTRACT

- A. Bidders are invited to bid on the Construction Contract known as Provo River Water Treatment Plant Project.
- B. The location of the work is: approximately 2100 North Freedom Blvd (200 West), Provo Utah.
- C. The Work generally includes, but is not limited to, the following: Construction of a 30 MGD ultrafiltration membrane drinking water treatment plant including, the main Water Treatment Plant Facility with Administration Building, 2 MG Clearwell with drain vault and overflow structure, High Service Pump Station, 36-inch diameter Transmission Pipeline with valve vault, 42-inch diameter Mill Race Pipeline with diversion box, electrical and controls including three (3) 1,000 kW natural gas generators, security cameras, fencing, and site restoration, paving, and landscaping.
- D. Questions regarding this project should be addressed in writing to Shane Jones, P.E., located at Provo City Water Resources, 1377 South 350 East, Provo, Utah 84606, (801) 852-6773 or sjones@provo.utah.gov or to Michael Chambers, P.E. (Hansen, Allen & Luce), located at 6771 South 900 East, South Jordan, Utah 84095, (801) 803-1828 or mchambers@halengineers.com.
- E. Only Bidders who have been pre-qualified by the Provo City Water Resources (Owner) may submit bids on this project.

1.02 BID LOCATION AND OPENING

- A. Sealed bids will be received until 2:00 p.m., August 31, 2023 at the Provo City Water Resources Office, 1377 South 350 East, Provo, Utah 84606, at which time and place all bids will be publicly opened and read aloud. Bids received after 2:00 p.m., as conclusively established by the clock at the Bid opening location, will not be accepted.
- B. On the outside of the envelope, the bidder shall indicate the Construction Contract title, the name and address of the Bidder, and the date and time of Bid opening and the Bidder's return mailing address.

1.03 BID BONDS

- A. A Bid Bond in the amount of 5 percent of the Bid must accompany each Bid in accordance with the Instructions to Bidders. The Bid Bond will be returned to each unsuccessful Bidder after tabulation and award of the Construction Contract.

1.04 BASIS OF BIDS

- A. Bids shall be on a unit price basis. Unsealed or segregated Bids will not be accepted.

1.05 CONTRACT TIME

- A. The Work will be Substantially Complete by **December 31, 2025**.

1.06 EXAMINATION AND PROCUREMENT OF DOCUMENTS

- A. Complete sets of Contract Documents may be examined and obtained online at SciQuest (www.purchasing.utah.gov) or from the Owner at 1377 South 350 East Provo, Utah after **June 28, 2023**. The cost of the contract documents, when obtained from the Owner, is \$30.00 and is non-refundable.

1.07 PRE-BID CONFERENCE

- A. Prospective Bidders are required to attend a Pre-Bid Conference which will be held at the Provo City Public Works Office located at 1377 South 350 East, Provo, Utah 84606 at **9:00 a.m. on July 19, 2023**. The object of the conference is to acquaint Bidders with the site conditions, specifications, and to answer any questions which Bidders may have concerning the project. The pre-Bid conference is mandatory. Representatives of Owner and Engineer will be present to discuss the Project. Engineer will transmit to all prospective Bidders of record such Addenda as Engineer considers necessary in response to questions arising at the conference. Oral statements may not be relied upon and will not be binding or legally effective.

1.08 RIGHT TO REJECT BIDS

- A. The Owner reserves the right to reject any or all bids or to waive any informality or technicality in any bid if deemed to be in the best interest of the Owner.

1.09 GOVERNING LAWS AND REGULATIONS

- A. This is a federally funded project. All bidders are required to make the six good faith efforts to assure compliance with the State's "fair share goals" and are required to comply with EEO regulations.
- B. Bidders on this Work will be subject to the applicable provisions of all federal rules, laws and regulations or orders.
- C. Bidder must provide proof that he has completed the registration process in an approved immigration status verification system and is in full compliance with the immigration status verification program as well as all requirements of Utah Code Section 63G-12-302.
- D. Bidder will also be required to provide similar proof of compliance for any subcontractor who works under the terms of the Contract Documents.

- E. The Owner reserves the right to reject any or all bids; or to accept or reject the whole or any part of any bid; or to waive any informality or technicality in any bid in the best interest of the Owner. Only bids giving a firm quotation properly signed will be accepted.

END OF SECTION

SECTION 00 21 13

INSTRUCTIONS TO BIDDERS

PART 1 - GENERAL

1.01 DEFINED TERMS

- A. Terms used in the Bid Documents that are defined in Article 1.1 of the General Conditions will have the meanings indicated in the General Conditions.
- B. General Conditions: as published in Document 00 72 00 in the Manual of Standard Specifications by the Utah Chapter of the American Public Works Association.

1.02 COPIES OF BID DOCUMENTS

- A. Bidders must use complete sets of Bid Documents in preparing Bids. Owner and Engineer assume no responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bid Documents.
- B. Bid Documents are made available to bidders only for the purpose of obtaining Bids on the Work. No license or grant for any other use is given.
- C. Bidding Document copyrights shall remain with the Owner.
- D. Only provisions that are referenced in the document of the current edition of the Manual of Standard Specifications and Manual of Standard Plans published by the Utah Chapter of the American Public Works Association that are applicable to the Work are hereby made a part of the Contract Documents by reference. The publications may be purchased separately from the LTAP Center, Utah State University 8205 Old Main Hill, Logan UT 84322-8205.
- E. For work within UDOT's right of way, all provisions of the State of Utah Standard Specifications and Standard Drawings for Road and Bridge Construction, U.S. Standard Units (Inch Pound Units), Edition 2012, as well as all other specified changes that are applicable to the Work are hereby made part of the Contract Documents by reference. The documents may be obtained separately from UDOT's website, www.udot.utah.gov.

1.03 PRE-BID COMMUNICATION

- A. The Owner shall not be bound by any statements, representations, conclusions, or assumptions made by any party, whether oral or written, except for written statements that are issued in an Addendum by the Engineer to all prospective bidders.

1.04 PHYSICAL CONDITIONS

- A. In General: Prior to submitting a Bid, each Bidder is responsible to review all available explorations, tests and data concerning surface conditions, subsurface conditions and

Underground Facilities at or contiguous to the site, or otherwise, which may affect cost, progress, performance or furnishing of the Work in accordance with the time, price and other terms and conditions of the Contract Documents.

- B. **Underground Facilities:** Information and data indicated in the Contract Documents regarding Underground Facilities at or contiguous to the site is based upon information and data furnished to Owner and Engineer by owners of such Underground Facilities. The Owner does not assume responsibility for the accuracy or completeness thereof other than as provided in paragraph 4.3A.2 of the General Conditions or unless expressly provided in the Modifications to General Conditions (Document 00 73 00).
- C. **Additional Explorations and Tests:** If feasible as determined by Owner, the Owner will provide each Bidder access to the site to conduct any explorations and tests as each Bidder deems necessary for submission of a Bid. Bidder shall obtain permits, fill all holes, clean up and restore the site to its former condition upon completion of such explorations. by requesting such an exploration or test, Bidder agrees to release, indemnify, defend, and save the Owner harmless from all costs damages and liabilities an any kind whatsoever, including reasonable attorneys' fees, that may arise in connection with or as a result of the performance of such explorations or tests.

1.05 COMPENSATION AND QUANTITIES

- A. **In General:** The bid price for any lump sum or unit price contract includes all labor, materials, and incidental work to fully complete the Work in a satisfactory manner under the terms of the Contract Documents. Bidders are responsible to inform themselves of the character of the Work to be performed.
- B. **Lump Sum Work:** If the Work is to be paid for on a lump sum basis, the lump sum will be the only sum paid.
- C. **Unit Price Work:** If any portion of the Work is to be paid for on a unit price basis, payment will cover only work actually performed and materials actually supplied at the unit prices bid and on the terms set forth in the Contract Documents, irrespective of any quantity approximations in the Bid Documents. Any quantity approximations in the Bid Documents are stated as a basis for determining bids, and the do not fix the amount of Work to be done or materials to be furnished. Stated quantities are estimates for the purpose of doing the class of work required. Actual quantities will vary. The OWNER may deviate in either direction from any indicated quantities. The Bidder shall have no claim for any variation in quantity, except to the extent permitted in the General Conditions.

1.06 EXAMINATION OF SITE AND CONTRACT DOCUMENTS

- A. **In General:** The Owner shall not be bound by any statements, representations, conclusions, or assumptions made by any party, whether oral or written, except for written statements that are in the Contract Documents or in an Addendum.

- B. Access: The Contract Documents designate the site for performance of the Work. Bidder is responsible to investigate the site and understand all access requirements. All additional off-site lands and access thereto required for temporary construction facilities or storage of materials and equipment are to be provided by Bidder.
- C. Contract Documents: The submission of a Bid will constitute an incontrovertible representation by Bidder that Bidder has complied with every requirement of this Article 1.4; that without exception the Bid is premised upon performing and furnishing the Work required by the Contract Documents; and that the Contract Documents are sufficient in scope and detail to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.
- D. Bidder's Obligations: In addition to Bidder's other responsibilities and obligations in connection with submitting a Bid, it is the responsibility of the Bidder before submitting a Bid, to:
1. Examine the Contract Documents thoroughly;
 2. Visit the site to become familiar with local conditions that may affect cost, progress, performance or furnishing of the Work;
 3. Investigate all applicable construction and labor conditions, quantities, and the character of the Work as they affect cost, progress, performance, or furnishing of the Work;
 4. Consider federal, state and local Laws and Regulations that may affect cost, progress, performance or furnishing of the Work;
 5. Study and carefully correlate Bidder's observations with the Contract Documents;
 6. Review all available explorations and data concerning surface and subsurface conditions as set forth in Section 1.4 above; and
 7. Identify and notify ENGINEER in writing in the manner set forth in article 2.1 below of all specific conflicts, omissions, errors, or discrepancies in the Contract Documents, or if Bidder doubts their meanings.

The failure or omission of any Bidder to take any of the foregoing actions shall not in any way relieve Bidder of its Bid, or its obligation to furnish all material, equipment, labor and services necessary to carry out the provisions of the Contract Documents and to complete the contemplated Work for the consideration set forth in its Bid. Submission of a Bid shall constitute prima facie evidence of compliance with these instructions.

- E. Deviations from the Terms of the Contract Documents: Owner will not accept any deviations whatsoever from the printed terms of the Agreement and the Contract Documents, except by Addendum or Change Order.

1.07 EFFECT OF SUBMITTING BID.

- A. Bidders are responsible to carefully examine the Contract Documents, visit the site, and fully inform themselves so as to include in the Bid a sum to cover the cost of all items. Bidder's failure or omission to receive or examine any form, instrument, addendum or other document, visit the site and become acquainted with existing conditions, or attend any pre-Bid Conference, shall in no way relieve Bidder from any obligations with respect to Bidder's Bid or the Construction Contract.
- B. By submitting a Bid, Bidder represents that Bidder has complied with all requirements of the Bid Documents; that the Bid is premised on properly performing and furnishing the Work required by the Contract Documents within the times specified; that the Bidder is informed of the conditions to be encountered and the character, quality and quantities of the Work; and that the Bidder believes the Contract Documents are sufficient in scope and detail to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.
- C. Submission of a Bid constitutes a promise that the Bidder will enter the Contract in the form presented in the Contract Documents. Bidders should carefully examine all Contract Documents, including the required Bonds and insurance to be provided by the Bidder.
 - 1. The Performance Bond is a guarantee of faithful performance of the requirements of the Contract Documents, including all applicable warranties. The Payment Bond is a guarantee of payment of all labor, materials, or supplies used directly or indirectly in the prosecution of the Work provided in the Construction Documents.
 - 2. The sum of the Performance Bond and the Payment Bond shall be increased or decreased during the course of the Work in the event that Contract Modifications, Change Orders or Addenda increase or decrease the total contract price. The sum of each bond shall be in an amount equal to the completed contract price at the completion of the Work.
 - 3. OWNER does not provide any release of Performance Bonds or Payment Bonds. The bonds are in effect throughout all periods during which a suit may be brought under the provisions of applicable law.
- D. By submitting a Bid, Bidder represents that the matters stated therein are true and correct.

PART 2 - BIDDING PROCEDURES

2.01 INTERPRETATIONS AND ADDENDA

- A. All requests for interpretation of the Contract Documents shall be made in writing and delivered to the Engineer no later than seven (7) calendar days prior to opening of Bids. In the Engineer's discretion, Engineer will send the written interpretation to all persons receiving a set of Bid Documents in the form of an Addendum. If the Engineer does not

respond to a Bidder's request for interpretation the Bidder shall comply with the intent and terms of the Contract Documents.

- B. No oral interpretations shall be made to any Bidder. The Owner shall not be responsible for or bound by any statements, interpretations, explanations, representations, conclusions or assumptions made by any party, whether oral or written, except for written statements that are issued in an Addendum by the Engineer to all prospective bidders.
- C. Each statement made in an Addendum is part of the Contract Documents at the location designated in the Addendum. A statement issued in an Addendum shall have the effect of modifying a portion of the Bid Documents when the statement in the Addendum specifies a particular section, paragraph or text and states that it is to be so modified. Only the specified section, paragraph or text shall be so modified, and all other portions of the Bid Documents shall remain in effect.
- D. Bidders shall sign to acknowledge their receipt of all Addenda issued. Bidders shall also acknowledge receipt of all Addenda in the space provided in the Bid.
- E. Except to postpone the Bid opening, no Addenda shall be issued within 48 hours of the Bid opening.

2.02 EQUIPMENT AND MATERIAL OPTIONS PRIOR TO BID OPENING

- A. The Contract, if awarded, will be on the basis of materials and equipment described in the Drawings or specified in the Specifications without consideration of possible substitute or "or equal" items. Whenever it is indicated in the Drawings or specified in the Specifications that a substitute or "or approved equal" item of material or equipment may be furnished or used by Contractor if acceptable to Engineer, application for such acceptance will not be considered by Engineer until after the Effective Date of the Agreement. The procedure for submission of any such application by Contractor and consideration by Engineer is set forth in the General Conditions and may be supplemented in the General Requirements.

2.03 BID SECURITIES

- A. Amount of Bid Security: A Bid Security must accompany each Bid. The total amount of the Bid on which Bid security is to be based shall be the sum of all items of the Bid constituting the maximum amount of the possible award to the Bidder. The Bid Bond amount must equal at least five (5) percent of the total amount of the Bid.
- B. Form of Bid Security: The Bid Security may be in the form of a certified check, cashier's check, cash, or Bid Bond. No other form of Bid Security will be accepted. A Bid Bond must be issued by a licensed Utah agency on behalf of a surety company licensed to do business in the State of Utah. A cashier's check must be drawn on a bank doing business in the State of Utah and made payable to OWNER. If a cashier's check is used in lieu of a Bid Bond, or if the Bid Bond does not specifically so provide, a certificate from an approved surety company guaranteeing execution of performance and payment bonds in the full amount of the bid must accompany the bid.

- C. Purpose of Submission: By submitting a Bid Bond Bidder assures Owner it will take all steps necessary to properly execute the Contract Documents.
- D. Return of Bid Security: Owner will return Bid securities to Bidder within 7 days after award of the Construction Contract. Bid Bonds and cashier's checks of all Bidders will be held until the Construction Contract is awarded or all bids have been rejected. The liability of Owner in regards to the checks shall be limited only to the return of the checks.
- E. Default: In the event of failure or refusal of the Bidder to enter into the Construction Contract and the delivery to the Owner a Performance Bond, Payment Bond and any other Bonds or documents required by the Contract Documents after Notice of Intent to Award by the Owner, the Bidder forfeits the sum of the Bid Bond or cashier's check as liquidated damages to the Owner.

2.04 COMPLETING BID DOCUMENTS

- A. The General Conditions identify all forms comprising the Bid Documents. Additional copies may be obtained from the ENGINEER. The Bidder shall make no stipulations or alterations on the Bid forms. The Bidder must use and execute only the Bid form and Bid Schedules bound in the Contract Documents. , Bidder shall complete and submit all forms and documents listed in paragraph 2.06.C below.
- B. The Bidder must fill in all items in the Bid form in ink or by typewriter. If applicable, furnish both the unit and total costs for each item. The total Bid price is the full price for the performance of all Work under the Contract Documents. Bidder shall initial in ink any corrections, interlineations, alterations, or erasures made by the Bidder on Bidder's entries in the Bid Documents.
- C. Any work or material which is specified in the Contract Documents or which is necessary because of the nature of the Work, but which is not listed separately in the Bid Schedule shall not be measured or paid for separately. The cost of such work or material shall be considered as included in the Contract Price.
- D. Bids by corporations must be executed in the corporate name by a corporate officer authorized to sign, and must be properly attested to as an official act of the corporation. At the OWNER's request, authority to sign shall be submitted.
- E. Bids by partnerships or joint ventures must be executed in the partnership or joint venture name and signed by a partner or joint venture whose title and official address must be shown. If a partnership or joint venture is the low bidder, the partnership or joint venture must also submit evidence to the OWNER of the responsibility of the partnership or joint venture as a bidder in the manner directed by the ENGINEER.
- F. Where the Bidder is wholly owned subsidiary of another company, the Bid must so state, and the owner or parent corporation also must agree to sign and be bound with the Bidder.
- G. All names must be typed or printed under or near the signature. Signatures shall be in longhand.

- H. The Bid shall contain an acknowledgment of receipt of all Addenda. The Addenda numbers must be filled in on the Bid form.
- I. The Bidder's address, telephone number, email address, and facsimile number for communications regarding the Bid must be shown on the first page of the Bid form.
- J. The divisions and sections of the specifications, and the identifications of any Drawings, shall not control Bidder in dividing the Work among subcontractors or suppliers, or delineating the Work to be performed by any specific trade.
- K. The base Bid and alternates shall include all Work required to be performed by the Contract Documents.

2.05 CONFLICT OF INTEREST, SUBCONTRACTORS

- A. Conflict of interest pertaining to Subcontractors is described in paragraph 6.5H of the General Conditions (Document 00 72 00).
- B. Bidder shall not subcontract more than 75 percent of the dollar value of the total contemplated Work (exclusive of the supply of materials and equipment to be incorporated in the Work) without OWNER's prior written approval.

2.06 SUBMISSION OF BIDS

- A. Bids shall be submitted at the time and place indicated in the Invitation to Bid and should be enclosed in an opaque sealed envelope, marked with the Construction Contract name and number, the name and address of the Bidder, and the date and the opening time for Bids. If the Bid is sent through the mail or other delivery system the sealed envelope should be enclosed in a separate envelope with the notation "BID ENCLOSED" on the face of it. It is the sole responsibility of the Bidder to deliver the Bid before the scheduled time.
- B. Bidder will make no recapitulations, stipulations, alterations, alternate submissions, or modifications in any manner to any of the Contract Documents.
- C. All bidders shall include the following Bid Form documents with required signatures and notarized when designated:
 - 1. Bid Form (Document 00 41 00)
 - 2. Bid Schedule (Document 00 43 00)
 - 3. Non-Collusion Affidavit of Prime Bidder (Document 00 45 38)
 - 4. Bid Bond (Document 00 42 00)
Failure to include any of these documents will result in Bid being considered non-responsive and may be disqualified.

- D. Alternate bids, other than those called for in the Bid form, will not be considered.
- E. No oral, telegraphic, telephonic, facsimile, or modified bids will be considered.

2.07 MODIFICATION AND WITHDRAWAL OF BIDS

- A. At any time prior to the opening of Bids, Bids may be modified or withdrawn if a written notice of modification or withdrawal is signed by Bidder and delivered to the place where Bids are to be submitted. Bid Security will be returned upon proper withdrawal of a Bid prior to the time for Bid opening.
- B. Within 24 hours after Bids are opened, any Bidder may file written notice with Owner that there was a substantial mistake made in the preparation of its Bid. Bidder must thereafter promptly demonstrate Bidder's mistake. The Owner has sole discretion to determine whether to permit any modification or withdrawal or the return of any Bid Security.
- C. When it appears a mistake has been made, or when the Owner desires an assurance of any matter, the Owner may request a Bidder to confirm the Bid in writing.

2.08 OPENING OF BIDS

- A. Bids will be opened and read aloud publicly unless obviously non-responsive. An abstract of the amounts of the base schedule of prices and any alternate schedules will be made available for review after the opening of Bids.
- B. Any Bids received after the time specified in the Invitation to Bid will be returned unopened.

2.09 BIDS SUBJECT TO ACCEPTANCE FOR 60 DAYS

- A. All bids remain subject to acceptance for 60 days after the day of the Bid opening. Owner may, in its sole discretion, release any Bid and return the Bid security prior to that date.

PART 3 - EVALUATION AND AWARD

3.01 SUBMITTALS REQUIRED FOR EVALUATION

- A. After Bid opening, the Bidder, whose Bid is under consideration, must submit the following at the times specified:
 - 1. Bidder Status Form: Document 00 43 38. The Bidder shall submit this report form within 24 hours of Engineer's request.
 - 2. Proposed Subcontractor Form: Document 00 43 36. The Bidder shall submit this report form within 24 hours of Engineer's request.

3.02 EVALUATION OF BIDS

- A. Owner reserves the right: to reject any and all Bids or any part thereof; to waive any informalities in the Bid Schedule and elsewhere; to negotiate and agree to contract terms with the successful Bidder; to disregard non-conforming, non-responsive, unbalanced or conditional Bids; and to withhold the award for any reason deemed in the best interests of the Owner.
- B. Owner reserves the right to reject any Bid if Owner believes that it would not be in the best interest of the Project or the Owner. Without limitation, such rejection may be because the Bid is not responsive, or the Bidder is unqualified or of doubtful ability or the Bid or Bidder fails to meet any other pertinent standard or criteria established by Owner.
- C. If the Owner intends to make an award to a Bidder, a Notice of Intent to Award will be issued within 30 days of bid opening.
- D. Owner may consider all information which Owner believes is relevant when evaluating a Bid, including, without limitation:
 - 1. The qualifications and experience of the Bidder and of the Subcontractors, Suppliers, and other persons and organizations proposed (whether or not the Bid otherwise complies with the prescribed requirements).
 - 2. Such alternates, unit prices and other data, as may be requested in the Bid Form, Bid Schedule, or written requests issued prior to Owner's Notice of Intent to Award the Construction Contract.
 - 3. Operating costs, maintenance requirements, performance data, and guarantees of ability to provide the required materials and equipment.
 - 4. Corporate organization and capacity for any party.
 - 5. Ability to perform and complete the Work in the manner and within the time specified.
 - 6. Pending litigation.
 - 7. The amount of the Bid.
 - 8. Proper licensing to do the Work in compliance with licensing laws of the State of Utah for contractors and subcontractors.
 - 9. All other relevant matters, consistent with Owner's procurement code and administrative rules, Owner's ordinances and program policies.
- E. If the Construction Contract is to be awarded, it will be awarded to the most responsive, qualified, and responsible Bidder as determined by the Owner. Alternates, as identified on the Bid Form, may be accepted depending upon availability of Owner's funds and as

determined by the Owner. Accepted alternates will be considered in determining the most responsive, qualified, and responsible Bidder.

F. Bid Schedules will be evaluated as follows:

1. Discrepancies in the multiplication of quantities of Work items and unit prices will be resolved in favor of the unit prices. Owner may correct Bid Schedule calculation errors accordingly.
2. Prices written out in words shall govern over prices written out in numbers.
3. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.
4. Bids shall not contain any recapitulations of or changes in the work to be done.

G. The Owner, in the Owner's sole discretion, shall make determinations as to disqualification of Bidders or rejection of Bids. Such matters may include, without limitation, submission of more than one Bid by the Bidder (whether under the same or different names); evidence of collusion among Bidders; other commitments of Bidder which, in the Owner's sole judgment, might hinder the Work; previous defaults, Bid irregularities when not waived in the best interests of the Owner, delays or poor performance by Bidder on any project; official action against Bidder; and any other cause which, in the Owner's sole discretion and judgment, is sufficient to justify disqualification of a Bidder or rejection of a Bid.

3.03 ADJUSTMENTS TO THE COST OF THE WORK AFTER OPENING OF BIDS

- A. The Contract Price identified in the Agreement represents the cost of the work which is to be paid by the Owner to the Contractor.
- B. Adjustments to the Contract Price which are agreed to between the Owner and the successful Bidder shall be affected by signing an Agreement Supplement.

3.04 SUBSTITUTIONS

- A. The Construction Contract, if awarded, will be on the basis of materials and equipment described in the Drawings, Specifications and any Addenda.
- B. After the Effective Date of the Construction Contract, the procedure for submitting an application for substitution is set forth in Article 6.4 of the General Conditions.

3.05 SUBMITTALS REQUIRED FOR AWARD OF CONTRACT

In order to execute the contract, the following documents shall be submitted to Owner within seven (7) calendar days of the receipt of the NOTICE OF INTENT TO AWARD.

- A. Performance Bond: The Owner's requirements as to performance bonds are as set forth in the Modifications to General Conditions (Document 00 73 03). Specific requirements are set forth in the Performance Bond (Document 00 61 13).
 - 1. The form of the Bond should be carefully examined by the Bidder.
 - 2. When the successful Bidder delivers the executed Construction Contract to Owner, it must be accompanied by the required Performance and Payment Bonds.
- B. Payment Bond: The Owner's requirements as to payment bonds are as set forth in the Modifications to General Conditions (Document 00 73 03). Specific requirements are set forth in the Payment Bond (Document 00 61 14).
 - 1. The form of the Bond should be carefully examined by the Bidder.
 - 2. When the successful Bidder delivers the executed Construction Contract to Owner, it must be accompanied by the required Performance and Payment Bonds.
- C. Certificate of Insurance: The Owner's requirements as to insurance are as set forth in the Modifications to General Conditions (Document 00 73 03).
- D. Status Verification System Affidavit: The Owner's requirements as to immigration status verification are set forth in the Modifications to General Conditions (Document 00 73 03). Specific requirements are set forth in the Status Verification System Affidavit (Document 00 45 37).
- E. Other Information: When a determination has been made to award the Construction Contract, Bidder is required, prior to the award or after the award, or both, to furnish such other information as the Engineer requests.

3.06 SIGNING OF AGREEMENT

- A. Within ten (10) calendar days after Owner issues Notice of Intent to Award the Construction Contract to the successful Bidder, the Bidder shall pick up, sign and return to Owner, the required number of copies of the Agreement (Document 00 52 00), bonds, insurance, and Status Verification System Affidavit: A minimum of six (6) originals will be signed and returned to the Owner. One executed original will be returned to the Bidder. Bidder shall comply with all execution requirements.
- B. All of Bidder's executions and submittals must be delivered to the Owner before Owner will execute the Construction Contract. The Construction Contract will not be deemed awarded and shall not be binding on the Owner until it has been approved and executed by the Owner, and a fully executed copy is formally delivered to the Contractor. The Owner reserves the right to rescind its Notice of Intent to Award without liability, except for the return of Bidder's Bid Security, at any time before the Construction Contract has been fully executed by all parties and delivered to the Contractor.

- C. Transfers, delegations or assignments of interests in the Contract Documents are prohibited, unless prior written authorization is received from the Owner.
- D. At the time of Bidding, and the signing of the Agreement, and at all times during the Work, Bidder shall be properly licensed to do the Work and shall be in compliance with the license laws of the State of Utah, Provo City and Utah County. The Bidder shall also require all Subcontractors to do the same.
- E. If a Bidder fails to fully and properly execute the Construction Contract and provide all submittals required therewith within ten (10) calendar days after the date of the Notice of Intent to Award, the Owner may elect to rescind the Notice of Intent to Award, and the Owner shall be entitled to the full amount of Bidder's Bid Security, not as a penalty, but in liquidation of and compensation for damages sustained. In the Owner's sole discretion, a Notice of Intent to Award may then be provided to another bidder whose Bid is most advantageous to the Owner, price and other factors considered.

END OF SECTION

SECTION 00 31 32
GEOTECHNICAL DATA

PART 1 - GENERAL

1.01 REPORTS OF EXPLORATIONS AND TESTS

- A. In preparing the Drawings and Specifications, Engineer has relied upon the following geotechnical reports of explorations and tests of subsurface conditions at or contiguous to the Work site.
 - 1. Report dated 9 April 2021 prepared by AGECE, Inc. entitled: Geotechnical Study - Provo River Diversion Structure – 260 West 2230 North – Provo, Utah consisting of 38 pages.
- B. Accuracy: For the purposes of bidding or construction, the Bidder may rely upon the accuracy of the geotechnical data at the locations where the data was obtained and to the depths indicated, but not upon any other information, interpretations or opinions contained in the geotechnical data itemized above or for the completeness thereof expressed or implied.
- C. Geotechnical Data Not a Part of the Contract Documents: Geotechnical data itemized above are not a part of the Contract Documents, but the technical data contained therein upon which Bidder is entitled to rely as provided in Article 4.02 of the General Conditions (Document 00 72 00) are incorporated by reference.

1.02 DRAWINGS OF SURFACE AND SUBSURFACE STRUCTURES

- A. In the preparation of Drawings and Specifications, Engineer has relied upon the following drawings of physical conditions in or relating to existing surface and subsurface structures (except Underground Facilities) which are at or contiguous to the Work site.
 - 1. None
- B. Drawings Not a Part of the Contract Documents: Drawings itemized above are not a part of the Contract Documents. Location of the surface and subsurface structures and utilities are further described in Article 4.3 of the General Conditions (Document 00 72 00).

1.03 EXAMINATION OF DATA

- A. Copies of geotechnical data and drawings of surface structures and subsurface structures may be examined during regular business hours at Provo City Water Resources, 1377 South 350 East, Provo, Utah.

SECTION 00 41 00

BID FORM

PART 1 - GENERAL

1.01 BID PROPOSAL

- A. After having personally and carefully examined all conditions surrounding the Work and the Contract Documents, the undersigned proposes to furnish all labor, materials, equipment, tools and machinery and to furnish and deliver all materials not specifically mentioned as being furnished by the OWNER, which is required in and about the construction of the Construction Contract known as **Provo River Water Treatment Plant Project, Bid No. PROVOEN202323202**.
- B. The undersigned proposes to complete the Work for the price or prices listed in the Bid Schedule (Document 00 43 00) and understands that quantities for Unit Price Work are not guaranteed.
- C. The undersigned proposes to furnish bonds with the Contract, signed by a surety company satisfactory to the OWNER, in an amount equal to the Contract amount to ensure compliance with all requirements of the Contract Documents.
- D. The undersigned encloses a certified check, cashier's check, cash, or a Bid Bond for _____ Dollars (\$_____) which is five (5) percent of the Bid amount payable to the Owner, as a guarantee of good faith, and which it is agreed will be forfeited to the Owner as liquidated damages in the event of the failure of the undersigned to enter into a contract and furnish satisfactory bonds to the Owner.
- E. The undersigned proposes to execute the attached contract within ten (10) days after the Notice of Intention to Award, and to begin work within ten (10) days after being notified to do so by the Owner.
- F. The undersigned agrees the Bid is genuine. The Bid is not made in the interest of or on behalf of any undisclosed person, firm or corporation. The undersigned agrees that they have not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid: that they have not solicited or induced any person, firm or corporation to refrain from bidding: and that they have not sought by collusion to obtain for itself any other advantage over any separate Bidder or over Owner.
- G. If Owner finds it necessary to further define the Work, Contract Price, Contract Time or some other portion of the Construction Contract, after Bid opening, the Bidder promises to execute an Agreement Supplement prior to or concurrent with the execution of the Agreement, if the Agreement Supplement is acceptable to the Bidder.

- H. It is understood that the Owner has the right to reject this proposal or to accept it at the prices listed in the Bid Schedule.

PART 2 - EXECUTION

2.01 BIDDER

- A. The Bidder is as follows

Name: _____

Address: _____

Telephone number: _____

Facsimile number: _____

Tax identification number: _____

- B. Bidder holds license number _____, issued on the ____ day of _____, _____, by the Utah State Department of Commerce, Division of Occupational and Professional Licensing. Bidder is licensed to practice as a _____ Contractor. License renewal date is the ____ day of _____, _____.

- C. The undersigned hereby acknowledges receipt of the following Addenda.

(list Addenda numbers here)

1.02 BIDDER'S SUBSCRIPTION

- A. Date: _____

- B. Bidder's Signature: _____

- C. Please print Bidder's name here: _____

BID BOND

PART 1 - GENERAL

1.01 PROCEDURE

- A. For filing purposes, add Bid Bond to the Contract Documents following this page.

END OF SECTION

SECTION 00 43 00

BID SCHEDULE

PART 1 - GENERAL

1.01 DOCUMENT INCLUDES

- A. Price schedules.
- B. Measurement and payment provisions.

1.02 CONSTRUCTION CONTRACT

- A. The Construction Contract is known as Provo River Water Treatment Plant Project.

1.03 REFERENCES

- A. APWA 01 29 00: Payment Procedures.
- B. Document 00 52 00: Agreement.

1.04 SCHEDULES TO BE ADDED TO THE AGREEMENT

- A. This document will be added to the Agreement by reference.

1.05 FEDERAL FUNDING REQUIREMENTS

- A. Base Bid shall be compliant with federal funding requirements identified in Section 00 45 15.
- B. Federal requirements include compliance with Build America, Buy America (BABA). Base bid shall include cost for compliance with (BABA).
 - 1. Contractor shall indicate all products and materials that cannot comply with BABA.
 - 2. If requested, Contractor shall provide the cost deduct for supply of product(s) or material(s) that are not compliant with BABA.
- C. Contractor shall prepare an alternate bid for compliance with the federal requirements identified in Section 00 45 15 excluding BABA. The Owner may choose to seek a waiver for BABA compliance. The Owner reserves the right to award the project based on the base bid or the non-BABA compliant bid alternate. The bid alternate bid schedules are provided in Attachment A of this Section.

1.06 BID ACCEPTANCE

- A. Bids are subject to acceptance for 60 days per Section 00 21 13.

- B. Where noted in the bid schedule, Contractor shall include a cost contingency after the bid for acceptance of bid for up to an additional 60 days, or 120 days from the bid opening. The contingency shall only be used in the event a bid is not accepted within the defined bid acceptance time and shall be prorated based on the duration is held after the initial 60 day acceptance period.

PART 3 - MEASUREMENT AND PAYMENT

3.01 GENERAL

- A. Units of measurement are listed above in the price schedule(s).
- B. See measurement and payment procedures in APWA Section 01 29 00 and modifications herein. Measurement methods are identified in paragraph 3.02 below. Basis of payment is identified in paragraph 3.02 below.

- C. Engineer will take all measurements and compute all quantities.
- D. Contractor will verify Engineer's measurements and computations.
- E. Contractor will provide all equipment, workers, and survey crews to assist Engineer in making measurements.
- F. Contractor responsible for the preservation of neighboring facilities not being demolished, if damage occurs during construction proper restoration of all damage is required at no additional cost. All shall be included in the Bid Item.

3.02 BID SCHEDULE A

A. BID ITEM NO. A1 - "MOBILIZATION / DEMOBILIZATION"

1. GENERAL This bid item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations not normally attributed to any other single bid item within this schedule. This shall include, but is not limited to, work described or enumerated in Section 01 71 13. "Mobilization/Demobilization" shall not exceed 8% of the sum total of Bid Items A2 through A55.
2. METHOD OF MEASUREMENT "Mobilization / Demobilization" shall not be measured, but shall be paid for on a lump sum basis for the completion of the work as required in Section 01 71 13 - Mobilization.
3. BASIS OF PAYMENT Payment for "Mobilization / Demobilization" will be made at the contract lump sum bid price. Payments will be made in accordance with the following schedule:
 - a. When 5% of the original contract amount is earned, 40% of the amount bid for mobilization will be paid.
 - b. When 15% of the original contract amount is earned, an additional 20% for a total of 60% of the amount bid for mobilization will be paid.
 - c. When 40% of the original contract amount is earned, an additional 30% for a total of 90% of the amount bid for mobilization will be paid.
 - d. When 50% of the original contract amount is earned, an additional 10% for a total of 100% of the amount bid for mobilization will be paid.

B. BID ITEM NO. A2 - "SITE SAFETY & PEDESTRIAN AND TRAFFIC CONTROL"

1. GENERAL This bid item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations related to site and pedestrian safety, site security, and pedestrian and vehicle traffic control.

2. METHOD OF MEASUREMENT "Site Safety & Pedestrian and Traffic Control" shall not be measured, but shall be paid for on a lump sum basis for the completion of the work.
3. BASIS OF PAYMENT Payment for "Site Safety & Pedestrian and Traffic Control" will be made at the contract lump sum bid price. Payments will be made in accordance with the following schedule:
 - a. When 5% of the original contract amount is earned, 50% of the amount bid for mobilization will be paid.
 - b. When 50% of the original contract amount is earned, an additional 30% for a total of 90% of the amount bid for mobilization will be paid.
 - c. When 90% of the original contract amount is earned, an additional 20% for a total of 100% of the amount bid for mobilization will be paid.

C. **BID ITEM NO. A3 - "QUALITY CONTROL AND MATERIALS TESTING"**

1. GENERAL This item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations associated with Quality Control and Materials Testing. This item shall include, but is not limited to, work described or enumerated in Section 01 45 33 and Section 01 43 00.
2. METHOD OF MEASUREMENT "Quality Control and Materials Testing" shall be measured based on the percentage of work completed for the project according to the amount defined in the Bid Schedule.
3. BASIS OF PAYMENT Payment for "Quality Control and Materials Testing" will be made at the contract lump sum bid price as shown and accepted by the Owner and ENGINEER in the Bid Schedule. Payments will be made in accordance with the following schedule:
 - a. When 10% of the original contract amount is earned, 25% of the amount bid for material testing will be paid.
 - b. When 25% of the original contract amount is earned, an additional 25% for a total of 50% of the amount bid for material testing will be paid.
 - c. When 50% of the original contract amount is earned, an additional 25% for a total of 75% of the amount bid for material testing will be paid.
 - d. When 75% of the original contract amount is earned, an additional 25% for a total of 100% of the amount bid for material testing will be paid.

D. BID ITEM NO. A4 - "CONSTRUCTION SURVEYING"

1. GENERAL This item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations associated with Construction Surveying, which shall be performed by a registered professional land surveyor.
2. METHOD OF MEASUREMENT "Construction Surveying" shall be measured based on the percentage of work completed for the project according to the amount defined in the Bid Schedule.
3. BASIS OF PAYMENT Payment for "Construction Surveying" will be made at the contract lump sum bid price as shown and accepted by the Owner and the Engineer in the Bid Schedule. Payments will be made in accordance with the following schedule:
 - a. When 5% of the original contract amount is earned, 75% of the amount bid for construction surveying will be paid.
 - b. When 75% of the original contract amount is earned, an additional 25% for a total of 100% of the amount bid for construction surveying will be paid.

E. BID ITEM NO. A5 - "DEVELOPMENT AND IMPLEMENTATION OF SWPPP"

1. METHOD OF MEASUREMENT "Development and Implementation of SWPPP (Storm Water Pollution Prevention Plan)" shall be paid for on a lump sum basis for preparation and implementation of the approved Plan as completed by the Contractor.
2. BASIS OF PAYMENT "Development and Implementation of the SWPPP" shall be paid for at the lump sum bid price as a percentage of work completed. Payment shall be considered full compensation for completion of an approved plan and implementation thereof. The implementation shall include installing and maintaining Best Management Practices defined in the SWPPP, and monitoring and maintaining the requirements of the SWPPP, preparation of required reports, and meeting all other requirements of the Utah Division of Water Quality.

F. BID ITEM NO. A6 - "DEMOLITION OF EXISTING STRUCTURES"

1. METHOD OF MEASUREMENT "Demolition of Existing Structures" shall be paid for on a lump sum basis for demolition of existing structures according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for the "Site Demolition" shall be considered full compensation for the demolition and disposal as shown on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; saw cutting, demolition of concrete walkways and curbing, demolition of asphalt pavements; coordinating power disconnection with Provo Power, excavations, removal of power poles,

removal of light poles and bases, removal of buried and overhead power lines; hauling debris and material off-site to an approved landfill or recycling facility; and all other incidentals required to complete the demolition as required to construct the new and future facilities specified herein and shown on the Contract Documents.

G. BID ITEM NO. A7 - "SITE CLEARING, GRUBBING, AND STRIPPING"

1. METHOD OF MEASUREMENT "Site Clearing, Grubbing, and Stripping" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "Site Clearing, Grubbing, and Stripping" shall be made at the contract lump sum bid price for the Contractor to remove, transport, disposal, applicable dumping fees, cleanup of waste materials, and related costs for clearing, grubbing, and stripping which includes removing all unwanted material from the surface and subsurface within the project limits such as trees, vegetation, boulders, stumps, roots, buried logs, and other debris; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings.

H. BID ITEM NO. A8 - "SITE EXCAVATION AND SHORING"

1. METHOD OF MEASUREMENT "Site Excavation and Shoring" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "Site Excavation and Shoring" shall be considered full compensation for all work completed under this bid item and shall be made at the contract lump sum bid price. Payment shall be considered complete compensation for design of the shoring system and furnishing all labor, materials and equipment required for installation and removal of the shoring system, excavation, and disposal of site soils to grades shown on plans, hauling, off-site disposal of surplus and unsuitable material, stockpiling of suitable material, and other items necessary for the shoring, excavation, and disposal as shown on the Contract Documents.

I. BID ITEM NO. A9 - "GROUND IMPROVEMENTS"

1. GENERAL Soil Mix Columns OR Aggregate columns are acceptable methods for ground improvements. Contractor shall bid preferred method in accordance with *Section 31 24 02 Ground Improvement Using Soil Mix Columns* OR *31 24 03 Ground Improvement Using Aggregate Columns*. Method submitted must meet the specified performance requirements.
2. METHOD OF MEASUREMENT "Ground Improvements" shall not be measured, but shall be paid for on a lump sum basis for design and construction of ground improvements or intermediate foundations beneath the water treatment plant,

Clearwell, and High Service Pump Station in accordance with Section 31 24 02 or Section 31 24 03 based on the method proposed by the Contractor and Approved by the Engineer.

3. BASIS OF PAYMENT Payment for "Ground Improvements " shall be paid for at the lump sum bid price. Payment shall be considered full compensation for design and construction of intermediate foundations beneath the Water Treatment Plant Facility including the Administration Building, Clearwell, and High Service Pump Station area, including sufficient distance outside of the footprint of the footings to accomplish design objectives of providing adequate net bearing capacity for the structures and reducing liquefaction potential to an acceptable limit. Payment shall be considered complete compensation for all labor, equipment, and materials, including but not limited to: design, design submittals (including detailed design calculations, construction drawings and shop drawings), quality control testing program for soil mix columns or aggregate columns meeting design requirements, construction of the most efficient and cost-effective ground improvement method, load transfer pad if required, verification testing, daily progress reports, and all other incidentals not specifically paid for in other bid items but which are otherwise required to complete required ground improvements and shown on the Contract Drawings and Specifications.

J. BID ITEM NO. A10 - "SITE DEWATERING"

1. METHOD OF MEASUREMENT "Site Dewatering" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "Site Dewatering" shall be made at the contract unit lump sum bid price for analyzing, designing, furnishing, and installation the site dewatering in order to facilitate site excavations. Payment shall be considered complete compensation for design of the dewatering system and furnishing all labor, equipment, and materials to install and maintain the dewatering system to allow excavation to the grades as shown on the Contract Drawings and paid for under Bid Item No. A8, permitting, treatment and testing (if required), disposal and/or storage of water, and all other incidentals not specifically paid for in other bid items, but which are shown or otherwise required to complete the installation as herein described.

K. BID ITEM NO. A11 - "UF MEMBRANE FILTRATION UNITS"

1. METHOD OF MEASUREMENT "UF Membrane Filtration Units" shall be measured by each UF Membrane Unit skid furnished and installed according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "UF Membrane Filtration Units" shall be made at the contract unit bid price per each UF Membrane Unit skid, with accompanying appurtenances furnished and installed. Work shall also include connections to

pipng, testing, and all other related items not paid elsewhere as shown on the Contract Drawings and in the Specifications. (Electrical connections paid as part of Bid Item A15).)

L. BID ITEM NO. A12 - "UF FEED VERTICAL TURBINE PUMPS"

1. METHOD OF MEASUREMENT "UF Feed Vertical Turbine Pumps" shall be measured by each pump and motor furnished and installed according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "UF Feed Vertical Turbine Pumps" shall be paid at the contract unit bid price per each pump and motor, with accompanying appurtenances furnished and installed. Work shall also include furnishing and installing discharge heads, pump cans; sleeves, and washers; pump bowls, shafting, columns, motors, testing, and all other pump related items not paid elsewhere as shown on the Contract Drawings and in the Specifications. (Electrical gear and connections paid as part of Bid Item A15.)

M. BID ITEM NO. A13 - "HIGH SERVICE VERTICAL TURBINE PUMPS (10 MGD)"

1. METHOD OF MEASUREMENT "High Service Vertical Turbine Pumps (10 MGD)" shall be measured by each pump and motor furnished and installed according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "High Service Vertical Turbine Pumps (10 MGD)" shall be paid at the contract unit bid price per each pump and motor, with accompanying appurtenances furnished and installed. Work shall also include furnishing and installing discharge heads, pump cans; barrel isolation sheet, sleeves, and washers; pump bowls, shafting, columns, motors, testing, and all other pump related items not paid elsewhere as shown on the Contract Drawings and in the Specifications. (Electrical gear and connections paid as part of Bid Item A17.)

N. BID ITEM NO. A14 - "HIGH SERVICE VERTICAL TURBINE PUMPS (5 MGD)"

1. METHOD OF MEASUREMENT "High Service Vertical Turbine Pumps (5 MGD)" shall be measured by each pump and motor furnished and installed according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "High Service Vertical Turbine Pumps (5 MGD)" shall be paid at the contract unit bid price per each pump and motor, with accompanying appurtenances furnished and installed. Work shall also include furnishing and installing discharge heads, pump cans; barrel isolation sheet, sleeves, and washers; pump bowls, shafting, columns, motors, testing, and all other pump related items not paid elsewhere as shown on the Contract Drawings and in the Specifications. (Electrical gear and connections paid as part of Bid Item A17.)

O. BID ITEM NO. A15 - "WATER TREATMENT PLANT FACILITY (PLANT AREA 10)"

1. METHOD OF MEASUREMENT Measurement for "Water Treatment Plant Facility (Plant Area 10)" work completed according to the amount defined in the Bid Schedule shall be based on the Schedule of Values to be provided by the Contractor prior to beginning the Work. Measurement shall begin at all piping connections shall begin at 5 feet from the outside edge of the building unless otherwise noted on the Contract Drawings.
2. BASIS OF PAYMENT Payment for "Water Treatment Plant Facility (Plant Area 10)" shall be made at the contract unit lump sum bid price for completion of the Water Treatment Plant Facility including Administration Building as shown on the Contract Drawings and specified herein. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; imported structure fill and compaction; concrete, reinforcement, forms, waterstop, concrete placement, curing; structural steel, CMU block, open web steel roof joists, roof decking, roof membrane, insulation, metal panels, louvers, windows, access doors, overhead coiling doors, and door hardware; 4 ton overhead bridge crane; water treatment system piping, valves, meters, and fittings; installation of vertical turbine pump cans (furnished in bid item A12); chlorination system and air scrubber; ozone system and liquid oxygen tank; chemical solution tanks, pumps, piping and fittings; office furniture and finishes, lab cabinets and equipment not included in Bid Item 53 below; electrical panels, MCCs, lighting, ground system, and miscellaneous gear; control panels and instrumentation; HVAC systems and controls; fire systems; security and access systems; coatings, finishes, and flooring; disinfection and testing, and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required for a complete and operational water treatment facility assembly as herein described and as shown on the Contract Drawings .

P. BID ITEM NO. A16 - "2 MG CLEARWELL (PLANT AREA 20)"

1. METHOD OF MEASUREMENT Measurement for "2 MG Clearwell (Plant Area 20)" work completed according to the amount defined in the Bid Schedule shall be based on the Schedule of Values to be provided by the Contractor prior to beginning the Work. Measurement shall begin at all piping connections shall begin at 5 feet from the outside edge of the building or nearest joint outside the Clearwell unless otherwise noted on the Contract Drawings.
2. BASIS OF PAYMENT Payment for "2 MG Clearwell (Plant Area 20)" shall be made at the contract unit lump sum bid price for completion of the 2 MG Clearwell as shown on the Contract Drawings and specified herein. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, the Clearwell 42-inch diameter emergency overflow piping, 42-inch diameter inlet pipes and fittings, 42-inch butterfly valves, 42-inch diameter outlet pipe and fittings, 36-inch stainless steel slide gates with

handwheels, 8-inch diameter drain pipe and fittings, 4-inch diameter wash down pipes and fittings, providing joint restraint on all fittings and valves and on pipes as designated, concrete encasement with reinforcement around all pipes under Clearwell; furnishing, placement, and installation of all concrete form work, formliners, reinforcement, shoring, concrete materials, curing, removal of forms; foundation preparation; 3/4-inch drain rock under tank floor slab and footings; interior ladders, guard rails, grates, hatches, vents and covers; FRP baffles walls and supports; 10-inch pressure relief valves and piping, 4-inch diameter stainless steel ozone piping, expansion joints, fittings, and supports; galvanized steel stairs with handrailing; gravel rock cover, 1-inch diameter PVC pipe drains, water stops, concrete staining, graffiti coat; commissioning of tank (including cleaning and flushing, disinfection and leak testing); painting all exposed piping excluding stainless steel piping; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings.

Q. BID ITEM NO. A17 - "HIGH SERVICE PUMP STATION (PLANT AREA 20)"

1. **METHOD OF MEASUREMENT** "High Service Pump Station (Plant Area 20)" work completed according to the amount defined in the Bid Schedule shall be based on the Schedule of Values to be provided by the Contractor prior to beginning the Work. Measurement shall begin at all piping connections shall begin at buttstrap connection 5-feet from valve pit wall on the suction side and end at the buttstrap connection approximately 37-feet from the outside edge of the building on the discharge side.
2. **BASIS OF PAYMENT** Payment for "High Service Pump Station (Plant Area 20)" shall be considered full compensation for installation of the High Service Pump Station as shown on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, imported structure fill and compaction; concrete, reinforcement, forms, waterstop, concrete placement, curing; structural steel supports and grating, ladders, CMU block, open web steel roof joists, roof decking, roof membrane, insulation, metal panels, louvers, windows, access doors, overhead coiling door, and door hardware; 2-ton monorail crane; suction and discharge piping, valves, couplings, restraints, meters, and fittings; ozone destruct units and piping; bladder style surge tanks; electrical panels, MCCs, lighting, ground system, and miscellaneous gear; control panels and instrumentation; HVAC systems and controls; security and access systems; coatings and finishes; disinfection and testing, and all other operations and materials and appurtenances required for a complete and operational pump station as herein described and as shown on the Contract Drawings.

R. BID ITEM NO. A18 - "CONCRETE DIVERSION BOX"

1. **METHOD OF MEASUREMENT** "Concrete Diversion Box" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.

2. BASIS OF PAYMENT Payment for “Concrete Diversion Box ” shall be made at the contract unit lump sum bid price for construction of a new concrete diversion box and slide gates as shown on the Contract Drawings and specified herein. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; (2) aluminum slide gates, electric gate actuators, adjustable stainless steel weir plate; cast-in-place concrete, rebar, forms; grating, checkered plates; PVC electrical conduits, and stainless steel water quality sensor pipe, level sensor pipe with level transmitter; 42-inch welded steel wall thimble, 42-inch ductile iron wall thimble, and 3-feet of 42-inch reinforced concrete pipes; 48-inch high PVC coated chain link fencing; native material backfill and compaction; structural fill, geotextile fabric, testing; and all other components required on the Contract Drawings and as specified herein. This bid item does not include payment for the 12-foot section of retaining wall south of diversion box, which is paid for under Bid Item No. 39.

S. BID ITEM NO. A19 - “COAGULANT INJECTION VAULT”

1. METHOD OF MEASUREMENT “Coagulant Injection Vault” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “Coagulant Injection Vault” shall be made at the contract unit lump sum bid price for construction of a new concrete coagulant injection vault as shown on the Contract Drawings and specified herein. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; excavation, shoring, and 3/4-inch drain rock; cast-in-place concrete, rebar, forms, placement, and curing; access hatches, ladders, pipe sleeves, and grating; pipe flash reactor assembly, 42-inch diameter steel pipe from bolted sleeve coupling outside of Diversion Box, through vault, and ending at buttstrap connection outside the vault; bolted sleeve coupling, dismantling joint, and buttstrap; irrigation piping, valves, pump, and flow meter; 10-inch steel branch outlet, coupling, and butterfly valve; 12-inch steel pipe and fittings internal to vault to to buttstrap connections outside of the vault; 3-inch diameter PVC conduit and fittings, 3/4-inch diameter tubing, and chemical injection quill; sump pump, sump pump pipe and fittings; mechanical pipe seals; exhaust fan, vent piping, and screened vent caps; coatings, disinfection and testing; native material backfill and compaction; and all other components required on the Contract Drawings and as specified herein.
3. BID ITEM NO. A20 "SITE STORM DRAIN PIPE”
4. METHOD OF MEASUREMENT “Site Storm Drain Pipe” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot.

Measurement shall include storm drainpipe shown on Sheets 01-C301 (including the 54 feet of 8-inch pipe and area inlet) and 01-C302 and start at the Catch Basin Sta 1+00 and end at, but not include, the Cleanout Box Sta 6+09.70 (Cleanout Box is included in Bid Item No. 26).

5. BASIS OF PAYMENT Payment for "Site Storm Drain Pipe" shall be paid for at the contract unit bid price per lineal foot listed in the bidder's proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the storm drain pipes to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 6-inch diameter, 8-inch diameter, 15-inch diameter, and 18-inch diameter PVC SDR 35 pipe and fittings, 3/4-inch washed gravel bedding, haunch, and pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to cleanout box, precast concrete catch basins, cast-in-place concrete cleanout box and area inlet, precast concrete dry sump manholes, grates, ring and covers, treatment snouts; protection of buried utilities, potholing as needed; all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

T. BID ITEM NO. A21 - "42-INCH RCP OVERFLOW PIPE"

1. METHOD OF MEASUREMENT "42-inch RCP Overflow Pipe" shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall include the overflow pipe on Sheet 01-C303 and shall start at the connection to the Emergency Overflow Box and end, but not include, the Cleanout Box Sta 1+51.64 (Cleanout Box is included in Bid Item No. 26).
2. BASIS OF PAYMENT Payment for "42-inch RCP Overflow Pipe" shall be paid at the contract unit bid price per lineal foot listed in the bidder's proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the overflow pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 42-inch diameter RCP Class III pipe, 3/4-inch washed gravel bedding, haunch, and pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connections, protection of buried utilities, potholing as needed; all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

U. BID ITEM NO. A22 - "6-INCH DI PIPE, FIRE HYDRANT, AND CONNECTION"

1. METHOD OF MEASUREMENT “6-inch DI Pipe, Fire Hydrant, and Connection” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall include the pipe shown on Sheet 01-C304 and start at the Fire Hydrant (Sta 10+00) and end at the connection to the existing 20-inch pipeline in Freedom Blvd (Sta. 10+44.15).
2. BASIS OF PAYMENT Payment for “6-inch DI Pipe, Fire Hydrant, and Connection” shall be made at the contract unit lump sum bid price for installing the 6-inch ductile iron pipe as shown on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, saw cutting and removal and disposal of existing AC pavement, excavation, dewatering, shoring; installing new 6-inch diameter ductile iron PC 250 pipe and fittings, 20-inch diameter hot tap, 6-inch diameter gate valve, tracer wire, thrust blocks, restraints, sand pipe zone backfill, native and/or imported trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning and flushing, disinfection and pressure testing); protection of buried utilities, potholing as needed; AC pavement restoration and striping; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

V. BID ITEM NO. A23 – “6-INCH FIRE SERVICE CONNECTION”

1. METHOD OF MEASUREMENT “6-inch Fire Service Connection” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall include the pipe shown on Sheet 01-C305 and start at the connection 5-feet from the WTP (Sta 1+00) and end at the connection to the existing 20-inch pipeline in Freedom Blvd (Sta. 2+14.53).
2. BASIS OF PAYMENT Payment for “6-inch Fire Service Connection” shall be made at the contract unit lump sum bid price for installing the 6-inch ductile iron pipe as shown on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, saw cutting and removal and disposal of existing AC pavement, excavation, dewatering, shoring; installing new 6-inch diameter ductile iron PC 250 pipe and fittings, 20-inch diameter hot tap, 6-inch diameter gate valve, tracer wire, thrust blocks, restraints, sand pipe zone backfill, native and/or imported trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning and flushing, disinfection and

pressure testing); protection of buried utilities, potholing as needed; AC pavement restoration and striping; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

W. BID ITEM NO. A24 – “12-INCH PVC SANITARY SEWER CONNECTION”

1. METHOD OF MEASUREMENT “12-inch PVC Sanitary Sewer Connection” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall include sanitary sewer pipe shown on Sheets 01-C306 and start at the connection 5-feet from the WTP (Sta 1+00) and end at the connection to the existing 5-foot diameter manhole (Sta 1+89.55).
2. BASIS OF PAYMENT Payment for “12-inch PVC Sanitary Sewer Connection” shall be made paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the sanitary sewer pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 12-inch diameter SDR 35 pipe and fittings, 3/4-inch washed gravel bedding, haunch, and pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning and testing); connection to the WTP, 5-foot diameter precast concrete manhole, connection to precast concrete manhole, ring and cover, flexible boots; protection of buried utilities, potholing as needed; AC pavement restoration and striping; all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

X. BID ITEM NO. A25 – “42-INCH HDPE RAW WATER PIPELINE”

1. METHOD OF MEASUREMENT “42-inch HDPE Raw Water Pipeline” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the connection to the existing 42-inch HDPE pipeline and end with the 42-inch ductile iron long sleeve outside the diversion box.
2. BASIS OF PAYMENT Payment for “42-inch HDPE Raw Water Pipeline” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 42-inch HDPE pipe to make a functional system including, but not limited to, pavement saw cutting and removal,

excavation, dewatering, shoring; installing the 42-inch HDPE IPS DR 32.5 pipe and fittings, CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; protection of buried utilities, potholing as needed, restoration of all surface improvements, disconnection, removal, and plugging of existing 30-inch storm drain; fence removal and replacement, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

Y. BID ITEM NO. A26 – “42-INCH RCP MILL RACE PIPELINE”

1. METHOD OF MEASUREMENT “42-inch RCP Mill Race Pipeline” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the connection to the 42-inch stub at the diversion box and end with the 6’x6’ cast-in-place curb inlet box.
2. BASIS OF PAYMENT Payment for “42-inch RCP Mill Race Pipeline” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the RCP pipe, Boxes, and Area Inlets to make a functional system including, but not limited to pavement saw cutting and removal, excavation, removal and off-site disposal of existing storm drainage pipes and existing structures; dewatering, shoring; installing the 42-inch, 24-inch, and 15-inch diameter Class III RCP, imported pipe zone backfill, native and/or imported trench zone backfill, native fill overburn and open channel infill, fills compaction; installing the area inlet boxes and cleanout boxes; installing the cast-in-place curb inlet box including backfilling, concrete, rebar, and forms; concrete waterway, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); provisions for testing the pipeline; protection of buried utilities, potholing as needed, connections to existing pipes; final grading, surface restoration, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

Z. BID ITEM NO. A27 – “42-INCH STEEL RAW WATER PIPE”

1. METHOD OF MEASUREMENT “42-inch Steel Raw Water Pipeline” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per

foot. Measurement shall start at the buttstrap connection to the Coagulant Injection Vault and end with the 42-inch diameter sleeve 5-feet from the WTP.

2. BASIS OF PAYMENT Payment for “42-inch Steel Raw Water Pipeline” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 42-inch diameter steel pipe and fittings to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 42-inch diameter steel pipe and fittings, CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; fence removal and replacement, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

AA. BID ITEM NO. A28 – “12-INCH STEEL MW PIPE”

1. METHOD OF MEASUREMENT “12-inch Steel MW Pipe” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the buttstrap connection to the Coagulant Injection Vault and end 5-feet from the WTP.
2. BASIS OF PAYMENT Payment for “12-inch Steel MW Pipe” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 12-inch diameter steel pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 12-inch diameter steel pipe and fittings, CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; fence removal and replacement, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

BB. BID ITEM NO. A29 – “12-INCH STEEL RW PIPE”

1. METHOD OF MEASUREMENT “12-inch Steel RW Pipe” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor

shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the buttstrap connection outside the Coagulant Injection Vault and end 5-feet from the WTP.

2. BASIS OF PAYMENT Payment for “12-inch Steel RW Pipe” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 12-inch diameter steel pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 12-inch diameter steel pipe and fittings, CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; fence removal and replacement, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

CC. BID ITEM NO. A30 – “10-INCH STEEL BRW PIPE”

1. METHOD OF MEASUREMENT “10-inch Steel BRW Pipe” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the 10” gate valve connected to the 42-inch diameter Steel Raw Water Pipe and end with the restrained coupling approximately 5-feet from the WTP.
2. BASIS OF PAYMENT Payment for “10-inch Steel BRW Pipe” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 10-inch diameter steel pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 10-inch diameter steel pipe and fittings, 10-inch gate vault with valve box; CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; fence removal and replacement, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

DD. BID ITEM NO. A31 – “42-INCH STEEL OZONATED WATER PIPE”

1. METHOD OF MEASUREMENT “42-inch Steel Ozonated Water Pipe” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the

horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the butt strap connection to the 42-inch diameter sleeve 5-feet from the WTP and end at the butt straps at the Clearwell.

2. **BASIS OF PAYMENT** Payment for “42-inch Steel Ozonated Pipe” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 42-inch diameter steel pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 42-inch diameter steel pipe and fittings, steel butt straps, CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; ; fence removal and replacement, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

EE. BID ITEM NO. A32 – “42-INCH STEEL FINISHED WATER PIPE”

1. **METHOD OF MEASUREMENT** “42-inch Steel Finished Water Pipeline” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the buttstrap connection outside the Clearwell and end at the buttstrap connection to the Pump Station.
2. **BASIS OF PAYMENT** Payment for “42-inch Steel Finished Water Pipeline” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 42-inch diameter steel pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 42-inch diameter steel pipe and fittings, CLSM pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline;, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

FF. BID ITEM NO. A33 – “CHAIN LINK FENCE AND SWING GATES”

1. **METHOD OF MEASUREMENT** “Chain Link Fence and Swing Gates” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.

2. BASIS OF PAYMENT Payment for “Chain Link Fence and Swing Gates” shall be considered full compensation for furnishing and installing the chain link fence and swing gates as identified on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, new 6’ Black Vinyl Coated Chain Link Fence, post excavation, concrete, gates, hardware, gate keepers; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

GG. BID ITEM NO. A34 – “2-INCH PE WATER SERVICE CONNECTION AND PIPE”

1. METHOD OF MEASUREMENT “2-inch PE Water Service Connection and Pipe” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by CONTRACTOR.
2. BASIS OF PAYMENT Payment for “2-inch PE Water Service Connection and Pipe” shall be considered full compensation for furnishing and installing the 2-inch diameter PE water service pipe as identified on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; installing the 2-inch polyethylene pipe and fittings, meter setting, meter box; pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning, flushing, and testing); connection to existing pipe, provisions for testing the pipeline; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

HH. BID ITEM NO. A35 – “4-INCH PE NATURAL GAS PIPE (DOMINION ENERGY)”

1. METHOD OF MEASUREMENT “4-inch PE Natural Gas Pipe (Dominion Energy)” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the connection to the existing 6-inch natural gas pipe and end at the connection to the new gas flow meter assembly installed by Dominion Energy.
2. BASIS OF PAYMENT Payment for “4-inch PE Natural Gas Pipe (Dominion Energy)” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the 4-inch diameter PE pipe to make a functional system including, but not limited to, pavement saw cutting and removal, excavation, dewatering, shoring; coordination of installation the 4-inch polyethylene pipe and fittings and connection to the existing 6-inch diameter pipe by Dominion Energy, sand pipe zone backfill, trench zone backfill,

compaction, removal and disposal of excess excavated material; concrete pad for meter assembly; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

II. BID ITEM NO. A36 – “SITE PE NATURAL GAS PIPING”

1. METHOD OF MEASUREMENT “Site PE Natural Gas Piping” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor. Measurement shall begin at the new gas meter assembly (installed by Dominion Energy) and end at the connections to the WTP facility and at the connection to each of the generators.
2. BASIS OF PAYMENT Payment for “Site PE Natural Gas Piping” shall be considered full compensation for furnishing and installing the natural gas piping on the site as identified on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, excavation and shoring; installation the 4-inch diameter and 2-inch diameter polyethylene pipe and fittings, 2-inch diameter HDPE ball valve, tracer wire, 2-inch diameter riser and appurtenances, 4-inch diameter risers and appurtenances; sand pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, testing and commissioning; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

JJ. BID ITEM NO. A37 – “CHEMICAL SOLUTION & SAMPLING PIPING AND VAULTS”

1. METHOD OF MEASUREMENT “Chemical Solution & Sampling Piping and Vaults” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor. Measurement shall begin at the connection to the WTP facility and end at the connections to the Clearwell and High Service Pump Station.
2. BASIS OF PAYMENT Payment for “Chemical Solution & Sampling Piping and Vaults” shall be considered full compensation for furnishing and installing the chemical solution and sampling piping and vaults as identified on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, excavation and shoring; 4-inch diameter casing pipes, chemical solution and sampling tubing and pipes, valves, and fittings; precast concrete vaults, ring and covers, polyethylene manhole steps, pipe supports; sand pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, testing and commissioning; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

KK. BID ITEM NO. A38 – “6-INCH PVC MISCELLANEOUS STORM DRAIN PIPING”

1. **GENERAL** This item includes the three 6-inch diameter storm drain pipes connecting the roof drains from the WTP, Administration Building, and High Service Pump Station to the site storm drain piping including typical connection detail C021 on Sheet 99-C706.
 2. **METHOD OF MEASUREMENT** “6-inch PVC Miscellaneous Storm Drain Piping” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
 3. **BASIS OF PAYMENT** Payment for “6-inch PVC Miscellaneous Storm Drain Piping” shall be considered full compensation for furnishing and installing the storm drain pipes as identified on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to, excavation and shoring; 6-inch diameter PVC SDR 35 pipe and fittings; precast boxes and lids; pipe zone backfill, trench zone backfill, compaction, removal and disposal of excess excavated material, testing and commissioning; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.
- LL. BID ITEM NO. A39 – “CONCRETE RETAINING WALL AND CMU SCREEN WALL”
1. **METHOD OF MEASUREMENT** “Concrete Retaining Wall and CMU Screen Wall” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
 2. **BASIS OF PAYMENT** Payment for “Retaining Wall and CMU Screen Wall” shall be considered full compensation for furnishing and installing the concrete retaining wall, 48-inch high PVC coated chain link fence, and 6-foot high CMU wall as identified on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; excavation, cast-in-place concrete, rebar, forms; 4-inch HDPE perforated drain pipe, non-woven geotextile fabric, and drain rock; native material backfill and compaction, fence posts, fabric, tension wires, and all fence appurtenant items; CMU block, rebar, mortar, precast concrete cap; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the retaining wall and CMU screen wall as herein described and as shown on the Contract Drawings.
- MM. BID ITEM NO. A40 – “LARGE BLOCK RETAINING WALL”
1. **METHOD OF MEASUREMENT** “Large Block Retaining Wall” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
 2. **BASIS OF PAYMENT** Payment for “Large Block Retaining Wall” shall be considered full compensation for furnishing and installing the large block retaining wall, 48-inch high PVC coated chain link fence as identified on the Contract

Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; excavation, cast-in-place concrete, rebar, forms; native material backfill and compaction, fence posts, fabric, tension wires, and all fence appurtenant items; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the retaining wall and fence as herein described and as shown on the Contract Drawings.

NN. BID ITEM NO. 41 – “CONCRETE GENERATOR PADS AND SLAB-ON-GRADE”

1. METHOD OF MEASUREMENT “Concrete Generator Pads and Slab-on-Grade” shall not be measured but shall be paid for on a lump sum unit price basis for the construction of the concrete slab and concrete pads, including all components required on the Contract Drawings and in the Specifications.
2. BASIS OF PAYMENT Payment for “Concrete Generator Pads and Slab-on-Grade” shall be made at the contract unit lump sum bid price for completion of all work as shown on the Contract Drawings and as specified herein, and shall be considered complete compensation for all labor, equipment, and materials necessary, including but not limited to subgrade preparation and compaction; furnishing, installing and compaction of untreated base course material; furnishing, forming and installing concrete and steel reinforcement; expansion boards, sealant; removing forming; saw cutting, curing and all other operations and materials required to complete this portion of the work as required by specifications and as shown on the Contract Drawings.

OO. BID ITEM NO. A42 – “1,000 kW NATURAL GAS GENERATORS”

1. METHOD OF MEASUREMENT “1,000 kW Natural Gas Generators” shall be measured by each 1,000 kW Generator furnished, tested, installed, and O&M materials provided according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “1,000 kW Natural Gas Generators” shall be paid at the contract unit bid price per each listed in the bidder’s proposal and shall be considered full compensation for all work completed under this bid item as shown on the Contract Drawings and as specified herein. Payment shall include, but not be limited to all labor, materials, and equipment for furnishing and installing the new 1,000 kW generators, generator paralleling equipment, automatic transfer switches, load bank, stainless steel epoxy anchor bolts, mounting to concrete pads, buried conduits and wiring, connections, testing, and all other related items as shown on the Contract Drawings not paid elsewhere for a complete and operable backup emergency generator system.

PP. BID ITEM NO. A43 – “DRAIN VAULT AND EMERGENCY OVERFLOW BOX”

1. METHOD OF MEASUREMENT Measurement for “Drain Vault and Emergency Overflow Box” shall be based on percentage of work completed for the project according to the amount defined in the Bid Schedule.
2. BASIS OF PAYMENT Payment for “Drain Vault and Emergency Overflow Box” shall be made at the contract lump sum bid price, including all components required in the Contract Drawings and Specifications. Payment shall be considered complete compensation for all work performed.
 - a. Payment shall include construction of the drain vault, with all associated facilities including but not limited to all labor, equipment, and materials; excavation, dewatering, foundation preparation; compacted drain rock wrapped in filter fabric; vents and inline exhaust fan; furnishing, placement, and installation of all concrete form work, reinforcement, shoring, concrete materials, curing, removal of forms; waterproof membrane with protection board; hatches; painting; ladder, galvanized steel stairs and railing, galvanized steel grating and supports; sump and sump pump; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings.
 - b. Payment shall include 8-inch diameter ductile iron Class 53 inlet piping and solid sleeve fittings from 2-feet outside of the Clearwell to and through the vault; all other piping and fittings inside the vault; 8-inch diameter ductile iron Class 53 discharge pipe and fittings through the vault to and including all piping at the Emergency Overflow Box as shown on the Contract Drawings. Payment shall also include all items referenced in the Drain Vault Pipe, Valve, Fitting, and Pump Schedules on Sheet 20-D601 of the Contract Drawings, including but not limited to gate valves, centrifugal pump; sump pump with valves, hose bibb, and all piping to the Emergency Overflow Box; transmitters; pipe supports; and all other interior piping in the drain vault and emergency overflow structures; all labor, equipment, and materials; furnishing and installing the pipe and associated piping; painting all pipes, valves, and fittings, etc.; restraints on all valves and fittings and on pipeline joints where designated on the Contract Drawings; commissioning of drain vault and emergency overflow box and piping (including cleaning and flushing, disinfection and pressure testing); and all other incidentals and appurtenances not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings. Payment shall be considered complete compensation for all work performed.
 - c. Payment shall include construction of the emergency overflow box, with all associated facilities including but not limited to all labor, equipment, and materials; excavation, dewatering, foundation preparation; untreated base course under box; furnishing, placement, and installation of all concrete form work, reinforcement, shoring, concrete materials, curing, removal of forms;

grates; pipe connection to vault; grout on floor; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings.

QQ. BID ITEM NO. A44 – “SITE BACKFILL, GRADING, AND COMPACTION”

1. METHOD OF MEASUREMENT “Site Backfill and Compaction” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “Site Backfill and Compaction” shall be made at the contract lump sum bid price for backfilling and compacting the site as shown on the Contract Drawings and as specified herein. Payment shall include furnishing all labor, materials and equipment including, but not be limited to, importing common fill material, placing, grading, and compacting; and all other related items as shown on the Contract Drawings not paid elsewhere.

RR. BID ITEM NO. A45 – “SITE CONCRETE ENTRANCES”

1. METHOD OF MEASUREMENT “Site Concrete Entrances” shall be paid for each entrances completed according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “Site Concrete Entrances” shall be made at the contract lump sum bid price for installation of the two new concrete entrances at the site as shown on the Contract Drawings and as specified herein. Payment shall include furnishing all labor, materials and equipment including, but not be limited to, saw cutting existing pavement and curb and gutter, demolition and disposal of material; providing, placing, and compacting untreated base course material; concrete forms, steel reinforcement, concrete, concrete curing and finishing, AC pavement restoration; and all other related items as shown on the Contract Drawings not paid elsewhere.

SS. BID ITEM NO. A46 – “FREEDOM BLVD CONCRETE SIDEWALK”

1. METHOD OF MEASUREMENT “Freedom Blvd Concrete Sidewalk” shall be measured according to the lineal foot of concrete sidewalk acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed sidewalk. This item shall include the additional width as shown at each end to transition to the existing sidewalk.
2. BASIS OF PAYMENT Payment for “Freedom Blvd Concrete Sidewalk” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the concrete sidewalk including, but not limited to, saw cutting existing sidewalk, demolition and disposal of material;

providing, placing, and compacting untreated base course material; concrete forms, concrete, concrete curing and finishing; expansion joint filler material, contraction joint saw cuts; and all other related items as shown on the Contract Drawings not paid elsewhere.

TT. BID ITEM NO. A47 – “SITE CONCRETE CURB AND GUTTER”

1. METHOD OF MEASUREMENT “Site Concrete Curb and Gutter” shall be measured according to the lineal foot of concrete curb and gutter acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed curb and gutter.
2. BASIS OF PAYMENT Payment for “Site Concrete Curb and Gutter” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the concrete curb and gutter including, but not limited to, providing, placing, and compacting untreated base course material; concrete forms, concrete, concrete curing and finishing; expansion joint filler material, contraction joint saw cuts; and all other related items as shown on the Contract Drawings not paid elsewhere.

UU. BID ITEM NO. A48 – “SITE CONCRETE SLAB-OB-GRADE”

1. METHOD OF MEASUREMENT “Site Concrete Slab-on-Grade” shall be measured according to the square foot of concrete slab-on-grade acceptably installed as shown on the Contract Drawings and in the Specifications.
2. BASIS OF PAYMENT Payment for “Site Concrete Slab-on-Grade” shall be paid for at the contract unit bid price per square foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the concrete slab-on-grade including, but not limited to, providing, placing, and compacting untreated base course material; concrete forms, steel reinforcement, concrete, concrete curing and finishing; expansion joint filler material, contraction joint saw cuts; and all other related items as shown on the Contract Drawings not paid elsewhere.

VV. BID ITEM NO. A49 - “SITE AC PAVEMENT”

1. METHOD OF MEASUREMENT “AC Pavement Restoration” (including UBC) shall be measured by the Square Yard and shall include furnishing and installing the 3” asphalt and 8” roadbase (UBC), including preparation of the surface and roadbase (UBC) for the pavement in the existing parking area removed as required for installation of the 42-inch HDPE Pipe.
2. BASIS OF PAYMENT Payment for “AC Pavement Restoration” (including UBC) shall be considered full compensation for all work completed under this bid item and shall be paid for at the contract unit square yard price. Work shall include all labor, equipment, and materials, including but not limited to final grading,

furnishing and installing the roadbase (UBC) and asphalt, saw cutting, compaction, and all other operations and materials required to complete the parking area pavement as herein described and as shown on the drawings be made at the contract unit lump sum bid price for completion of the work as shown on the Contract Drawings and specified herein.

WW. BID ITEM NO. 50 – “SITE LIGHTING AND SECURITY CAMERAS”

1. METHOD OF MEASUREMENT “Site Lighting and Security Cameras” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “Site Lighting and Security Cameras” shall be made at the contract lump sum bid price to install the site lighting and security cameras as shown on the Contract Drawings and Specifications. Payment shall be considered complete compensation for all labor performed and materials and equipment required. Payment shall include furnishing all labor, materials and equipment including, but not be limited to, excavation, installation of concrete bases, electrical conduits, light and/or camera poles, lights, cameras wiring; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings and Specifications.

XX. BID ITEM NO. 51 – “SITE CONTINUOUS LOUVER BLADE SCREEN WALLS”

1. METHOD OF MEASUREMENT “Site Continuous Louver Blade Screen Walls” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “Site Continuous Louver Blade Screen Walls” shall be made at the contract lump sum bid price to install the louver screen walls and gates shown on the Contract Drawings and Specifications. Payment shall be considered complete compensation for all labor performed and materials and equipment required. Payment shall include furnishing all labor, materials and equipment including, but not be limited to, excavation, concrete, posts, continuous louver blade screen walls, gate hinges, hardware; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings and Specifications.

YY. BID ITEM NO. A52 - "SITE LANDSCAPING AND IRRIGATION SYSTEM”

1. METHOD OF MEASUREMENT “Site Landscaping and Irrigation System” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “Landscaping and Irrigation System” shall be made at the contract lump sum bid price, including all required grading to match

the intent of the Contract Drawings and Specifications. Payment shall be considered complete compensation for all labor performed and materials and equipment required. Payment shall include general grading cleanup to make a smooth transition to existing structures and surrounding terrain, imported topsoil; repair of any damaged existing concrete sidewalks, curbs, or gutters; design and installation of irrigation system including connection to irrigation pump discharge pipe at the Coagulant Injection Vault, excavation, irrigation pipe and fittings, sprinklers and emitters, filter, irrigation controller, wiring; furnishing and planting all trees and shrubs, soil amendments, fertilizer; and all other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings and Specifications.

ZZ. BID ITEM NO. A53 - "RIVER DIVERSION WATER QUALITY SENSORS"

1. METHOD OF MEASUREMENT "River Diversion Water Quality Sensors" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "River Diversion Water Quality Sensors" shall be made at the contract lump sum bid price and as shown on sheet 05-X601. Payment shall be considered complete compensation for all labor performed and materials and equipment required. Payment shall include, but is not limited to, furnishing and installing the BOD/COD/DOC/TOC/NO3/UVT-254 and Turbidity water quality sensors, junction box, controller, mounting brackets, sensor holders, stainless steel chains, stainless steel bracket, conductors, cables, and other incidentals not specifically paid for in other bid items but which are shown or otherwise required to complete the installation as herein described and as shown on the Contract Drawings and Specifications.

AAA.BID ITEM NO. A54 - "ALLOWANCE FOR LABORATORY EQUIPMENT"

1. METHOD OF MEASUREMENT "Allowance for Laboratory Equipment" shall be paid for on a actual cost basis according to the amount defined in the Bid Schedule and for actual costs paid by the Contractor for equipment purchased.
2. BASIS OF PAYMENT Payment for "Allowance for Laboratory Equipment" shall be made at the actual cost required to purchase the equipment. Payment shall be considered complete compensation for all labor performed and materials and equipment required. Payment shall include purchasing the following or Engineer and Owner approved equivalent items.

Item	Design Basis Manufacturer/Model
60 L Incubator	Fisherbrand Isotemp Microbiological Incubator Catalog No: 15-103-0513
Colilert Tray Sealer	IDEXX Quanti-Tray Sealer Plus
60 L Drying Oven	Fisherbrand Isotemp General Purpose Heating and Drying Ovens Catalog No: 15-103-0503
Colilert Viewing Cabinet	IDEXX Viewing UC Cabinet
TOC Analyzer W/ Autosampler	Shimadzu TOC-L _{CSN} ASI-L Autosampler
Ion Chromatograph W/ Autosampler	ThermoScientific Dionex AS-DV
pH Meter	Hach HQ440D pH Meter Package with Electrode and Stand
Turbidity Meter	HachTL23 Series Laboratory Turbidimeters
Desktop Spectrophotometer	Hach DR3900
Full Height Lab Sample Refrigerator	Fisherbrand Isotemp General Purpose Lab Refrigerator Catalog No: FBG30RPGA
UC Reagent Lab Refrigerator	Fisherbrand Undercounter Refrigerator Catalog No: FBG505GA
UC Lab Glassware Dishwasher	Labcono 41-100-1000 FlaskScrubber Glassware Washers

Items not listed in the table but shown on the Contract Drawings and Specifications shall be included in Bid Item No. 15 above. Payment shall include any labor by the suppliers for setup and training.

BBB. BID ITEM NO. A55 - "ALLOWANCE FOR TOOLS"

1. METHOD OF MEASUREMENT "Allowance for Tools" shall be paid for on a actual cost basis according to the amount defined in the Bid Schedule and for actual costs paid by the Contractor for tools purchased.
2. BASIS OF PAYMENT Payment for "Allowance for Tools" shall be made at the actual cost required to purchase the Tools. Payment shall be considered complete compensation for all labor performed and materials and equipment required. Payment shall include purchasing the tools requested by the Owner.

CCC. BID ITEM NO. 56 – “SYSTEM TESTING AND START-UP”

1. METHOD OF MEASUREMENT “System Testing and Start-up” shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for “System Testing and Start-up” shall be considered full compensation for start-up and testing of the Water Treatment Plant as shown on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials including, but not limited to; providing personnel to assist in start-up, testing and commissioning; manufacturer services representatives; and all other incidentals required for complete system testing and start-up as specified herein and shown on the Contract Documents.

3.03 BID SCHEDULE B

A. BID ITEM NO. B1 - "MOBILIZATION / DEMOBILIZATION"

1. GENERAL This bid item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations not normally attributed to any other single bid item within this schedule. This shall include, but is not limited to, work described or enumerated in Section 01 71 13 - Mobilization. “Mobilization/Demobilization” shall not exceed 8% of the sum total of Bid Items B2 through A20.
2. METHOD OF MEASUREMENT “Mobilization / Demobilization” shall not be measured, but shall be paid for on a lump sum basis for the completion of the work as required in Section 01 71 13 - Mobilization.
3. BASIS OF PAYMENT Payment for “Mobilization / Demobilization” will be made at the contract lump sum bid price. Payments will be made in accordance with the following schedule:
 - a. When 5% of the original contract amount is earned, 40% of the amount bid for mobilization will be paid.
 - b. When 15% of the original contract amount is earned, an additional 20% for a total of 60% of the amount bid for mobilization will be paid.
 - c. When 40% of the original contract amount is earned, an additional 30% for a total of 90% of the amount bid for mobilization will be paid.
 - d. When 50% of the original contract amount is earned, an additional 10% for a total of 100% of the amount bid for mobilization will be paid.

B. BID ITEM NO. B2 - "SITE SAFETY & PEDESTRIAN AND TRAFFIC CONTROL"

1. GENERAL This bid item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations related to site and pedestrian safety, site security, and pedestrian and vehicle traffic control.
2. METHOD OF MEASUREMENT "Site Safety & Pedestrian and Traffic Control" shall not be measured, but shall be paid for on a lump sum basis for the completion of the work.
3. BASIS OF PAYMENT Payment for "Site Safety & Pedestrian and Traffic Control" will be made at the contract lump sum bid price. Payments will be made in accordance with the following schedule:
 - a. When 5% of the original contract amount is earned, 50% of the amount bid for mobilization will be paid.
 - b. When 50% of the original contract amount is earned, an additional 30% for a total of 90% of the amount bid for mobilization will be paid.
 - c. When 90% of the original contract amount is earned, an additional 20% for a total of 100% of the amount bid for mobilization will be paid.

C. BID ITEM NO. B3 - "QUALITY CONTROL AND MATERIALS TESTING"

1. GENERAL This item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations associated with Quality Control and Materials Testing. This item shall include, but is not limited to, work described or enumerated in Section 01 45 33 and Section 01 43 00.
2. METHOD OF MEASUREMENT "Quality Control and Materials Testing" shall be measured based on the percentage of work completed for the project according to the amount defined in the Bid Schedule.
3. BASIS OF PAYMENT Payment for "Quality Control and Materials Testing" will be made at the contract lump sum bid price as shown and accepted by Owner and Engineer in the Bid Schedule. Payments will be made in accordance with the following schedule:
 - a. When 10% of the original contract amount is earned, 25% of the amount bid for material testing will be paid.
 - b. When 25% of the original contract amount is earned, an additional 25% for a total of 50% of the amount bid for material testing will be paid.
 - c. When 50% of the original contract amount is earned, an additional 25% for a total of 75% of the amount bid for material testing will be paid.

- d. When 75% of the original contract amount is earned, an additional 25% for a total of 100% of the amount bid for material testing will be paid.

D. BID ITEM NO. B4 - "CONSTRUCTION SURVEYING"

1. GENERAL This item is provided to cover the Contractor's cost for general and miscellaneous responsibilities and operations associated with Construction Surveying, which shall be performed by a registered professional land surveyor.
2. METHOD OF MEASUREMENT "Construction Surveying" shall be measured based on the percentage of work completed for the project according to the amount defined in the Bid Schedule.
3. BASIS OF PAYMENT Payment for "Construction Surveying" will be made at the contract lump sum bid price as shown and accepted by Owner and Engineer in the Bid Schedule. Payments will be made in accordance with the following schedule:
 - a. When 5% of the original contract amount is earned, 75% of the amount bid for construction surveying will be paid.
 - b. When 75% of the original contract amount is earned, an additional 25% for a total of 100% of the amount bid for construction surveying will be paid.

E. BID ITEM NO. B5 - "DEVELOPMENT AND IMPLEMENTATION OF SWPPP"

1. METHOD OF MEASUREMENT "Development and Implementation of SWPPP (Storm Water Pollution Prevention Plan)" shall be paid for on a lump sum basis for preparation and implementation of the approved Plan as completed by the Contractor.
2. BASIS OF PAYMENT "Development and Implementation of the SWPPP" shall be paid for at the lump sum bid price as a percentage of work completed. Payment shall be considered full compensation for completion of an approved plan and implementation thereof. The implementation shall include installing and maintaining Best Management Practices defined in the SWPPP, and monitoring and maintaining the requirements of the SWPPP, preparation of required reports, and meeting all other requirements of the Utah Division of Water Quality.

F. BID ITEM NO. B6 – "6-INCH WATERLINE LOOP"

1. METHOD OF MEASUREMENT "6-inch Waterline Loop" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "6-inch Waterline Loop" shall be made at the contract unit lump sum bid price for installing the 6-inch waterline loop shown at Sta. 10+06 on the Contract Drawings. Payment shall be considered complete compensation for furnishing all labor, equipment, and materials necessary to remove

the existing 6" pipeline and install the new 6" waterline loop including, but not limited to, excavation, dewatering, shoring; cutting and removing and disposing of existing 6" pipeline, installing new 6" pipe and fittings, reconnecting tracer wire, thrust blocks, restraints, sand pipe zone backfill, native and/or imported trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning and flushing, disinfection and pressure testing); protection of buried utilities, potholing as needed; and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

G. BID ITEM NO. B7 – "36-INCH DUCTILE IRON TRANSMISSION PIPELINE"

1. METHOD OF MEASUREMENT "36-inch Ductile Iron Transmission Pipeline" shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the bolted sleeve coupling 2-feet outside the Valve Vault (Sta. 1+60) and continue to the flange coupling adapter connection at Sta. 10+30, continue at the flange coupling adapter connection at Sta. 11+19 and continue to the flange coupling adapter at Sta. 18+26, continue at the flange coupling adapter at Sta. 20+30 and end at the connection to the existing 36-inch pipeline near Canyon Road (Sta. 26+03).
2. BASIS OF PAYMENT Payment for "36-inch Ductile Iron Transmission Pipeline" shall be paid for at the contract unit bid price per lineal foot listed in the bidder's proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnishing and install the ductile iron pipeline to make a functional system, including, but not limited to excavation, dewatering, shoring; installing the pipe, (2) flange coupling adapters, DI long sleeve, joint restraints, tracer wire and magnetic marker tape, sand pipe zone backfill, native and/or imported trench zone backfill, compaction, removal and disposal of excess excavated material; protection of buried utilities, potholing as needed; restoration of all surface improvements (excluding asphalt and base course) including but not limited to chain link fence, concrete curb, gutter, sidewalk, driveways, sodded areas, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings. Payment for commissioning of these sections of the pipeline including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.

H. BID ITEM NO. B8 - "36-INCH DUCTILE IRON TEES AND 12" BUTTERFLY VALVES"

1. METHOD OF MEASUREMENT "36-inch Ductile Iron Tees and 12" Butterfly Valves" shall be for each 36-inch ductile iron tee and 12" butterfly valve installed by the Contractor.

2. BASIS OF PAYMENT Payment for “36-inch Ductile Iron Tee and 12” Butterfly Valve” shall be made per each 36-inch ductile iron reducing tee, 12” butterfly valve and 12” MJ plug as shown on the Contract Drawings to install complete, including all appurtenances and related work. Payment shall include all cost for furnishing, material, and labor to install the ductile iron tee, 12” butterfly valve, 12” MJ plug, and appurtenances not otherwise paid for in other bid items, including, but not limited to including cleaning, aligning, and installing the ductile iron tee, valve, plug, and restraints. Costs associated with excavations and backfilling, for the installation shall be measured and paid for with Bid Item No. B7. Payment for commissioning of these sections of the pipeline including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.
- I. **BID ITEM NO. B9 - "36-INCH DUCTILE IRON 22.5-DEG ELBOWS"**
 1. METHOD OF MEASUREMENT “36-inch Ductile Iron 22.5-deg Elbows” shall be for each 36-inch ductile iron 22.5-deg elbow installed by the Contractor.
 2. BASIS OF PAYMENT Payment for “36-inch Ductile Iron 22.5-deg Elbows” shall be made per each 36-inch ductile iron 22.5-deg elbow as shown on the Contract Drawings to install complete, including all appurtenances and related work. Payment shall include all cost for furnishing, material, and labor to install the ductile iron elbow and appurtenances not otherwise paid for in other bid items, including, but not limited to including cleaning, aligning, and installing the ductile iron elbow and restraints. Costs associated with excavations and backfilling for the elbow installation shall be measured and paid for with Bid Item No. B7. Payment for commissioning of the pipeline including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.
 - J. **BID ITEM NO. B10 - "36-INCH DUCTILE IRON 45-DEG ELBOWS"**
 1. METHOD OF MEASUREMENT “36-inch Ductile Iron 45-deg Elbows” shall be for each 36-inch ductile iron 22.5-deg elbow installed by the Contractor.
 2. BASIS OF PAYMENT Payment for “36-inch Ductile Iron 45-deg Elbows” shall be made per each 36-inch ductile iron 45-deg elbow as shown on the Contract Drawings to install complete, including all appurtenances and related work. Payment shall include all cost for furnishing, material, and labor to install the ductile iron elbow and appurtenances not otherwise paid for in other bid items, including, but not limited to including cleaning, aligning, and installing the ductile iron elbow and restraints. Costs associated with excavations and backfilling for the elbow installation shall be measured and paid for with Bid Item No. B7. Payment for commissioning of the pipeline including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.
 - K. **BID ITEM NO. B11 – “TRANSMISSION PIPELINE TRENCH OVER-EXCAVATION AND STABILIZATION”**

1. METHOD OF MEASUREMENT "Transmission Pipeline Trench Over-Excavation and Stabilization" shall be measured by the Cubic Yard for excavation and removal of soils and acceptable placement of trench bed stabilization material according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "Transmission Pipeline Trench Over-Excavation and Stabilization" shall be considered full compensation for all work completed under this bid item and shall be paid for at the contract unit cubic yard price. Payment shall be considered complete compensation for all labor, materials and equipment required for excavation and disposal of unsuitable trench bed material, dewatering, shoring, trench bed stabilization backfill, compaction, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings.

L. BID ITEM NO. B12 - "AIR VALVE VAULT"

1. METHOD OF MEASUREMENT "Air Valve Vault" shall be for each air valve vault assembly installed by the Contractor.
2. BASIS OF PAYMENT Payment for "Air Valve Vault" shall be made per each air valve vault assembly as shown on the Contract Drawings to install complete, including all valves and appurtenances and related work. Payment shall include all cost for furnishing, material and labor to install the air valve vault assembly and appurtenances not otherwise paid for in other bid items, including, but not limited to all labor, materials, and equipment for furnishing and installing the precast vault, including utility potholing, excavations, shoring, dewatering, structural fill, non-woven geotextile fabric, backfilling and compaction; manhole lids, manhole rungs; air valve and isolation valves, vent piping, vent cover, tee, and flange coupling adapters. Bid item does not include costs for associated 36-inch pipeline connections within vault, which shall be measured and paid for under Bid Item No. B7. Costs for cleaning, testing, and disinfecting the piping and valves within the vault shall also be paid for under Bid Item No. B20.

M. BID ITEM NO. B13 - "VALVE VAULT"

1. METHOD OF MEASUREMENT "Valve Vault" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "Valve Vault" shall be made at the contract lump sum bid price for the valve vault work as shown on the Contract Drawings and as specified herein. Payment shall include, but not be limited to, all labor, materials, and equipment for furnishing and installing the cast-in-place vault, including utility potholing, excavations, shoring, dewatering, structural fill, non-woven geotextile fabric, forming and curing, concrete and reinforcements, and backfilling and compaction; heavy duty access hatches, ladders; vents, air valve and isolation valves, vent stand, and associated piping; butterfly valves; pipe and fittings inside

vault and to first jointed connection outside vault; and all other related items as shown on the Contract Drawings not paid elsewhere. Costs for cleaning, testing, and disinfecting the piping and valves within the vault shall also be paid for under Bid Item No. B20.

N. BID ITEM NO. B14 - "20-INCH CONNECTION"

1. METHOD OF MEASUREMENT "20-inch Connection" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "20-inch Connection" shall be made at the contract lump sum bid price for the connection to the existing 20-inch water pipeline as shown on the Contract Drawings and as specified herein. Payment shall include, but not be limited to, all labor, materials, and equipment for furnishing and installing the 20-inch waterline connection, including utility potholing, excavations, shoring, dewatering, cutting existing pipeline, nonwoven filter fabric, backfilling and compaction; all 20-inch pipeline and fittings; tracer wire and warning tape; cleaning, disinfection (including disinfection of existing 20-inch waterline) and pressure testing; and all other related items as shown on the Contract Drawings not paid elsewhere.

O. BID ITEM NO. B15 – "36-INCH STEEL PIPELINE (STATIONS 1+24 TO 1+41)"

1. METHOD OF MEASUREMENT "36-inch Steel Pipeline (Stations 1+24 to 1+41)" shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the beginning of the transmission main at Sta. 1+24 and end with the butt strap connection outside the Valve Vault at Sta. 1+41.
2. BASIS OF PAYMENT Payment for "36-inch Steel Pipeline (Stations 1+24 to 1+41)" shall be paid for at the contract unit bid price per lineal foot listed in the bidder's proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the welded steel pipeline to make a functional system, including, but not limited to excavation, dewatering, shoring; installing the steel pipe and fittings, welding, coating and lining repairs, restraints, dual coupling harness assembly, tracer wire and magnetic marker tape, CLSM pipe zone backfill, native and/or imported trench zone backfill, compaction, removal and disposal of excess excavated material; protection of buried utilities, potholing as needed; restoration of all surface improvements including but not limited to concrete curb, gutter, sidewalk, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings. Payment for commissioning of this section of the pipeline

including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.

P. BID ITEM NO. B16– “36-INCH STEEL PIPELINE (STATIONS 10+23 TO 11+19)”

1. METHOD OF MEASUREMENT “36-inch Steel Pipeline (Stations 10+23 to 11+19)” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the beginning of the insulated flange connection at Sta. 10+23 and end with insulated flange connection at Sta. 11+19.
2. BASIS OF PAYMENT Payment for “36-inch Steel Pipeline (Stations 10+23 to 11+19)” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the welded steel pipeline to make a functional system, including, but not limited to; excavation, dewatering, shoring; installing the steel pipe and fittings, welding, coating and lining repairs, restraints, dual coupling harness assembly, tracer wire and magnetic marker tape, CLSM pipe zone backfill, native and/or imported trench zone backfill, compaction, removal and disposal of excess excavated material; protection of buried utilities, potholing as needed; restoration of all surface improvements including but not limited to concrete curb, gutter, sidewalk, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings. Payment for commissioning of this section of the pipeline including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.

Q. BID ITEM NO. B17 – “36-INCH STEEL PIPELINE (STATIONS 18+26 TO 20+30)”

1. METHOD OF MEASUREMENT “36-inch Steel Pipeline (Stations 18+26 to 20+30)” shall be measured according to the lineal foot of pipeline acceptably installed as shown on the Contract Drawings and in the Specifications. Measurement shall be along the horizontal centerline of the acceptably installed pipeline. Pipe in vertically or vertically diagonal directions will only be measured in the horizontal plane. The Contractor shall include associated cost for any such pipe as the horizontal cost per foot. Measurement shall start at the beginning of the insulated flange connection at Sta. 18+26 and end with insulated flange connection at Sta. 20+30.
2. BASIS OF PAYMENT Payment for “36-inch Steel Pipeline (Stations 18+26 to 20+30)” shall be paid for at the contract unit bid price per lineal foot listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the welded steel pipeline

to make a functional system, including, but not limited to; excavation, dewatering, shoring; installing the steel pipe and fittings, welding, coating and lining repairs, restraints, tracer wire and magnetic marker tape, CLSM pipe zone backfill, imported trench zone backfill, compaction, removal and disposal of excess excavated material, commissioning of pipeline (including cleaning and flushing, disinfection and pressure testing); protection of buried utilities, potholing as needed; grading, furnishing and installing the roadbase (UBC) and asphalt, saw cutting, compaction, and all other operations and materials required to complete the asphalt restoration; restoration of all surface improvements including but not limited to concrete curb, gutter, sidewalk, UDOT permitting and compliance, and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings. Payment for commissioning of this section of the pipeline including disinfecting and pressure testing shall be measured and paid for under Bid Item No. B20.

R. BID ITEM NO. B18 – “ASPHALT RESTORATION – FREEDOM BLVD & BYU PROPERTY”

- a. METHOD OF MEASUREMENT** “Asphalt Restoration – Freedom Blvd & BYU Property” shall be measured according to the square yardage of asphalt acceptably installed within Freedom Blvd and on BYU properties as shown on the Contract Drawings and in the Specifications.
- b. BASIS OF PAYMENT** Payment for “Asphalt Restoration – Freedom Blvd & BYU Property” shall be paid for at the contract unit bid price per square yardage listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the 5-inch thick asphalt and 8-inch thick base course, including but not limited to; saw cutting, addition asphalt removals beyond the trench excavations, grading, furnishing and installing the roadbase (UBC) and asphalt, compaction, and all other operations and materials required to complete the asphalt restoration as shown on the Contract Drawings.

S. BID ITEM NO. B19 – “ASPHALT RESTORATION – UNIVERSITY AVE”

- 1. METHOD OF MEASUREMENT** “Asphalt Restoration – University Ave” shall be measured according to the square yardage of asphalt acceptably installed within University Ave properties as shown on the Contract Drawings and in the Specifications.
- 2. BASIS OF PAYMENT** Payment for “Asphalt Restoration – University Ave” shall be paid for at the contract unit bid price per square yardage listed in the bidder’s proposal and shall be considered complete compensation for all labor, equipment, and materials necessary to furnish and install the 7-inch thick asphalt and 8-inch thick base course trench patch and the 2-inch thick mill and asphalt overlay, including but not limited to milling, saw cutting, grading, furnishing and installing the roadbase (UBC) and asphalt, micro-surfacing (if applicable), compaction, and

all other operations and materials required to complete the asphalt restoration as shown on the Contract Drawings per UDOT standards and acceptance. At CONTRACTOR'S option UDOT asphalt restoration shall be SMA or HMA with Micro-Surfacing.

T. BID ITEM NO. B20 - "36-INCH TRANSMISSION MAIN COMMISSIONING"

1. METHOD OF MEASUREMENT "36-inch Transmission Main Commissioning" shall be paid for on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
2. BASIS OF PAYMENT Payment for "36-inch Transmission Main Commissioning" shall be made at the contract lump sum bid price for the commissioning the 36-inch transmission main from Sta. 1+24 to Sta. 26+03 as shown on the Contract Drawings and as specified herein. Payment shall be considered complete compensation for all labor, equipment, and materials necessary to flush, clean, disinfect, and testing the pipeline to commission to as a functional system, including, but not limited to flushing, cleaning, disinfecting, pressure testing, repairs and retesting (if required) and all other operations and materials required to complete this portion of the work as herein described and as shown on the Contract Drawings. Payment shall also include furnishing, installing, and removing temporary blow-offs, valves, blind flanges, plugs, and fittings required to flush, test, and disinfect new pipeline.

3.04 BID SCHEDULE C

A. ADDITIVE/DEDUCTIVE BID ITEM NO. C1 – "BECK ELECTRIC ACTUATORS"

1. GENERAL This bid item is included to allow the Owner the opportunity to change from another electric actuator supplier to the Beck electric actuators. If Beck electric actuators are already included in the Contractors bid items in Bid Schedule A, then the amount listed in this Bid Item should be zero (no cost).
2. METHOD OF MEASUREMENT "Beck Electric Actuators" shall be measured on a lump sum basis according to the amount defined in the Bid Schedule and as completed by the Contractor.
3. BASIS OF PAYMENT Payment for "Beck Electric Actuators" shall be made at the contract shall be made at the contract lump sum bid price when approved by OWNER. Payment shall be considered complete compensation for all labor, equipment and materials, to replace all electric actuators (excluding actuators provided with the UF Membrane Filtration Units – Bid Item No. A11) in Bid Schedule A with Beck electric actuators and other incidental items to complete the installation as herein described and as shown on the Contract Drawings and Specifications.

3.05 BID SCHEDULE D

A. DEDUCTIVE ALTERNATE BID ITEM NO. D1 – "20 MGD CAPACITY PLANT"

1. GENERAL This item is provided to cover a reduction in Bid Schedule A Base Bid cost to change the treatment capacity of the WTP from 30 MGD to 20 MGD. Owner will evaluate and accept this item before the Notice of Award.
2. BASIS OF BID The lump sum amount provided for “20 MGD Capacity Plant” shall be calculated as follows:
 - a. The following equipment shall be deducted as part of this bid alternate. See contract drawings sheets “-D1” for locations of equipment to be excluded as part of this deduction.
 - (1) 10 Water Treatment Facility
 - (a) UF Feed Pump 10: PMP-0210-1
 - (b) UF Feed Pump 11: PMP-0211-1
 - (c) UF Feed Pump 12: PMP-0212-1
 - (d) UF Feed Pump 13: PMP-0213-1
 - (e) UF Strainer 10: STR-0210-2
 - (f) UF Strainer 11: STR-0211-2

b. Description of deduction at 10 Water Treatment Facility

- (1) Provide cost deduction to remove noted UF Feed Vertical Turbine Pumps including suction and discharge piping, expansion joints, all valves, expansion joint, pressure gauges, pressure switches, electrical and signal cabling, local disconnects, appurtenances, and motors. Provide and install blind flanges as needed on suction headers to facilitate installation of pump piping in the future. Pump cans shall be provided and installed. Install blind flanges on pump can suction connections and steel plates on the top of the cans. Conduit (without cabling) shall be provided and installed for future pump installation.
- (2) Provide cost deduction to remove noted UF Strainers including strainer hosing inlet and outlet piping and fittings, all valves and actuators, motors, pressure gauges and transmitters, electrical and signal cabling, local disconnects, and appurtenances. Install 3" floor penetrations at each strainer location for future backwash waste line. Conduit (without cabling) shall be provided and installed for future strainer installation.
- (3) Provide cost deduction to remove noted UF Membrane Filtration Skids including all piping and tubing and fittings, support frames, all valves and actuators, membrane modules, all analytical instruments, remote I/O panels, and appurtenances. Install appropriately sized floor penetrations for all piping connections from below and provide a steel plate at the penetration. Install appropriately sized blind flanges on the header pipes for the filtrate, backwash outlet, backwash inlet, air inlet, all chemical cleaning connections, and purge lines.
- (4) Provide cost deduction to remove piping and fittings to/from equipment to be removed, see Contract Drawings "-D1" for locations. For removed piping install blind flanges to allow for future installation of piping. For floor penetrations $\geq 3"$, install floor penetrations w/ steel cover plates for future installation.
- (5) Provide a cost deduction for removing Ozone Generator 2 from the Ozone Scope of Supply and associated piping, valves, instrumentation, and appurtenances. Provide space in the Ozone room for equipment in the future. Conduit (without cabling) shall be provided and installed for future generator installation.
- (6) Provide cost deduction to remove Backwash Recycle Pump 3 including suction and discharge piping and fittings, motor, flow control valve, isolation valves, pressure switch, expansion joint. Install a blind flange on the tee at Backwash Recycle Pump 3 suction and discharge. Conduit

(without cabling) shall be provided and installed for future pump installation.

- (7) Provide a deduction for removing 10-MCC-3 including all drives and associated electrical equipment. Provide space in the future for an additional MCC. Remove conductors but provide conduit for electrical equipment.
 - (8) Provide a reduction for removing Air Compressor 3 from the UF Manufacturer scope of supply including compressor, discharge piping, valves, instrumentation, and appurtenances. Conduit (without cabling) shall be provided and installed for future compressor installation.
 - (9) Provide cost deduction for removing items at the Water Treatment Facility including other incidentals not noted above no longer required for remove the noted equipment.
- c. Description of deduction at 20 Clearwell & Pump Station
- (1) Provide cost deduction to remove High Service Vertical Turbine Pump No. 5 including motor, and discharge head. Pump can and all suction piping shall be provided and installed. Install blind flange on the pump can. Remove all discharge pipe and valves and install blind flange on the main discharge header connection. Also remove Surge Tank No. 2 and butterfly valve (VLV-0417-2A) and replace with a blind flange.
 - (2) Provide cost deduction for removing items at the High Service Pump Station including VFDs, wiring, piping, valves, and other incidentals no longer required for removed High Service Vertical Turbine Pumps.
- d. Description of deduction for Electrical, Instrumentation and Control:
- (1) 10-MCC-3 shall be removed as part of the deduct including power and control cabling. All conduit shall be installed along with housekeeping pad for MCC.
 - (2) Remove connections for Ozone Generator 2 including disconnect, power and control cabling. All conduit shall be installed along with transformer rack.
 - (3) Remove connections for High Service Pump 5 including VFD, power and control cabling. All conduit shall be installed.
- e. Provide cost deductions summarized as follows:

PROPOSED SUBCONTRACTOR FORM

PART 1 - GENERAL

1.01 BIDDER

- A. Name: _____
- B. Address: _____

- C. Telephone Number: _____

1.02 CONSTRUCTION CONTRACT

- A. The Construction Contract is known as Provo River Water Treatment Plant Project, Bid No. PROVOEN202323202.

PART 2 - REPORT

2.01 SUBCONTRACTOR AND SUPPLIER REPORT

- A. Failure of the Bidder to specify a Subcontractor for any portion of the Work constitutes an agreement by the Bidder that the Bidder is fully qualified to perform that portion, and that Bidder shall perform that portion.
- B. Bidder will be fully responsible to Owner for the acts and omissions of Subcontractors and Suppliers and of persons either directly or indirectly employed by them, as Bidder is for the acts and omissions of persons employed by Bidder directly.
- C. Nothing contained in the Contract Documents shall create any contractual relationship between any Subcontractor or Supplier and the Owner. Bidder agrees each subcontract with Bidder's Subcontractor will disclaim any third party or direct relationship between Owner and any Subcontractor or Supplier.
- D. The names and addresses of the Subcontractors and Suppliers who will work under the terms of the Contract Documents and the estimated dollar amount of each subcontract (provide listed subcontractors and suppliers and those to provide services in excess of 2 percent of the Bid sum) are set forth as follows.

Table 1 – SCHEDULE A - BASE BID

SUBCONTRACTORS		
Name and Address	Nature and Extent of Work to be Sublet	Amount
1.	Electrical	
2.	Mechanical HVAC	
3.	Ground Improvements	
4.		
5.		
6.		
SUPPLIERS		
Name and Address	Nature and Extent of Work to be Sublet	Amount
1.	UF Membrane Systems	
2.	Ozone Generation System	
3.	Vertical Turbine Pumps and Motors	
4.	Surge Tanks	
5.		
6.		
7.		

PART 3 - EXECUTION

3.01 EFFECTIVE DATE

- A. Bidder executes this Subcontractor and Supplier report and declares it to be a supplement to the Bid and in effect as of _____, _____.

3.02 BIDDER'S SUBSCRIPTION

- A. Bidder's signature: _____
- B. Please print Bidder's name here: _____
- C. Title: _____

END OF SECTION

SECTION 00 45 15

FEDERAL REQUIREMENTS

This contract is subject to the requirements and regulations governing projects receiving Federal Funding. The funds for this project include a FEMA Building Resilience Infrastructure Communities (BRIC) Grant and therefore FEMA grant contract provisions outlined in the link here (https://www.fema.gov/sites/default/files/documents/fema_contract-provisions-guide_6-14-2021.pdf) and provided for reference as follows:

1.01 EQUAL EMPLOYMENT OPPORTUNITY

During the performance of this contract, the contractor agrees as follows:

- (1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, sexual orientation, gender identity, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion, sex, sexual orientation, gender identity, or national origin. Such action shall include, but not be limited to the following:

Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this nondiscrimination clause.

- (2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, or national origin.
- (3) The contractor will not discharge or in any other manner discriminate against any employee or applicant for employment because such employee or applicant has inquired about, discussed, or disclosed the compensation of the employee or applicant or another employee or applicant. This provision shall not apply to instances in which an employee who has access to the compensation information of other employees or applicants as a part of such employee's essential job functions discloses the compensation of such other employees or applicants to individuals who do not otherwise have access to such information, unless such disclosure is in response to a formal complaint or charge, in furtherance of an investigation, proceeding, hearing, or action, including an investigation conducted by the employer, or is consistent with the contractor's legal duty to furnish information.
- (4) The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers' representatives of the contractor's

commitments under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

- (5) The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.
- (6) The contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the administering agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.
- (7) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.
- (8) The contractor will include the portion of the sentence immediately preceding paragraph (1) and the provisions of paragraphs (1) through (8) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including sanctions for noncompliance:

Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the administering agency, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

The applicant further agrees that it will be bound by the above equal opportunity clause with respect to its own employment practices when it participates in federally assisted construction work: Provided, that if the applicant so participating is a state or local government, the above equal opportunity clause is not applicable to any agency, instrumentality or subdivision of such government which does not participate in work on or under the contract.

The applicant agrees that it will assist and cooperate actively with the administering agency and the Secretary of Labor in obtaining the compliance of contractors and subcontractors with the equal opportunity clause and the rules, regulations, and relevant orders of the Secretary of Labor, that it will furnish the administering agency and the

Secretary of Labor such information as they may require for the supervision of such compliance, and that it will otherwise assist the administering agency in the discharge of the agency's primary responsibility for securing compliance.

The applicant further agrees that it will refrain from entering into any contract or contract modification subject to Executive Order 11246 of September 24, 1965, with a contractor debarred from, or who has not demonstrated eligibility for, Government contracts and federally assisted construction contracts pursuant to the Executive Order and will carry out such sanctions and penalties for violation of the equal opportunity clause as may be imposed upon contractors and subcontractors by the administering agency or the Secretary of Labor pursuant to Part II, Subpart D of the Executive Order. In addition, the applicant agrees that if it fails or refuses to comply with these undertakings, the administering agency may take any or all of the following actions: Cancel, terminate, or suspend in whole or in part this grant (contract, loan, insurance, guarantee); refrain from extending any further assistance to the applicant under the program with respect to which the failure or refund occurred until satisfactory assurance of future compliance has been received from such applicant; and refer the case to the Department of Justice for appropriate legal proceedings.

1.02 CONTRACT WORK HOURS AND SAFETY STANDARDS ACT **Compliance with the Contract Work Hours and Safety Standards Act.**

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (b)(1) of this section the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (b)(1) of this section, in the sum of \$27 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (b)(1) of this section.

(3) Withholding for unpaid wages and liquidated damages. The City of Provo shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by

the contractor or subcontractor under any such contract or any other federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (b)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (b)(1) through (4) of this section.

1.03 FURTHER COMPLIANCE WITH THE CONTRACT WORK HOURS AND SAFETY STANDARDS ACT.

(1) The contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.

(2) Records to be maintained under this provision shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the Department of Homeland Security, the Federal Emergency Management Agency, and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

1.04 CLEAN AIR ACT AND FEDERAL WATER POLLUTION CONTROL ACT **Compliance with Clean Air Act**

The contractor agrees to comply with all applicable standards, orders or regulations issued pursuant to the Clean Air Act, as amended, 42 U.S.C. § 7401 et seq.

The contractor agrees to report each violation to the (insert name of non-federal entity entering into the contract) and understands and agrees that the (insert name of the non-federal entity entering into the contract) will, in turn, report each violation as required to assure notification to the Federal Emergency Management Agency (FEMA), and the appropriate Environmental Protection Agency Regional Office.

The contractor agrees to include these requirements in each subcontract exceeding \$150,000 financed in whole or in part with federal assistance provided by FEMA.

Compliance with Federal Water Pollution Control Act

The contractor agrees to comply with all applicable standards, orders, or regulations issued pursuant to the federal Water Pollution Control Act, as amended, 33 U.S.C. § 1251 et seq.

The contractor agrees to report each violation to the (insert name of the non-federal entity entering into the contract) and understands and agrees that the (insert name of the non-federal entity entering into the contract) will, in turn, report each violation as required to assure notification to the (insert name of the pass-through entity, if applicable), Federal Emergency Management Agency (FEMA), and the appropriate Environmental Protection Agency Regional Office.

The contractor agrees to include these requirements in each subcontract exceeding \$150,000 financed in whole or in part with federal assistance provided by FEMA.

1.05 DEBARMENT AND SUSPENSION

Suspension and Debarment

This contract is a covered transaction for purposes of 2 C.F.R. Part 180 and 2 C.F.R. Part 3000. As such, the contractor is required to verify that none of the contractor's principals (defined at 2 C.F.R. § 180.995) or its affiliates (defined at 2 C.F.R. § 180.905) are excluded (defined at 2 C.F.R. § 180.940) or disqualified (defined at 2 C.F.R. § 180.935).

The contractor must comply with 2 C.F.R. Part 180, subpart C and 2 C.F.R. Part 3000, subpart C, and must include a requirement to comply with these regulations in any lower tier covered transaction it enters into.

This certification is a material representation of fact relied upon by (insert name of recipient/subrecipient/applicant). If it is later determined that the contractor did not comply with 2 C.F.R. Part 180, subpart C and 2 C.F.R. Part 3000, subpart C, in addition to remedies available to (insert name of recipient/subrecipient/applicant), the federal government may pursue available remedies, including but not limited to suspension and/or debarment.

The bidder or proposer agrees to comply with the requirements of 2 C.F.R. Part 180, subpart C and 2 C.F.R. Part 3000, subpart C while this offer is valid and throughout the period of any contract that may arise from this offer. The bidder or proposer further agrees to include a provision requiring such compliance in its lower tier covered transactions.

1.06 BYRD ANTI-LOBBYING AMENDMENT

Byrd Anti-Lobbying Amendment, 31 U.S.C. § 1352 (as amended)

Contractors who apply or bid for an award of more than \$100,000 shall file the required certification. Each tier certifies to the tier above that it will not and has not used federally appropriated funds to pay any person or organization for influencing or attempting to influence

an officer or employee of any agency, a Member of Congress, officer or employee of Congress, or an employee of a Member of Congress in connection with obtaining any federal contract, grant, or any other award covered by 31 U.S.C. § 1352. Each tier shall also disclose any lobbying with non-federal funds that takes place in connection with obtaining any federal award. Such disclosures are forwarded from tier to tier up to the recipient who in turn will forward the certification(s) to the federal awarding agency.

1.07 REQUIRED CERTIFICATION LANGUAGE

Contractor shall sign and submit the following certification for each bid or offer exceeding \$100,000

APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

No federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any federal contract, the making of any federal grant, the making of any federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any federal contract, grant, loan, or cooperative agreement.

If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, “Disclosure Form to Report Lobbying,” in accordance with its instructions.

The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, Title 31, U.S.C. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

1.08 PROCUREMENT OF RECOVERED MATERIALS

In the performance of this contract, the Contractor shall make maximum use of products containing recovered materials that are EPA-designated items unless the product cannot be acquired—

Competitively within a timeframe providing for compliance with the contract performance schedule;

Meeting contract performance requirements; or

At a reasonable price.

Information about this requirement, along with the list of EPA-designated items, is available at EPA's Comprehensive Procurement Guidelines webpage:

<https://www.epa.gov/smm/comprehensive-procurement-guideline-cpg-program>.

The Contractor also agrees to comply with all other applicable requirements of Section 6002 of the Solid Waste Disposal Act.

1.09 PROHIBITION ON CONTRACTING FOR COVERED TELECOMMUNICATIONS EQUIPMENT OR SERVICES

Prohibition on Contracting for Covered Telecommunications Equipment or Services

(a) *Definitions.* As used in this clause, the terms backhaul; covered foreign country; covered telecommunications equipment or services; interconnection arrangements; roaming; substantial or essential component; and telecommunications equipment or services have the meaning as defined in FEMA Policy 405-143-1, Prohibitions on Expending FEMA Award Funds for Covered Telecommunications Equipment or Services, as used in this clause—

(b) *Prohibitions.*

- (1) Section 889(b) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019, Pub. L. No. 115-232, and 2 C.F.R. § 200.216 prohibit the head of an executive agency on or after Aug. 13, 2020, from obligating or expending grant, cooperative agreement, loan, or loan guarantee funds on certain telecommunications products or from certain entities for national security reasons.
- (2) Unless an exception in paragraph (c) of this clause applies, the contractor and its subcontractors may not use grant, cooperative agreement, loan, or loan guarantee funds from the Federal Emergency Management Agency to:
 - i. Procure or obtain any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology of any system;
 - ii. Enter into, extend, or renew a contract to procure or obtain any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology of any system;

- iii. Enter into, extend, or renew contracts with entities that use covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system; or
- iv. Provide, as part of its performance of this contract, subcontract, or other contractual instrument, any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system.

(c) Exceptions.

- (1) This clause does not prohibit contractors from providing—
 - i. A service that connects to the facilities of a third-party, such as backhaul, roaming, or interconnection arrangements; or
 - ii. Telecommunications equipment that cannot route or redirect user data traffic or permit visibility into any user data or packets that such equipment transmits or otherwise handles.
- (2) By necessary implication and regulation, the prohibitions also do not apply to:
 - i. Covered telecommunications equipment or services that:
 - i. Are not used as a substantial or essential component of any system; and
 - ii. Are not used as critical technology of any system.
 - ii. Other telecommunications equipment or services that are not considered covered telecommunications equipment or services.

(d) Reporting requirement.

- (1) In the event the contractor identifies covered telecommunications equipment or services used as a substantial or essential component of any system, or as critical technology as part of any system, during contract performance, or the contractor is notified of such by a subcontractor at any tier or by any other source, the contractor shall report the information in paragraph (d)(2) of this clause to the recipient or subrecipient, unless elsewhere in this contract are established procedures for reporting the information.
- (2) The Contractor shall report the following information pursuant to paragraph (d)(1) of this clause:
 - i. Within one business day from the date of such identification or notification: The contract number; the order number(s), if applicable; supplier name; supplier unique entity identifier (if known); supplier Commercial and Government Entity (CAGE) code (if known); brand; model number (original equipment manufacturer number, manufacturer part number, or wholesaler number); item description; and any readily available information about mitigation actions undertaken or recommended.
 - ii. Within 10 business days of submitting the information in paragraph (d)(2)(i) of this clause: Any further available information about mitigation actions undertaken or recommended. In addition, the contractor shall describe the efforts it undertook to prevent use or submission of covered telecommunications equipment or

services, and any additional efforts that will be incorporated to prevent future use or submission of covered telecommunications equipment or services.

(e) *Subcontracts*. The Contractor shall insert the substance of this clause, including this paragraph (e), in all subcontracts and other contractual instruments.

1.10 DOMESTIC PREFERENCES FOR PROCUREMENTS

Domestic Preference for Procurements

As appropriate, and to the extent consistent with law, the contractor should, to the greatest extent practicable, provide a preference for the purchase, acquisition, or use of goods, products, or materials produced in the United States. This includes, but is not limited to iron, aluminum, steel, cement, and other manufactured products.

For purposes of this clause:

Produced in the United States means, for iron and steel products, that all manufacturing processes, from the initial melting stage through the application of coatings, occurred in the United States.

Manufactured products mean items and construction materials composed in whole or in part of non-ferrous metals such as aluminum; plastics and polymer-based products such as polyvinyl chloride pipe; aggregates such as concrete; glass, including optical fiber; and lumber.

1.11 BUILD AMERICA BUY AMERICA ACT PROCUREMENT PREFERENCE

As required by Section 70914 of the Bipartisan Infrastructure Law (also known as the Infrastructure Investment and Jobs Act), P.L. 117-58, on or after May 14, 2022, none of the funds under a federal award that are part of Federal financial assistance program for infrastructure may be obligated for a project unless all of the iron, steel, manufactured products, and construction materials used in the project are produced in the United States, unless subject to an approved waiver. The requirements of this section must be included in all subawards, including all contracts and purchase orders for work or products under this program.

Recipients of an award of Federal financial assistance are hereby notified that none of the funds provided under this award may be used for a project for infrastructure unless:

1. All iron and steel used in the project are produced in the United States--this means all manufacturing processes, from the initial melting stage through the application of coatings, occurred in the United States;
2. All manufactured products used in the project are produced in the United States—this means the manufactured product was manufactured in the United States; and the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product, unless another standard for determining the minimum amount of domestic content of the manufactured product has been established under applicable law or regulation; and

3. All construction materials are manufactured in the United States—this means that all manufacturing processes for the construction material occurred in the United States.

The Buy America preference only applies to articles, materials, and supplies that are consumed in, incorporated into, or affixed to an infrastructure project. As such, it does not apply to tools, equipment, and supplies, such as temporary scaffolding, brought to the construction site and removed at or before the completion of the infrastructure project. Nor does a Buy America preference apply to equipment and furnishings, such as movable chairs, desks, and portable computer equipment, that are used at or within the finished infrastructure project, but are not an integral part of the structure or permanently affixed to the infrastructure project.

1.12 ACCESS TO RECORDS

The Contractor agrees to provide the City of Provo, the FEMA Administrator, the Comptroller General of the United States, or any of their authorized representatives access to any books, documents, papers, and records of the Contractor which are directly pertinent to this contract for the purposes of making audits, examinations, excerpts, and transcriptions.

The Contractor agrees to permit any of the foregoing parties to reproduce by any means whatsoever or to copy excerpts and transcriptions as reasonably needed.

The Contractor agrees to provide the FEMA Administrator or his authorized representatives access to construction or other work sites pertaining to the work being completed under the contract.

1.13 DHS SEAL, LOGO, AND FLAGS

The contractor shall not use the DHS seal(s), logos, crests, or reproductions of flags or likenesses of DHS agency officials without specific FEMA pre-approval. The contractor shall include this provision in any subcontracts.

1.14 COMPLIANCE WITH FEDERAL LAW, REGULATIONS AND EXECUTIVE ORDERS

This is an acknowledgement that FEMA financial assistance will be used to fund all or a portion of the contract. The contractor will comply with all applicable federal law, regulations, executive orders, FEMA policies, procedures, and directives.

1.15 NO OBLIGATION BY FEDERAL GOVERNMENT

The federal government is not a party to this contract and is not subject to any obligations or liabilities to the non-federal entity, contractor, or any other party pertaining to any matter resulting from the contract.

1.16 PROGRAM FRAUD AND FALSE OR FRAUDULENT STATEMENTS OR RELATED ACTS

The contractor acknowledges that 31 U.S.C. Chap. 38 (Administrative Remedies for False Claims and Statements) applies to the contractor's actions pertaining to this contract.

1.17 AFFIRMATIVE SOCIOECONOMIC STEPS

If subcontracts are to be let, the prime contractor is required to take all necessary steps identified in 2 C.F.R. § 200.321(b)(1)-(5) to ensure that small and minority businesses, women's business enterprises, and labor surplus area firms are used when possible.

AGREEMENT

PART 1 - GENERAL

1.01 CONTRACTOR

- A. Name: _____
- B. Address: _____

- C. Telephone Number: _____
- D. Facsimile Number: _____

1.02 OWNER

- A. The name of the Owner is Provo City Corporation. The Owner is also referred to as Provo City Water Resources in the Contract Documents.

1.03 CONSTRUCTION CONTRACT

- A. The Construction Contract is known as Provo River Water Treatment Plant Project, Bid No. PROVOEN202323202.

1.04 ENGINEER

- A. Michael M. Chambers, P.E. (Hansen, Allen, & Luce) is the Owner's representative and agent for this Construction Contract who has the rights, authority and duties assigned to the Engineer in the Contract Documents.

1.05 REPRESENTATION REGARDING ETHICAL STANDARDS FOR CITY OFFICERS AND EMPLOYEES AND FORMER CITY OFFICERS AND EMPLOYEES

- A. CONTRACTOR represents that it has not:
 - 1. Provided an illegal gift or payoff to a City officer or employee or former City officer or employee, or his or her relative or business entity.
 - 2. Retained any person to solicit or secure this contract upon an agreement or understanding for a commission, percentage, or brokerage or contingent fee, other than bona fide employees or bona fide commercial selling agencies for the purpose of securing business.

PART 2 - TIME AND MONEY CONSIDERATIONS

2.01 CONTRACT PRICE

- A. The Contract Price includes the cost of the Work specified in the Contract Documents, plus the cost of all bonds, insurance, permits, fees, and all charges, expenses or assessments of whatever kind or character.
- B. The Schedules of Prices awarded from the Bid Schedule (Document 00 43 00) are as follows.
 - 1. Schedule A- Base Bid
- C. An Agreement Supplement is not attached to this Agreement.
- D. Based upon the above awarded schedules and the Agreement Supplement (if any), the Contract Price awarded is: _____ dollars and _____ cents. (\$_____).

2.02 CONTRACT TIME

- A. Substantial Completion of the Work shall occur:
 - 1. by **December 31, 2025**
- B. Any time specified in work sequences in the Summary of Work shall be a part of the Contract Time.
- C. The OWNER anticipates that a Notice to Proceed will be given on the following date, but reserves the right to change such date:
Anticipated date of Notice to Proceed: _____

2.03 PUNCH LIST TIME

- A. The Work will be complete and ready for final payment within 60 days after the date Contractor receives Engineer's Final Inspection Punch List unless exemptions of specific items are granted by Engineer in writing or an exception has been specified in the Contract Documents.
- B. Permitting the Contractor to continue and finish the Work or any part of the Work after the time fixed for its completion, or after the date to which the time for completion may have been extended, whether or not a new completion date is established, shall in no way operate as a waiver on the part of the Owner of any of Owner's rights under this Agreement.

2.04 LIQUIDATED DAMAGES

- A. Time is the essence of the Contract Documents. Contractor agrees that Owner will suffer damage or financial loss if the Work is not completed on time or within any time extensions allowed in accordance with Part 12 of the General Conditions. Contractor and Owner agree that proof of the exact amount of any such damage or loss is difficult to determine. Accordingly, instead of requiring any such proof of damage or specific financial loss for late completion, Contractor agrees to pay the following sums to the Owner as liquidated damages and not as a penalty.
1. **Late Contract Time Completion:** Five hundred dollars and zero cents (\$500.00) for each day or part thereof that expires after the Contract Time until the Work is accepted as Substantially Complete as provided in Article 14.5 of the General Conditions.
 2. **Late Punch List Time Completion:** 50% of the amount specified for Late Contract Time Completion for each day or part thereof if the Work remains incomplete after the Punch List Time. The Punch List shall be considered delivered on the date it is transmitted by email, facsimile, hand delivery or received by the Contractor by certified mail.
 3. **Interruption of Public Services:** No interruption of public services shall be caused by Contractor, its agents or employees, without the Engineer's prior written approval. Owner and Contractor agree that in the event Owner suffers damages from such interruption, the amount of liquidated damages stipulated below shall not be deemed to be a limitation upon Owner's right to recover the full amount of such damages. Five hundred dollars and zero cents (\$500.00) for each day or part thereof of any utility interruption caused by the Contractor without the Engineer's prior written authorization.
- B. **Survey Monuments:** No land survey monument shall be disturbed or moved until Engineer has been properly notified and the Engineer's surveyor has referenced the survey monument for resetting. The parties agree that upon such an unauthorized disturbance it is difficult to determine the damages from such a disturbance, and the parties agree that Contractor will pay as liquidated damages the sum of \$1,000.00 to cover such damage and expense.
- C. **Deduct Damages from Moneys Owed Contractor:** Owner shall be entitled to deduct and retain liquidated damages out of any money which may be due or become due the Contractor. To the extent that the liquidated damages exceed any amounts that would otherwise be due the Contractor, the Contractor shall be liable for such amounts and shall return such excess to the Owner.

1.04 OWNER

- A. Provo City Corporation

1.05 CONSTRUCTION CONTRACT

- A. The Construction Contract is known as Provo River Water Treatment Plant Project, Bid No. PROVOEN202323202.

1.06 DEFINED TERMS

- A. Terms used in this Performance Bond which are defined in Article 1.1 of the General Conditions (Document 00 72 00) will have the meanings indicated in the General Conditions.

PART 2 - COVENANTS

2.01 SURETY'S AND CONTRACTOR'S RELATIONSHIP

- A. Surety as surety, and Contractor as principal, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner as obligee, for the performance of the Construction Contract, whether awarded or about to be awarded.
- B. If Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except to participate in conferences indicated in Article 2.3.

2.02 NOTICE

- A. Notice to the Surety, the Owner or the Contractor shall be sent by certified mail, facsimile, or hand delivered to the address shown on this Bond agreement.
- B. Notices sent as required by paragraph 2.2A shall be effective on the date on which such notice was sent.
- C. Notice may be sent by facsimile. Facsimile notice shall be effective on the date of transmission provided that a confirmation establishing the successful transmission of the notice is sent by first-class mail, postage prepaid, along with a copy of the notice transmitted, no later than twenty-four (24) hours after the facsimile notice is transmitted.
- D. If any notice requires a period of less than seven (7) days for response, the notice shall be sent by facsimile.
- E. If the time for response to any notice expires on a Saturday, Sunday or a legal holiday in the State of Utah, the time shall be extended to the next working day.

2.03 PROCEDURE TO INVOKE SURETY'S OBLIGATION

- A. If the Contractor fails to perform or to comply with the terms of the Construction Contract, and such failure to perform or to comply has not been waived by the Owner, the Owner may notify the Contractor and the Surety, at their addresses described above, that the Owner is considering declaring the Contractor in default.
- B. Before declaring the default, the Owner shall request and attempt to arrange a conference with the Contractor and the Surety to be held at a time and place required by the Owner to discuss methods of performing the Work.

- C. If the Contractor does not attend the conference or agree to cure any deficiencies in the Contractor's performance of the Work to the satisfaction of the Owner, the Owner may declare the Contractor in default and formally terminate the Contractor's right to complete the Work. Such default shall not be declared earlier than 10 days after the Contractor and the Surety have received notice as provided in article 2.2.
- D. If the Contract with the Contractor is terminated, the Owner agrees to pay the unpaid Balance of the Contract Price to the Surety for completion of the Work in accordance with the terms of the Construction Contract or to a contractor selected by the Surety to perform the Work in accordance with the terms of the Construction Contract.

2.04 SURETY'S OPTIONS AT CONTRACTOR TERMINATION

- A. Surety Completes the Work: The Surety may undertake to perform and complete the Work itself, through its agents or through independent contractors.
- B. Surety Obtains Bids or Proposals: The Surety may obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Work.
 - 1. Such bids or proposals shall be prepared by the Surety for execution by the Owner and the completion contractor selected.
 - 2. Surety shall secure the contract with Performance and Payment Bonds executed by a qualified surety equivalent to this Performance Bond and the Payment Bond (Document 00 61 14); and
 - 3. Surety shall pay to the Owner the amount of damages as described in paragraph 2.6 in excess of the balance of the Contract Price incurred by the Owner resulting from the Contractor's default.
 - 4. Surety to Pay Owner: Surety may determine the amount not to exceed the amount of this bond specified in paragraph 1.1B, for which Surety believes it may be liable to pay, and tender payment therefore to the Owner. Owner has sole discretion to accept payment. If the Owner refuses the payment tendered, or the Surety has denied liability in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

2.05 PROCEDURE FOR OWNER TO DECLARE SURETY IN DEFAULT

- A. The Owner may declare the Surety to be in default upon the following procedures.
 - 1. The Owner shall issue an additional written notice to the Surety, after declaring the Contractor in default as provided in Article 2.3, demanding that the Surety perform its obligations under this Bond.

2. Surety shall respond to the Owner within 15 days after receipt of the Owner's additional notice, either denying the claim or accepting liability and exercising its' options under Article 2.4.

2.06 SURETY'S OBLIGATIONS

- A. After the Owner has terminated the Contractor's right to complete the Construction Contract, and if the Surety elects to complete the Construction Contract as provided in Article 2.4, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract.
- B. To the limit of the amount of this Bond, but subject to commitment by the Owner to pay all valid and proper payments made to or on behalf of the Contractor under the Construction Contract, the Surety is obligated, without duplication, for:
 1. the responsibilities of the Contractor for correction of Defective Work and completion of the Construction Contract;
 2. design professional and delay costs resulting from the Contractor's default, and resulting from the actions or failure to act of the Surety under article 2.4; and
 3. liquidated damages which are or may become due for any reason.

2.07 UNRELATED OBLIGATIONS OF THE CONTRACTOR

- A. The Surety and the Owner shall not be liable to others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced or changed on account of any such unrelated obligations.
- B. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, or successors.

2.08 SURETY WAIVES NOTICE OF ANY CHANGE

- A. Surety hereby waives notice of any change, including changes of Contract Time, Contract Price and scope of Work, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

2.09 VENUE

- A. Any suit or action commenced by Owner under this Bond shall be for action in a court of competent jurisdiction in the State of Utah.

PART 3 - EXECUTION

3.01 EFFECTIVE DATE

- A. Surety and Contractor execute this Bond agreement and declare it to be in effect as of the _____ day of _____, _____.

3.02 CONTRACTOR'S SUBSCRIPTION AND ACKNOWLEDGMENT

- A. Provo City Corporation

1.05 CONSTRUCTION CONTRACT

- A. The Construction Contract is known as Provo River Water Treatment Plant Project, Bid No. PROVOEN202323202

1.06 DEFINED TERMS

- A. Terms used in this Performance Bond which are defined in Article 1.1 of the General Conditions (Document 00 72 00) will have the meanings indicated in the General Conditions.

PART 2 - COVENANTS

2.01 SURETY'S AND CONTRACTOR'S RELATIONSHIP

- A. Surety as surety, and Contractor as principal, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner as obligee, for the performance of the Construction Contract, whether awarded or about to be awarded.
- B. If Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond.

2.02 NOTICE

- A. Notice to the Surety, the Owner or the Contractor shall be sent by certified mail, facsimile, or hand delivered to the address shown on this Bond agreement.
- B. Notices sent as required by paragraph 2.2A shall be effective on the date on which such notice was sent.
- C. Notice may be sent by facsimile. Facsimile notice shall be effective on the date of transmission provided that a confirmation establishing the successful transmission of the notice is sent by first-class mail, postage prepaid, along with a copy of the notice transmitted, no later than twenty-four (24) hours after the facsimile notice is transmitted.
- D. If any notice requires a period of less than seven (7) days for response, the notice shall be sent by facsimile.
- E. If the time for response to any notice expires on a Saturday, Sunday or a legal holiday in the State of Utah, the time shall be extended to the next working day.

2.03 CONDITIONS OF SURETY'S LIABILITY

- A. With respect to the Owner, this Bond agreement shall be null and void if the Contractor promptly takes the following actions:
 - 1. promptly makes payment, directly or indirectly, for all sums due Claimants, and
 - 2. defends, indemnifies and saves harmless the OWNER from all claims, demands, Liens or suits by any person or entity who furnished labor, materials or equipment for use in the performance of the Work, provided the OWNER has tendered defense of such claims, demands, liens or suits to the CONTRACTOR and the Surety.

2.04 PROCEDURE TO INVOKE SURETY'S OBLIGATION

- A. **Concerning Claimants who have a Direct Contract with the Contractor:** The Surety shall have no obligation to Claimants under this Bond who are employed by or have a direct contract with the Contractor until Claimants have given notice to the Surety at the address shown on this Bond agreement and sent a copy, or notice thereof, to the Owner, stating that a claim is being made under this Bond and, with substantial accuracy, the amount of the claim.
- B. **Concerning Claimant who does not have a Direct Contract with the Contractor:** The Surety shall have no obligation to Claimant under this Bond who does not have a direct contract with the Contractor until Claimant takes the following actions.
 - 1. The Claimant shall furnish written notice to the Contractor and send a copy, or notice thereof, to the Owner, within 90 days after having last performed labor or last furnished materials or equipment included in the claim stating, with substantial accuracy, the amount of the claim and the name of the party to whom the materials were furnished or supplied or for whom the labor was done or performed.
 - 2. The Claimant shall have either received a rejection in whole or in part from the Contractor, or not received within 15 days of furnishing the above notice any communication from the Contractor by which the Contractor has indicated the claim will be paid directly or indirectly.
 - 3. Not having been paid within the above 15 days, the Claimant shall have sent a written notice to the Surety at the address described on this Bond agreement and sent a copy, or notice thereof, to the Owner stating that a claim is being made under this Bond and enclosing a copy of the previous written notice furnished to the Contractor.

2.05 SURETY'S OPTION TO SETTLE CLAIMS

- A. When the Claimant has satisfied the conditions of article 2.4, the Surety shall promptly and at the Surety's expense take the following actions.
 - 1. Send an answer to the Claimant, with a copy to the Owner, within 45 days after receipt of the claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and
 - 2. Pay or arrange for payment of any undisputed amounts.

2.06 SURETY'S OBLIGATION

- A. Surety's total obligations under this bond shall not exceed the amount of this Bond, and the amount of this Bond shall be credited for any payments made in good faith by the Surety.

2.07 USE OF FUNDS

- A. Amounts owed by Owner to Contractor under the Construction Contract shall be used for the performance of the Construction Contract and to satisfy claims, if any, against the Performance Bond (Document 00 61 13). By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Work are dedicated as follows:
 - 1. The Owner has first priority to use the funds for the completion of the Work.
 - 2. The Contractor and the Surety have second priority to use the funds to satisfy the obligations of the Contractor and the Surety under this Bond.

2.08 UNRELATED OBLIGATIONS OF THE CONTRACTOR

- A. The Surety and the Owner shall not be liable to Claimants or others for obligations of the Contractor that are unrelated to the Construction Contract.
- B. The Owner shall not be liable for payment of any damages, costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligations to make payments to, give notices on behalf of, or otherwise have obligations to Claimants under this Bond.

2.09 SURETY WAIVES NOTICE OF ANY CHANGE

- A. Surety hereby waives notice of any change to the Construction Contract including changes of Contract Time, Contract Price, and scope of Work, or to related subcontracts, purchase orders or other obligations.

2.10 VENUE

- A. Any suit or action commenced by a Claimant under this Bond shall be for action in a court of competent jurisdiction in the State of Utah.

2.11 COPIES OF THIS BOND

- A. Upon request by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor or Owner shall promptly furnish a copy of this Bond or shall permit a copy to be made.

PART 3 - EXECUTION

3.01 EFFECTIVE DATE

- A. Surety and Contractor execute this Bond agreement and declare it to be in effect as of the _____ day of _____, _____.

3.02 CONTRACTOR'S SUBSCRIPTION AND ACKNOWLEDGMENT

- A. Type of organization: _____
(corporation, partnership, individual, etc.)
- B. If Contractor is a corporation, attach a corporate resolution evidencing Contractor's authority to sign.
- C. CONTRACTOR's signature: _____
- D. Please print name here: _____
- E. Title: _____
- F. Notary Acknowledgement: In the Country of _____, State of _____, on the _____ day of _____, 20____, the foregoing instrument was acknowledged before me

(person acknowledging and the title or representative capacity, if any).

SECTION 00 62 16

CERTIFICATE OF INSURANCE

PART 1 - GENERAL

1.01 PROCEDURE

- A. For filing purposes, add Certificates of Insurance to the Contract Documents following this page.
- B. Certificates of Insurance must include all requirements in Section 5.2 of the Modifications to General Conditions (Supplementary Conditions) (Document 00 73 00).

END OF SECTION

SECTION 00 73 00

MODIFICATIONS TO GENERAL CONDITIONS
(Supplementary Conditions)

This document changes provisions specified in the General Conditions in the Manual of Standard Specifications published by the Utah Chapter of the American Public Works Association.

Add the following paragraphs to Article 2.2 (page 20).

PART 1 -

PART 2 -

2.01

2.02 COPIES OF DOCUMENTS

- A. Owner shall not furnish to Contractor published Contract Documents which include the Manual of Standard Plans and the Manual of Standard Specifications. Such documents shall be purchased separately by the Contractor.
- B. Copies of all Contract Documents including the Manual of Standard Plans and the Manual of Standard Specifications shall be provided on site by the Contractor.

Modify paragraph 2.5C of the General Conditions (page 21) to read as follows:

2.03

2.04

2.05 BEFORE STARTING CONSTRUCTION

- A. Field Office: Contractor shall provide and maintain an on-site field office. Field office shall include internet service with wireless capabilities in the field during performance of the Work such that the Engineer and Owner may always contact Contractor for transmittal of plans, instructions and dissemination of project information.

Modify Article 5.1 (page 28) to read as follows:

PART 3 -

PART 4 -

PART 5 -

5.01 PERFORMANCE, PAYMENT AND OTHER BONDS

- A. Prior to OWNER executing the Agreement, Contractor shall file with the Owner a good and sufficient performance Bond and a payment Bond, each in the sum of not less than 100 percent of the Contract Price.
- B. The Bonds shall be executed by the Contractor and secured by a company duly and regularly authorized to do a general surety business in the State of Utah and either (i) named in the current U.S. Treasury Department's listing of approved sureties (Department Circular 570) (as amended) with an underwriting limitation equal to or greater than the Contract Price which the Bond guarantees, or (ii) with a current "A-" rating or better in A.M. Best Co., Inc's. Best Insurance Reports, Property and Casualty Edition.
- C. The Performance Bond shall guarantee the faithful performance of the Construction Contract by the Contractor and the payment Bond shall guarantee the payment of labor and materials. The Bonds shall inure by their terms to the benefit of the OWNER. Neither this nor any other provision requiring a performance Bond shall be construed to create any rights in any third party Claimant as against the OWNER for performance of the Work under the Construction Contract.
- D. All Bonds required by the Contract Documents to be purchased and maintained by Contractor shall be obtained from surety companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue Bonds for the limits so required. Such surety companies shall also meet such additional requirements and qualifications as may be provided in the Supplementary General Conditions.
- E. If the surety on any Bond furnished by Contractor is subject to any proceeding under the Bankruptcy Code (Title 11, United States Code) or becomes insolvent or its right to do business is terminated in the State of Utah or it ceases to meet the requirements of this Article, Contractor shall, within 15 days thereafter, substitute another Bond and surety, both of which must be acceptable to Owner.

Modify Article 5.2 (page 28) to read as follows:

5.02 INSURANCE

- A. Contractor shall procure and maintain for the duration of the contract, insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the contracting party, his agents,

representatives, employees or subcontractors. The cost of such insurance shall be included in the Contracting party's proposal.

REQUIRED INSURANCE POLICIES

Contractor (the Contractor) shall maintain or cause to be maintained on its behalf insurance policies of the types required below with insurance companies authorized to do business in the State of Utah, (i) having a Best Insurance Reports rating of "A" or better and a financial size category of "X" or higher, or (ii) otherwise being acceptable to the City with coverage limits and provisions at least sufficient to satisfy the requirements set forth below.

Workers' Compensation Insurance: Statutory workers' compensation insurance (Part A). Such insurance shall also include employer's liability (Part B) insurance in a limit of not less than \$1,000,000 for each: accident, disease, employee. No owner or officer may be excluded.

General Liability Insurance: Commercial general liability insurance on an occurrence basis arising out of claims for bodily injury (including death) and property damage. Such insurance shall provide coverage for ongoing operations and products-completed operations, blanket contractual, broad form property damage, personal and advertising injury, independent contractors and sudden and accidental pollution liability with not less than \$2,000,000 per occurrence limit combined bodily injury and property damage, with not less than \$2,000,000 aggregate limit, provided the general policy aggregate shall apply separately to the Contractor on a per project basis. Any aggregate limit that does not apply separately to the premises shall be at least double the required per occurrence limit.

Automobile Liability Insurance: Automobile liability insurance for the Contractor's liability arising out of the use of owned (if any), leased (if any), non-owned and hired vehicles of the Contractor, with no less than \$2,000,000 limit per accident for combined bodily injury and property damage and containing appropriate no-fault insurance provisions wherever applicable. All owned and/or leased automobiles shall be covered using symbol "1" (any auto).

Professional Liability (errors & omissions) Insurance: coverage for a limit of \$2,000,000. Insurance shall be carried for two years after the work has been completed.

- B. Additional Insured Endorsements: All policies of liability insurance required to be maintained by the Contractor shall be endorsed to name the City and the Engineer, Hansen, Allen & Luce, Inc. and AECOM Technical Services, Inc., as additional insured for ongoing operations (ISO CG 20 10 or equivalent) and completed operations (ISO CG 20 37 or equivalent) (except for insurance policies required in Section 1 and 3 above).
- C. Primary and Non-Contributory Endorsements: The Contractor's insurance coverage shall be a primary insurance as respects to the City, its officers, officials, employees, volunteers, and the Engineer. Any insurance or self-insurance maintained by the City, its officers, officials, employees, volunteers or Engineer shall be in excess of the contracting party's insurance and shall not contribute with it.

- D. Waiver of Subrogation Endorsements: The Contractor hereby waives any and every claim for recovery from the City, Lenders and their respective offices and employees for any and all loss or damage covered by any of the insurance policies to be maintained under this Contractor agreement to the extent that such loss or damage is recovered under any such policy. To the extent the foregoing waiver would preclude coverage under any insurance required by this Section, the Contractor shall give written notice of the terms of such waiver to each insurance company which has issued, or which may issue in the future, any such policy of insurance (if such notice is required by the insurance policy) and shall cause each such insurance policy to be properly endorsed, or to otherwise contain one or more provisions that prevent the invalidation of the insurance coverage by reason of such a waiver.
- E. Severability of Interests: The contracting party's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respects to the limits of the insurer's liability.
- F. Deductibles and Self-Insured Retentions: Any deductibles or self-insured retention, exceeding 5% limit of policy, must be declared to and approved by the City. At the option of the City, either; the insurer may be required to reduce or eliminate such deductibles or self-insured retention as respects the City, its officers, officials and employees; or the contracting party may be required to procure a bond guaranteeing payment of losses and related investigations, claim distribution and defense expenses.
- G. Notice of Incident or Accident: Contracting party shall agree to disclose to the City, all incidents or occurrences of accident, injury, and/or property damage, regardless of whether such incidents are submitted as claims under the contractor's insurance policies.
- H. Evidence and Verification of Insurance: On or before the effective date of each policy and on an annual basis at least 10 days prior to each policy anniversary, the Contractor shall furnish the City with (1) certificates of insurance or binders, in a form acceptable to the City, evidencing all of the insurance required by the provisions of this Section. Contractor shall provide a certificate of insurance verifying completed operations coverage for a period of not less than two years after project completion. Certificates and endorsements are to be signed by a person authorized by that insurer to bind coverage on its behalf. The certificates and endorsements are to be furnished to and accepted by the City before work commences. The City reserves the right to require complete, certified copies of all required insurance policies, with all endorsements, at any time.
- I. Claims-Made Policies: If any policy is a claims-made policy, the policy shall provide the Contractor the right to purchase, upon cancellation or termination by refusal to renew the policy, an extended reporting period (Tail) of not less than two years. The Contractor agrees to purchase such an extended reporting period if needed to ensure continuity of coverage. The Contractor's failure to purchase such an extended reporting period as required by this paragraph shall not relieve it of any liability under this Contract. If the policy is a claims-made policy, the retroactive date of any such policy shall be not later than the date this Contract is executed by the parties hereto. If the Contractor purchases a subsequent claims-made policy in place of any prior claims-made policy, the retroactive

date of such subsequent policy shall be no later than the date this Contract is executed by the parties hereto.

- J. Policy Cancellation and Change: All insurance policies shall be endorsed so that if at any time they are canceled, such cancellation shall not be effective for the City for 30 days, except for non-payment of premium which shall be for 10 days. If any material change in coverage should occur, the Contractor shall provide notice of any material change in coverage to the City immediately.
- K. Liability Limits: The liability limits shown in this Section are minimum requirements. To the extent the Contractor maintains, or causes to be maintained on its behalf, liability limits which are higher than the minimum limits stated in this Section, the higher liability limits shall be required of the Contractor.
- L. Failure to Maintain Insurance: In the event the Contractor fails, or fails to cause others on their behalf, to take out or maintain the full insurance coverage required by this Section, the City, upon 30 days' prior notice (unless the required insurance would lapse within such period, in which event notice will be given as soon as reasonably possible) to the Contractor of any such failure, may (but shall not be obligated to) take out the required policies of insurance and pay the premiums on the same. All amounts so advanced thereof by the City shall become an additional obligation of the Contractor to the City, and the Contractor shall pay such amounts to the City, together with interest thereon from the date so advanced. Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the City, its officers, officials, employees or volunteers.
- M. No Duty to Verify or Review: No provision of this Section or any provision of any Document related to this agreement shall impose on the City any duty or obligation to verify the existence or adequacy of the insurance coverage maintained by the Contractor, nor shall City be responsible for any representations or warranties made by or on behalf of the Contractor to any insurance company or underwriter. Any failure on the part of the City to pursue or obtain the evidence of insurance required by this agreement from the Contractor and/or failure of the City to point out any non-compliance of such evidence of insurance shall not constitute a waiver of any of the insurance requirements in this agreement.
- N. Subcontractors: Contractor shall include all subcontractors as an insured under its policies or shall furnish separate certificates and endorsements for each subcontractor. All coverages for subcontractors shall be subject to the requirements stated herein.
- O. Indemnification/Liability: Contractor shall indemnify and hold harmless the City, its officers, agents, employees and volunteers from all damages, costs or expenses in law or equity, including attorney's fees, that may at any time arise or be set up because of damages to property, bodily injury or personal injury received by reason of or in the course of providing services to the City but only to the extent caused by any willful, negligent or wrongful act or omission of the contracting party, any of their employees or any subcontractors.

- P. Loss Control and Safety: The Contractor shall retain control over its employees, agents, servants, and subcontractors, as well as control over its invitees, and its activities on and about the subject premises and the manner in which such activities shall be undertaken and to that end, the Contractor shall not be deemed to be an agent of the City. Precaution shall be exercised at all times by the Contractor for the protection of all persons, including employees and property. The Contractor shall make special effort to detect hazards and shall take prompt action where loss control/safety measures should reasonably be expected.
- Q. The Contractor shall not commence Work under this Agreement until all of the insurance required herein shall have been obtained by the Contractor. The Contractor shall furnish to the Owner Certificates of Insurance verifying that such insurance has been obtained. Such certificates will provide that Owner will receive at least thirty (30) days prior written notice of any material change in, cancellation of, or non-renewal of such insurance.

Add the following paragraphs to Article 6.8 (page 35).

PART 6 -

6.01

6.02

6.03

6.04

6.05

6.06

6.07

6.08 LAWS AND REGULATIONS

- A. All Bidders are required to follow the requirements of Utah Code Annotated 63G-12-302 which prohibits the Owner from entering into any contract for the performance of services with any successful bidder who does not first provide the Owner with proof of registration and participation in a federally approved immigration status verification system to ensure that their employees are legally authorized to work in the United States. Failure to provide the required proof may be grounds for rejection of an otherwise successful bid. By submitting a bid in response to this RFB, Contractor certifies that it does not, and will not during the performance of this contract, knowingly employ, or subcontract with any entity which employs workers who are not legally authorized to work in the United States. Contractor agrees to require all its employees to provide proof of their eligibility to work in the United States and agrees to use all reasonable means to verify that proof. Contractor

further agrees to require any subcontractors engaged to work on the project to sign a Certification of Legal Work Status and submit the Certification to the Owner prior to any work being performed by the subcontractors. Contractor agrees to provide to the Owner all documents necessary to verify compliance with applicable State and Federal immigration and labor laws. If Contractor knowingly employs workers or subcontractors in violation of 8 USC § 1324a, such violation shall be cause for unilateral cancellation of the contract between Contractor and Owner. In addition, Contractor may be suspended from participating in future projects with the Owner. In the event this contract is terminated due to a violation of 8 USC § 1324a by Contractor or a subcontractor of Contractor, Contractor shall be liable for any and all costs associated with such termination, including, but not limited to, any damages incurred by the Owner as well as attorney fees. For purposes of compliance, the Owner requires Contractor and subcontractors to use an immigration status verification system such as E-Verify, or other approved system as outlined in Utah Code Annotated 63G-12-302, to verify the employment eligibility of all employees. Contractor and subcontractors must maintain up to date documentation of the status verification system inquiry regarding each employee and must provide this information to the Owner prior to beginning the project.

Add the following paragraphs to Article 9.3 (page 47).

9.3 AUTHORITY AND DUTIES OF RESIDENT PROJECT REPRESENTATIVE

- D. The Resident Project Representative (RPR) will be Engineer's representative at the Site, will act as directed by and under the supervision of Engineer, and will confer with Engineer regarding RPR's actions.
 - 1. General: RPR's dealings in matters pertaining to the Work in general shall be with Engineer and Contractor. RPR's dealings with Subcontractors shall only be through or with the full knowledge and approval of Contractor. RPR shall generally communicate with Owner only with the knowledge of and under the direction of Engineer.
 - 2. Schedules: Review the progress schedule, schedule of Shop Drawing and Sample submittals, and Schedule of Values prepared by Contractor and consult with Engineer concerning acceptability.
 - 3. Conferences and Meetings: Attend meetings with Contractor, such as preconstruction conferences, progress meetings, job conferences, and other Project-related meetings.
 - 4. Liaison:
 - a. Serve as Engineer's liaison with Contractor. Working principally through Contractor's authorized representative or designee, assist in providing information regarding the provisions and intent of the Contract Documents.
 - b. Assist Engineer in serving as Owner's liaison with Contractor when Contractor's operations affect Owner's on-Site operations.

- c. Assist in obtaining from Owner additional details or information, when required for proper execution of the Work.
- 5. Interpretation of Contract Documents: Report to Engineer when clarifications and interpretations of the Contract Documents are needed and transmit to Contractor clarifications and interpretations as issued by Engineer.
- 6. Shop Drawings and Samples:
 - a. Record date of receipt of Samples and Contractor-approved Shop Drawings.
 - b. Receive Samples which are furnished at the Site by Contractor and notify Engineer of availability of Samples for examination.
 - c. Advise Engineer and Contractor of the commencement of any portion of the Work requiring a Shop Drawing or Sample submittal for which RPR believes that the submittal has not been approved by Engineer.
- 7. Modifications: Consider and evaluate Contractor's suggestions for modifications in Drawings or Specifications and report such suggestions, together with RPR's recommendations, if any, to Engineer.
- 8. Review of Work and Rejection of Defective Work:
 - a. Conduct on-Site observations of Contractor's work in progress to assist Engineer in determining if the Work is in general proceeding in accordance with the Contract Documents.
 - b. Report to Engineer whenever RPR believes that any part of Contractor's work in progress is defective, will not produce a completed Project that conforms generally to the Contract Documents, or will imperil the integrity of the design concept of the completed Project as a functioning whole as indicated in the Contract Documents, or has been damaged, or does not meet the requirements of any inspection, test or approval required to be made; and advise Engineer of that part of work in progress that RPR believes should be corrected or rejected or should be uncovered for observation, or requires special testing, inspection or approval.
- 9. Inspections, Tests, and System Start-ups:
 - a. Verify that tests, equipment, and systems start-ups and operating and maintenance training are conducted in the presence of appropriate Owner's personnel, and that Contractor maintains adequate records thereof.
 - b. Observe, record, and report to Engineer appropriate details relative to the test procedures and systems start-ups.
- 10. Records:

- a. Prepare a daily report, recording Contractor's hours on the Site, Subcontractors present at the Site, weather conditions, data relative to questions of Change Orders, Field Orders, Work Change Directives, or changed conditions, Site visitors, deliveries of equipment or materials, daily activities, decisions, observations in general, and specific observations in more detail as in the case of observing test procedures; and send copies to Engineer.
 - b. Maintain records for use in preparing Project documentation.
- 11. Reports:
 - a. Furnish to Engineer periodic reports as required of progress of the Work and of Contractor's compliance with the Progress Schedule and schedule of Shop Drawing and Sample submittals.
 - b. Draft and recommend to Engineer proposed Change Orders, Work Change Directives, and Field Orders. Obtain backup material from Contractor.
 - c. Immediately notify Engineer of the occurrence of any Site accidents, emergencies, acts of God endangering the Work, force majeure or delay events, damage to property by fire or other causes, or the discovery of any Constituent of Concern or Hazardous Environmental Condition.
- 12. Payment Requests: Review applications for payment with Contractor for compliance with the established procedure for their submission and forward with recommendations to Engineer, noting particularly the relationship of the payment requested to the Schedule of Values, Work completed, and materials and equipment delivered at the Site but not incorporated in the Work.
- 13. Certificates, Operation and Maintenance Manuals: During the course of the Work, verify that materials and equipment certificates, operation and maintenance manuals and other data required by the Contract Documents to be assembled and furnished by Contractor are applicable to the items actually installed and in accordance with the Contract Documents, and have these documents delivered to Engineer for review and forwarding to Owner prior to payment for that part of the Work.
- 14. Completion:
 - a. Participate in Engineer's visits to the Site to determine Substantial Completion, assist in the determination of Substantial Completion and the preparation of a punch list of items to be completed or corrected.
 - b. Participate in Engineer's final visit to the Site to determine completion of the Work, in the company of Owner and Contractor, and prepare a final punch list of items to be completed and deficiencies to be remedied.

- c. Observe whether all items on the final list have been completed or corrected and make recommendations to Engineer concerning acceptance and issuance of the notice of acceptability of the work.

E. The RPR shall not:

1. Authorize any deviation from the Contract Documents or substitution of materials or equipment (including “or-equal” items).
2. Exceed limitations of Engineer’s authority as set forth in the Contract Documents.
3. Undertake any of the responsibilities of Contractor, Subcontractors, or Suppliers.
4. Advise on, issue directions relative to, or assume control over any aspect of the means, methods, techniques, sequences, or procedures of Contractor’s work.
5. Advise on, issue directions regarding, or assume control over security or safety practices, precautions, and programs in connection with the activities or operations of Owner or Contractor.
6. Participate in specialized field or laboratory tests or inspections conducted off-site by others except as specifically authorized by Engineer.
7. Accept Shop Drawing or Sample submittals from anyone other than Contractor.
8. Authorize Owner to occupy the Project in whole or in part.

Replace Article 14.2 Paragraph E with the following:

Retainage: Payments will be made for work and labor performed and materials furnished under the contract according to the schedule of rates and prices and the specifications attached and made a part thereof. Partial payments under the contract will be made at the request of the Contractor once each month upon partial estimates by the Engineer, as hereinafter specified. There will be reserved and retained from monies earned by the Contractor, as determined by such monthly estimates, a sum equal to five (5) percent of all amounts of such estimates.

Cost of materials, properly stored, protected and insured at the site of the work will be paid on monthly estimates only when so provided for in the special provisions, and then only for the specific materials listed therein for partial payment. In preparing the monthly estimates, advancement will be made therein for ninety percent (90%) of the cost of such materials, as evidenced by invoices to the Contractor. Advancement will not be made for any item of material amounting to less than five hundred dollars (\$500.00). All materials must conform to the requirements of the specifications; however, advancement for materials will not constitute acceptance, and any faulty material will be condemned although advancement may have been made for same in the estimates. Deductions at the same rates, and equal in amount to the advancements, will be made on the estimates as the material is used.

Quantities used for progress estimates shall be considered only as approximate and provisional, and shall be subject to recalculation, adjustment and correction by the Engineer in subsequent progress estimates and in final estimates. Inclusion of any quantities in progress estimates, or failure to disapprove the work at the time of progress estimate, shall not be construed as acceptance of the corresponding work or materials.

In the event that an unforeseen condition beyond the control of the Contractor will materially delay the final completion of a contract and if the retention of the monies reserved will work undue hardship upon the Contractor, he may request payment of the retained percentage. If no claims have thus far been filed against the contract and if no taxes have been certified as due or about to become due by the State Tax Commission, the Owner, at its discretion, may pay the retained percentage or so much of it as appears to be proper, but no payment shall be made until the Contractor will have delivered to the Owner an acceptable bond in the full amount of the retained percentage thereupon released.

Payment of the retained percentage shall be withheld for a period of thirty (30) days following the final acceptance by the Owner, and shall be paid the Contractor at the expiration of said thirty (30) days in event no claims, as provided by law, have been filed against such funds; and provided further, that releases have been obtained from the Utah Labor Commission and also, except for contract totaling less than \$20,000.00, the Utah State Tax Commission, the State of Utah Employment Security Department, and all other departments and agencies having jurisdiction over the activities of the Contractor. In the event such claims are filed, the Contractor shall be paid such retained percentages less an amount sufficient to pay any such claims, together with a sum sufficient to pay the cost of such action, and to cover attorney fees as determined by the Owner.

SECTION 01 11 00
SUMMARY OF WORK

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:

1. Project information.
2. Work covered by Contract Documents.
3. Access to site.
4. Work restrictions.
5. Specification and drawing conventions.

B. Related Requirements:

1. Division 01 Section "Temporary Facilities" for limitations and procedures governing temporary use of Owner's facilities.

1.02 PROJECT INFORMATION:

- A. Owner's Representative: Shane Jones, PE, Project Manager, sjones@provo.org, 801-852-6773.
- B. Engineer: Michael M. Chambers, PE, PMP, Engineer mchambers@halengineers.com, 801-803-1828 and John Krinks, PE, Engineer, john.krinks@aecom.com, 614-493-3359.
- C. Engineer's Consultants: The Engineer has retained the following design professionals who have prepared designated portions of the Contract Documents:
1. Pump Station Electrical: Bob Hillyer, PE, bhillyer@heatheng.com, 385-202-7425.
 2. Pump Station HVAC: Karson Halverson, PE, khalverson@heatheng.com, 801-322-0487
 3. Pump Station Structural: Robert Conder, SE, robert@conderengineering.com, 801-597-4860
- D. Project Website: A project Website administered by Engineer will be used for purposes of managing communication and documents during the construction stage.

1. See Division 01 Section "Internet Based Construction Management System" for requirements for the Project website.

1.03 WORK COVERED BY CONTRACT DOCUMENTS:

- A. The Work of Project is defined by the Contract Documents and consists of the following:
 1. Construction includes, but is not limited to, the following: Work consists of the construction of a 30 MGD ultrafiltration membrane drinking water treatment plant including, but not limited to, the main Water Treatment Plant Facility with Administration Building, 2 MG Clearwell with drain vault and overflow structure, High Service Pump Station, 36-inch diameter Transmission Pipeline with valve vault, 42-inch diameter Mill Race Pipeline with diversion box, electrical and controls including three (3) 1,000 kW natural gas generators, security cameras, fencing, and site restoration, paving, and landscaping.
 2. Project will be constructed under a single prime contract.

1.04 ACCESS TO SITE:

- A. Use of Site: Limit use of Project site to areas within the Contract limits indicated. Only temporary closures will be allowed on portions of Project site beyond areas in which the Work is indicated.
 1. Shared Raintree Apartments Driveway, Walkways and Entrances: Keep driveways, parking lots, and entrances serving the Raintree Apartments and as noted on the Contract Drawings clear and available to residents, Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.
 - a. Limited closures will be permitted and must be coordinated with the Raintree Apartments property manager.
- B. BYU Easements: Work within BYU property shall only be conducted between February 1 to August 30 of 2023 or 2024. The work may be deferred to the 2024 season but work shall be completed in one construction season.
- C. UDOT Right-of-Way: Work within University Avenue shall not begin until after April 1 and shall be complete by September 29.

1.05 WORK RESTRICTIONS:

- A. Work Restrictions, General: Comply with restrictions on construction operations.
 1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.

- B. On-Site Work Hours: Limit work to normal business working hours of 7:00 a.m. to 6:00 p.m., Monday through Friday, excluding legal holidays, unless otherwise approved by Owner.
 - 1. Weekend Hours and Early Morning Hours are not allowed unless approval is provided by Owner.
 - C. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after providing temporary utility services according to requirements indicated:
 - 1. Notify Owner not less than two days in advance of proposed utility interruptions.
 - 2. Obtain written permission before proceeding with utility interruptions.
 - D. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to adjacent residents with Owner.
 - 1. Notify Owner not less than two days in advance of proposed disruptive operations.
 - 2. Obtain Owner's written permission before proceeding with disruptive operations.
 - E. Nonsmoking Building: Smoking is not permitted within the building or within 25 feet of entrances, operable windows, or outdoor-air intakes.
- 1.06 SPECIFICATION AND DRAWING CONVENTIONS:
- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 - 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
 - 2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
 - B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.
 - C. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:
 - 1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.

2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

(Not Used)

END OF SECTION

SECTION 01 14 14
CONTROL OF WORK

PART 1 - GENERAL

1.01 WORK AND HOURS OF CONSTRUCTION

- A. Furnish equipment which will be efficient, appropriate, and large enough to secure a satisfactory quality of work and a rate of progress which will insure the completion of the work within the Contract Time. If at any time such plant appears to the Engineer or Owner to be inefficient, inappropriate, or insufficient for securing the quality of work required or for producing the rate of progress aforesaid, the Engineer or Owner may order the Contractor to increase the efficiency, change the character, or increase the plant equipment, and the Contractor shall conform to such order. Failure of the Engineer or Owner to give such order shall in no way relieve the Contractor of his obligations to secure the quality of the work and rate of progress required.
- B. See Section 01 11 00 for normal construction activity on-site work hours.

1.02 OCCUPYING PRIVATE LAND

- A. The Contractor shall not (except after written consent from the proper parties) enter or occupy with personnel, tools, materials, or equipment any land outside the rights of way or property of the Owner. A copy of the written consent shall be given to the Engineer and Owner.

1.03 PIPE LOCATIONS

- A. Exterior pipelines will be located substantially as indicated on the Drawings, but the right is reserved to the Owner, acting through the Engineer, to make such modifications in location as may be found desirable to avoid interference with existing structures or for other reasons. Where fittings, etc., are noted on the Drawings, such notation is for the Contractor's convenience and does not relieve him from laying and jointing different or additional items where required.
- B. Small interior piping is indicated diagrammatically on the Drawings, and the exact location is to be determined in the field. Piping shall be arranged in a neat, compact, and workmanlike manner, with a minimum of crossing and interlacing, so as not to interfere with equipment or access ways, and, in general, without diagonal runs.

1.04 DIMENSION OF EXISTING STRUCTURES

- A. The Contractor shall verify the dimensions and locations of existing structures in the field before the fabrication of any material or equipment which is dependent on the correctness of such information.

1.05 OPEN EXCAVATIONS

- A. All open excavations shall be adequately safeguarded by providing temporary barricades, fencing, caution signs, lights, and other means to prevent accidents to persons and damage to property, and in accordance with applicable occupational health and safety regulations. The Contractor shall, at his own expense, provide suitable and safe bridges and other crossings for accommodating travel by pedestrians and workmen. Bridges provided for access during construction shall be removed when no longer required. The length or size of excavation will be controlled by the particular surrounding conditions, but shall always be confined to the limits prescribed by the Engineer or Owner. If the excavation becomes a hazard, or if it excessively restricts traffic at any point, the Engineer or Owner may require special construction procedures such as limiting the length of the open trench, prohibiting stacking excavated material in the street, and requiring that the trench shall not remain open overnight.
- B. The Contractor shall take precautions to prevent injury to the public due to open trenches and provide appropriate lighting at night. All trenches, excavated material, equipment, or other obstacles which could be dangerous to the public shall be constructed in accordance with applicable rules and regulations.

1.06 TEST PITS

- A. Test pits for the purpose of locating underground pipeline or structures in advance of the construction shall be excavated and backfilled by the Contractor at the direction of the Engineer. Test pits shall be backfilled immediately after their purpose has been satisfied and the surface restored and maintained in a manner satisfactory to the Engineer.

1.07 INTERFERENCE WITH AND PROTECTION OF STREETS

- A. The Contractor shall not close or obstruct any portion of a street, road, or private way without obtaining permits therefor from the proper authorities. If any street, road or private way has the potential to be made unsafe by the Contractor's operations, prior to the Work, the Contractor shall make such repairs or provide such temporary ways or guards as shall be acceptable to the proper authorities.
- B. Streets, roads, private ways, and walks not closed shall be maintained passable and safe by the Contractor, who shall assume and have full responsibility for the adequacy and safety of provisions made therefor.
- C. The Contractor shall, at least 72 hours in advance, notify the Police and Fire Departments in writing, with a copy to the Engineer and Owner, if the closure of a street or road is necessary. The Contractor shall cooperate with the Police Department in the establishment of alternate routes and shall provide adequate detour signs, plainly marked and well lighted, in order to minimize confusion.

1.08 TRAFFIC CONTROL

- A. General:

1. Unless otherwise approved by the Engineer, Contractor shall maintain at least one 12-foot wide travel lane for each direction of travel at all times.
2. Full road and/or intersection closures will only be approved under extreme circumstances as determined by the Engineer. Street and/or lane closure fees may be assessed for closures determined to be for Contractor convenience in completing the Work.
3. If a lane, intersection, or road closure is approved by the Engineer, the Contractor shall be required to provide advance public notification. This shall be done using electronic message boards (variable message signs) at the beginning and end of each reach to be closed, and in all four directions at intersections, as well as flyers to the residents in the vicinity. The Contractor shall post both types of messages at least 7 days prior to closure.
4. A copy of the approved Traffic Control Plan shall be maintained on the job site at all times.
5. Unless otherwise approved by the Engineer, Contractor shall remove all traffic control devices from roadway at the end of each day. All advance warning signs not being used should be turned around until the traffic control placement the following day.
6. Contractor shall implement traffic control measures to safely and properly secure the work area, equipment, residents, and personnel throughout the duration of the project. This requirement also applies to portions of the work being performed by subcontractors.

B. University Avenue Crossing:

1. CONTRACTOR may adopt the prepared traffic control plan as shown on the Contract Drawings or may prepare a new traffic control plan for review. Traffic control plans for work within University Avenue shall conform to all requirements of UDOT Standard Specification 01554 Traffic Control and shall be submitted to and approved by UDOT.
2. CONTRACTOR may limit travel lane widths to 10-foot wide for each direction but shall maintain two lanes of travel in one direction and one lane of travel in the opposite direction. Full road closure will not be allowed.
3. CONTRACTOR shall provide advance public notification for work within University Avenue via electronic message boards (variable message signs) for north bound and south bound traffic. CONTRACTOR shall post messages at least 7 days prior to closure.
4. A copy of the approved Traffic Control Plan shall be maintained on the job site at all times.

5. Contractor shall implement traffic control measures to safely and properly secure the work area, equipment, residents, and personnel throughout the duration of the project. This requirement also applies to portions of the work being performed by subcontractors.

C. Intersections:

1. Use uniformed police officer when construction activities are impacting an operating signalized intersection.
2. Use of flaggers at a signalized intersection is permitted only when signals have been turned to red flash mode or are inoperable.
3. Control each approach by separate flaggers.
4. Flaggers can control only two lanes of approach traffic.
5. Third lane control permitted when left or right turn bays are present.
6. Coordinate all modifications to signal operations with Brian Torgersen, Provo City Traffic Engineer (801) 852-6745.
7. For unsignalized intersections – provide a certified flagger for each approach.
8. Existing left turn lanes may be used for through traffic movement when the need to reduce the through traffic to one lane at the approach to signalized intersections. Install appropriate channelization and install “No Left Turn” signs stating “Bus Exception” message.

9. ACCESS:

- a. CONTRACTOR shall provide access to all affected properties except for durations of less than 8 hours. In all cases:
- b. Provide alternate access whenever normal access is blocked and an alternate access method is possible.
- c. Notify property owners 48 hours in advance of change or loss of access detailing duration and frequency of access closures.

10. PARKING RESTRICTIONS:

- a. CONTRACTOR shall be responsible to notify residents and/or businesses of any necessary parking restrictions that may be required to complete the Work.
- b. CONTRACTOR shall post “NO PARKING” signs every 50 feet 24 hours in advance of the anticipated need for parking restrictions.

11. PUBLIC TRANSIT:

- a. CONTRACTOR shall contact the Utah Transit Authority (UTA) and coordinate necessary alternations in UTA's bus service. Details of alternate bus routes are to be submitted with the Traffic Control Plan.
 - b. CONTRACTOR shall keep bus stops open and clear of debris and minimize disruption to current bus services in and around bus stops.
12. MOMENTARY PARTIAL OR COMPLETE LANE CLOSURE AUTHORIZATION (WITHOUT PERMIT):
- a. Provide flagger when work momentarily affects travel lanes. Example: A backhoe maneuvering in a travel lane outside of the construction work zone.
 - b. Activities requiring momentary partial or complete lane closures shall be kept to a minimum. Lane closure fees may be assessed as determined appropriate by the ENGINEER for excessive momentary closures.
13. TRAFFIC CONTROL PLAN
- a. CONTRACTOR shall develop and submit a Traffic Control Plan which satisfies OWNER's requirements and shall conform to the requirements of this section and the requirements, limitations, and phasing identified in Section 01 11 00S. Traffic Control Plan to be created using the recommendations and guidelines outlined in the following resources. Resolve discrepancies between resources in descending order as shown:
 - (1) MUTCD.
 - (2) Work Zone Traffic Control Guide
 - (3) ATSSA
 - b. CONTRACTOR shall be responsible to provide a Traffic Control Plan for all phases, segments, and portions of the WORK including items of the WORK performed by Subcontractors and work within University Avenue.
 - c. The Traffic Control Plan shall be prepared using CAD software showing the appropriate scale and space relationship between traffic control devices and intersections, high volume driveways, and other pertinent roadway features.
 - d. OWNER may require that the Traffic Control Plan be produced, signed, and sealed by a professional engineer licensed in the State of Utah at no additional cost to the OWNER.
 - e. CONTRACTOR shall coordinate with Brian Torgersen, Provo City Traffic Engineer, (801) 852-6745, in the preparation and implementation of the Traffic Control Plan.

- f. Include the following documentation as part of the traffic control plan:
 - (1) Written description and phasing.
 - (2) Drawing showing phasing (if required for clarity)
 - (3) Drawing showing placement of traffic control devices.
 - g. Show how to move pedestrians through or around the Work site.
 - h. Show how traffic control at signalized intersections will be addressed.
 - i. Provide concrete barrier or other positive protection for workers and all hazards located within the AASHTO clear zone for approach traffic.
 - j. Meet grade, slope and protection requirements of the Americans with Disabilities Act (ADA).
14. TRAFFIC CONTROL TECHNICIAN
- a. Certified by UDOT, ATSSA, or Associated General Contractors (AGC).
 - b. Authority
 - (1) Obtains and uses all labor, equipment, and materials necessary to maintain traffic control.
 - (2) Changes traffic control operations according to the approved traffic control plan.
 - c. Responsibilities and Duties
 - (1) Oversees all traffic control operations.
 - (2) Will be present and active participant during the installation, maintenance, and removal of Temporary Traffic Control Devices.
 - (3) Implements the Traffic Control Plan.
 - (4) Remains available 24 hours a day, seven days a week and can be on-site within 30 minutes of notification.
 - (5) Corrects deficiencies immediately upon verbal or written notification from Engineer or his representative.
 - (6) Document the traffic control activities and inspections on a form acceptable to the Engineer. Inspect at least four times each day with at least one of the inspections conducted during nighttime hours:

- (a) Before beginning of shift
 - (b) At mid-shift
 - (c) Half-hour after shift ends
 - (d) At midpoint of the off-shift period
- (7) Coordinate project traffic control with emergency services and local law enforcement agencies.
 - (8) Inspect and document traffic control inspections twice each day when no construction work is being done.
 - (a) Once during daylight hours and once during nighttime hours.
 - (b) Conduct inspections a minimum of eight hours apart.
 - (9) Submit traffic control activities and inspection forms each week on a day and time acceptable to the Engineer.
 - (10) Monitor traffic queue lengths and adjust advanced warning signs to provide adequate warning to the actual back of queue resulting from construction activities.

15. FLAGGER

- a. Certified by ATSSA, AGC, or UDOT.
- b. Equipment:
 - (1) 24" X 24" "Stop/Slow" sign.
 - (2) 6" to 8" long red wand for night flagging.
 - (3) Light plant for night flagging.
- c. Clothing:
 - (1) Clothed; full length pants and long or short sleeved shirt.
 - (2) Hard toed shoes.
 - (3) Lime green, orange, or red-orange hardhat and vest.
 - (4) Night clothing to be reflectorized.

1.09 CARE AND PROTECTION OF PROPERTY

- A. The Contractor shall be responsible for the preservation of all public and private property, and shall use every precaution necessary to prevent damage thereto. If any direct or indirect damage is done to public or private property by or on account of any act, omission, neglect, or misconduct in the execution of the work on the part of the Contractor, such property shall be restored by the Contractor, at his expense, to a condition similar or equal to that existing before the damage was done, or he shall make good the damage in other manner acceptable to the Engineer and Owner.

1.10 INTERFERENCE WITH EXISTING WORKS

- A. The Contractor shall at all times conduct his operations so as to interfere as little as possible with existing works. The Contractor shall develop a program, in cooperation with the Engineer and interested officials, which shall provide for the construction and putting into service of the new works in the most orderly manner possible. This program shall be adhered to except as deviations therefrom are expressly permitted. All work of connecting with, cutting into, and reconstructing existing pipes or structures shall be planned to interfere with the operation of the existing facilities for the shortest possible time when the demands on the facilities best permit such interference, even though it may be necessary to work outside of normal working hours to meet these requirements. Before starting work which will interfere with the operation of existing facilities, the Contractor shall do all possible preparatory work and shall see that all tools, materials, and equipment are made ready and at hand.
- B. The Contractor shall make such minor modifications in the work relating to existing structures as may be necessary, without additional compensation.

1.11 PROTECTION AND RELOCATION OF EXISTING STRUCTURES AND UTILITIES

- A. The Contractor shall assume full responsibility for the protection of all buildings, structures, and utilities, public or private, including poles, signs, services to buildings, utilities in the street, gas pipes, water pipes, hydrants, sewers, drains, and electric and telephone cables, whether or not they are shown on the Drawings. The Contractor shall carefully support and protect all such structures and utilities from injury of any kind. Any damage resulting from the Contractor's operations shall be repaired by him at his expense.
- B. The Contractor shall bear full responsibility for obtaining all locations of underground structures and utilities (including existing water services, drain lines, and sewers). Services to buildings shall be maintained, and all costs or charges resulting from damage thereto shall be paid by the Contractor.
- C. Protection and temporary removal and replacement of existing utilities and structures as described in this Section shall be a part of the work under the Contract and all costs in connection therewith shall be included in the Total Price Bid in the Bid Form.

1.12 INSPECTION OF WORK AWAY FROM THE SITE

- A. If work to be done away from the construction site is to be inspected on behalf of the Owner during its fabrication, manufacture, or testing, or before shipment, the Contractor shall give notice to the Engineer of the place and time where such fabrication, manufacture, testing, or shipping is to be done. Such notice shall be in writing and delivered to the Engineer in ample time so that the necessary arrangements for the inspection can be made.

1.13 COOPERATION WITHIN THIS CONTRACT

- A. All firms or persons authorized to perform any work under this Contract shall cooperate with the Owner, Engineer, and General Contractor and his Subcontractors or trades, and shall assist in incorporating the work of other trades where necessary or required.
- B. Cutting and patching, drilling and fitting shall be carried out where required by the trade or subcontractor having jurisdiction, unless otherwise indicated herein or recommended by the Engineer.

1.14 CLEANUP AND DISPOSAL OF EXCESS MATERIAL

- A. During the course of the work, the Contractor shall keep the site of his operations in as clean and as neat a condition as is possible. He shall dispose of all residue resulting from the construction work and, at the conclusion of the work, he shall remove and haul away any surplus excavation materials, broken pavement, lumber, equipment, temporary structures, and any other refuse remaining from the construction operations, and shall leave the entire site of the work in a neat and orderly condition.
- B. In order to prevent environmental pollution arising from the construction activities related to the performance of this Contract, the Contractor and his subcontractors shall comply with all applicable Federal, State, and local laws, and regulations concerning site management, waste material disposal, as well as the specific requirements stated in this Section and elsewhere in the Specifications.
- C. The Contractor is advised that the disposal of excess excavated material in wetlands, stream corridors, and plains is strictly prohibited even if the permission of the property owner is obtained. Any violation of this restriction by the Contractor or any person employed by him, will be brought to the immediate attention of the responsible regulatory agencies, with a request that appropriate action be taken against the offending parties. Therefore, the Contractor will be required to remove the fill at his own expense and restore the area impacted.
- D. Obtain prior approval from the Owner and Engineer for any stockpiling of material onsite.

PART 2 - PRODUCTS

2.1 PAVEMENT MARKINGS, SIGNS, BARRICADES

- A. MUTCD.
- B. Channelizing Devices: Crash worthy plastic cones, drums and barricades.
 - 1. Only drums, barricades, and vertical panels will be allowed for nighttime use. No cones will be allowed for nighttime use.
- C. Reflective Sheeting: ASTM D 4956.
- D. Pavement Markings: Section 32 17 23.
 - 1. Temporary striping: by CONTRATOR
 - 2. Permanent striping: by CONTRACTOR
 - a. ENGINEER will provide layout for new pavement striping where striping has been completely removed.
 - b. CONTRACTOR shall be responsible to provide traffic control for ENGINEER during striping layout operations
 - 3. Permanent rumble strips: by CONTRACTOR
 - a. To follow installation of permanent striping and requires restriping following grinding of rumble strips.

PART 3 - EXECUTION

3.1 FLAGGING

- A. MUTCD
- B. ATSSA

3.2 TRAFFIC CONTROL DEVICES

- A. Install traffic control devices before work activities begin.
- B. Maintain devices to ensure proper, continuous function.
- C. Wash devices weekly unless conditions warrant more frequent cleaning.

- D. Replace damaged devices missing any part of the message or background.
- E. Remove when no longer needed.
- F. Concrete barriers are not to be used as road closure devices.

END OF SECTION

SECTION 01 21 00

ALLOWANCES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Section includes administrative and procedural requirements governing allowances.
 - 1. Certain items are specified in the Contract Documents by allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when direction will be provided to Contractor.
- B. Types of allowances include the following:
 - 1. Cash allowances for laboratory equipment.
 - 2. Cash allowances for tools.

1.02 SELECTION AND PURCHASE:

- A. At the earliest practical date after award of the Contract, advise Engineer of the date when final selection and purchase of each product or system described by an allowance must be completed to avoid delaying the Work.
- B. At Engineer's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.
- C. Purchase products and systems selected by Engineer from the designated supplier.

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. Submit proposals for purchase of products or systems included in allowances.
- C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.04 COORDINATION:

- A. Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.05 CASH ALLOWANCES FOR EQUIPMENT OR MATERIALS:

A. Amount of each allowance for Work specified see Section 3.03.

B. Engineer's Duties:

1. Consult with Contractor in consideration of equipment or material and suppliers or installers.
2. Make selection in consultation with Owner. Obtain Owner's written decision, designating following as applicable.
 - a. Material, equipment, model, and finish.
 - b. Accessories and attachments.
 - c. Supplier and installer.
 - d. Cost to Contractor, delivered to site or installed.
 - e. Manufacturer's warranties.
3. Transmit Owner's written decision to Contractor.

C. Contractor's Duties:

1. At earliest feasible date after award of Contract, advise Engineer of scheduled date when final selection of material or equipment described by each allowance must be accomplished in order to avoid delays in performance of Work.
2. Assist Engineer and Owner in determining qualified suppliers or installers.
3. Obtain proposals from suppliers and installers when requested by Engineer.
4. Make appropriate recommendations for consideration of Owner and Engineer.
5. Notify Engineer promptly of following:
 - a. Reasonable objections Contractor may have against supplier or installer under consideration.
 - b. Effect on construction schedule anticipated by selections under consideration.
6. On notification of selection, execute purchase agreement with designated supplier.
7. Arrange for and process Shop Drawings, product data, and samples as required.
8. Make arrangements for delivery.

9. Upon delivery, inspect materials or equipment for damage or defects.
 10. Submit claims for transportation damage.
 11. Install and finish materials or equipment as directed by Owner.
- D. Adjustment of Costs:
1. If cost is more or less than specified allowance, Contract Price will be adjusted by Change Order.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 EXAMINATION:

- A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.02 PREPARATION:

- A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.03 SCHEDULE OF ALLOWANCES:

- A. Lump-Sum Allowance:

1. Include lump sum of \$250,000 for purchase and supply of laboratory equipment.
2. Include lump sum of \$20,000 for purchase and supply of tools.

3.04 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 01 25 00

SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Section includes administrative and procedural requirements for substitutions.

1.02 DEFINITIONS:

- A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
 - 1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - 2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. Substitution Request Form: Use Form 01 25 00-1 to request substitution.
 - 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - a. Justification for use of the proposed equivalent item(s), including evidence, as applicable, that Contract specified material, product or equipment is unobtainable or unobtainable within an acceptable time for Contract completion.
 - b. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable. If the Contractor is proposing the substitution because of unavailability of the product, submit a letter from the manufacturer stating the product is unavailable with an explanation of why it is unavailable with the form 01 25 00-1

- c. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
- d. Detailed comparison of qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, electrical characteristics, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated and specified. Indicate deviations, if any, from the Work specified.
- e. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
- f. Samples, where applicable or requested.
- g. Certificates and qualification data, where applicable or requested.
- h. List of similar installations for completed projects with project names and addresses and names, telephone numbers and addresses of engineers and owners.
- i. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
- j. Research reports evidencing compliance with building code in effect for Project.
- k. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
- l. Cost information, including a proposal of change, if any, in the Contract Sum.
- m. A prediction of any effects the proposed change will have on operation and maintenance costs, where applicable.
- n. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is intended for applications indicated.

- o. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
 - 3. Engineer's Action: If necessary, Engineer will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Engineer will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
 - a. Forms of Acceptance: Change Order, Construction Change Directive, or Engineer's Supplemental Instructions for minor changes in the Work.
 - b. Use product specified if Engineer does not issue a decision on use of a proposed substitution within time allocated.

1.04 ACCEPTABLE EQUIVALENT PRODUCTS, MATERIALS AND EQUIPMENT:

- A. Any other product the contractor wants to substitute must follow the requirements of this Section.
- B. If the Contractor chooses to substitute equipment other than a named manufacturer(s), any additional costs or time required to accommodate such equipment shall be made without a change in the Contract Price or Contract Time and at no additional cost to the Owner.

1.05 MATERIAL AND WORKMANSHIP:

- A. Whenever a material, article, system, or sub-system is specified or described by using the name and/or model of a proprietary product or trademark or the name of the manufacturer or vendor, the specified item shall establish the type, function, and quality required; it shall be understood that the words "or approved equivalent" are implied whether or not they follow the proprietary enumeration.
- B. The Engineer reserves the right to determine when proprietary items have no equivalency, and when uniformity of operations, interchangeability of parts, standard parts inventory, etc., are in Owner's best interest.
- C. Requests for review of equivalency will be considered upon submission of sufficient information as described herein, to allow complete review.
- D. Such requests will not be accepted from anyone other than the Contractor. Such submission must be made prior to purchase, fabrication, manufacture, or use of the equivalent items under consideration.
- E. The Contractor is responsible for all delays caused by its failure to submit complete and accurate information with any request for approval of any material, article, system, or subsystem, as an equivalent.

1. Contractor Risk:
 - a. If the Contractor includes in his bid or later proposes any material, product, or equipment that he considers equivalent to that specified, the Contractor assumes all risk of any sort associated with acceptance or rejection of proposed equivalent items.
 - b. The Contractor shall have no right to make claim based upon his bid that includes a proposed equivalent item(s) of work which resulted in a lower bid amount for said item(s) or lower total bid.
2. Equivalency:
 - a. An item will be considered equivalent to the item specified if:
 - (1) It is equal or better in design and strength in all subparts, quality, reliability and durability, operation, maintenance, and serviceability, as applicable; and
 - (2) It is equal or better in specified parameters in performance in all respects for the specific function(s) indicated in the contract.
 - b. Engineer shall make final determination of equivalence.
3. Supplemental Requirements:
 - a. The time associated with equivalency review will be paid by the Contractor.
 - b. Any tests required by the Engineer to establish quality and performance standards shall be promptly conducted by or through the Contractor at no additional cost to the Owner.
 - c. The Contractor shall submit any additional data requested by the Engineer for the equivalency review.
 - d. The Contractor shall satisfactorily accomplish all changes, including any engineering associated with use of equivalent items, at no additional cost to the Owner.
 - e. The Contractor shall have no right of appeal to any decision rejecting the equivalency of any item.

1.06 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to

perform compatibility tests recommended by manufacturers at no cost to the Engineer or Owner.

1.07 PROCEDURES:

- A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.01 SUBSTITUTIONS:

- A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

- 1. Conditions: Engineer will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Engineer will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution is consistent with the Contract Documents and will produce specified and indicated results.
- b. Requested substitution provides sustainable design characteristics that specified product provided.
- c. Substitution request is fully documented and properly submitted.
- d. Requested substitution will not negatively affect Contractor's construction schedule.
- e. Requested substitution has received necessary approvals of authorities having jurisdiction.
- f. Requested substitution is compatible with other portions of the Work.
- g. Requested substitution has been coordinated with other portions of the Work.
- h. Requested substitution provides specified warranty.
- i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

- B. Substitutions for Convenience: Not allowed

PART 3 - EXECUTION

3.01 CONTRACT CLOSEOUT:

- A. Provide in accordance with Section 01 77 00.

Form 01 25 00-1
SUBSTITUTION REQUEST

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Claims for additional costs related to accepted substitution which may subsequently become apparent are to be waived.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to design, including Engineer design, detailing, and construction costs caused by the substitution.
- Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

SECTION 01 31 19
PROJECT MEETINGS

PART 1 - GENERAL

1.01 CONTRACTORS RESPONSIBILITY:

- A. Contractor shall schedule and administer meetings with their own staff and/or other contractors, construction foremen's meetings, and specially called meetings with these parties throughout progress of Work. Contractor shall:
 - 1. Prepare agenda for meetings.
 - 2. Distribute written notice of specially called meetings minimum of one working day(s) in advance of meeting date.
 - 3. Make physical arrangements for meetings.
 - 4. Preside at meetings.
 - 5. Record minutes; include significant proceedings and decisions.
 - 6. Prepare formal minutes and distribute within two working days after each meeting to the following:
 - a. Meeting participants.
 - b. Parties affected by decisions made at meeting.
 - c. Engineer and Owner - furnish both with three copies of minutes.
- B. Representatives of Contractor, Subcontractors, and Suppliers attending meetings shall be qualified and authorized to act on behalf of entity each represents.
- C. Owner and Engineer may attend meetings.

1.02 PRECONSTRUCTION CONFERENCE:

- A. Attend a pre-construction meeting.
- B. Engineer will preside at the preconstruction conference and will arrange for keeping the minutes and distributing the minutes to all persons in attendance.
- C. The location of the conference will be determined by the Owner. Contractor should plan on the conference taking no less than 4 hours.

- D. The time of the meeting will be determined by the Owner but will be after the Notice of Award is issued and not later than fifteen (15) days after the Notice to Proceed is issued.
- E. The Owner, Engineer, representatives of utility companies, the Contractor's project manager and superintendent, and representatives from major Subcontractors and Suppliers shall attend the meeting.
- F. Contractor shall provide and be prepared to discuss:
 - 1. Preliminary construction schedule per Section 01 32 17 "Construction Progress Schedule".
 - 2. Preliminary submittal schedule per Section 01 33 00 "Submittals".
 - 3. Schedule of values and anticipated schedule of payments.
 - 4. List of Subcontractors and Suppliers.
 - 5. Contractor's organizational chart as it relates to this project.
 - 6. Letter indicating the agents of authority for the Contractor and the limit of that authority with respect to the execution of legal documents, contract modifications and payment requests.

1.03 PROGRESS MEETINGS

- A. Attend meetings with the Engineer and Owner.
 - 1. Meet on a bi-weekly basis or as requested by the Engineer to discuss the project.
 - 2. Meet at the project site or other location as designated by the Engineer.
 - 3. Contractor's superintendent and other key personnel are to attend the meeting. Other individuals may be requested to attend to discuss specific matters.
- B. Engineer shall preside at the meetings and provide for keeping and distribution of the minutes. The purpose of the meetings will be to review the progress of the work, maintain coordination of efforts, discuss changes in scheduling, and resolve other problems which may develop. Provide information as requested by the Engineer or Owner concerning this project.
 - 1. Prepare to discuss:
 - a. Status of overall project schedule.
 - b. Contractor's detailed schedule for the next month.
 - c. Anticipated delivery dates for equipment.

- d. Coordination with the Owner.
 - e. Status of submittals.
 - f. Information or clarification of the Contract Documents.
 - g. Claims and proposed modifications to the contract.
 - h. Field observations, problems, or conflicts.
 - i. Maintenance of quality standards.
- 2. Notify the Engineer of any specific items to be discussed a minimum of one week prior to the meeting.
- C. Review minutes of meetings and notify the Engineer of any discrepancies within ten days of the date of the memorandum.
- 1. Following that date, the minutes will stand as shown or as corrected.
 - 2. Corrections will be reflected in the minutes of the following meeting. Issues discussed will be documented and old issues will remain on minutes of subsequent meetings until the issue is resolved.

1.04 PRE-SUBMITTAL AND PRE-INSTALLATION MEETINGS

- A. Attend pre-submittal and pre-installation meetings as required in the individual technical specifications or as determined necessary by the Engineer (for example, instrumentation, roofing, concrete mix design, etc.).
- B. The location of the meeting will be determined by the Engineer.
- C. The time of the meeting will be determined by the Contractor when ready to proceed with the associated work, subject to submission of a Notification by Contractor form and acceptance by the Engineer and Owner of the proposed time.
- D. The Owner, Engineer, the Contractor's project manager and superintendent, and representatives from affected Subcontractors and Suppliers shall attend the meeting.

SECTION 01 31 24

INTERNET BASED CONSTRUCTION MANAGEMENT SYSTEM

PART 1 - GENERAL

1.01 WORK INCLUDED

- A. The Owner will utilize the Internet-based project delivery management system Procore to manage this project.
- B. The project website will provide server space and secured access to staff members representing the Owner, Engineer, and Contractor. Each user will have a separate log-in name and password to access the website.
 - 1. Upon receipt of Notice of Award, Contractor to designate the lead person who will automatically receive notifications when responses are made to contractor postings.
 - 2. Instruction for login and use of system will be provided prior to preconstruction meeting.
- C. Contract management related documents will be submitted, tracked, responded to, and made available to the Owner, Engineer and Contractor through the management system.

1.02 REQUIREMENTS

- A. The Contractor will be required to make all submittals in electronic format by utilizing the designated construction management system. Process will be discussed at the pre-construction meeting.
- B. The website includes a secured document management system for storing and making available to the project team the following:
 - 1. Ability to store files and correspondence.
 - 2. Latest drawings and specifications.
 - 3. Project progress photos.

All electronic documents are considered record on file upon system receipt.

- C. The website will include the following database driven applications. The system is designed to inform team members regarding new or updated documents and automatic task assignment and overdue notifications. The following items shall be entered, submitted, tracked, and responded to on-line:
 - 1. Document Management

2. Construction Schedule
3. Meeting Minutes
4. RFIs (Requests for Information)
5. Submittals
6. Owner Inspector Daily Field Report.
7. Contractor's Site Visit Reports

1.03 ARCHIVES

- A. Web based project delivery management application shall be capable of archiving all files on the website.
- B. All data from the website, such as RFIs, submittals, etc. will be available in the archive.
- C. The project website will provide server space and secured access to staff members representing the Owner, Engineer, and Contractor. Each user will have a separate log-in name and password to access the website.
 1. Upon receipt of Notice of Award, Contractor to designate the lead person who will automatically receive notifications when responses are made to contractor postings.
 2. Instruction for login and use of system will be provided prior to preconstruction meeting.
- D. Contract management related documents will be submitted, tracked, responded to, and made available to the Owner, Engineer and Contractor through the management system.

1.04 REQUIREMENTS

- A. The Contractor will be required to make all submittals in electronic format by utilizing the designated construction management system. Process will be discussed at the pre-construction meeting.
- B. The website includes a secured document management system for storing and making available to the project team the following:
 1. Ability to store files and correspondence.
 2. Latest drawings and specifications.
 3. Project progress photos.All electronic documents are considered record on file upon system receipt.

- C. The website will include the following database driven applications. The system is designed to inform team members regarding new or updated documents and automatic task assignment and overdue notifications. The following items shall be entered, submitted, tracked, and responded to on-line:

1. Document Management
2. Construction Schedule
3. Meeting Minutes
4. RFIs (Requests for Information)
5. Submittals
6. Owner Inspector Daily Field Report.
7. Contractor's Site Visit Reports

PART 2 - PRODUCTS

2.01 SOFTWARE

- A. Procore Technologies, Inc.

PART 3 - EXECUTION

3.01 ORIENTATION

- A. Contractor will receive system orientation by email. Orientation email will contain login instructions, video tutorials, user guide and access to system provided online training resources. Additional training can be done at the request of Contractor at no additional expense to the Contractor.

3.02 SUPPORT

- A. Contractor shall contact Engineer for initial system support. Engineer will determine if Project Controls is to be contacted for further support. System support is provided at no additional expense to Contractor.

3.03 OPERATION

- A. Contractor shall maintain high speed access to the internet for the Contractor, Engineer, and Owner to have access to and use of system at the jobsite trailers as well as on mobile devices.

3.04 DURATION

- A. The website will be active for the duration of project delivery and a minimum of 3 months past final completion at which time the project file will be archived.

3.05 ARCHIVES

- A. All files on the website will be archived at the end of the project. The archive file will be made available upon request by Contractor no sooner than 3 months past final completion.

END OF SECTION

SECTION 01 32 17

CONSTRUCTION PROGRESS SCHEDULES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide Construction Progress Schedules as indicated and in compliance with Contract Documents.
- B. Summary:
 - 1. Section includes administrative and procedural requirements for planning, monitoring, and documenting the progress of construction during performance of the Work, including the following:
 - a. Startup construction schedule.
 - b. Contractor's construction schedule.
 - c. Construction schedule updating reports.
 - d. Daily construction reports.
 - e. Material location reports.
 - f. Site condition reports.
 - g. Special reports.
- C. The Contractor has the obligation and responsibility at all times to plan and monitor all of its activities, anticipating and scheduling its staff, materials, plant and Work methods in a manner that is likely to ensure completion of the Work in accordance with the terms and conditions of the Contract and at a rate that will allow it to be completed within the Contract Time.

1.02 DEFINITIONS:

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
 - 1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
 - 2. Predecessor Activity: An activity that precedes another activity in the network.

- 3. Successor Activity: An activity that follows another activity in the network.
- B. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- C. Event: The starting or ending point of an activity.
- D. Float: The measure of leeway in starting and completing an activity.
 - 1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
 - 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
 - 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.
 - 4. Use of float suppression techniques such as software constraints, preferential sequencing, special lead/lag logic restraints, extended activity times, or imposed dates, other than as required by the Contract, shall be cause for the rejection of any schedule submitted by the Contractor.
- E. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. Format for Submittals: Submit required submittals in the following format:
 - 1. Working electronic copy of schedule file, where indicated.
 - 2. PDF electronic file.
- C. Startup construction schedule.
 - 1. Within 15 days after execution of the AGREEMENT, submit 3 copies of a preliminary schedule indicating planned operations during first 60 days. Include cost of activities expected to be completed before submission and acceptance of the complete schedule.
- D. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.

1. Within 30 days after execution of the AGREEMENT, submit 3 copies of the complete network analysis system. After review, submit 3 copies of the mutually acceptable system.
 - E. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.
 - F. Construction Progress Schedule and Updating Reports: Submit with Applications for Payment.
 - G. Daily Construction Reports: Submit at weekly intervals.
 - H. Material Location Reports: Submit at weekly intervals.
 - I. Site Condition Reports: Submit at time of discovery of differing conditions.
 - J. Special Reports: Submit at time of unusual event.
- 1.04 QUALITY ASSURANCE:
- A. Comply with the requirements specified in Section 01 43 00.
- 1.05 COORDINATION:
- A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.
 - B. Coordinate Contractor's construction schedule with the schedule of values, submittal schedule, progress reports, payment requests, and other required schedules and reports.
 1. Secure time commitments for performing critical elements of the Work from entities involved.
 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.01 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL:

- A. Contractor shall maintain an overall project schedule which shall include all construction activities. Schedule shall demonstrate major milestones for the overall Contract.
- B. Time Frame: Extend schedule from date established for the Notice of Award to date of final completion.
 1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

C. Activities: Treat each separate area as a separate numbered activity for each main element of the Work. Comply with the following:

1. Activity Duration: Define activities to sufficiently describe the tasks involved in the work, include procurement, long lead wait times, and delivery of equipment. Add additional activities and details as requested by Engineer or Owner. The durations shall be determined based upon resource planning under contractually-defined on-site work conditions. The Engineer may require that the duration of major activities be calculated by the scheduling software on the basis of the planned rate of daily production. In calculating activity durations, normal inclement weather shall be considered.
2. Procurement Activities: Include procurement process activities for all long lead items and major equipment items, requiring a cycle of more than 90 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, acceptance, purchasing, fabrication, and delivery.
3. Submittal Review Time: Include review and resubmittal times indicated in Division 01 Section "Submittal" in schedule. Coordinate submittal review times in Contractor's construction schedule with submittal schedule.
4. Startup and Testing Time: Include startup and testing time appropriate for each individual process or piece of equipment.
5. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow no fewer than 30 days for Engineer's administrative procedures necessary for certification of Substantial Completion.
6. Punch List and Final Completion: Include not more than 60 days for completion of punch list items and final completion.

D. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.

1. Phasing: Arrange list of activities on schedule by phase.
2. Work Under More Than One Contract: Include a separate activity for each contract.
3. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
4. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Division 01 Section "Summary of Work." Delivery dates indicated stipulate the earliest possible delivery date.

5. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Division 01 Section "Summary of Work." Delivery dates indicated stipulate the earliest possible delivery date.
6. Work Restrictions: Show the effect of the following items on the schedule:
 - a. Coordination with existing construction.
 - b. Limitations of continued occupancies.
 - c. Uninterruptible services.
 - d. Partial occupancy before Substantial Completion.
 - e. Use of premises restrictions.
 - f. Provisions for future construction.
 - g. Seasonal variations and inclement weather.
 - h. Environmental control.
 - i. Specified work sequences and constraints.
7. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
 - a. Subcontract awards.
 - b. Submittals.
 - c. Purchases.
 - d. Mockups.
 - e. Fabrication.
 - f. Sample testing.
 - g. Deliveries.
 - h. Installation.
 - i. Functional testing.
 - j. Start-up.
 - k. Commissioning.

- l. Performance testing.
 - m. Training
 - n. Tests and inspections.
 - o. Adjusting.
 - p. Curing.
 - q. Startup and placement into final use and operation.
 - r. Project closeout and final cleaning.
 - s. Demobilization.
- E. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and final completion.
- F. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:
 - 1. Unresolved issues.
 - 2. Unanswered Requests for Information.
 - 3. Rejected or unreturned submittals.
 - 4. Notations on returned submittals.
 - 5. Pending modifications affecting the Work and Contract Time.
- G. Recovery Schedule:
 - 1. When periodic update indicates critical path or major milestones of the Work is thirty or more calendar days behind the current accepted construction schedule and directed by owner, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.
 - 2. If, at any time, the critical path or major milestone Work is behind schedule with respect to the project progress schedule currently in force, and if the Engineer believes there is a risk of the Work not being completed within the Contract Time as a result of such delay, the Contractor shall take all necessary measures to make up for such delay either by increasing staff, plant or facilities, or by amending its Work methods, whichever is applicable.

- H. Computer Scheduling Software: Prepare schedules using Primavera P6 and provide in native software or Engineer approved equal scheduling software.
- 2.02 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE):
- A. CPM Schedule: Prepare Contractor's construction schedule using a time-scaled CPM network analysis diagram for the Work.
 - 1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 60 days after date established for the Notice of Award.
 - a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Engineer's acceptance of the schedule.
 - 2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
 - 3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
 - 4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule in order to coordinate with the Contract Time.
 - B. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.
 - 1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
 - a. Preparation and processing of submittals.
 - b. Mobilization and demobilization.
 - c. Purchase of materials.
 - d. Delivery.
 - e. Fabrication.
 - f. Utility interruptions.
 - g. Installation.

- h. Work by Owner that may affect or be affected by Contractor's activities.
 - i. Functional Completion Testing,
 - j. Startup and commissioning.
 - k. O&M Manual development.
 - l. Training.
 - m. Performance Testing
 - n. Punch list and final completion.
 - o. Activities occurring following final completion.
- 2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
 - 3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
 - 4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
 - a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

C. Contract Modifications:

- 1. For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall project schedule. Logically connect approved Contract changes into the CPM schedule. Each change will be identified by number and description, and activities/milestones will be added to record the following:
 - a. Date the change was identified
 - b. Date the change was priced (if applicable)
 - c. Start and finish dates of the changed Work
- 2. Extensions of the Contract Times must be substantiated by a complete schedule demonstration showing the cause and effect of the relevant issue on the then-current critical path.

- D. Schedule Updating: The CPM Progress Schedule will show the projected completion date of the Work based on the progress information inserted into it, without changes to the schedule logic or the original duration of any activity. The Contractor shall use the retained logic option when executing schedule calculation. Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

1. Identification of activities that have changed.
2. Changes in early and late start dates.
3. Changes in early and late finish dates.
4. Changes in activity durations in workdays.
5. Changes in the critical path.
6. Changes in total float or slack time.
7. Changes in the Contract Time.

2.03 CONTRACTOR'S LOOK-AHEAD SCHEDULES:

- A. The Contractor shall provide short interval, i.e., 2-week, "look ahead" schedules bi-weekly, identifying Work that has been performed during the past two weeks and activities that are planned for the next four weeks. The short interval schedule shall be consistent with the progress schedule currently in force.
- B. The Look-Ahead Schedules shall generally reflect the Work associated with the Detailed Progress Schedule. The activities in the Look-Ahead Schedules shall be identified by the same number coding as the Detailed Progress Schedule and revised as necessary.
- C. The final format of the look-ahead schedules will be determined by the Engineer and Owner.

2.04 REPORTS:

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:
1. List of subcontractors at Project site.
 2. List of separate contractors at Project site.
 3. Approximate count of personnel at Project site.
 4. Equipment at Project site.
 5. Material deliveries.

6. High and low temperatures and general weather conditions, including presence of rain or snow.
7. Accidents.
8. Meetings and significant decisions.
9. Unusual events (see special reports).
10. Stoppages, delays, shortages, and losses.
11. Meter readings and similar recordings.
12. Emergency procedures.
13. Orders and requests of authorities having jurisdiction.
14. Change Orders received and implemented.
15. Work Change Directives received and implemented.
16. Services connected and disconnected.
17. Equipment or system tests and startups.
18. Partial completions and occupancies.
19. Substantial Completions authorized.

2.05 SPECIAL REPORTS:

- A. General: Submit special reports directly to Owner within two day(s) of an occurrence. Distribute copies of report to parties affected by the occurrence.
- B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.01 CONTRACTOR'S CONSTRUCTION SCHEDULE:

- A. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the Work progresses, indicate final completion percentage for each activity.

END OF SECTION

SECTION 01 32 33

CONSTRUCTION PHOTOGRAPHS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide construction photographs pertinent to the Contract work during the Contract period as indicated and in compliance with Contract Documents.
 - 1. Section includes administrative and procedural requirements for the following:
 - a. Preconstruction photographs.
 - b. Periodic construction photographs.
 - c. Final completion construction photographs.
 - d. Preconstruction video recordings.
 - e. Periodic construction video recordings.

1.02 SUBMITTALS:

- A. Submit the following in accordance with Section 01 33 00.
- B. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph and video recording. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.
- C. Digital Photographs: Submit image files within three days of taking photographs.
 - 1. Submit video recordings by posting to Procore.
 - 2. Identification: Provide the following information with each image description in file metadata tag:
 - a. Name of Project
 - b. Name and contact information for photographer.
 - c. Name of Engineer
 - d. Name of Contractor.
 - e. Date photograph was taken.

- f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - g. Unique sequential identifier keyed to accompanying key plan.
- D. Video Recordings: Submit video recordings within seven days of recording.
 - 1. Submit video recordings by posting to Project Web site.
 - 2. Identification: With each submittal, provide the following information:
 - a. Name of Project
 - b. Name and address of photographer.
 - c. Name of Engineer
 - d. Name of Contractor.
 - e. Date video recording was recorded.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - g. Weather conditions at time of recording.

1.03 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Photographer to use techniques, material, and equipment capable of producing photographs of high quality and resolution.
 - 1. The records to be in sufficient detail to support any attestation that may be required of photographer.
 - 2. Photographer to retain such records for a period not less than two years from the final acceptance of entire work under this Contract.

1.04 USAGE RIGHTS:

- A. Obtain and transfer copyright usage rights from photographer to Owner for unlimited reproduction of photographic documentation.

1.05 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.

PART 2 - PRODUCTS

2.01 PHOTOGRAPHIC MEDIA:

- A. Digital Images: Provide high-resolution, digital photograph in format acceptable to Engineer.
- B. Digital Video Recordings: Provide high-resolution, digital video disc in format acceptable to Engineer.

PART 3 - EXECUTION

3.01 CONSTRUCTION PHOTOGRAPHS:

- A. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.
- B. Digital Images: Submit digital images exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.
 - 1. Date and Time: Include date and time in file name for each image.
 - 2. Field Office Images: Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those submitted to Engineer.
- C. Preconstruction Photographs: Before commencement of excavation, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Engineer.
 - 1. Flag excavation areas before taking construction photographs.
 - 2. Take sufficient photographs to document existing site conditions adjacent to property before starting the Work.
 - 3. Take minimum of 20 photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
 - 4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.
- D. Periodic Construction Photographs: Take minimum of 20 photographs weekly, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.

- E. Engineer-Directed Construction Photographs: From time to time, Engineer will instruct photographer about number and frequency of photographs and general directions on vantage points. Select actual vantage points and take photographs to show the status of construction and progress since last photographs were taken.
- F. Time-Lapse Sequence Construction Photographs: Take photographs at four fixed locations to show time-lapse sequence of construction and progress since last photographs were taken.
 - 1. Frequency: Take photographs weekly, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment.
 - 2. Vantage Points: Following suggestions by Engineer and Contractor, photographer to select vantage points. During each of the following construction phases, take one photographs from the four fixed locations to create a time-lapse sequence as follows:
 - a. Site upon completion of site clearing.
 - b. At completion of each structural excavation.
 - c. At completion of each structural foundation.
 - d. At completion of framing or forming for structures.
 - e. At completion of enclosures of structures.
 - f. At 1-month intervals, progress photography during construction of facilities. Photos of any month need show only new work performed during month.
 - g. Such special photographs required by Engineer.
 - h. Interior Work, through date of Substantial Completion.
 - 3. Views:
 - a. Coordinate with Engineer on views to be taken. In general views from locations to adequately illustrate state of project and condition of construction.
 - b. At least 3 different views of photographic subject except over-all site photography to have at least 4 different views unless otherwise approved by Engineer.
 - c. Succeeding photography of same photographic subject to be taken, insofar as practical, from the same view points as preceding photographic sessions. Variations in this procedure to be approved by Engineer.

G. Final Completion Construction Photographs: Take **20** color photographs after date of Substantial Completion for submission as project record documents. **Engineer** will inform photographer of desired vantage points.

1. Do not include date stamp.

H. Additional Photographs: Engineer may request photographs in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum.

1. Three days' notice will be given, where feasible.

2. In emergency situations, take additional photographs within 24 hours of request.

3. Circumstances that could require additional photographs include, but are not limited to, the following:

- a. Special events planned at Project site.

- b. Immediate follow-up when on-site events result in construction damage or losses.

- c. Photographs to be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.

- d. Substantial Completion of a major phase or component of the Work.

- e. Extra record photographs at time of final acceptance.

- f. Owner's request for special publicity photographs.

3.02 ROUTE PHOTOGRAPHY REQUIRED:

A. Provide progressive photographs of route before commencement of construction:

1. Progressive photographs of route starting at one end of route and progressing to other end then reverse progressive photography back to point of beginning.

2. Each exposure to overlap preceding exposure by 1/4 to 1/3 of the frame.

3. Additional photographs of features along route as directed by Engineer.

B. In the portions of the route where clearing is required make an additional set of progress photographs in similar manner specified for the initial route photography after all clearing work completed and before any other work commences in the cleared portion of the route.

C. During Construction:

1. At least once per week to illustrate state of project, condition of construction and progress in the previous week. Work photographed in previous sessions only photographed again sufficiently to provide progressive continuity of work unless otherwise directed by Engineer.
2. Such special photographs required by Engineer.

D. Upon Completion of All Construction Work:

1. Progressive photographs of route in same manner as that specified before commencement of Contract Work.
2. The route may be photographed in increments when work in that increment is completed and when approved by Engineer. Each increment photography to overlap other increment photography sufficiently such that all photographs provide progressive views of the route throughout.

3.03 CONSTRUCTION VIDEO RECORDINGS:

- A. Narration: Describe scenes on video recording by audio narration by microphone while video recording is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.
1. Confirm date and time at beginning and end of recording.
 2. Begin each video recording with name of Project, Contractor's name, videographer's name, and Project location.
- B. Preconstruction Video Recording: Before starting excavation, record video recording of Project site and surrounding properties from different vantage points.
1. Flag excavation areas before recording construction video recordings.
 2. Show existing conditions adjacent to Project site before starting the Work.
 3. Show existing buildings either on or adjoining Project site to accurately record physical conditions at the start of excavation.
 4. Show protection efforts by Contractor.
- C. Periodic Construction Video Recordings: Record video recording monthly, coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last video recordings were recorded.

END OF SECTION

SECTION 01 33 00

SUBMITTALS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This Section specifies the general methods and requirements of submissions applicable to the following work-related submittals as indicated and in compliance with Contract Documents.
 - 1. Shop Drawings, Product Data and Samples.
 - 2. Mock Ups.
 - 3. Construction Photographs.
 - 4. Contractor's Responsibilities.
 - 5. Submission Requirements.
 - 6. Review of Shop Drawings, Product Data, Working Drawings and Samples.
 - 7. Distribution.
 - 8. General Procedures for Submittals.
 - 9. Certificate of Design.
 - 10. Certificates of Compliance.
 - 11. Schedules.
- B. Detailed submittal requirements will be specified in the technical specifications section.

1.02 DEFINITIONS:

- A. Written and graphic information and physical samples that require Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."
- B. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.
- C. Shop drawings, as defined in the General Conditions, and as specified in individual work Sections include, but are not necessarily limited to: custom-prepared data such as

fabrication and erection/installation (working) drawings of concrete reinforcement, structural details and piping layout, scheduled information, setting diagrams, actual shopwork manufacturing instructions, custom templates, special wiring diagrams, coordination drawings, individual system or equipment inspection and test reports including performance curves and certifications as applicable to the work.

1.03 SUBMITTALS:

- A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Engineer and additional time for handling and reviewing submittals required by those corrections.
1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
 2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
 3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.
 - a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
 4. Format: Arrange the following information in a tabular format:
 - a. Scheduled date for first submittal.
 - b. Specification Section number and title.
 - c. Submittal category: Action; informational.
 - d. Name of subcontractor.
 - e. Description of the Work covered.
 - f. Scheduled date for Engineer's final release or acceptance.
 - g. Scheduled date of fabrication.
 - h. Scheduled dates for purchasing.
 - i. Scheduled dates for installation.
 - j. Activity or event number.

1.04 SUBMITTAL ADMINISTRATIVE REQUIREMENTS:

- A. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
 - 1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 - 2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on accepted submittal schedule.
 - 3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
 - 4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
 - a. Engineer reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
 - 5. The Contractor shall revise and resubmit rejected submittals and those requiring corrections or verification of information in a timely manner such that the overall progress of the Work is not impeded.
 - 6. Coordination of Submittal Times: The Contractor shall prepare and transmit each submittal sufficiently in advance of performing the related Work or other applicable activities, or within the time specified in the individual Sections of the Specifications, so that the installation will not be delayed by processing times, including rejection and resubmittal (if required), coordination with other submittals, testing, purchasing, fabrication, delivery, and similar sequenced activities. No extension of Contract Time will be authorized because of the Contractor's failure to transmit submittals sufficiently in advance of the Work.
- B. All shop drawings shall be submitted using the transmittal form approved by the Engineer.
- C. Submittals shall be managed through the Procore construction management system as specified in Section 01 31 24.
- D. All shop drawings submitted by subcontractors for approval shall be sent directly to the Contractor for checking. The Contractor shall be responsible for their submission at the proper time so as to prevent delays in delivery of materials.
- E. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Engineer's receipt of submittal. No

extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow 15 working days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Engineer will advise Contractor when a submittal being processed must be delayed for coordination.
 2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
 3. Resubmittal Review: Allow 15 working days for review of each resubmittal.
 4. Sequential Review: Where sequential review of submittals by Engineer's consultants, Owner, or other parties is indicated, allow 21 working days for initial review of each submittal.
- F. Physical Submittals: Where physical submittals are specified, place a permanent label or title block on each submittal item for identification.
1. Indicate name of firm or entity that prepared each submittal on label or title block.
 2. Include the following information for processing and recording action taken:
 - a. Project name.
 - b. Date.
 - c. Name of Engineer.
 - d. Name of Contractor.
 - e. Name of subcontractor.
 - f. Name of supplier.
 - g. Name of manufacturer.
 - h. Submittal number or other unique identifier, including revision identifier.
 - (1) Submittal number shall use Specification Section number followed by a decimal point and then a sequential number (e.g., 061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., 061000.01.A).
 - i. Number and title of appropriate Specification Section.
 - j. Drawing number and detail references, as appropriate.

- k. Location(s) where product is to be installed, as appropriate.
 - l. Other necessary identification.
 - 3. Transmittal: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. Engineer will discard submittals received from sources other than Contractor.
- G. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:
 - 1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
 - 2. Name file with submittal number or other unique identifier, including revision identifier.
 - a. File name shall use project identifier and Specification Section number followed by a decimal point and then a sequential number (e.g., LNHS-061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., LNHS-061000.01.A).
 - 3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Engineer.
 - 4. Provide electronic bookmarks with the electronic submittal.
 - 5. Provide a copy of the specification section with exceptions noted including an explanation.
 - 6. Transmittal Form for Electronic Submittals: Use software-generated form from electronic project management software or electronic form acceptable to Engineer, containing the following information:
 - a. Project name.
 - b. Date.
 - c. Name and address of Engineer.
 - d. Name of Contractor.
 - e. Name of firm or entity that prepared submittal.
 - f. Names of subcontractor, manufacturer, and supplier.
 - g. Category and type of submittal.

- h. Submittal purpose and description.
 - i. Specification Section number and title.
 - j. Specification paragraph number or drawing designation and generic name for each of multiple items.
 - k. Drawing number and detail references, as appropriate.
 - l. Location(s) where product is to be installed, as appropriate.
 - m. Related physical samples submitted directly.
 - n. Indication of full or partial submittal.
 - o. Transmittal number, numbered consecutively.
 - p. Submittal and transmittal distribution record.
 - q. Other necessary identification.
 - r. Remarks.
7. Metadata: Include the following information as keywords in the electronic submittal file metadata:
- a. Project name.
 - b. Number and title of appropriate Specification Section.
 - c. Manufacturer name.
 - d. Product name.
- H. Options: Identify options requiring selection by Engineer.
- I. Deviations and Additional Information: On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Engineer on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.
- J. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.
- 1. Note date and content of previous submittal.
 - 2. Note date and content of revision in label or title block and clearly indicate extent of revision.

3. Resubmit submittals until they are marked with acceptance notation from Engineer's action stamp.
 - K. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.
 - L. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with acceptance notation from Engineer's action stamp.
- 1.05 CONSTRUCTION PHOTOGRAPHS:
- A. The Contractor shall provide construction photographs in accordance with requirements specified in Section 01 32 33.

PART 2 - PRODUCTS

2.01 SUBMITTAL PROCEDURES:

- A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
 1. Post electronic submittals as PDF electronic files directly to Procore construction management system.
 - a. Engineer will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
 - b. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.
- B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
 1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
 2. Mark each copy of each submittal to show which products and options are applicable.
 3. Include the following information, as applicable:
 - a. Manufacturer's catalog cuts.
 - b. Manufacturer's product specifications.

- c. Standard color charts.
 - d. Statement of compliance with specified referenced standards.
 - e. Testing by recognized testing agency.
 - f. Application of testing agency labels and seals.
 - g. Notation of coordination requirements.
 - h. Availability and delivery time information.
4. For equipment, include the following in addition to the above, as applicable:
- a. Wiring diagrams showing factory-installed wiring.
 - b. Printed performance curves.
 - c. Operational range diagrams.
 - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
5. Submit Product Data before or concurrent with Samples.
- C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.
1. Certified shop and erection drawings. Contractor shall submit electronic files of the proposed equipment in the capacity, size, and arrangement as indicated and specified. Electronic files shall conform to the following minimum requirements:
- a. Electronic Files: Revit or AutoCAD latest version, 3D, drawn to scale.
 - b. Submit electronic files as part of the Shop Drawing submittal.
 - c. Drawings shall include plan views, sectional views, title block, Tag Numbers, serial numbers, Parts List (identifying each component), dimensions, connection sizes and types and all details of all related items. In cases where certain information is proprietary and is omitted, provided a statement indicating that the information is proprietary and is being omitted.
 - d. Drawings shall be in conformance with all other requirements as specified in this specification.
2. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

- a. Identification of products.
 - b. Schedules.
 - c. Compliance with specified standards.
 - d. Notation of coordination requirements.
 - e. Notation of dimensions established by field measurement.
 - f. Relationship and attachment to adjoining construction clearly indicated.
 - g. Seal and signature of professional engineer if specified.
3. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets 22 by 34 inches.
 4. Submit Shop Drawings in electronic pdf file format:
- D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
 2. Identification: Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Sample source.
 - d. Number and title of applicable Specification Section.
 - e. Specification paragraph number and generic name of each item.
 3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
 4. Disposition: Maintain sets of accepted Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

- a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
 - b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.
- 5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. Number of Samples: Submit one full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Engineer will return submittal with options selected.
- 6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured, and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
 - a. Number of Samples: Submit three sets of Samples. Engineer will retain two Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.
 - (1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
 - (2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
- E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
 - 1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
 - 2. Manufacturer and product name, and model number if applicable.
 - 3. Number and name of room or space.

4. Location within room or space.
5. Submit product schedule in PDF electronic file format:
 - a. PDF electronic file.
- F. Coordination Drawing Submittals: Comply with requirements specified in Section 01 33 00.
- G. Contractor's Construction Schedule: Comply with requirements specified in Section 01 32 17.
- H. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Division 01 Section "Quality Requirements."
- I. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Division 01 Section "Contract Closeout."
- J. Maintenance Data: Comply with requirements specified in Division 01 Section "Operation and Maintenance Data."
- K. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of Engineers and owners, and other information specified.
- L. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- M. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
- N. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
- O. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
- P. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
- Q. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

- R. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- S. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
 - 1. Name of evaluation organization.
 - 2. Date of evaluation.
 - 3. Time period when report is in effect.
 - 4. Product and manufacturers' names.
 - 5. Description of product.
 - 6. Test procedures and results.
 - 7. Limitations of use.
- T. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
- U. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
- V. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
- W. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.02 DELEGATED-DESIGN SERVICES:

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract

Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Engineer.
- B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.01 CONTRACTOR'S REVIEW:

- A. Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents prior to submission to the Engineer. Mark with approval stamp before submitting to Engineer.
- B. Contractor review shall verify the following:
 1. Field measurements
 2. Field construction criteria
 3. Catalog numbers and similar data
 4. Conformance with the Specifications
- C. If a shop drawing shows any deviation from the requirements of the Contract Documents, the Contractor shall make specific mention of the deviations in the Transmittal Form furnished by the Engineer and provide a description of the deviations in a letter attached to the submittal.
- D. The review and approval of shop drawings, samples or product data by the Engineer shall not relieve the Contractor from his responsibility with regard to the fulfillment of the terms of the Contract. All risks of error and omission are assumed by the Contractor and the Engineer will not have responsibility for any such errors and omissions.
- E. No portion of the work requiring a shop drawing, sample, or product data shall be started nor shall any materials be fabricated or installed prior to the approval or qualified approval of such item by the Engineer. Any fabrication performed, materials purchased or on-site construction accomplished which does not conform to accepted shop drawings

and data shall be at the Contractor's own risk. The Owner will not be liable for any expense or delay due to corrections or remedies required to accomplish conformity with the requirements of the Contract.

- F. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.02 ENGINEER'S ACTION:

- A. The Engineer's review is for general conformance with the design concept and contract documents. Markings or comments shall not be construed as relieving the Contractor from compliance with the contract plans and specifications or from departures therefrom. The Contractor remains responsible for details and accuracy, for coordinating the work with all other associated work and trades, for selecting fabrication processes, for techniques of assembly, and for performing work in a safe manner.
- B. Submittals will be reviewed for the Contractor's approval stamp. Submittals not stamped by the Contractor will be returned without any action.
- C. The review of shop drawings, data, and samples will be general. They shall not be construed:
 - 1. as permitting any departure from the Contract requirements;
 - 2. as relieving the Contractor of responsibility for any errors or omissions, including details, dimensions, and materials;
 - 3. as approving departures from details furnished by the Engineer, except as otherwise provided herein.
- D. If the shop drawings, data, or samples as submitted describe variations and show a departure from the Contract requirements which the Engineer finds to be in the interest of the Owner and to be so minor as not to involve a change in Contract Price or time for performance, the Engineer may return the reviewed drawings without noting an exception.
- E. Submittals will be returned to the Contractor under one of the action codes indicated below and defined on the transmittal form furnished by the Engineer.
 - 1. Marking: No Exception Taken.
 - a. When submittals are marked as "No Exception Taken," Work covered by submittal may proceed provided it complies with Contract Documents. Acceptance of Work depends on that compliance.
 - 2. Marking: Approved as Noted.

- a. When submittals are marked as “Approved as Noted,” Work covered by submittal may proceed provided it complies with Engineer’s notations or corrections on submittal and with Contract Documents. Acceptance of Work depends on that compliance. Resubmittal not required.
- 3. Marking: Revise and Resubmit.
 - a. When submittals are marked as “Revise and Resubmit,” do not proceed with Work covered by submittal. Do not permit Work covered by submittals to be used at Project site or elsewhere where Work is in progress.
 - b. Revise submittal or prepare new submittal in accordance with Engineer's notations in accordance with resubmittal requirements of this section. Resubmit without delay. Repeat if required to obtain different action marking.
- 4. Marking: Rejected; See Remarks.
 - a. When submittals are marked as “Rejected; See Remarks,” do not proceed with Work covered by submittal. Work covered by submittal does not comply with Contract Documents.
 - b. Prepare new submittal for different material or equipment supplier or different product line or material of same supplier complying with Contract Documents.
- 5. Marking: For Information Only.
 - a. When submittals are marked as “For Information Only,” the Engineer will review the submittal but take no action.
 - b. It will be recorded as “For Information Only”. Work covered by this submittal may proceed provided it complies with the Contract Documents.
- 6. Marking: Not Required for Review.
 - a. When submittals are marked as “Not Required for Review,” the Engineer has not reviewed the submittal and it is being returned.
 - b. Work covered by this submittal may proceed provided it complies with the Contract Documents.
- F. Resubmittals will be handled in the same manner as first submittals. On resubmittals the Contractor shall direct specific attention, in writing, on the letter of transmittal and on resubmitted shop drawings by use of revision triangles or other similar methods, to revisions other than the corrections requested by the Engineer, on previous submissions. Any such revisions which are not clearly identified shall be made at the risk of the Contractor. The Contractor shall make corrections to any Work done in relation to

revisions which are not specifically pointed out to the Engineer which are deemed, by the Engineer, not to be in accordance with the Contract Documents.

- G. Partial submittals may not be reviewed. The Engineer will be the only judge as to the completeness of a submittal. Submittals not complete will be returned to the Contractor and will be considered "Rejected" until resubmitted. The Engineer may at his option provide a list or mark the submittal directing the Contractor to the areas that are incomplete.
- H. If the Contractor considers any correction indicated on the shop drawings to constitute a change to the Contract Documents, the Contractor shall give written notice thereof to the Engineer at least seven working days prior to release for manufacture. The shop drawing and the Product data sheet reviews do not authorize changes in Contract Price or Contract Time. Changes involving Contract Price or Contract Time are authorized only by a signed Change Order, in accordance with the General Conditions.
- I. When the shop drawings have been completed to the satisfaction of the Engineer, the Contractor shall carry out the construction in accordance therewith and shall make no further changes therein except upon written instructions from the Engineer.
- J. Material and equipment delivered to the Site will not be paid for until the pertinent shop drawings have been reviewed and accepted by the Engineer.

3.03 DISTRIBUTION:

- A. Distribute reproductions of accepted shop drawings and copies of accepted product data and samples, where required, to the job site file and elsewhere as directed by the Engineer. Number of copies shall be as directed by the Engineer but shall not exceed 6.

3.04 CERTIFICATE OF DESIGN:

- A. If specifically specified in other Sections of these Specifications, the Contractor shall submit the applicable Certificate of Design for each item required, Form 01 33 00-1, completely filled in and signed and sealed by a registered professional engineer.

3.05 CERTIFICATES OF COMPLIANCE:

- A. Certificates of Compliance as specified in the specifications shall include and mean certificates, manufacturer's certificates, certifications, certified copies, letters of certification and certificate of materials.
- B. The Contractor shall be responsible for providing Certificates of Compliance as specified in the technical specifications. Certificates are required for demonstrating proof of compliance with specification requirements and shall be provided electronically and with one (1) print copy unless otherwise specified. Each certificate shall be signed by an official authorized to certify on behalf of the manufacturing company and shall contain the name and address of the Supplier, the project name and location, and the quantity and date or dates of shipment or delivery to which the certificates apply. Copies of

laboratory test reports submitted with certificates shall contain the name and address of the testing laboratory and the date or dates of the tests to which the report applies. Certification shall not be construed as relieving the Supplier from furnishing satisfactory material, if after tests are performed on selected samples, the material is found not to meet the specific requirements.

END OF SECTION

Form 01 33 00-1
CERTIFICATE OF DELEGATED DESIGN SERVICES

The undersigned hereby certifies that he/she is a Professional Engineer registered in the state of _____ and that he/she has been employed by (Name of Contractor) _____ to design _____ in accordance with Specifications Section _____ for the (Name of Project) _____. The undersigned further certifies that he/she has performed similar designs previously and has performed the design of the _____; that said design is in conformance with all applicable local, state, and federal codes, rules, and regulations and professional practice standards; that his/her signature and Professional Engineer (P.E.) Stamp have been affixed to all calculations and drawings used in, and resulting from, the design; and that the use of that stamp signifies the responsibility of the undersigned for that design.

The undersigned hereby certifies that he/she has Professional Liability Insurance with limits of \$1,000,000.00 and a Certificate of Insurance is attached.

The undersigned hereby agrees to make all original design drawings and calculations available to the Town/City of _____ or Owner's representative within seven (7) days following written request therefore by the Owner.

Section No. 01 33 00-18

SECTION 01 35 43

PROTECTION OF ENVIRONMENT

PART 1 - GENERAL

1.01 SUMMARY:

- A. Contractor, in executing Work, shall maintain Work areas on- and off-site free from environmental pollution that would be in violation of federal, state, or local regulations as indicated and in compliance with Contract Documents.
- B. The control of environmental pollution requires consideration of air, water, and land, and involves management of noise and solid waste, as well as other pollutants.
- C. Any contamination shall be reported by the Contractor to the Owner, the State and Local Authorities and cleaned up as required by the governing agency.
- D. The Contractor shall be responsible for the protection of the natural environment of the Site and surrounding areas, both land and water. Protection of the environment must start with avoidance and prevention, and then control/mitigation, compensation, or enhancement (in order of descending preference).
- E. Schedule and conduct all work in a manner that will minimize the erosion of soils in the area of the work. Provide erosion control measures such as diversion channels, sedimentation or filtration systems, berms, staked hay bales, seeding, mulching, or other special surface treatments as are required to prevent silting and muddying of streams, rivers, impoundments, lakes, etc. All erosion control measures shall be in place in an area prior to any construction activity in that area.
- F. Ensure that construction is achieved with a minimum of disturbance to the existing ecological balance between a water resource and its surroundings. It is the Contractor's responsibility to determine the specific construction techniques to meet these guidelines.
- G. Schedule and conduct all work in a manner that will minimize the level of noise escaping the site, especially at night and on weekends.
- H. Submit Storm Water Pollution Prevention Plan (SWPPP) in accordance with Section 01 33 00.
- I. Payment:
 - 1. Consider Work specified in this section incidental and include payment as part of appropriate lump sum or unit prices specified in Bid Form.

1.02 REFERENCES:

- A. United States Environmental Protection Agency (USEPA):

Protection of Environment
Section No. 01 35 43-1

1. EPA-72-015: Guidelines for Erosion and Sedimentation Control Planning and Implementation
2. EPA 43019-73-007: Processes, Procedures, and Methods to Control Pollution Resulting from All Construction Activity

- B. Federal Environmental Protection Act and applicable regulations.
- C. Owner's environmental management plans and associated environmental protection plans.

1.03 ENVIRONMENTAL INSPECTION AND MONITORING

- A. The Contractor shall be responsible for conducting on-going environmental inspection and monitoring to ensure compliance with the required mitigation measures set out in the Environmental Protection Plans. This shall include identification of the appropriate remedial actions where required and implementation in a timely fashion.
- B. The Contractor is advised that inspectors from local authorities may make periodic visits to the site during construction. They have the power to order the Contractor to stop Work if the work, in their opinion is not being done to ensure compliance with environmental objectives. The Engineer's acceptance of the work may be withheld until the authorities concerned have issued their approval.

1.04 SUBMITTALS

- A. Submit shop drawings in accordance with the requirements of Section 01 33 00 "Submittals".
- B. Prior to commencing any Work on this Contract and not later than fifteen (15) Working Days following receipt of the Notice to Proceed, the Contractor shall submit Environmental Protection Plan for the Engineer's review and approval. Submit the following:
 1. Plans and sketches showing areas proposed to be used for construction storage, the Contractor's Site office, vehicle cleaning, equipment fueling, and associated access routes.
 2. Surface drainage and storm sewer control plan.
 3. Erosion and sediment control plan
 4. Waterways control plan.
 5. Tree protection plan.
 6. Air pollution control plan.
 7. Mud and dust control plan.

8. Noise control plan.
9. Fuels and lubricants storage and dispensing control plan.
10. Construction Equipment Cleaning control plan.
11. Spills response and spills reporting plan.
12. Erosion and sediment control contingency plan.
13. Fire contingency plan.
14. Contaminated site contingency plan.
15. Historical resources contingency plan.
16. Fuel spills contingency plan

1.05 PROTECTION OF STORM SEWERS:

- A. Prevent construction material (including volatile liquid wastes such as oil, chemicals, paints), pavement, concrete, earth, or other debris from entering existing storm sewer or sewer structure.

1.06 PROTECTION OF WATERWAYS:

- A. The Contractor shall not cause or permit action to occur which would cause an overflow to existing waterways. Provide holding ponds or accepted method which will divert flows, including storm flows and flows created by construction activity, to prevent excessive silting of waterways or flooding damage to property.
- B. Comply with procedures outlined in U.S. EPA manuals entitled, "Guidelines for Erosion and Sedimentation Control Planning and Implementation", Manual EPA-72-015 and "Processes, Procedures, and Methods to Control Pollution Resulting from All Construction Activity", Manual EPA 43019-73-007

1.07 PROTECTION OF TREES:

- A. Only cut down trees shown on the Contract Drawings. Coordinate with the Owner and Engineer for approval prior to removing other trees.
- B. The Contractor shall take precautions to prevent damage to existing trees and shrubs, protect branches and foliage, protect trunks and stems, and prevent machinery from travelling over roots within the 'drip-line' of the trees by placing and maintaining snow fencing around each tree outside of the 'drip-line'. The Contractor shall not pile excavated material within the dripline of existing trees.
- C. Where damage does occur, it must be reported by the Contractor to the Engineer and repaired or replaced by a qualified person as directed by the Engineer. In the event of

damage to bark, trunks, limbs, or roots of plants that are not designated for removal, the Contractor shall treat damage by corrective pruning, bark tracing, application of a heavy coating of tree paint, and other accepted horticultural and tree surgery practices.

1.08 DISPOSAL OF EXCESS EXCAVATED AND OTHER WASTE MATERIALS:

- A. Excess excavated material not required or not suitable for backfill and other waste material shall be disposed of in accordance with local regulatory requirements.
- B. Provide watertight conveyance for liquid, semi-liquid or saturated solids which tend to bleed during transport. Liquid loss from transported materials is not permitted, whether being delivered to construction site or hauled away for disposal. Fluid materials hauled for disposal must be specifically acceptable at selected disposal site.

1.09 PROTECTION OF AIR QUALITY:

- A. Minimize air pollution by requiring use of properly operating combustion emission control devices on construction vehicles and equipment and encourage shutdown of motorized equipment not in use.
- B. Do not burn trash on or adjacent to construction site.
- C. If temporary heating devices are necessary for protection of Work, they shall not cause air pollution.
- D. The Contractor shall conduct operations of dumping rock and of carrying rock away in trucks in such a way as to minimize dust. Give unpaved streets, roads, detours, or haul roads used in construction area a dust-preventive treatment or periodically water them to prevent dust. Strictly adhere to all applicable environmental regulations for dust prevention.

1.10 THAWING OF FROZEN GROUND:

- A. Obtain permit from appropriate local authority, if required, before using any heating devices to thaw frozen ground and comply with conditions of permit.
- B. Use fuel which does not create air pollution or inconvenience public.
- C. Open wood fires are prohibited for thawing frozen ground.

1.11 USE OF CHEMICALS:

- A. Chemicals used during project construction or furnished for project operation, whether herbicide, pesticide, disinfectant, polymer, reactant or of other classification, shall be approved by U.S. EPA and any other applicable regulatory agency.
- B. Use and disposal of chemicals and residues shall comply with manufacturer's instructions.

1.12 NOISE CONTROL:

- A. Conduct operations to cause least annoyance to residents in vicinity of Work and comply with applicable local ordinances.
- B. Equip compressors, hoists, and other apparatus with mechanical devices necessary to minimize noise and dust. Equip compressors with silencers on intake lines.
- C. Equip gasoline or oil-operated equipment with silencers or mufflers on intake and exhaust lines.
- D. Line storage bins and hoppers with material that will deaden sounds.
- E. Conduct operation of dumping rock and of carrying rock away in trucks so as to cause minimum of noise and dust.
- F. Route vehicles carrying rock, concrete or other material over such streets as will cause least annoyance to public and do not operate on public streets between hours of 6:00 p.m. and 7:00 a.m., or on Saturdays, Sundays or legal holidays unless approved by Owner.
- G. No excessive idling of motorized equipment is permitted.
- H. Where necessary, the Contractor shall place noise attenuation devices (barriers) around the Contractor's construction equipment.
- I. Submit a plan to mitigate construction noise and to comply with noise control ordinances, including methods of construction, equipment to be used, and acoustical treatments.

1.13 MUD AND DUST CONTROL:

- A. Due to close geographic location of Project to other off-site facilities and residential buildings take special care in providing and maintaining temporary site roadways, Owner's existing roads, and public roads used during construction operations in clean, dust free condition.
- B. Comply with local environmental regulations for dust control. If Contractor's dust control measures are considered inadequate by Engineer, Engineer may require Contractor to take additional dust control measures.
- C. The Contractor shall provide and maintain temporary dust-tight partitions, bulkheads, or other protective devices during construction to permit normal operation of existing facilities. The Contractor shall construct partitions of plywood, insulating board, plastic sheets, or similar material. The Contractor shall construct partitions in such a manner that dust and dirt from demolition and cutting will not enter other parts of existing buildings or facilities. The Contractor shall remove temporary partitions as soon as the need for them no longer exists.

- D. The Contractor shall employ only wet type equipment for saw cutting and concrete grinding to control dust nuisance. There shall be no cutting prior to the Engineer's and Owner's approval.
- E. The Contractor shall obtain the Engineer's acceptance before chemicals for dust control are used. Sodium chloride is not permitted for dust control.
- F. All trenches and disturbed areas created during the execution of the Work that will produce dust shall be maintained dust free by an application of calcium chloride at the Engineer's direction.
- G. The Contractor shall not use calcium chloride on access roads.
- H. The Contractor shall transport dusty materials in covered haulage vehicles.
- I. The Contractor shall be responsible for a prompt and complete cleanup of all dirt and mud deposited on the public and/or private property as a consequence of the execution of the Work. If the Contractor fails to comply with this obligation the Owner may proceed with the necessary clean up and charge all the costs for the cleanup to the Contractor.
- J. The Contractor shall wash mud from construction vehicles before leaving the construction Site.
- K. The Contractor shall wash and clean the following roads at the end of each workday during the Contract:
 - 1. Major traffic routes inside the plant and City streets impacted by construction activities.
 - 2. Contractor shall provide vehicle tracking control pads at each exit location.

1.14 CLEANING OF EQUIPMENT

- A. The Contractor shall keep construction equipment clean so that no debris is deposited on the plant roadways or any public roadway. The Contractor shall identify a designated vehicle cleaning area within the working limits of the Contract. The Contractor shall contain all construction debris in this designated area only. The Contractor shall dispose of debris off Site.
- B. The Contractor shall ensure that debris cleaned from equipment cannot gain access to storm sewers and watercourses.

1.15 FUELS AND LUBRICANTS:

- A. Comply with local, state, and federal regulations concerning transportation and storage of fuels and lubricants.

- B. The Contractor shall designate an area within the working limits to be used exclusively for fueling of construction equipment. The Contractor shall carry out all refueling in this area only. Refueling of backhoes or shovels will be allowed at locations other than the accepted refueling areas, but not closer than 30 feet from any watercourse.
- C. Fuel storage area and fuel equipment shall be approved by Owner prior to installation. Submit containment provisions to Engineer for approval.
- D. The Contractor shall submit to the Engineer for review prior to starting the Work, procedures for the interception and rapid clean-up and disposal of fuel spillages which may occur. The Contractor shall ensure that the materials required for the clean-up of fuel spillages are always readily accessible on Site.
- E. The emptying of fuel, lubricants and pesticides into watercourses is prohibited. The Contractor shall contain fuel, lubricants, pesticides, and construction debris and dispose of it off Site in approved locations.
- F. Report spills or leaks from fueling equipment or construction equipment to Owner and cleanup as required by local, state, or federal regulations.
- G. Owner may require Contractor to remove damaged or leaking equipment from Project site.

1.16 PILE AND SHEATHING DRIVING NOISE:

- A. If piles are required, use only pile driver hammers with mufflers capable of significantly reducing noise and use barriers or shielding techniques to comply with applicable federal, state, and local ordinances.

1.17 CONTINGENCY AND EMERGENCY RESPONSE PLANS:

A. General

1. The Contractor shall adopt a pollution preventative strategy to fulfill its commitment to protecting public and worker health and safety, and the environment, as stipulated in the General Conditions under Occupational Health and Safety Act, and Environmental Protection Act. Through this strategy, the potential issues and emergency events that can be anticipated shall be identified by the Contractor and procedures put in place by the Contractor to minimize their potential occurrence.
2. To address any unanticipated events, the Contractor shall develop Contingency and Emergency Response Plans and implement these plans during the performance of the Work.

B. Spills Response and Spills Reporting:

1. Prior to commencing construction, the Contractor shall be responsible for preparing a Spills Response Plan. The Spills Response Plan must address the response, containment, and cleanup of an accidental spill. It must take care of the specific roles and responsibilities of construction staff, accountability, reporting and documentation. Specifically, the plan must include:
 - a. the names and the telephone numbers of the persons in the local municipalities to be notified forthwith of a spill
 - b. the names and the telephone numbers of the representatives of the fire, the police and the health departments of the local municipalities who are responsible to respond to emergency situations
 - c. the names and the telephone numbers of the companies experienced in the control and clean-up of hazardous materials that would be called upon in an emergency involving a spill
 - d. the Contractor's proposal for the immediate containment and control of the spill, the clean-up procedures to be initiated immediately and any other action to be taken to mitigate the potential environmental damage while awaiting additional assistance, and,
 - e. the name and the telephone number of the Contractor's representative responsible for preparing, implementing, directing, and supervising the contingency plan
2. The Contractor shall submit for the Engineer's review and for the review of other authorities having jurisdiction a copy of the Spills Response plan and shall make the appropriate changes to it based upon the comments received from these authorities
3. In the event of a spill or other emission of a pollutant caused by the execution of the Work into the natural environment, the Contractor shall immediately notify the Owner and Engineer of the spill, of the circumstances thereof, and of the action taken or intended to be taken with respect thereto:
4. The Contractor shall make the necessary allowances to ensure the immediate availability of the products with which to effect temporary repair to broken pipelines and other services, so the spill or other emission of a pollutant is immediately controlled and stopped and to mitigate the damages. The Contractor shall do everything practicable to restore the natural environment.
5. The Contractor shall prepare a written report of the spill, and the spill event is to be recorded in the Contractor's logbook. The report must contain the following information, at a minimum:
 - a. Date and time spill occurred.

- b. Estimated volume of spill.
- c. Duration of the spill.
- d. Cause and discovery of the spill.
- e. Cleanup and recovery measures taken.
- f. Name of hauler or outside contractors called in to assist with cleanup and recovery measures.
- g. Personnel on the scene.
- h. Names of parties and agencies notified and the date and time of notification of each.
- i. Steps to be taken to prevent a reoccurrence of the spill.

C. Fire Contingency Plan

- 1. The Contractor shall develop and submit a Fire Contingency Plan to ensure a rapid response to a fire thereby minimizing the threat to worker and public safety, and the environment.
- 2. The plan must include, but is not limited to, an explanation of the purpose of the plan and when the plan is triggered, an explanation of relevant roles and responsibilities, and accountability for implementing the plan, and provision of fire prevention training and equipment for implementing the plan.

1.18 NOTIFICATIONS:

- A. The Engineer will notify the Contractor in writing of any non-compliance with the foregoing provisions or of any environmentally objectionable acts and corrective action to be taken. State or local agencies responsible for verification of certain aspects of the environmental protection requirements shall notify the Contractor in writing, through the Engineer, of any non-compliance with State or local requirements. The Contractor shall, after receipt of such notice from the Engineer or from the regulatory agency through the Engineer, immediately take corrective action. Such notice, when delivered to the Contractor or his authorized representative at the site of the work, shall be deemed sufficient for the purpose. If the Contractor fails or refuses to comply promptly, the Owner may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to any such stop orders shall be made the subject of a claim for extension of time or for excess costs or damages by the Contractor unless it is later determined that the Contractor was in compliance. Failure of Owner, Engineer, or regulatory agency to provide notice of non-compliance to the Contractor does not relieve the Contractor from duty of compliance with all applicable rules and regulations.

1.19 WILDLIFE MITIGATION

- A. No nesting vegetation clearance (which can include trees, shrubs, and herbaceous vegetation such as grasses and forbs) can occur during the typical nesting/brood rearing season period from April 1 through August 30 or perform a nest clearance prior to starting work.
 - 1. Nest Clearance: Assign a qualified wildlife biologist to perform a nest clearance survey immediately prior (within 3 days) of construction activities if any vegetation clearing is required during the nesting/brood rearing period.
- B. If actively nesting and/or brood rearing birds are found within or reasonably near (200 feet or less) the vegetation clearance area, clearance and construction should be postponed until breeding activity is completed (as assessed by a qualified wildlife biologist).

1.20 CULTURAL RESOURCES

- A. CONTRACTOR's attention is directed to the National Historic Preservation Act of 1966 (16 U.S.C. 470) and 36 CFR 800 which provides for the preservation of potential historical architectural, archeological, or cultural resources (hereinafter called "cultural resources").
- B. CONTRACTOR shall conform to the applicable requirements of the National Historic Preservation Act of 1966 as it relates to the preservation of cultural resources.
- C. If a suspected or unsuspected historical, archaeological, or paleontological item, feature, or site or other cultural resource is encountered during subsurface excavations at the site of construction, the following procedures shall be instituted:
 - 1. Construction operations shall be immediately stopped in the vicinity of the discovery and Engineer and Owner shall be notified of the nature and exact location of the finding. Contractor shall not damage the discovered objects and shall provide written confirmation of the discovery to Engineer within two (2) calendar days.
 - 2. Owner and Engineer will then immediately notify the State Historical Preservation Office (SHPO) and the Utah Geological Survey (UGS).
 - 3. SHPO and UGS will investigate the finding and determine if the resource requires protection and the disposition of the said resource.
- D. If SHPO and UGS determine that the potential find is a bona fide cultural resource, CONTRACTOR shall suspend work at the location of the find under the provisions for changes contained in Articles 11, 12, and 13 of the General Conditions, Section 00 70 00 – General Conditions.

1.21 IMPLEMENTATION:

- A. Prior to commencement of the work, meet with the Engineer to develop mutual understandings relative to compliance with this provision and administration of the environmental pollution control program.
- B. Remove temporary environmental control features, when accepted by the Engineer, and incorporate permanent control features into the project at the earliest practicable time.
- C. Implementation of the Contingency and Emergency Response Plans
 - 1. The responsibility for implementing the Contingency and Emergency Response Plans shall lie with the Contractor. Specific responsibilities include:
 - a. Reviewing the Contingency Plans and Emergency Response Plans and identifying any issues / concerns and providing suggested changes / updates;
 - b. Ensuring that all construction staff are trained in Contingency Plan Implementation and Emergency Response Techniques and that they have the appropriate equipment on hand;
 - c. Providing advice to construction staff on proper emergency response procedures;
 - d. Auditing the Contractor's response to events resulting in the activation of its Contingency Plans and Emergency Response Plans;
 - e. Initiating actions to correct any response deficiencies identified through the audit process and reporting it;
 - f. Maintaining emergency response records for review by the Engineer and the appropriate regulatory agencies.

SECTION 01 41 20
SEISMIC AND WIND REQUIREMENTS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section establishes the minimum seismic design requirements for architectural, mechanical, electrical and non-structural components.
- B. The Contractor shall be responsible for the seismic requirements specified including the conformance of work for all subcontractors, manufacturers and suppliers with regard to the indicated and specified seismic requirements.

 - 1. Standard for the Installation of Sprinkler Systems
 - K. Rack Manufacturers Institute:
 - 1. Specification for the Design, Testing, and Utilization of Industrial Steel Storage Racks
- 1.03 DEFINITIONS:
- A. Components are defined as systems, equipment, parts, or other elements, including supporting structures and attachments.
 - B. The reference building code is defined as the building code cited on the structural drawings or specified herein for the design of the basic structure.
 - C. The specified seismic criteria is defined as the seismic criteria cited on the structural drawings or specified herein for the design of the basic structure.
 - D. The specified wind criteria is defined as the wind criteria cited on the structural drawings or specified herein for the design of the basic structure.
- 1.04 MINIMUM DESIGN REQUIREMENTS:
- A. Architectural, mechanical, electrical and non-structural components shall be designed and constructed to resist the seismic and wind forces and displacements based upon ASCE/SEI 7, the reference building code, and the specified seismic and wind criteria. In the case of conflict the more stringent requirements shall govern.

- B. The interrelationship of components and their effect on each other shall be such that the failure of one component shall not cause the failure of any other component.
- C. Components shall be anchored to the building structure to transfer seismic and wind forces. Connections shall be bolted, welded or otherwise positively anchored to the structure. Anchorage shall not rely on friction for force transfer.
- D. Exceptions: Exemption from the requirements for seismic and wind analysis and design are permitted only to the extent permitted in the reference code.
- E. The following design criteria shall be used in conjunction with the appropriate minimum design criteria section listed below.
 - 1. Structures or systems related to WTP operation:
 - a. Occupancy Category: IV
- F. Seismic bracing for Fire protection piping shall be designed in accordance with FM Global requirements.

1.05 WIND LOADING MINIMUM DESIGN CRITERIA:

- A. Design in accordance with the requirements of the above referenced codes.
 - 1. Wind Speed : 115 miles per hour for Risk Category IV structures
 - 2. Wind Exposure: C

1.06 SEISMIC LOADING MINIMUM DESIGN CRITERIA:

- A. Design Requirements: Design in accordance with the requirements of the above referenced codes.
 - 1. Risk Category:
 - a. IV
 - 2. Short Period MCE (S_s) = 1.38
 - 3. Long Period MCE (S_1) = 0.51
 - 4. Soil Site Class: D
 - 5. Seismic Parameters for Soil Site Class D:
 - a. Site Coefficient, F_a = 1.0
 - b. Site Coefficient, F_v = 1.79

- c. Site Specific Short Period Spectral Acceleration (SDS) = 0.92
- d. Site Specific Long Period (1-sec) Spectral Acceleration (SD1) = 0.61
- 6. Seismic Design Category: D
- 7. Importance Factor (Ie):
 - a. Select based upon Risk Category and corresponding values provided by ASCE/SEI 7.
- 8. Component Importance Factor (Ip):
 - a. Equipment and systems related to operations, including but not limited to pumping systems, supply piping; $I_p = 1.5$
 - b. Other structures, $I_p = 1.0$
- 9. Seismic response coefficient (Cs): is determined by ASCE/SEI 7 Equation 12.8-2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Equation 12.8-3 for $T_L \geq T > 1.5T_s$ or Equation 12.8-4 for $T > T_L$.
- 10. Selection and application of the appropriate seismic design sections of ASCE/SEI 7 shall be the responsibility of the Engineer responsible for the element being designed; however, final approval of the selected section of ASCE 7 shall be provided by the Engineer.

1.07 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. Where specified in the technical specifications, provide and complete the Certificate of Unit Responsibility form in Section 01 33 00 and submit to Engineer prior to manufacture of components.
- C. In addition, submit the following support data along with Certificate of Unit Responsibility:
 - 1. Certification, signed and sealed by a Professional Structural Engineer registered in the jurisdiction where the project is located, stating that all systems, equipment, and other elements, including supporting structures, attachments and connections are designed to withstand the required seismic and wind forces and displacements.
 - 2. Codes and specifications to which structural design conforms.
- D. A copy of this specification section, with addenda updates, with each paragraph check marked to show specification compliance or marked to show deviations.

- E. Manufacturer's information and catalog data showing compliance with this specification and a full description of the product.
- F. Design calculations for shoring systems and support and anchorage of equipment and appurtenances. Calculations shall be stamped and signed by a civil or structural engineer currently licensed in the State of Utah and submitted under the appropriate technical specification Section.
- G. Submit complete shop drawings and corresponding calculations that thoroughly cover the work elements associated with an area of work being requested for review.
 - 1. Calculations shall be signed and stamped by a civil or structural engineer licensed in the State of Utah and submitted under the appropriate technical specification section.

1.08 SPECIFIC COMPONENTS:

- A. Compound Equipment: Connecting elements for equipment combinations such as pumps and motors, valves and operators, engines and generators, etc. which are not capable of transferring seismic and/or wind loads or accommodating seismic and wind displacements shall be protected by appropriate design.
- B. Storage Tanks: Tanks, supporting structures and anchorages shall be designed for the weight of the tank, appurtenances and the tank contents at the maximum capacity. Tank contents shall not be considered in resistance to seismic and wind loads.
 - 1. Where applicable include impulsive and convective "sloshing" effects.
 - 2. Component response modification factor for impulsive effects, R_i : In accordance with ASCE 7, Table 15.4-2.
 - 3. Component response modification factor for convective effects, $R_c = 1.0$.
 - 4. Component importance factor, I_e : Determine in accordance with ASCE 7, Section 15.4.1.1.
- C. Ductwork: Equipment installed within ductwork shall be independently supported and braced. Support and bracing of heating and cooling coils shall account for the weight of the contents.
- D. Piping Systems: Support and bracing of piping systems shall account for the weight and hydrodynamic effects of the contents.
- E. Pressure Piping: Pressure piping support and bracing shall conform to ASME B31 in addition to the force and displacement requirements of the reference code.

- F. Sprinkler Systems: Sprinkler system support and bracing shall conform to NFPA 13 in addition to the force and displacement requirements of the reference code.
- G. General Supports: Pipe, duct, raceways and cable tray supports and bracing shall conform to the AISC Manual of Steel Construction and MSS SP-58 in addition to the force and displacement requirements of the reference code.
- H. Submerged components shall be designed for hydrodynamic sloshing forces.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 CONTRACT CLOSEOUT:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 01 43 00

QUALITY REQUIREMENTS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section covers Quality Assurance and Quality Control requirements for this contract as indicated and in compliance with Contract Documents.
- B. The Contractor is responsible for controlling the quality of work, including work of its subcontractors, and suppliers and for assuring the quality specified in the Technical Specifications is achieved.

1.02 SUMMARY:

- A. Section includes administrative and procedural requirements for quality assurance and quality control.
- B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
 - 1. Specific quality-assurance and quality-control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
 - 2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
 - 3. Requirements for Contractor to provide quality-assurance and quality-control services required by Engineer, Owner, or authorities having jurisdiction are not limited by provisions of this Section.
- C. Related Requirements:
 - 1. Divisions 02 through 46 Sections for specific test and inspection requirements.

1.03 DEFINITIONS:

- A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work

and completed construction comply with requirements. Services do not include contract enforcement activities performed by Engineer.

- C. Mockups: Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, accepted mockups establish the standard by which the Work will be judged.
 - 1. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.
- D. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.
- E. Product Testing: Tests and inspections that are performed by a Nationally Recognized Testing Laboratory (NRTL), an (National Voluntary Laboratory Accreditation Program (NVLAP), or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.
 - 1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 - 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- F. Source Quality-Control Testing: Tests and inspections that are performed at the source, e.g., plant, mill, factory, or shop.
- G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).

- J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.04 CONFLICTING REQUIREMENTS:

- A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Engineer for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Engineer for a decision before proceeding.

1.05 SUBMITTALS:

- A. Shop Drawings: For integrated exterior mockups, provide plans, sections, and elevations, indicating materials and size of mockup construction.
 - 1. Indicate manufacturer and model number of individual components.
 - 2. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.
- B. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.
- C. Qualification Data: For Contractor's quality-control personnel.
- D. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems:
 - 1. Seismic-force-resisting system, designated seismic system, or component listed in the designated seismic system quality-assurance plan prepared by a state licensed Engineer approved by Owner.
 - 2. Main wind-force-resisting system or a wind-resisting component listed in the wind-force-resisting system quality-assurance plan prepared by a state licensed Engineer approved by Owner.

- E. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

1.06 CONTRACTOR'S QUALITY-CONTROL PLAN:

- A. Quality-Control Plan, General: Submit quality-control plan within 30 days of Notice to Proceed, and not less than five days prior to preconstruction conference. Submit in format acceptable to Engineer. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities. Coordinate with Contractor's construction schedule.
- B. Quality-Control Personnel Qualifications: Engage qualified full-time personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.
 - 1. Project quality-control manager may also serve as Project superintendent.
- C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.
- D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:
 - 1. Contractor-performed tests and inspections including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections.
 - 2. Special inspections required by authorities having jurisdiction and indicated on the "Statement of Special Inspections."
- E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and accepted mockups.
- F. Monitoring and Documentation: Maintain testing and inspection reports including log of accepted and rejected results. Include work Engineer has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.07 REPORTS AND DOCUMENTS:

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, and telephone number of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.
6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12. Name and signature of laboratory inspector.
13. Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, and telephone number of technical representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Project site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.

6. Statement whether conditions, products, and installation will affect warranty.
 7. Other required items indicated in individual Specification Sections.
- C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of factory-authorized service representative making report.
 2. Statement that equipment complies with requirements.
 3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 4. Statement whether conditions, products, and installation will affect warranty.
 5. Other required items indicated in individual Specification Sections.
- D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.08 QUALITY ASSURANCE:

- A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated.

- F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.
- G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
- H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- J. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
1. Build mockups in location and of size indicated or, if not indicated, as recommended by Engineer.
 2. Notify Engineer seven days in advance of dates and times when mockups will be constructed.
 3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 5. Obtain Engineer's acceptance of mockups before starting work, fabrication, or construction.
 - a. Allow seven days for initial review and each re-review of each mockup.
 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 7. Demolish and remove mockups when directed unless otherwise indicated.

- K. Copies of applicable referenced standards are not included in the Contract Documents. Where copies of standards are needed by the Contractor for superintendence and quality control of the work, the Contractor shall obtain a copy or copies directly from the publication source and maintain at the jobsite, available to the Contractor's personnel, subcontractors, and Engineer
- L. Quality of Materials: Unless otherwise specified, all materials and equipment furnished for permanent installation in the Work shall conform to applicable standards and specifications and shall be new, unused, and free from defects and imperfections, when installed or otherwise incorporated in the Work. The Contractor shall not use material and equipment for any purpose other than that intended or specified unless the Engineer authorizes such use.
- M. Where so specified, products or workmanship shall also conform to the additional performance requirements included within the Contract Documents to establish a higher or more stringent standard or quality than that required by the referenced standard.

1.09 OFFSITE INSPECTION:

- A. When the specifications require inspection of materials or equipment during the production, manufacturing, or fabricating process, or before shipment, such services shall be performed by the Owner's independent testing laboratory, or inspection organization acceptable to Engineer in conjunction with or by the Engineer.
- B. The Contractor shall give appropriate written notice to the Engineer not less than 30 days before offsite inspection services are required, and shall provide for the producer, manufacturer, or fabricator to furnish safe access and proper facilities and to cooperate with inspecting personnel in the performance of their duties.

1.10 MATERIALS AND EQUIPMENT:

- A. The Contractor shall maintain control over procurement sources to ensure that materials and equipment conform to specified requirements in the Contract Documents.
- B. The Contractor shall comply with manufacturer's printed instructions regarding all facets of materials and/or equipment movement, storage, installation, testing, startup, and operation. Should circumstances occur where the contract documents are more stringent than the manufacturer's printed instructions, the Contractor shall comply with the specifications. In cases where the manufacturer's printed instructions are more stringent than the contract documents, the Contractor shall advise the Engineer of the disparity and conform to the manufacturer's printed instructions. In either case, the Contractor is to apply the more stringent specification or recommendation, unless accepted otherwise by the Engineer.

1.11 QUALITY CONTROL:

A. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.

1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
2. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce Work of specified quality.
3. Comply with manufacturers' instructions, including each step in sequence.
4. When manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.
5. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.
6. Perform Work by persons qualified to produce required and specified quality.
7. Verify field measurements are as indicated on Shop Drawings or as instructed by manufacturer.
8. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.
9. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.
 - a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
10. Notify testing agencies at least 24hours in advance of time when Work that requires testing or inspecting will be performed.
11. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
12. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
13. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

B. Tolerances:

1. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.
 2. Comply with manufacturers' tolerances. When manufacturers' tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.
 3. Adjust products to appropriate dimensions; position before securing products in place.
- C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 01 Section "Submittals."
- D. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.
- E. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- F. Testing Agency Responsibilities: Cooperate with Engineer and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
1. Notify Engineer and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
 2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
 3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
 4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
 5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
 6. Do not perform any duties of Contractor.
- G. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested.

Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.
 2. Incidental labor and facilities necessary to facilitate tests and inspections.
 3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
 4. Facilities for storage and field curing of test samples.
 5. Delivery of samples to testing agencies.
 6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
 7. Security and protection for samples and for testing and inspecting equipment at Project site.
- H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of Contractor's quality-control plan. Coordinate and submit concurrently with Contractor's construction schedule. Update as the Work progresses.
1. Distribution: Distribute schedule to Owner, Engineer, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 EXAMINATION:

- A. Verify existing site conditions and substrate surfaces are acceptable for subsequent Work. Beginning new Work means acceptance of existing conditions.

- B. Verify existing substrate is capable of structural support or attachment of new Work being applied or attached.
- C. Examine and verify specific conditions described in individual specification sections.
- D. Verify utility services are available, of correct characteristics, and in correct locations.

3.02 PREPARATION:

- A. Clean substrate surfaces prior to applying next material or substance.
- B. Seal cracks or openings of substrate prior to applying next material or substance.
- C. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying new material or substance in contact or bond.

3.03 QUALITY CONTROL:

- A. Quality control is the responsibility of the Contractor, and the Contractor shall maintain control over construction and installation processes to assure compliance with specified requirements.
- B. Certifications for personnel, procedures, and equipment associated with special processes (e.g., welding, cable splicing, instrument calibration, surveying) shall be maintained in the Contractor's field office, available for inspection by the Engineer. Copies shall be made available to the Engineer upon request.
- C. Means and methods of construction and installation processes are the responsibility of the Contractor, and at no time is it the intent of the Engineer to supersede or void that responsibility.

3.04 TEST AND INSPECTION LOG:

- A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:
 - 1. Date test or inspection was conducted.
 - 2. Description of the Work tested or inspected.
 - 3. Date test or inspection results were transmitted to Engineer.
 - 4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Engineer's reference during normal working hours.

3.05 REPAIR AND PROTECTION:

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
 - 1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching.
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION

SECTION 01 43 39

MOCKUPS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Integrated exterior mockups.

1.02 DEFINITIONS

- ###### A. Integrated Exterior Mockups:
- Mockups of the exterior envelope constructed on-site as freestanding temporary built elements, consisting of multiple products, assemblies, and subassemblies.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference:

Conduct conference at Project site.

1. Meet with Owner, Engineer, testing and inspecting agency representative, and installers of major systems whose Work is included in integrated exterior mockups.
2. Review coordination of equipment and furnishings provided by the Owner for room mockups.
3. Review locations and extent of mockups.
4. Review testing procedures to be performed on mockups.
5. Review and finalize schedule for mockups, and verify availability of materials, personnel, equipment, and facilities needed to complete mockups and maintain schedule for the Work.

1.04 ACTION SUBMITTALS

A. Shop Drawings:

For integrated exterior mockups.

1. Include plans, elevations, sections, and support details.
2. Indicate manufacturer and model number of individual components, subassemblies, and assemblies.
3. Include site location drawing indicating orientation of mockup.

4. Revise and resubmit Shop Drawings to reflect approved modifications in details and component interfaces resulting from changes made during testing procedures.

B. Delegated Design Submittal: For temporary structural supports for mockups not attached to building structure, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 QUALITY ASSURANCE

A. Build mockups to do the following:

1. Verify selections made under Sample submittals.
2. Demonstrate aesthetic effects.
3. 3. Demonstrate the qualities of products and workmanship.
4. 4. Demonstrate acceptable coordination between components and systems.

B. Fabrication: Before fabricating or installing portions of the Work requiring mockups, build mockups for each form of construction and finish required. Use materials and installation methods as required for the Work.

1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Engineer.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at Project.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. Demolish and remove mockups when directed unless otherwise indicated.

C. Notifications:

1. Notify Engineer seven days in advance of the dates and times when mockups will be constructed.
2. Allow seven days for initial review and each re-review of each mockup.

D. Approval: Obtain Engineer's approval of mockups before starting fabrication or construction of corresponding Work.

1. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 COORDINATION

- A. Coordinate schedule for construction of mockups, so construction, testing, and review of mockups do not impact Project schedule.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design support structure for free-standing mockups.
- B. Structural Performance:
 1. Seismic Performance: Mockups and support structure to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
 2. Wind Loads: As indicated on Drawings.

2.02 INTEGRATED EXTERIOR MOCKUPS

- A. Construct integrated exterior mockups as indicated on Drawings or when requested by Owner or Engineer. Construct mockups to demonstrate constructability, coordination of trades, and sequencing of Work; and to ensure materials, components, subassemblies, assemblies, and interfaces integrate into a system complying with indicated performance and aesthetic requirements.
- B. Design and construct foundation and superstructure to support free-standing integrated exterior mockups.
- C. Build integrated exterior mockups using installers and construction methods that will be used in completed construction.
- D. Use specified products that have been approved by Engineer. Coordinate installation of materials and products specified in individual Specification Sections that include Work included in integrated exterior mockups.

- E. The Work of integrated exterior mockups includes, but is not limited to, the following:
1. Masonry veneer and mortar.
 2. Applied water repellents.
 3. Through-wall flashing.
 4. Flashing and sheet metal trim, including coping.
 5. Joint sealants.
 6. Metal wall panels.
 7. Aluminum-framed entrances and storefront.
 8. Glazing.
 9. Louvers.
- F. Photographic Documentation: Document construction of integrated exterior mockups with photographs. Provide photographs showing details of interface of different materials and assemblies.
- G. Provide and document modifications to construction details and interfaces between components and systems required to properly sequence the Work, or to pass performance testing requirements. Obtain Engineer's approval for modifications.
- H. Retain approved mockups constructed in place. Incorporate fully into the Work.

PART 3 - EXECUTION

(Not Used)

END OF SECTION

SECTION 01 45 33

STRUCTURAL TESTS AND INSPECTIONS

PART 1 - GENERAL

1.01 GENERAL:

- A. The Structural Engineer of Record (SER) is the Structural Engineer (an individual) who is in responsible charge of the preparation of the structural drawings and structural specifications for this project and whose professional engineering seal appears on said structural drawings.
- B. The Program of Structural Tests and Inspections which has been or will be submitted to the building official who has jurisdiction over this project is included at the end of this Section.
- C. The Structural Tests and Inspections shall not relieve the Contractor or its subcontractors of their responsibilities and obligations for quality control of the Work, their other obligations for supervising the work, for any design work, which is included in their scope of services, and for full compliance with the requirements of the Contract Documents. The detection of, or failure to detect, deficiencies or defects in the Work during the testing and inspection conducted pursuant to the Structural Tests and Inspections shall not relieve the Contractor or its subcontractors of their responsibility to correct all deficiencies or defects, whether detected or undetected, in all parts of the Work, and to otherwise comply with all requirements of the Contract Documents. Further, while the SER, and the Resident Project Representative shall perform certain tasks in the Program requiring the review of certain construction activities, the SER and Resident Project Representative shall only perform such tasks to ensure compliance with the SER approved submittals and the specifications. Neither the SER nor the Resident Project Representative shall assume any responsibility or liability for the means, methods, procedures or techniques used by any construction contractor.
- D. The Program of Structural Tests and Inspection does not apply to the Contractor's equipment, temporary structures used by the Contractor to construct the project, the Contractor's means, methods, and procedures, and job site safety.

1.02 CONTRACTOR'S RESPONSIBILITIES:

- A. Where the Program of Structural Tests and Inspections (Attachment No. 1 of 01 45 33) indicates that a structural component or system is subject to structural tests and inspections and that the SER for the project has not been retained to design said component or system or to prepare a performance specification for said component of system, the Contractor shall retain, or require others under his aegis to retain, a professional engineer registered in the jurisdiction where the project is located to design said component or system and to provide the required program of structural tests and inspections for said component or system.

- B. The Contractor shall provide free and safe access to the Work for the SER and all other individuals who are observing the Work or performing structural tests or inspections. The Contractor shall provide all ladders, scaffolding, staging, and up-to-date safety equipment, all in good and safe working order, and qualified personnel to handle and erect them, as may be required for safe access.
- C. The Contractor shall be responsible for all scheduling and coordination of Owner and Contractor's Testing Laboratory Services to comply with testing frequencies and tests required as indicated in the Contract Documents.
- D. Building permit applications are submitted by the Engineer. Inspections required for the project by the building department must additionally be requested by the Contractor. Engineer shall not be responsible for scheduling building department inspections. Engineer and Owner shall not be responsible for any additional costs or delays to the project caused from Contractor delay in getting or requesting building department inspections.
 - 1. Any costs associated with rework or removal to allow access/inspection by building department shall be at Contractor expense.

1.03 CONTRACTOR FURNISHED TESTING LABORATORY SERVICES:

- A. An independent commercial testing laboratory acceptable to the Engineer shall perform all tests that require the services of a laboratory to determine compliance with the Contract Documents. The laboratory shall be staffed with experienced technicians, properly equipped, and fully qualified to perform the tests in accordance with the specified standards.
- B. Preliminary Testing Services: The Contractor shall be responsible for all testing laboratory services in connection with concrete materials and mix designs, the design of asphalt mixtures, gradation tests for structural and embankment fills, backfill materials, and all other tests and engineering data required for the Engineer's review of materials and equipment proposed to be used in the Work. The Contractor shall obtain the Engineer's acceptance of the testing laboratory before having services performed, and shall pay all costs for services.
- C. The Contractor shall not retain any testing laboratory against which the Owner or the Engineer have reasonable objection, and if at any time during the construction process the services become unacceptable to the Owner, or the Engineer, either the Owner or the Engineer may direct in writing that such services be terminated. The request must be supported with evidence of improper testing or unreasonable delay. If the Engineer determines that sufficient cause exists, the Contractor shall terminate the services and engage a different testing laboratory.
- D. Transmittal of Test Reports: Written reports of testing and engineering data furnished by the Contractor for the Engineer's review of materials and equipment proposed to be used in the Work shall be submitted as specified for Shop Drawings.

- E. The Contractor's testing laboratory shall furnish four copies of a written report of each test performed by laboratory personnel within three days after each test is completed. Distribution shall be two copies of each test report to the Engineer's Representative, one copy to the Owner, and one copy for the Contractor.

1.04 OWNER FURNISHED TESTING AND INSPECTION SERVICES:

- A. The Owner will employ the services of an independent testing agency to conduct the Program of Structural Tests and Inspections as described in Section 01 45 33 and perform all quality control tests of materials of construction in the field or in the laboratory during and after their incorporation in the Work. Field sampling and testing shall be performed in the general manner indicated in the specifications, with minimum interference with construction operations.
- B. The Contractor shall furnish a construction schedule and a minimum of 48 hour notice of readiness for testing and inspection of the work. The Engineer shall determine the exact time and location of field sampling and testing, and may require such additional sampling and testing as necessary to determine that materials and equipment conform with data previously furnished by Contractor and with the Contract Documents.
- C. The Contractor shall schedule the work to permit adequate time for testing and re-testing should test results not conform to the contract documents. Lack of testing or inspection which is attributable to insufficient notice by the Contractor or failure of the Contractor to cooperate, will be cause for rejection of the work.
- D. The Contractor shall deliver materials in sufficient quantities to the Owner's testing agency as may be required. Laboratory testing shall be performed within a reasonable time, consistent with the specified standards.
- E. The Contractor shall furnish material samples and cooperate in the field sampling and testing activities, interrupting the work when necessary. The Contractor shall furnish personnel, facilities and access to assist in the sampling and testing activities.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 CONTRACT CLOSEOUT:

- A. Provide in accordance with Section 01 77 00.

ATTACHMENT NO. 1
PROGRAM OF STRUCTURAL TESTS AND INSPECTIONS

Project: Provo River Water Treatment Plant

Location: 2025 North Freedom Blvd, Provo UT

Owner: Provo City Corporation

Owner's Address: 1377 South 350 East, Provo, UT 84606

Architect of Record: Jim Singletary, AECOM

Structural Engineer of Record (SER): Robert E. Hawthorne, AECOM

This program of structural tests and inspections is submitted as a condition for issuance of the building permit in accordance with the International Building Code 2018.

The following firms, agencies, or individuals (hereinafter referred to collectively as agents) will perform the tests and inspections under the direction of the SER:

<u>Abbreviation</u>	<u>Agent</u>
SER	Structural Engineer Of Record Listed Above
RES	The Resident Representative
ITA	Independent Testing Agency Employed By Owner
ITA(C)	Independent Testing Agency Employed By Contractor
RPE(C)	Registered Professional Engineer Employed by Contractor
GEO	The Project Geotechnical Engineer
IWI	Independent Welding Inspector

The above abbreviations will be used on the attached pages to identify which agent is performing the particular tests or inspections.

The following categories of structural tests and inspections, if checked, are included in the Program for Structural Tests and Inspections for this project. The specific tests and inspections required for each checked category are listed on the page noted opposite the category and further described in the various technical specification sections.

<u>Category</u>	<u>Page</u>	<u>Category</u>	<u>Page</u>

<input checked="" type="checkbox"/> Cast-in-Place Concrete	7	<input type="checkbox"/> Pile Foundations	13
<input checked="" type="checkbox"/> Precast Concrete Construction	8	<input type="checkbox"/> Drilled Pier Foundations	14
<input checked="" type="checkbox"/> Masonry Construction	10	<input checked="" type="checkbox"/> Aluminum Construction	15
<input checked="" type="checkbox"/> In-Situ Bearing Strata for Foundations	11	<input type="checkbox"/> Special Cases	16

The following items of construction, if checked, are specified in the structural plans or specifications on a performance basis. The structural design of these items will be performed by the RPEC and reviewed by the SER. The construction of these items is included in the program for tests and inspections on the attached sheets.

<u>Category</u>	<u>Category</u>
<input type="checkbox"/> Curtain Walls	<input type="checkbox"/> Metal Buildings
<input checked="" type="checkbox"/> Precast Concrete Components	<input checked="" type="checkbox"/> Metal Stairs
<input type="checkbox"/> Post-Tensioning Steel	<input checked="" type="checkbox"/> Metal Railings
<input checked="" type="checkbox"/> Structural Steel Connections	<input checked="" type="checkbox"/> Metal and Composite Gratings
<input type="checkbox"/> Structural Aluminum Connections	<input type="checkbox"/> Metal Plate Covers

The following items are excluded from this program of structural tests and inspections, since other structural engineers not under the aegis of the SER designed them and the SER has no duties or responsibilities with respect to such performance specifications or designs. The Owner shall assign other architects, or construction contractors, as applicable; to be special SER's for their respective designs and such architects and/or contractors shall be responsible for all such structural tests and inspections for their respective designs.

- Wind and seismic design of mechanical or electrical components, systems and their anchorage to the structure.
- Excavation support systems.
- Temporary bracing, temporary platforms, scaffolding, temporary guards and railings.
- Anything related to jobsite safety or construction means and methods.
- Ground improvements.

Registration Seal

STEEL CONSTRUCTION

Item	Agent	Scope	Frequency
1. Fabricator Certification/ Quality Control Procedures.	SER	Review to ensure that quality control procedures have been adopted for each Fabricator.	Start of project
2. Fabricator Inspection	SER	Review to ensure that an Independent Inspection Agency has approved each Fabricator.	Start of project
3. Material Certification	SER	Review for conformance to the specifications.	Each produce
4. Bolting	ITA	Test and inspect bolted connections in accordance with specifications. Verify bolt size and grade in accordance with AISC specifications A325/A490.	Periodic
5. Welding	IWI	Check welder qualifications. Verify filler material in accordance with AWS D1.1. Visually inspect fillet welds. Test complete and partial penetration groove welds full length by dye penetrant, ultrasonic, or radiographic testing in accordance with the contract documents.	Periodic
6. Shear Connectors	IWI	Inspect for size and placement. Test for proper weld attachment.	Periodic
7. Structural Framing, Details and Assemblies	RES	Review for conformance with specifications and shop drawings.	Continuous
8. Open Web Steel Joists	RES	Inspect for size, placement, bridging, bearing and connection to structure.	Continuous
9. Open Web Steel Joists	IWI	Visually inspect all welds of a minimum of 5 percent of the joists, randomly selected.	Periodic
10. Steel Decking	RES/ IWI	Verify gage, width, and type. Inspect placement, laps, welds, side lap attachment and screws or other mechanical fasteners (IWI). Check welder qualifications (RES).	Periodic

CAST-IN-PLACE CONCRETE CONSTRUCTION

Item	Agent	Scope	Frequency
1. Mix Design	ITA(C)	Design concrete mixes	Each mix
	SER	Review mix designs.	Each mix
2. Materials Certification	SER	Review for conformance to specifications.	Each product
3. Batching Plant	ITA/SER	Review to ensure that Plant quality control procedures have been adopted.	Start of project
4. Reinforcement Installation	RES	Inspect reinforcing for size, quantity, condition and placement.	Prior to each placement
5. Formwork Geometry	RES	Inspect form sizes for compliance with specifications.	Prior to each placement
6. Concrete Placement	RES	Review for conformance with specifications.	Each placement
	ITA	Perform slump, density and air content tests at point of discharge.	Each truck
7. Curing and Protection	ITA/RES	Observe procedures for conformance to the specifications.	Each placement
8. Evaluation of Concrete Strength	ITA	Test and evaluate in accordance with the specifications.	Every 50 cubic yards or part thereof
Note: The Contractor may elect to have the Contractor's independent testing agency (ITA(C)) perform additional tests in addition to the testing by the Owner's Independent Testing Agency (ITA) at no cost to the Owner.			

PRECAST CONCRETE CONSTRUCTION

Item	Agent	Scope	Frequency
1. Plant Certification/Quality Control Procedures	SER/ ITA	Review to ensure that Plant quality control procedures have been adopted (SER). Inspect plant storage and handling procedures (ITA). Confirm that approved submittals are being used for fabrication; review welder's certifications (SER). Monitor finished product for structural defects (cracks) (ITA).	Start of project
2. Material Certification	SER	Review for conformance to ACI 318.	Each product
3. Formwork Geometry	ITA	Inspect form sizes.	Selected placements
4. Reinforcement Installation	ITA	Inspect reinforcing and prestressing strands for size, quantity, condition and placement for conformance with Contract Documents, SER approved submittals, and ACI 318. Inspect welding.	Selected placements
5. Mix Design	ITA(C)	Design concrete mixes	Each mix
	SER	Review for conformance with specifications (SER).	Each mix
6. Concrete Placement	RES/ ITA	Inspect concrete placement procedures for conformance to ACI 318, Sections 5.9 and 5.10 (ITA), and for conformance with specifications (RES).	Selected placements
7. Curing and Protection	RES/ ITA	Inspect for maintenance of specified curing temperatures and techniques per ACI 318 (ITA), and for conformance with specifications (RES).	Each placement
8. Evaluation of Concrete Strength	ITA	Test for conformance to specifications in accordance with ACI 318.	Every 50 cubic yards or part thereof
9. Prestress Operation	ITA	Inspect application of prestressing forces per ACI 318. Inspect grouting of bonded, post-tensioned, prestressing tendons.	Selected placements

Item	Agent	Scope	Frequency
10. Assembled/Erected Precast Elements.	RES	Inspect for compliance with SER approved submittals and specifications. Review site storage and handling procedures for consistency with design of precast elements. Verify that SER approved erection drawings are on site and are being used for erection. Verify that SER approved erection procedures are being followed. . Review welder's certifications.	Each unit
11. Connections/ Embedded Items	ITA	Inspect interface connections including end and edge doweling. Inspect embedment for proper location. Inspect shimming, bearing, bolting and welding of connections.	Each unit

MASONRY CONSTRUCTION

Item	Agent	Scope	Frequency
1. Material Certification	SER	Review for conformance to specifications.	Each product
2. Evaluation of Masonry Strength	ITA	Verify strength in accordance with the specifications.	Periodic
3. Proportioning, Mixing and Consistency of Mortar and Grout	ITA	Inspect field-mixing procedures for conformance to the specifications.	Continuous
4. Installation of Masonry	RES	Inspect placement for conformance to the specifications.	Continuous
5. Reinforcement Installation	RES/ IWI	Inspect reinforcing steel for conformance to SER approved submittals and specifications (RES) Inspect welding of reinforcement and review welder's certifications (IWI).	Periodic
6. Grouting Operations	RES	Review grouting procedures for conformance with the specifications.	Periodic
7. Weather Protection	RES	Review procedures for protection for cold and hot weather for conformance with the specifications.	Periodic
8. Anchorage	RES	Inspect anchorage of masonry to other construction for conformance with specifications.	Periodic

IN-SITU BEARING STRATA FOR FOUNDATIONS

Item	Agent	Scope	Frequency
1. Bearing strata for foundations	GEO/ RES	Review strata for conformance to the structural drawings, specifications, and/or geotechnical report.	Prior to foundation placement
2. Bearing surfaces of foundations	GEO/RES	Review for conformance to the requirements of the structural drawings, specifications, and/or geotechnical report.	Prior to foundation placement

CONTROLLED STRUCTURAL FILL (PREPARED FILL)

Item	Agent	Scope	Frequency
1. Fill Material	ITA	Test material for conformance to specifications or geotechnical report. Perform laboratory compaction tests in accordance with the specifications to determine optimum water content and maximum dry density.	Each material
2. Installation of Controlled Structural Fill	RES/ ITA	Provide review of the installation, in accordance with the specifications. Verify maximum lift placement thickness (ITA).	Each lift
3. Density of Fill	ITA	Perform field density tests of the in-place fill in accordance with the specifications.	Each lift
NOTE: Above testing is confirmatory testing by the Owner's Independent Testing Agency (ITA). These tests are <u>in addition</u> to the testing required by the Contractor's independent testing agency (ITA(C)).			

PILE FOUNDATIONS

Item	Agent	Scope	Frequency
1. Pile Material	SER/ RES	Review for conformance with the specifications, and that the identification is maintained from the point of manufacture to the point of delivery to the site.	Each pile shipment
2. Pile Material Tests	ITA	If Item 1 is unsatisfactory, test material for conformance to the Contract Documents.	As required
3. Precast Concrete Piles.	-	Perform structural tests and inspections as listed under Precast Concrete Construction.	See precast concrete requirements
4. Steel Piles	-	Perform structural test and inspections as listed under Steel Construction.	See steel construction requirements
5. Pile Installation	RES/ GEO	Provide review for conformance with specifications. Maintain accurate records for each pile. Record final location of each pile in plan.	Continuous
6. Cast-in-Place Concrete Piles	-	Perform structural tests and inspections as listed under Cast-in-Place Concrete Construction.	See cast-in-place concrete construction
Note: Additional confirmatory observations and/or testing by the Owner's independent testing agency (ITA) <u>in addition</u> to the observations and testing required by the Contractor's independent testing agency (ITA(C)) and the Contractor's registered professional engineer (RPE(C)) may be performed at the Owner's discretion.			

DRILLED PIER FOUNDATIONS

Item	Agent	Scope	Frequency
1. Load-bearing Steel Components	SER	Review documents identifying material and certifying grade of material for conformance to the specifications	Each component
2. Concrete and Reinforcing Steel Components	-	Perform structural tests and inspections as listed under Cast-in-Place Concrete Construction.	See concrete requirements
3. Pier installation	RES	Provide review of installation for conformance with specifications. Maintain accurate records for each pier, documenting observations.	Continuous

ALUMINUM CONSTRUCTION

Item	Agent	Scope	Frequency
1. Fabricator Certification/ Quality Control Procedures.	SER	Review to ensure that quality control procedures have been adopted for each Fabricator.	Start of project
2. Fabricator Inspection	SER	Review to ensure that an Independent Inspection Agency has approved each Fabricator.	Start of project
3. Material Certification	SER	Review for conformance to the specifications.	Each product
4. Bolting	ITA	Test and inspect bolted connections in accordance with specifications. Verify bolt size and grade in accordance with AISC specifications A325/A490.	Periodic
5. Welding	IWI	Check welder qualifications. Verify filler material in accordance with AWS D1.1. Visually inspect fillet welds. Test complete and partial penetration groove welds full length by dye penetrant, ultrasonic, or radiographic testing in accordance with the contract documents.	Periodic
6. Structural Framing, Details and Assemblies	RES	Review for conformance with specifications and shop drawings.	Periodic

SPECIAL CASES

Item	Agent	Scope	Frequency
1. Rock Anchors	RES	Witness testing in accordance with contract documents.	Each anchor
2. Pressure Relief Valves	RES	Verify that quantity, location and details conform to SER approved submittals and specifications.	Each valve
3. Tank Leakage Testing	RES	Witness testing in accordance with contract documents.	Each tank
4. Concrete Anchor Installation	RES	Verify diameters, depth and cleaning of holes conforms to manufacturer's instructions.	Each anchor

END OF SECTION

SECTION 01 50 00
TEMPORARY FACILITIES

PART 1 - GENERAL

1.01 SCOPE OF WORK:

- A. The Contractor shall provide all temporary facilities for the proper completion of the work as indicated and in compliance with Contract Documents.

1. Section Includes:

- a. Use Charges:
 - (1) Sewer.
 - (2) Water.
 - (3) Electric.
 - (4) Temporary heat.
- b. Project identification.
- c. Traffic regulation.
- d. Temporary Facilities:
 - (1) Field offices and sheds.
 - (2) Office for Engineer.
- e. Equipment.
- f. Support facility installation.
- g. Security and Protection:
- h. Operation, termination, and removal.

1.02 REFERENCES:

- A. American National Standards Institute (ANSI):
- 1. A 117.1: Accessible and Usable Buildings and Facilities.
- B. American Society for Testing and Materials (ASTM):

1. E84: Standard Test Method for Surface Burning Characteristics of Building Materials
2. E136: Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 deg. C.

C. National Fire Protection Association (NFPA):

1. 70: National Electrical Code
2. 241: Standard of Safeguarding Construction, Alteration, and Demolition Operations
3. 701: Standard Methods of Fire Tests for Flame Propagation of Textiles and Films

1.03 USE CHARGES:

A. General: Costs for installation, removal and use of temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's project team, Engineer, testing agencies, and authorities having jurisdiction.

B. Sewer Service: Pay sewer-service use charges for sewer usage by all entities for construction operations.

1. The Contractor shall provide adequate sanitary facilities for the use of those employed on the Work. Such facilities shall be made available when the first employees arrive on the site of the Work, shall be properly secluded from public observation, and shall be constructed and maintained during the progress of the Work in suitable numbers and at such points and in such manner as may be required by pertinent health and safety regulations.
2. The Contractor shall maintain the sanitary facilities in a satisfactory and sanitary condition at all times and shall enforce their use. He shall rigorously prohibit the committing of nuisances on the site of the Work, on the lands of the Owner, or on adjacent property.

a. The Contractor shall not use the Owner's sanitary facilities.

C. Potable Water Service: Pay water-service use charges for potable water used by all entities for construction operations.

1. For all necessary operations at the site of the work (except as noted in the next paragraph below) the Owner, without charge therefor, shall provide reasonable quantities of water at the then existing pressure from a mutually convenient hydrant of the water distribution system. The Contractor shall furnish all necessary pipe or hose extensions to conduct the water to the points of use and shall exercise due care not to waste water. The Contractor shall not contaminate the water supply

and shall comply with all applicable regulations and code requirements. Contractor shall supply and install a meter to monitor water use. The Owner retains the right to restrict or limit water use.

2. The Owner reserves the right to limit, suspend, or terminate the supplying of water as set forth above should it consider such action to be necessary on account of damage to the distribution system, the necessity of conserving water, or other emergency. In this event, the Contractor shall obtain water from some other approved source, at his own expense.
- D. Electric Power Service: Pay electric-power-service use charges for electricity used by all entities for construction operations.
1. The Contractor shall make all necessary applications and arrangements and pay all fees and charges for electrical energy for power and light necessary for the proper completion of the Work and during its entire progress. The Contractor shall provide and pay for all temporary wiring, switches, connections, and meters.
 2. The Contractor shall provide sufficient electric lighting so that all work may be done in a workmanlike manner when there is not sufficient daylight.
- E. Notwithstanding the availability of potable water from the existing system, the Contractor shall be solely responsible for the provision of water for leakage and other testing, for concrete protection and to prevent freezing of equipment, as required by the Contract.
- F. Temporary Heat:
1. If temporary heat is required for the protection of the Work, the Contractor shall provide and install suitable heating apparatus, shall provide adequate and proper fuel, and shall maintain heat as required. Costs for temporary heating, cooling, and ventilating required to execute the Work shall be borne by the Contractor.
 2. Temporary heating apparatus shall be installed and operated in such manner that finished work will not be damaged thereby. After the permanent heating system has been installed, tested, and made ready for operation, the Contractor may, at his own risk and expense, use it for providing heat for protection of the Work. He shall provide and pay for all fuel and care necessary, and, when the Work is ready for acceptance, he shall, at his own expense, put the system into first-class condition, even to the extent of replacing worn or damaged parts.
 3. If permanent natural gas piping is used for temporary heating units, the Contractor shall not modify or reroute gas piping without the prior approval of the natural gas supplier. The Contractor shall provide separate gas metering as required by the natural gas supplier.
 4. The Contractor shall provide 24-hour monitoring of temporary heating, cooling and ventilating equipment.

1.04 PROJECT IDENTIFICATION:

A. Project Identification Sign:

1. Painted sign of construction, design, and content shown on Drawings. Sign content to be reviewed and approved by Owner.

B. Project Informational Signs:

1. Painted informational signs of same colors and lettering as Project Identification sign, or standard products; size lettering for legibility at 100 foot distance.
2. Provide at each field office, storage shed, and directional signs to direct traffic into and within site. Relocate as Work progress requires.
3. Provide municipal traffic agency directional traffic signs to and within site.
4. No other signs are allowed without Owner permission except those required by law.

C. Design sign and structure to withstand 60 miles/hr wind velocity.

D. Sign Company: Experienced as professional sign company for minimum three years.

E. Finishes, Painting: Adequate to withstand weathering, fading, and chipping for duration of construction.

F. Show content, layout, lettering, color, structure, and grades of members.

G. Sign Materials:

1. Structure and Framing: Wood or metal, structurally adequate.
2. Sign Surfaces: Exterior grade plywood with medium density overlay, minimum 3/4 inch thick, standard large sizes to minimize joints.
3. Rough Hardware: Galvanized.
4. Paint and Primers: Exterior quality, two coats; sign background of white.
5. Lettering: Exterior quality paint, contrasting colors as selected.

H. Installation:

1. Install project identification sign within 15 days after date fixed by Notice to Proceed and with Owners approval.
2. Erect at location of high public visibility adjacent to main entrance to site.

3. Erect supports and framing on secure foundation, rigidly braced and framed to resist wind loadings.
 4. Install sign surface plumb and level, with butt joints. Anchor securely.
 5. Paint exposed surfaces of sign, supports, and framing.
- I. Maintenance: Maintain signs and supports clean, repair deterioration and damage.
 - J. Removal: Remove signs, framing, supports, and foundations at completion of Project and restore the area.
- 1.05 TRAFFIC REGULATION:
- A. Provide that all traffic control layouts and designs comply with the Manual of Uniform Traffic Control Devices (MUTCD).
 - B. Signs, Signals, And Devices:
 1. Post Mounted and Wall Mounted Traffic Control and Informational Signs: As approved by authority having jurisdictions.
 2. Traffic Control Signals: As approved by authority having jurisdictions.
 3. Traffic Cones and Drums, Flares and Lights: As approved by authority having jurisdictions.
 4. Flagperson Equipment: As required by local jurisdictions.
 - C. Flag Persons: Provide trained and equipped flag persons to regulate traffic when construction operations or traffic encroach on public traffic lanes.
 - D. Flares and Lights: Use flares and lights during hours of low visibility to delineate traffic lanes and to guide traffic.
 - E. Haul Routes:
 1. Consult with authority having jurisdiction, establish public thoroughfares to be used for haul routes and site access.
 2. Confine construction traffic to designated haul routes.
 3. Provide traffic control at critical areas of haul routes to regulate traffic, to minimize interference with public traffic.
 - F. Traffic Signs and Signals:
 1. Provide signs approaches to site and on site, at crossroads, detours, parking areas, and elsewhere as needed to direct construction and affected public traffic.

2. Provide, operate, and maintain traffic control signals to direct and maintain orderly flow of traffic in areas under Contractor's control, and areas affected by Contractor's operations.
3. Relocate as Work progresses, to maintain effective traffic control.

G. Removal:

1. Remove equipment and devices when no longer required.
2. Repair damage caused by installation.
3. Remove post settings to depth of 2 feet.

1.06 SUBMITTALS:

- A. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.
- B. Erosion- and Sedimentation-Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
- C. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.
- D. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.
 1. Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.
 2. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
 3. Indicate sequencing of work that requires water, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.

1.07 QUALITY ASSURANCE:

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

- C. Accessible Temporary Egress: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.

1.08 PROJECT CONDITIONS:

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.
- B. During adverse weather and against the possibility thereof, the Contractor shall take all necessary precautions so that the Work may be properly done and satisfactory in all respects. When required, protection shall be provided by use of tarpaulins, wood and building-paper shelters, or other suitable means.
- C. During cold weather, materials shall be preheated, if required, and the materials and adjacent structure into which they are to be incorporated shall be made and kept sufficiently warm so that a proper bond will take place and a proper curing, aging, or drying will result. Protected spaces shall be artificially heated by suitable means which will result in a moist or a dry atmosphere according to the particular requirements of the work being protected. Ingredients for concrete and mortar shall be sufficiently heated so that the mixture will be warm throughout when used.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch- OD line posts and 2-7/8-inch- OD corner and pull posts.

2.02 TEMPORARY FACILITIES:

- A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.
- B. The Contractor shall maintain a temporary field office near the work for his own use during the period of construction at which readily accessible copies of all contract documents shall be kept. The office shall be located where it will not interfere with the progress of the work. There shall be a competent superintendent of the Contractor in charge of this office.
- C. Temporary Storage Yards: The Contractor shall construct temporary storage yards for storage of Products that are not subject to damage by weather conditions.
- D. Temporary Storage Buildings:

1. The Contractor shall provide environmental control systems that meet the recommendations of Suppliers and manufacturers of the equipment and materials stored.
 2. The Contractor shall arrange for a chain link partition fence to provide security of contents and ready access for inspection and inventory.
- E. The Contractor shall store combustible materials (paints, solvents, fuels) in a well ventilated and remote building meeting all applicable safety standards.

2.03 FIELD OFFICE REQUIREMENTS:

- A. In addition to Contractor staff, the field office shall provide two desk spaces for the Engineer or Owner to use while on site.
- B. The Contractor shall furnish insurance coverage of adequate amount to replace not only the Contractor's equipment, but all property belonging to the Engineer at replacement cost.
- C. The office shall have two exterior doors, with cylinder locks and keys.
- D. The Contractor shall furnish the following furniture, equipment, supplies, and services:
1. Climate controlled office space
 2. All furnishings, including but not limited to: desks, chairs, monitors, tables.
 3. Adequate interior and exterior lighting
 4. Printer: "All-in-one" unit equipped with printer server, combining color printing, photocopying, scanning, and faxing, or separate units for each of these three functions.
 5. Internet Service: Broadband modem, router and ISP, equipped with hardware firewall, providing High Speed Internet at each computer.
 6. Internet Security: Integrated software, providing software firewall, virus, spyware, phishing, and spam protection in a combined application.
- E. The Contractor shall provide office space and facilities until the office, furnishings, and equipment described above are ready for use, but by so doing he shall not be relieved of his obligation to provide and equip the specified Engineer's office as promptly as possible.
- F. Unless otherwise directed by the Engineer, after the date of completion of the Work as stated in the final estimate, the Contractor shall remove the office and all such temporary facilities from the site, the same to become his property, and leave the premises in a condition acceptable to the Engineer.

- G. Provide janitorial service with two cleanings per week.
 - H. Provide designated parking for Contractor, Engineer and Owner. Parking space provided shall be adequate to accommodate all on site personal.
 - I. Remove snow and ice as required to minimize accumulations.
 - J. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.
 - 1. Store combustible materials apart from building.
- 2.04 EQUIPMENT:
- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
 - B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
 - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 - 2. Heating Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL:

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.02 TEMPORARY UTILITY INSTALLATION:

- A. General: Install temporary service or connect to existing service.
 - 1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. Sewers and Drainage: Provide temporary utilities to remove effluent lawfully.

1. Connect temporary sewers to municipal system as directed by authorities having jurisdiction.
- C. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.
- D. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
- E. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.
- F. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
 1. Provide dehumidification systems when required to reduce substrate moisture levels to level required to allow installation or application of finishes.
- G. Electric Power Service: Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.
 1. Install electric power service overhead unless otherwise indicated.
 2. Connect temporary service as directed by Owner.
- H. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.
 1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
 2. Install lighting for Project identification sign.
- I. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel. Install one telephone line(s) for each field office.
 1. At each telephone, post a list of important telephone numbers.
 - a. Police and fire departments.

- b. Ambulance service.
 - c. Contractor's home office.
 - d. Contractor's emergency after-hours telephone number.
 - e. Engineer's offices.
 - f. Owner's office.
 - g. Principal subcontractors' field and home offices.
2. Provide superintendent with cellular telephone or portable two-way radio for use when away from field office.

3.03 SUPPORT FACILITIES INSTALLATION:

A. General: Comply with the following:

1. Provide construction for temporary offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible according to ASTM E136. Comply with NFPA 241.
2. Maintain support facilities until Engineer schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.

B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.

1. Provide dust-control treatment that is nonpolluting and non-tracking. Reapply treatment as required to minimize dust.
2. Do not use chemical means of dust control without prior written approval from the Engineer. The use of petroleum products will not be allowed at any time.

C. Temporary Use of Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
2. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Division 31 Section "Earth Moving."

3. Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.
 4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course according to Division 32 Section "Rigid Paving."
- D. Traffic Controls: Comply with requirements of authorities having jurisdiction.
1. Protect existing site improvements to remain including curbs, pavement, and utilities.
 2. Maintain access for fire-fighting equipment and access to fire hydrants.
 1. Unless described and approved under a Traffic Control Plan (TCP), conduct operations on the site so that the use of any plant roads by vehicles employed under this Contract will not restrict pedestrian and vehicular traffic thereon nor hinder the use of such facilities.
 2. All roads within the plant are used simultaneously by vehicles and pedestrians. The speed limit of 15 mph (20km/h) applies throughout the plant, including the access roads and parking lots. Failure to comply with speed limit or to operate vehicles safely will result in possible removal of the staff from the plant.
- E. Parking: Provide temporary parking areas for construction personnel. The Contractor shall not use public roads or undesignated areas for parking.
- F. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 2. Remove snow and ice as required to minimize accumulations.
- G. Project Signs: Provide Project signs in accordance with Contract Documents. Unauthorized signs are not permitted.
1. Identification Signs: Provide Project identification signs as indicated on Drawings.
 2. Temporary Signs: Provide other signs as required to inform public and individuals seeking entrance to Project.
 - a. Provide temporary, directional signs for construction personnel and visitors.
 3. Maintain and touchup signs so they are legible at all times.

- H. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. (NTS: Retain "Lifts and Hoists" Paragraph below for construction of more than two stories.)
 - I. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.
 - 1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.
 - J. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.
 - K. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.
- 3.04 SECURITY AND PROTECTION FACILITIES INSTALLATION:
- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
 - B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
 - 1. Comply with work restrictions specified in Division 01 Section "Summary of Work."
 - C. Temporary Erosion and Sedimentation Control: Comply with requirements specified in Section 01 57 13 Erosion Control, Sedimentation and Containment of Construction Material.
 - D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
 - E. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
 - F. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using environmentally safe materials.

- G. Site Enclosure Fence: Prior to commencing earthwork, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates. The Owner shall not assume liability for breaches of security on the Contractor's Work Area. It is the Contractor's responsibility to secure its construction materials, tools and equipment. The Owner is not responsible for providing security services, and is not responsible for any loss, theft or damage to any equipment/material within the Contractor's Work Area
1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations
 2. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Owner.
- H. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.
- I. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- J. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.
- K. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.
- L. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.
1. Prohibit smoking in construction areas.
 2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
 3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.

4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.05 MOISTURE AND MOLD CONTROL:

- A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of mold that may appear during construction.
- B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:
 1. Protect porous materials from water damage.
 2. Protect stored and installed material from flowing or standing water.
 3. Keep porous and organic materials from coming into prolonged contact with concrete.
 4. Remove standing water from decks.
 5. Keep deck openings covered or dammed.
- C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:
 1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
 2. Keep interior spaces reasonably clean and protected from water damage.
 3. Periodically collect and remove waste containing cellulose or other organic matter.
 4. Discard or replace water-damaged material.
 5. Do not install material that is wet.
 6. Discard, replace, or clean stored or installed material that begins to grow mold.
 7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.
- D. Controlled Construction Phase of Construction: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:
 1. Control moisture and humidity inside building by maintaining effective dry-in conditions.

2. Use permanent HVAC system to control humidity.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.
 - a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective.
 - b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Engineer.
 - c. Remove materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.06 CLEANING ENGINEER'S AND CONSTRUCTION OFFICES DURING CONSTRUCTION:

- A. Contractor to maintain the grounds within his working limits and around any equipment or storage areas. This includes removal of waste material, cutting of grass, weed whacking around storage racks and material, snow plowing and snow shoveling.
- B. The Contractor shall make arrangements with, and obtain permits from, any authorities having jurisdiction for disposal of waste and debris.
- C. The Contractor shall wet down exterior surfaces prior to sweeping to prevent blowing of dust and debris. At least weekly, the Contractor shall sweep all floors (basins, tunnels, platforms, walkways, roof surfaces), and pick up all debris and dispose of off Site.
- D. The Contractor shall provide approved containers for collection and disposal of waste materials, debris, and rubbish. At least at weekly intervals, the Contractor shall dispose of such waste materials, debris, and rubbish off Site.
- E. At least weekly, the Contractor shall brush sweep entry drive and roadways, and all other streets and walkways affected by the Work and where adjacent to the Work.

3.07 OFFICE FOR ENGINEER:

- A. Locate the Engineer's Field inside the field office.
- B. Communication Services: The Contractor shall arrange and provide on Site telephone service and cable Internet access including router/firewall for use during construction. The Contractor shall pay for all installation and basic monthly billing charges. The Contractor shall reinstate service outages resulting from construction activities within one Working Day.

- C. Maintain all temporary buildings clean and free from nuisances so as to avoid danger to plant property or structures, and to prevent complaints from plant personnel, and prohibit interferences with the operation of the existing plant.
 - D. Maintain in good repair and appearance, and provide daily cleaning service and replenishment, as required, of paper towels, paper cups, hand soap, toilet paper, first-aid kit supplies, and bottled water.
 - E. Provide and maintain services including power, heating and ventilating.
- 3.08 OPERATION, TERMINATION, AND REMOVAL:
- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
 - B. Maintenance: Maintain facilities in good operating condition until removal.
 - 1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
 - C. Operate Project-identification-sign lighting daily from dusk until 12:00 midnight unless directed otherwise by Owner.
 - D. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
 - E. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
 - 1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
 - 2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
 - 3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Division 01 Section "Contract Closeout."

END OF SECTION

SECTION 01 57 13

EROSION CONTROL, SEDIMENTATION AND CONTAINMENT OF CONSTRUCTION MATERIALS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide all work and take all measures necessary to control soil erosion resulting from construction operations, prevent flow of sediment from construction site, and contain construction materials (including excavation and backfill) within protected working area as to prevent damage to any stream or wetlands as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. Owner's environmental management plans and associated environmental protection plans
- B. United States Environmental Protection Agency (USEPA):
 - 1. Guidelines for Erosion and Sediment Control, Planning and Implementation.
 - 2. Processes, Procedures and Methods to Control Pollution Resulting from all Construction Activity.
- C. City of Provo Public Works
- D. Utah Department of Environmental Quality

1.03 SUBMITTALS:

- A. Submit the following in accordance with Section 01 33 00.
- B. Two weeks prior to the start of the work, submit to Engineer, for review, a plan with detailed sketches showing the proposed methods to be used for controlling erosion during construction.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Use acceptable procedures, including use of water diversion structures, diversion ditches, settling basins, and sediment traps.
- C. Operations restricted to areas of work indicated on drawings and area which must be entered for construction of temporary or permanent facilities.

- D. If construction materials are washed away during construction, remove materials from fouled areas.
- E. Stabilize diversion outlets by means acceptable to Engineer.
- F. Engineer has authority to limit surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and fill operations and to direct immediate permanent or temporary pollution control measures to prevent contamination of any stream or wetlands, including construction of temporary berms, dikes, dams, sediment basins, sediment traps, slope drains, and use of temporary mulches, mats, or other control devices or methods to control erosion.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Provide materials in accordance with EPA Stormwater Pollution Prevention

PART 3 - EXECUTION

3.01 GENERAL:

- A. Do not discharge chemicals, fuels, lubricants, bitumen, raw sewage and other harmful waste into or alongside any body of water or into natural or man-made channels.
- B. Design erosion and sediment controls to handle peak runoff resulting from storm events.
- C. The Contractor shall be responsible for inspecting and maintaining these control measures to ensure their proper function and adequate sediment storage at all times. The Contractor shall remove sediment once it reaches 50 percent of the capacity of the structure. Sediment collected shall be disposed of offsite at the Contractor's cost.

3.02 INSTALLATION:

- A. Install baled hay or straw erosion checks in all locations as directed, surrounding base of all deposits of stored excavated material outside of disturbed area, and where directed by the Engineer.
- B. Install checks immediately after site is cleared and before trench excavation. Locate checks, surrounding stored material, approximately 6 feet from material.
- C. Hold bales in place with two 2 inches by 2 inches by 3 feet stakes so that each bale is butted tightly against adjoining bale thereby precluding shortcircuiting of erosion check.
- D. Construct earth berms or diversions to intercept and divert runoff water from critical areas.

- E. Discharge silt-laden water from excavations onto filter fabric mat and/or baled hay or straw sediment traps to ensure that only sediment-free water is returned to watercourses.
- F. Do not place excavated soil material adjacent to water-course in manner that will cause it to wash away by high water or runoff.
- G. Prevent damage to vegetation by excessive watering or silt accumulation in the discharge area.
- H. Do not dump spoiled material into any streams, wetlands, surface waters, or unspecified locations.
- I. Prevent indiscriminate, arbitrary, or capricious operation of equipment in streams, wetlands or surface waters.
- J. Do not pump silt-laden water from trenches or excavations into surface waters, streams, wetlands, or natural or man-made channels leading thereto.
- K. Prevent damage to vegetation adjacent to or outside of construction area limits.
- L. Do not dispose of trees, brush, debris, paints, chemicals, asphalt products, concrete curing compounds, fuels, lubricants, insecticides, washwater from concrete trucks or hydroseeders, or any other pollutant in streams, wet-lands, surface waters, or natural or man-made channels leading thereto, or unspecified locations.
- M. Do not alter flow line of any stream unless indicated or specified.

END OF SECTION

SECTION 01 61 00
CONTROL OF MATERIALS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.

1. Section Includes:

- a. Definitions
- b. Spare parts
- c. Quality assurance
- d. Delivery, storage and handling
- e. Products
- f. Acceptance of materials
- g. Reuse of existing material
- h. Manufacturer's instructions
- i. Special tools
- j. Lubrication
- k. Nameplates
- l. Loads and seismic forces
- m. General material and equipment requirements
- n. Materials and Equipment
- o. Field Quality Control; Installation, Instructional, and Post Startup Services

1.02 DEFINITIONS:

- A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
 - 2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
 - 3. Comparable Product: Product that is demonstrated and accepted through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

1.03 SPARE PARTS:

- A. Provide spare parts for Products as specified in the individual technical specification sections. Comply with the requirements specified in Section 01 61 00.
- B. Pack spare parts to protect them during storage. Tag spare parts and containers to clearly identify them in accordance with Owners' parts numbering system as reviewed by the Engineer. All parts shall be cross-referenced to their applicable Specification Section.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 61 00.
- B. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1.05 DELIVERY STORAGE AND HANDLING:

- A. Contractor shall arrange deliveries of materials and equipment in accordance with construction Progress Schedule, coordinate to avoid conflict with Work and conditions at site.
- B. Comply with the requirements of Section 01 66 00.
- C. Provide equipment and personnel to handle materials and equipment by methods recommended by manufacturer to prevent soiling or damage to materials or equipment, or their packaging.

- D. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
- E. Owner assumes no responsibility for damage or loss due to storage of materials and equipment.
- F. Interior Storage:
 - 1. Store with seals and labels intact and legible.
 - 2. Store materials and equipment subject to damage by elements in weathertight enclosures.
 - 3. Maintain temperature and humidity within ranges required by manufacturer's instructions.
- G. Exterior Storage:
 - 1. Store fabricated materials and equipment above ground, on blocking or skids, to prevent soiling or staining. Cover materials and equipment subject to deterioration with impervious sheet coverings. Provide ventilation to avoid condensation.
 - 2. Store loose granular materials in well-drained area on solid surfaces to prevent mixing with foreign matter.
 - 3. Store materials such as pipe, reinforcing steel, structural steel, and equipment on pallets or racks, off ground.
- H. Inspection and Maintenance:
 - 1. Arrange storage to provide easy access for inspection, maintenance, and inventory.
 - 2. Make periodic inspections of stored materials and equipment to ensure materials and equipment maintained under specified conditions are free from damage or deterioration, and coverings are in-place and in condition to provide required protection.
 - 3. Perform maintenance on stored material and equipment in accordance with manufacturer's written instructions and in presence of Owner or Engineer.
 - a. Notify Engineer 24 hours before performance of maintenance.
 - b. Submit report of completed maintenance and condition of coverings to Engineer with each Application for Payment.
 - c. Failure to perform maintenance, to notify Engineer of intent to perform maintenance or to submit maintenance report may result in rejection of material or equipment.

- I. Contractor assumes responsibility for protection of completed construction and repair and restore damage to completed Work equal to original condition until acceptance and closeout of project by Owner subject to warranty requirements.
- J. Wheeling of loads over finished floors, with or without plank protection, is not permitted in anything except rubber-tired wheelbarrows, buggies, trucks or dollies. This applies to finished floors and exposed concrete floors, as well as those covered with composition tile or other applied surfacing.
- K. Where structural concrete is also finished surface, avoid marking or damaging surface.

1.06 PRODUCTS:

- A. Furnish products of qualified manufacturers suitable for intended use. Furnish products of each type by single manufacturer unless specified otherwise.
- B. Do not use materials and equipment removed from existing premises, except as specifically permitted by Contract Documents.
- C. Furnish interchangeable components from same manufacturer for components being replaced.

1.07 ACCEPTANCE OF MATERIALS:

- A. Unless otherwise specified, only new materials and equipment shall be incorporated in the work. All materials and equipment furnished by the Contractor shall be subject to the inspection and acceptance of the Engineer. No material shall be delivered to the work without prior acceptance of the Engineer.
- B. As specified in Section 01 33 00, the Contractor shall submit to the Engineer, data relating to materials and equipment he proposes to furnish for the work. Such data shall be in sufficient detail to enable the Engineer to identify the particular product and to form an opinion as to its conformity to the specifications.
- C. Facilities and labor for handling and inspection of all materials and equipment shall be furnished by the Contractor. If the Engineer requires, either prior to beginning or during the progress of the work, the Contractor shall submit additional samples or materials for such special tests as may be necessary to demonstrate that they conform to the specifications. Such samples shall be furnished, stored, packed, and shipped at the Contractor's expense. Except as otherwise noted, the Owner will make arrangements for and pay for the tests.
- D. Any delay of acceptance resulting from the Contractor's failure to submit samples or data promptly shall not be used as a basis of a claim against the Owner or the Engineer.
- E. In order to demonstrate the proficiency of workmen or to facilitate the choice among several textures, types, finishes, and surfaces, the Contractor shall provide such samples of workmanship or finish as may be required.

- F. The materials and equipment used on the work shall correspond to the accepted samples or other data.

1.08 REUSE OF EXISTING MATERIAL:

- A. Except as specifically indicated or specified, do not use materials and equipment removed from existing structure(s) in new Work.

1.09 MANUFACTURER'S INSTRUCTIONS:

- A. Installation of equipment and materials shall comply with manufacturer's instructions. Obtain and distribute printed copies of such instructions to parties involved in installation, including one copy to Engineer.

- 1. Maintain one set of complete instructions at Site during installation and until completion of Work.

- B. Handle, store, install, connect, clean, condition, and adjust materials and equipment in accordance with manufacturer's written instructions and in conformance with Specifications.

- 1. If Site conditions or specified requirements conflict with manufacturer's instructions, Engineer for further instructions. Do not proceed with Work without written instructions.

1.10 SPECIAL TOOLS:

- A. For each type of equipment furnished, the Contractor shall provide a complete set of all special tools (including grease guns or other lubricating devices) which may be necessary for the adjustment, operation, maintenance, and disassembly of such equipment. Tools shall be high-grade, smooth, forged, alloy, tool steel. Grease guns shall be lever type.

- B. Special tools are considered to be those tools which because of their limited use are not normally available, but which are necessary for the particular equipment.

- C. Pack items to protect them during storage. Tag items and containers to clearly identify them in accordance with Owner's part system, as reviewed by the Engineer. Cross-reference all items to their applicable Specification Section.

- D. Special tools shall be delivered at the same time as the equipment to which they pertain. The Contractor shall properly store and safeguard such special tools until completion of the work, at which time they shall be delivered to the Owner.

- E. The Contractor shall furnish and erect one or more steel wall cases with flat key locks and clips or hooks to hold each tool in arrangement.

1.11 LUBRICATION:

- A. Where lubrication is required for proper operation of equipment, incorporate necessary and proper provisions in equipment in accordance with manufacturer's requirements. Where possible, lubrication shall be automated and positive.
- B. Where oil is used, reservoir shall be of sufficient capacity to supply unit for 48-hour period.
- C. Provide adequate and, as far as practicable, automatic means of lubrication for working parts. Arrange lubrication grease nipples, grease boxes and other lubrication devices so that they are readily accessible for routing greasing using grease nipples and Type 316 stainless steel or copper tubing extensions where required. Secure nipples and tubing to the equipment at appropriate locations. Indicate on the working drawings submitted, the types of lubricants to be used (must be readily available in the State of Utah). Use grease nipples of a consistent type, Alemite button head type or equivalent. Provide grease gun(s) of the appropriate size(s) and pressure(s).
- D. Provide a one (1) year supply of all lubricants necessary for the routine, daily operation of the equipment. All lubricants to be readily available in the State of Utah. Provide a complete schedule of all the lubricant including the manufacturer name, type, name and local address and phone number of where each lubricant can be purchased for each piece of equipment.

1.12 NAMEPLATES:

- A. With the exceptions mentioned below, each piece of equipment shall be provided with a nameplate of non-corrodible metal, securely fastened in place and clearly and permanently inscribed with the manufacturer's name, model or type designation, serial number, principal rated capacities, electrical or other power characteristics, and similar information.
- B. This requirement shall not apply to standard, manually operated hydrants or to gate, globe check and plug valves.
- C. Each process valve shall be provided with a substantial tag of non-corrodible metal securely fastened in place and inscribed with an identification number in conformance with the Valve Identification Schedule indicated on the drawings or furnished by the Engineer.

1.13 LOADS AND SEISMIC FORCES:

- A. See Section 01 41 20.
- B. Provide anchorage and supports for products, including equipment, assemblies, and pipe, designed to resist the following loads and seismic forces.
 - 1. Horizontal forces: 100 percent of dead and live loads acting in any direction in the horizontal plane applied to the center of gravity of the load.
 - 2. Vertical forces: 50 percent of the dead and live load, acting either upward or downward applied at the center of gravity of the load.
 - 3. Cantilevered anchorages/supports: 100 percent of the dead and live loads acting in any direction applied at the center of gravity of the load.
- C. Seismic and wind force determination: in accordance with Section 01 41 20.
- D. Products, including equipment and assemblies, in normal submerged condition operation: analysis of seismic forces in both submerged/dry condition in accordance with loading per Section 01 41 20.
- E. Above ground tanks, their supports and anchorages: Design fabricate and install to comply with the seismic requirements of applicable codes and in accordance with Section 01 41 20.
- F. Analysis of loads and seismic force: Performed by a registered Engineer in the state of Utah with experience in this type of work.
- G. Furnish copies of analysis with submittals for equipment, assemblies, and pipe.

1.14 GENERAL MATERIAL AND EQUIPMENT REQUIREMENTS:

- A. The requirements of this Paragraph shall constitute the standards for the material and equipment specified herein. Should these requirements conflict with the Supplier's recommendations or in any way be less stringent than the Supplier's requirements, they shall be superseded by the Supplier's requirements.
- B. Bolts, Anchor Rods and Nuts:
 - 1. All necessary bolts, anchor rods, nuts, washers, plates and bolt sleeves shall be furnished by the Contractor in accordance herewith. Anchor rods shall have suitable washers and hexagonal nuts.
 - 2. All anchor rods, nuts, washers, plates, and bolt sleeves shall be stainless steel unless otherwise indicated or specified.
 - 3. Unless otherwise specified, stud, tap, and machine bolts, and nuts shall conform to the requirements of ASTM Standard Specification for High Strength Structural

Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, Designation F3125. Hexagonal nuts of the same quality of metal as the bolts shall be used. All threads shall be clean cut and shall conform to ANSI Standard B1.1 for Unified Inch Screw Threads (UN and UNR Thread Form).

4. Bolts, anchor rods, nuts, and washers, specified to be galvanized, shall be zinc coated, after being threaded, by the hot-dip process in conformity with the ASTM Standard Specification for Zinc (Hot-Galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip, Designation A123, or the ASTM Standard Specifications for Zinc Coating (Hot Dip) on Iron and Steel Hardware, Designation A153, as is appropriate.
5. Bolts, anchor rods, nuts, and washers specified to be stainless steel shall be Type 304 or Type 316 stainless steel, as indicated.
6. Anchor rods shall be set accurately. They shall be carefully held in suitable templates of acceptable design. Where indicated on the Drawings, specified, or required, anchor bolts shall be provided with square plates at least 4 inches by 4 inches by 3/8 inch or shall have square heads and washers and set in the concrete forms with suitable pipe sleeves, or both. If anchors are set after the concrete has been placed, all necessary drilling and grouting or caulking shall be done by the Contractor and care shall be taken not to damage the structure or finish by cracking, chipping, spalling, or otherwise during the drilling and caulking.

C. Grease Fittings:

1. Provide extension fittings and tubing on all grease fittings that are installed in an inaccessible location. The extension is to be located so that equipment can be lubricated from the operating level without the use of ladders, staging or shutting down the equipment. Tubing: 316 stainless steel.

D. Equipment Foundations, Installation and Grouting:

1. The Contractor shall furnish the necessary materials and construct suitable concrete foundations for all equipment installed by him, even though such foundations may not be indicated on the Drawings. The tops of foundations shall be at such elevations as will permit grouting as specified below.
2. All such equipment shall be installed by skilled mechanics and in accordance with the instructions of the manufacturer.
3. In setting pumps, motors, and other items of equipment customarily grouted, the Contractor shall make an allowance of at least 1 inch for grout under the equipment bases. Shims used to level and adjust the bases shall be steel. Shims may be left embedded in the grout, in which case they shall be installed neatly and so as to be as inconspicuous as possible in the completed work. Unless otherwise permitted, all grout shall be a suitable non-metallic, non-shrink grout.

4. Grout shall be mixed and placed in accordance with the recommendations of the manufacturer. Where practicable, the grout shall be placed through the grout holes in the base and worked outward and under the edges of the base and across the rough top of the concrete foundation to a peripheral form so constructed as to provide a suitable chamfer around the top edge of the finished foundation.
5. Where such procedure is impracticable, the method of placing grout shall be as accepted by the Engineer. After the grout has hardened sufficiently, all forms, hoppers, and excess grout shall be removed, and all exposed grout surfaces shall be patched in an accepted manner and given a burlap-rubbed finish.

E. Equipment Drive Guards:

1. All equipment driven by open shafts, belts, chains, or gears shall be provided with acceptable all-metal guards enclosing the drive mechanism. Guards shall be constructed of galvanized sheet steel (12 gage minimum) or galvanized woven wire or expanded metal set in a frame of galvanized steel members. Guards shall be secured in position by steel braces or straps which will permit easy removal for servicing the equipment. The guards shall conform in all respects to all applicable safety codes and regulations.
2. Provide pivoting access covers for shaft speed measurements.

F. Protection Against Electrolysis:

1. Where dissimilar metals are used in conjunction with each other, provide insulation between adjoining surfaces to eliminate direct contact and any resultant electrolysis. Provide bituminous insulation, heavy bituminous coatings, nonmetallic separators or washers, impregnated felt, or other means to provide insulation.

PART 2 - PRODUCTS

2.01 MATERIALS AND EQUIPMENT:

A. Material and Equipment Incorporated into Work:

1. Conform to applicable specifications and standards.
2. Comply with size, make, type, and quality specified or as accepted by Submittal.

B. Manufactured and Fabricated Materials and Equipment:

1. Design, fabricate, and assemble in accordance with engineering and shop practices standard with industry.

2. Manufacture like parts of duplicate units to standard sizes and gauges, to be interchangeable.
 3. Two or more items of same kind shall be identical, by same manufacturer.
 4. Material and equipment shall be suitable for service conditions.
 5. Equipment capabilities, sizes, and dimensions shown or specified shall be adhered to, unless variations are specifically accepted, in writing.
 6. Equipment shall be adapted to best economy in power consumption and maintenance. Parts and components shall be proportioned for stresses occurring during continuous or intermittent operation, and for additional stresses occurring during fabrication or installation.
 7. Design so working parts are readily accessible for inspection and repair, easily duplicated, and replaced.
 8. Design structural members of equipment for anticipated shock and vibratory loads.
 9. Design machinery such that working parts are readily accessible for inspection and repair, and that each part is suitable for the service required.
- C. Do not use material or equipment for purpose other than for which it is designed or specified.

PART 3 - EXECUTION

- 3.01 FIELD QUALITY CONTROL; INSTALLATION, INSTRUCTIONAL, AND POST STARTUP SERVICES:
- A. General: Provide services in accordance with Section 01 78 25.
 - B. Training: Comply with Section 01 78 25.
- 3.02 CLOSEOUT ACTIVITIES:
- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 01 66 10

DELIVERY, STORAGE AND HANDLING

PART 1 - GENERAL

1.01 GENERAL:

- A. This Section specifies the general requirements for the delivery handling, storage and protection for all items required in the construction of the work as indicated and in compliance with Contract Documents. Specific requirements, if any, are specified with the related item.

1.02 TRANSPORTATION AND DELIVERY:

- A. Transport and handle items in accordance with manufacturer's printed instructions.
- B. Before shipping to the Site, contact the Engineer, in writing, giving at least fourteen (14) Days prior notice to enable the Engineer or its authorized inspector to inspect the equipment if necessary. Assemble the complete unit in the factory for inspection by the Engineer or its authorized inspector. Do not ship the equipment until the Engineer has completed its inspection.
- C. Schedule delivery to reduce long term on-site storage prior to installation and/or operation. Under no circumstances shall equipment be delivered to the site more than one month prior to installation without written authorization from the Engineer.
- D. Ship equipment, material and spare parts complete except where partial disassembly is required by transportation regulations or for protection of components.
- E. Pack spare parts in containers bearing labels clearly designating contents and pieces of equipment for which intended. All spare parts shall be cross-referenced to their applicable the Specification Section.
- F. Carefully pack and crate equipment for shipment. Protect polished and machined metal surfaces from corrosion and damage during shipment and installation. Specially pack electrical equipment to prevent damage by moisture. Cover equipment having exposed bearings and glands to exclude foreign matter. Carefully pack machines for shipment and protect electrical equipment from moisture damage. Protect bearings, seals and glands from grit and dirt.
- G. Identify each component with durable identifying labels or tags securely attached to each piece of equipment, crate or container.
- H. Finished surfaces of all exposed flanges shall be protected by fiberboard blank flanges strongly built and securely bolted thereto.

- I. Deliver spare parts at same time as pertaining equipment. Deliver spare parts to owner after completion of work.
- J. Coordinate delivery with installation to ensure minimum holding time for items that are hazardous, flammable, easily damaged or sensitive to deterioration.
- K. Deliver products to the site in manufacturer's original sealed containers or other packing systems, complete with instructions for handling, storing, unpacking, protecting and installing.
- L. Assume responsibility for equipment material and spare parts just before unloading from carrier at site.
- M. All items delivered to the site shall be unloaded and placed in a manner which will not hamper the Contractor's normal construction operation or those of subcontractors and other contractors and will not interfere with the flow of necessary traffic.
- N. Provide equipment and personnel to unload all items delivered to the site..
- O. Promptly inspect shipment to assure that products comply with requirements, quantities are correct, and items are undamaged. For items furnished by others (i.e. Owner, other Contractors), perform inspection in the presence of the Engineer. Notify Engineer verbally, and in writing, of any problems.
- P. Pay all demurrage charges if failed to promptly unload items.

1.03 STORAGE AND PROTECTION:

- A. Store and protect products and equipment in accordance with the manufacturer's instructions, with seals and labels intact and legible. Storage instruction shall be studied by the Contractor and reviewed with the Engineer by him. Instructions shall be carefully followed and a written record of this kept by the Contractor for each product and pieces of equipment.
- B. Arrange storage of products and equipment to permit access for inspection. Periodically inspect to make sure products and equipment are undamaged and are maintained under specified conditions.
- C. Provide protective maintenance during storage consisting of manually exercising equipment, inspecting mechanical surfaces for signs or corrosion or other damage, lubricating, applying any coatings as recommended by the equipment manufacturer necessary for its protection and all other precautions to assure proper protection of all equipment stored and for compliance with manufacturers' requirements related to warranties. Log all protective maintenance for each piece of equipment in the written record noted above.
- D. Store loose granular materials on solid flat surface in a well-drained area. Prevent mixing with foreign matter.

- E. Cement and lime shall be stored under a roof and off the ground and shall be kept completely dry at all times. All structural, miscellaneous and reinforcing steel shall be stored off the ground or otherwise to prevent accumulation of dirt or grease, and in a position to prevent accumulations of standing water and to minimize rusting. Beams shall be stored with the webs vertical. Precast concrete shall be handled and stored in a manner to prevent accumulations of dirt, standing water, staining, chipping or cracking. Brick, block and similar masonry products shall be handled and stored in manner to reduce breakage, cracking and spalling to a minimum.
- F. All mechanical and electrical equipment and instruments shall be covered with canvas and stored in a weathertight building to prevent injury. The building may be a temporary structure on the site or elsewhere, but it shall be satisfactory to the Engineer. Building shall be provided with adequate ventilation to prevent condensation. Maintain temperature and humidity within range required by manufacturer and to prevent condensation on the equipment being stored.
1. All equipment shall be stored fully lubricated with oil, grease and other lubricants unless otherwise instructed by the manufacturer.
 2. Moving parts shall be rotated a minimum of once weekly to insure proper lubrication and to avoid metal-to-metal "welding". Log all rotation maintenance for each piece of equipment in the written record noted above.
 3. Upon installation of the equipment, the Contractor shall start the equipment, at least half load, once weekly for an adequate period of time to ensure that the equipment does not deteriorate from lack of use. Log all startup for each piece of equipment in the written record noted above.
 4. Lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance. New lubricants shall be put into the equipment at the time of acceptance.
 5. Prior to acceptance of the equipment, the Contractor shall have the manufacturer inspect the equipment and certify that its condition has not been detrimentally affected by the long storage period. Such certifications by the manufacturer shall be deemed to mean that the equipment is judged by the manufacturer to be in a condition equal to that of equipment that has been shipped, installed, tested and accepted in a minimum time period. As such, the manufacturer will guaranty the equipment equally in both instances. If such a certification is not given, the equipment shall be judged to be defective. It shall be removed and replaced at the Contractor's expense.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

(Not Used)

END OF SECTION

SECTION 01 71 13

MOBILIZATION

PART 1 - GENERAL

1.01 SUMMARY

- A. This Section is provided to cover Contractor's cost of general and miscellaneous responsibilities and operations not normally attributed to, or included in, any other single bid item. This shall include, but not necessarily be limited to, work described or enumerated in this section under the following subsections.

1.02 MOVING TO AND FROM THE JOB SITE

- A. This shall include Contractor's preliminary arrangement for starting and stopping construction operations, work schedules, and transportation of equipment and personnel to and from the project.

1.03 CLEAN-UP

- A. The cost of all clean-up work as specified and not covered under other items shall be included in the Bid. Values shall be included in the Bid Schedule, lump-sum price, for "Mobilization/Demobilization".

1.04 TEMPORARY UTILITIES

- A. The cost of water, power, etc. required by Contractor in performing the Work specified in the Contract shall be included in the Bid. Values shall be included in the Bid Schedule, lump-sum price, for "Mobilization/Demobilization".

1.05 PERFORMANCE BOND, PAYMENT BOND, AND INSURANCE

- A. The cost of the Performance Bond, Payment Bond, and any required insurance and/or other miscellaneous cost associated with this Project shall be included with the Bid. Values shall be included in the Bid Schedule, lump-sum price, for "Mobilization/Demobilization".

1.06 PERMITS

- A. Contractor shall provide all necessary permits for completion of the Work. Values shall be included in the Bid Schedule, lump-sum price, for "Mobilization/ Demobilization".

1.07 PRE-CONSTRUCTION VIDEO RECORDS

- A. Contractor is required to produce a preconstruction video recording of areas where Work is to be performed. The video record shall be of professional quality and the coverage shall be such, as to allow accurate determination of location, size, and conditions, etc. of

existing features and improvements within the rights-of-way. Contractor shall provide Owner with a copy of the rights-of-way video in electronic format on a digital video disc (DVD) or solid-state drive (USB or Thumb Drive) before construction begins.

1.08 PROJECT SIGN

- A. The cost of furnishing and installing a project sign per the Section 01 50 00 and in accordance with the Bidding Requirements shall be included in the Bid Schedule, lump-sum price, for "Mobilization". The project sign shall be installed at the Primary Entrance to the Construction Site.

PART 2 - PRODUCTS

PART 3 - EXECUTION

(Not Used)

END OF SECTION

SECTION 01 74 23

CLEANING UP

PART 1 - GENERAL

1.01 SUMMARY:

- A. Execute cleaning during progress of Work and at completion of Work as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. Refer to specification sections for specific cleaning for Products or Work.
- B. American Water Works Association (AWWA)

- 1. C652: Disinfection of Water Storage Facilities

1.03 DISPOSAL REQUIREMENTS:

- A. Conduct cleaning and disposal operations to comply with local codes, ordinances, regulations, and anti-pollution laws. Do not burn or bury rubbish or waste materials on Project site. Do not dispose of volatile wastes, such as mineral spirits, oil, or paint thinner, in storm or sanitary drains. Do not dispose of wastes into streams or waterways.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Use only those cleaning materials which will not create hazards to property and persons or damage surfaces of material to be cleaned.
- B. Use only cleaning materials recommended by manufacturer of surface to be cleaned.

PART 3 - EXECUTION

3.01 CLEANING DURING CONSTRUCTION:

- A. At all times maintain areas covered by the contract and adjacent properties and public access roads free from accumulations of waste, debris, and rubbish caused by construction operations.
- A. During execution of work, clean site, adjacent properties, and public access roads and dispose of waste materials, debris, and rubbish to assure that buildings, grounds, and public properties are maintained free from accumulations of waste materials and rubbish.

Unneeded construction equipment shall be removed and all damage repaired so that the public and property owners will be inconvenienced as little as possible.

- B. Wet down dry materials and rubbish to lay dust and prevent blowing dust.
- C. Cover or wet excavated material leaving and arriving at the site to prevent blowing dust. Clean the public access roads to the site of any material falling from the haul trucks.
- D. Where material or debris has washed or flowed into or been placed in existing watercourses, ditches, gutters, drains, pipes structures, work done under this contract, or elsewhere during the course of the Contractor's operations, such material or debris shall be entirely removed and satisfactorily disposed of during the progress of the work, and the ditches, channels, drains, pipes, structures, and work, etc., shall, upon completion of the work, be left in a clean and neat condition.
- E. On or before the completion of the work, the Contractor shall, unless otherwise especially directed or permitted in writing, tear down and remove all temporary buildings and structures built by him; shall remove all temporary works, tools, and machinery or other construction equipment furnished by him; shall remove, acceptably disinfect, and cover all organic matter and material containing organic matter in, under, and around privies, houses, and other buildings used by him; shall remove all rubbish from any grounds which he has occupied; and shall leave the roads and all parts of the premises and adjacent property affected by his operations in a neat and satisfactory condition.
- F. Provide on-site containers for collection and removal of waste materials, debris, and rubbish in accordance with applicable regulations.

3.02 FINAL CLEANING:

- A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
 - 1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:
 - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.

- c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
- d. Remove tools, construction equipment, machinery, and surplus material from Project site.
- e. Remove snow and ice to provide safe access to building.
- f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, construction dust, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
- g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
- h. Sweep concrete floors broom clean in unoccupied spaces.
- i. Mop or vacuum clean concrete/tile floors in occupied spaces.
- j. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
- k. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
- l. Remove labels that are not permanent.
- m. Wipe surfaces of mechanical and electrical equipment and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
- n. Vacuum inside and outside of all new and existing electrical panels, MCCs, variable speed drives, etc., which have been affected by dust or dirt due to construction activities.
- o. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
- p. Replace disposable air filters and clean permanent air filters. Vacuum clean exposed surfaces of diffusers, registers, and grills.

- q. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
 - (1) Clean HVAC system in compliance with NADCA Standard 1992-01. Provide written report on completion of cleaning.
 - r. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - s. Leave Project clean and ready for occupancy.
- C. Electrical Contractor shall touch-up paint or repaint damaged finishes on electrical items delivered to Project with finish coat of paint. Engineer will make final determination of items to be repainted or touched-up.
- D. Prior to substantial completion or Owner occupancy, Contractor with Engineer and Owner, shall conduct inspection of sight-exposed interior and exterior surfaces and work areas to verify Work and site is clean.

3.03 CLEANING AND DISINFECTING OF CONCRETE TANKS:

- A. Comply with the requirements of AWWA C652: Disinfection of Water Storage Facilities. Refer to Section 33 13 00 for requirements.

END OF SECTION

SECTION 01 77 00
CONTRACT CLOSEOUT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

- A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following as indicated and in compliance with Contract Documents:
 - 1. Substantial Completion procedures.
 - 2. Final completion procedures.
 - 3. Warranties.
 - 4. Final cleaning.
 - 5. Repair of the Work.
 - 6. Specific closeout and special cleaning requirements for the Work in those Sections.

1.03 SUBMITTALS:

- A. Submit in accordance with Section 01 33 00.
- B. Product Data: For cleaning agents.
- C. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.
- D. Certified List of Incomplete Items: Final submittal at Final Completion.
- E. Certificates of Release: From authorities having jurisdiction.
- F. Certificate of Insurance: For continuing coverage.
- G. Field Report: For pest control inspection.
- H. Schedule of Maintenance Material Items: For maintenance material submittal items specified in other Sections.

1.04 SUBSTANTIAL COMPLETION PROCEDURES:

- A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.
- B. Submittals Prior to Substantial Completion: Complete the following a minimum of 20 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
 - 1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
 - 2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
 - 3. Submit closeout submittals specified in individual Divisions 02 through 33 Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
 - 4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Engineer. Label with manufacturer's name and model number where applicable.
 - a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Engineer's signature for receipt of submittals.
 - 5. Submit test/adjust/balance records.
 - 6. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
- C. Procedures Prior to Substantial Completion: Complete the following a minimum of 20 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
 - 1. Advise Owner of pending insurance changeover requirements.
 - 2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.

3. Complete startup and testing of systems and equipment.
 4. Perform preventive maintenance on equipment used prior to Substantial Completion.
 5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Division 01 Section "Training."
 6. Advise Owner of changeover in heat and other utilities.
 7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
 8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
 9. Remove labels that are not permanent labels.
 10. Complete final cleaning requirements, including touchup painting.
 11. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.
- D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Engineer will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Engineer, that must be completed or corrected before certificate will be issued.
1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
 2. Results of completed inspection will form the basis of requirements for final completion.

1.05 PROJECT RECORDS DOCUMENTS

- A. The Contractor shall record any actual revisions to the Work and maintain one set of the following Project Record Documents on Site:
1. Contract Drawings, Specifications, and Addenda.
 2. Change Orders, Field Orders, and other written notices.
 3. Shop drawings, Product data, and samples.

4. Records of surveying and layout Work.
 5. Project Record Drawings.
- B. The Contractor shall record information on the Project Record Documents concurrent with construction progress and store these documents separately from the documents used for construction.
1. The Owner will supply a set of Contract Drawings. The Contractor shall mark thereon all revisions as the Work progresses in order to produce a set of as-built drawings.
 2. The Contractor shall note any changes made during construction by any of the Contractor's forces or those of any Subcontractors.
 3. The Contractor shall dimension the locations of buried or concealed Work, especially piping and conduit, with reference to exposed structures.
 4. The Contractor shall dimension the installed locations of concealed service lines on the Site or within the structure by reference from the centre line of the service to the structure column lines, or other main finished faces, or other structural points which are easily identified and located in the finished Work.
 5. Certificates of Substantial Completion and Final Completion shall not be issued until Record Drawings are complete and submitted, and the Contractor has satisfied all requirements for Substantial Completion and Final Completion of the Work.
- C. For Project Record Documents and Record Shop Drawings, the Contractor shall legibly mark each item to record actual construction including:
1. Field changes of dimensions and details.
 2. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
 3. Measured locations of internal utilities and appurtenances which are concealed in construction, referenced to visible and accessible features of the Work.
 4. Changes in the Work caused by Site conditions, or originated by the Owner, the Engineer, the Contractor, Preselected Equipment Vendors, or Subcontractors and by addenda, supplemental drawings, Site instructions, supplementary instructions, change orders, correspondence, and directions of any regulatory authorities.
 5. Record the location of concealed mechanical services and electrical main feeders, junction boxes and pullboxes.

- D. Upon completion of the Work, the Contractor shall provide electronic sets of the Record Shop Drawings and an index.

1. The Contractor shall remove the Architect/Engineer seal from all documents.
2. The Contractor shall provide a set of Project Record Documents in an electronic format. All drawings are to be provided electronically in both AutoCAD (latest version) and Adobe Acrobat PDF (latest version). Also provide a set of the software implemented on this project, including standard software and custom application software. Also provide a set of the various programming tools and files necessary for maintenance, editing, backing up and restoring programmable equipment implemented on this project.

1.06 EQUIPMENT INVENTORY SPREADSHEET

- A. As part of the Owner's asset management program, the Contractor shall complete all fields for the equipment inventory file for each piece of equipment and device provided under this Contract, as a requirement for Substantial Performance. An electronic format of the equipment inventory spreadsheet will be provided on a CD to the successful General Contractor.

1.07 EQUIPMENT PREVENTATIVE MAINTENANCE SPREADSHEET

- A. As part of the Owner's asset management program, the Contractor shall complete all fields for each piece of equipment and device provided under this Contract, as a requirement for Substantial Completion. The Contractor shall transfer all of the manufacturer's recommended preventative maintenance tasks and frequencies into the spreadsheet. An electronic format of the equipment inventory spreadsheet will be provided on a CD to the successful General Contractor

1.08 PROTECTING INSTALLED CONSTRUCTION:

- A. Protect installed Work and provide special protection where specified in individual specification sections.
- B. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.
- C. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.
- D. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.
- E. Prohibit traffic or storage upon waterproofed or roofed surfaces. When traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
- F. Prohibit traffic from landscaped areas.

1.09 SPARE PARTS AND MAINTENANCE PRODUCTS:

- A. Furnish spare parts, maintenance, and extra products in quantities specified in individual specification sections.
- B. Deliver to Project site and place in location as directed by Owner; obtain receipt prior to final payment.

1.10 FINAL COMPLETION PROCEDURES:

- A. Submittals Prior to Final Completion: Before requesting final inspection for determining final completion, complete the following:
 - 1. Submit a final Application for Payment according to Contract Documents.
 - 2. Certified List of Incomplete Items: Submit certified copy of Engineer's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Engineer. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
 - 3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
 - 4. Submit pest-control final inspection report.
- B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Engineer will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.
 - 1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.11 LIST OF INCOMPLETE ITEMS (PUNCH LIST):

- A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.
 - 1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
 - 2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
 - 3. Include the following information at the top of each page:

- a. Project name.
 - b. Date.
 - c. Name of Engineer.
 - d. Name of Contractor.
 - e. Page number.
4. Submit list of incomplete items in the following format:
- a. MS Excel electronic file. Engineer will return annotated file.

1.12 SUBMITTAL OF PROJECT WARRANTIES:

- A. Time of Submittal: Submit written warranties on request of Engineer for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.
- B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.
- C. Organize warranty documents into an orderly sequence based on the table of contents of Contract Documents.
 1. Bind warranties and bonds in electronic format.
 2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
 3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.
 4. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
- D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

PART 3 - EXECUTION

3.01 FINAL CLEANING:

- A. General: Perform final cleaning in accordance with Section 01 74 23.
- B. Pest Control: Comply with pest control requirements in Division 01 Section "Temporary Facilities" Prepare written report.
- C. Construction Waste Disposal: Comply with waste disposal requirements in Division 01 Section "Temporary Facilities".

3.02 REPAIR OF THE WORK:

- A. Complete repair and restoration operations before requesting inspection for determination of Substantial Completion.
- B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.
 - 1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
 - 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that already show evidence of repair or restoration.
 - a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.
 - 3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.

4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

3.03 ADJUSTING:

- A. Adjust operating products and equipment to ensure smooth and unhindered operation.

END OF SECTION

SECTION 01 78 23

OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section includes procedural requirements for providing, compiling, and submitting operation and maintenance data required for this project.

1.02 SUMMARY:

- A. This section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
 - 1. General contents of data.
 - 2. Specific data for each equipment and system.
 - 3. Manual for materials and finishes.
 - 4. Assembly.

1.03 DEFINITIONS:

- A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.
- B. Subsystem: A portion of a system with characteristics similar to a system.

1.04 SUBMITTALS:

- A. O&M Manual Content: Operations and maintenance manual submittal requirements are specified in individual Specification Sections for the Products for which they must be supplied. Submit reviewed manual content formatted and organized by this Section and in accordance with Section 01 33 00.
 - 1. Engineer will comment on whether content of operations and maintenance submittals are acceptable.
 - 2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.
- B. Pre-Final Manual Submittal: Submit one electronic copy of each manual in final form prior to requesting inspection for Substantial Completion. Engineer will return one copy with comments.

- C. The contractor to correct or revise each manual to comply with Engineer comments. After acceptance, deliver one electronic copy to the Engineer.
- D. Submit two hardcopies and one electronic copy of the final manual to the Owner within 15 days of receipt of Engineer's comments and prior to commencing startup, commissioning, and/or training.

1.05 FORMAT (HARDCOPY):

- A. Prepare data in the form of an O&M instructional manual.
- B. Binders: Commercial quality, 8-1/2 x 11-inch three-hole post type binders with hardback, 3-inch maximum binder size. When multiple binders are used, correlate data into related consistent groupings. Three ring binders are not acceptable.
- C. Arrange contents by Specification Section numbers and sequence of Table of Contents of this Project Manual.
- D. Provide tabbed fly leaf for each separate product and system, with printed description of product and major component parts of equipment. Insert type tab labels must be secured or bonded to prevent the labels from falling out.
- E. Text: Manufacturer's printed data, or typewritten data on 20 pound paper.
- F. Drawings: Provide with reinforced punched binder tab. Bind in with text; fold larger drawings to size of text pages and insert into clear plastic envelopes that can be secured into the three-hole post binders.

1.06 FORMAT (ELECTRONIC DOCUMENTATION):

- A. The Contractor must provide Operation and Maintenance Manual information specific to the configuration of the project in electronic form. Documents should be formatted like a web site complete with index page and Table of Contents. The electronic format must be such that the Owner is able to load the files onto a server to provide online access via any standard web browser. The Manual shall be a searchable PDF file formats with hyperlinks.
- B. The electronic O&M data must be organized in a logical manner to aid operation in troubleshooting and information retrieval.

1.07 QUALITY ASSURANCE:

- A. Preparation of data shall be performed by personnel:
 - 1. Trained and experienced in O&M of described equipment.
 - 2. Familiar with requirements of this section.
 - 3. Skilled as technical writers to the extent required to communicate the essential data to the Reader.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 GENERAL CONTENTS OF DATA:

- A. Each individual manual shall contain equipment data pertaining to not more than one Specification section number as indicated in the Contract Documents.
- B. Title Sheet: First page in data listing following:
 - 1. Title: "OPERATION AND MAINTENANCE INSTRUCTIONS".
 - 2. Title of Project: As shown on Contract Documents.
 - 3. Name(s) of applicable building(s) or structure(s) in which equipment is located.
 - 4. Name of equipment as described in Contract Documents.
 - 5. Contractor's name, address, and telephone number.
 - 6. Subcontractor's name, address, and telephone number if equipment is provided by Subcontractor.
 - 7. Contractor's or Subcontractor's purchase order number, manufacturer's shop order number or other such numbers required for parts and service ordering.
 - 8. Manufacturer's name, address, and telephone number.
 - 9. Name, address, and telephone number for local source of supply for parts and service.
- C. Equipment List: Immediately following title sheet containing the following:
 - 1. Table of Contents: Immediately following equipment list. Arrange in logical, systematic order and shall include as minimum each tabbed divider. Each page shall be numbered.
 - 2. Tabbed Dividers: Insert tabbed section dividers between each major section
 - a. Provide title of section on each tab.
 - b. Provide table of contents for each tabbed section, arranged in systematic order.

3. Equipment Data Sheets: Provide catalog sheets showing configuration, manufacturer's specifications, models, options, and styles of equipment and major components being provided. Product data sheets will show project specific information with inapplicable information deleted by crossing out or removal. Include in tabbed section(s).
4. Text:
 - a. Include only those sheets applicable to Project.
 - b. Each sheet shall:
 - (1) Identify specific equipment or part installed.
 - (2) Identify text applicable to equipment or part installed.
 - (3) Do not include inapplicable information or neatly strike it out.
5. Drawings:
 - a. Supplement text with drawings to clearly illustrate following:
 - (1) Equipment and components.
 - (2) Relations of component parts of equipment and systems.
 - (3) Control and flow diagrams, wiring diagrams.
 - b. Actual drawings of equipment from manufacturer. "Typical" drawings are not acceptable unless they accurately illustrate actual installation for this contract.
6. Specially written information, as required to supplement text for particular installation.
 - a. Provide explanation of interrelationships of equipment and components, and effects one component has on another or entire system.
 - b. Provide overall instructions and procedures for equipment tying in instructions and procedures for separate components into unified instructional package.
 - c. Provide glossary of any special terms used by the manufacturer if applicable.
 - d. Organize in consistent format under separate headings for different O&M procedures.
 - e. Provide logical sequence of instructions in order of O&M action required for each procedure.

3.02 SPECIFIC DATA FOR EACH ITEM OF EQUIPMENT AND/OR SYSTEM:

A. For each item of equipment and system include:

1. Description of equipment and component parts:
 - a. Function
 - b. Normal operating characteristics
 - c. Limiting conditions.
 - d. Performance curves
 - e. Engineering data
 - f. Test as applicable.
 - g. Complete nomenclature and model number of replaceable parts including keyed labeled exploded diagram.
 - h. Complete nameplate data.
 - i. Owner's tag (or asset) numbers for equipment as indicated on the Contract Drawings.
2. Operating Procedures:
 - a. Startup and break-in.
 - b. Normal operating instructions.
 - c. Regulation and control
 - d. Stopping and shutdown,
 - e. Emergency instructions.
 - f. Summer and winter operating instructions, as applicable.
 - g. Special operating instructions.
3. Maintenance Procedures:
 - a. Routine maintenance operations.
 - b. Guide to troubleshooting.
 - c. Disassembly, repair, and reassembly instructions.

- d. Alignment, adjusting, and checking instructions.
 - 4. Servicing and Lubrication Schedule:
 - a. List of lubricants required and quantity to be applied.
 - b. Schedule of lubrication.
 - c. Schedule for other routine maintenance.
 - 5. Manufacturer's printed instructions regarding safety precautions for both (a) protection of personnel operating equipment and systems and (b) prevention of damage to equipment and systems.
 - 6. Description of sequence of operation of controls.
 - 7. Assembly drawings and diagrams required for maintenance.
 - 8. Manufacturer's parts list and illustrations
 - a. Predicted life of parts subject to wear.
 - b. Items recommended to be stocked by the Owner as spare parts and quantities of same.
 - 9. Accepted control diagrams such as ladder diagrams, instrumentation loop diagrams, and electrical schematics.
 - 10. Bill of material.
 - 11. Other data as required under applicable Specification sections.
- B. Each electric and electronic system, as applicable to equipment such as switchgear, motor control centers, panel boards, switchboards, starters, breakers, and relays shall include:
- 1. Description of System and Component Parts:
 - a. Function
 - b. Normal operating characteristics
 - c. Limiting conditions.
 - d. Performance curves
 - e. Engineering data
 - f. Rating tables

- g. Tests, as applicable.
 - h. Complete nomenclature and model number of replaceable parts.
 - i. Complete nameplate data.
 - j. Owner's Tag (asset) numbers for equipment as indicated on the Contract Drawings.
- 2. Circuit Directories of Panel Boards:
 - a. Electrical service.
 - b. Controls.
 - c. Communications.
 - 3. Complete instrumentation
 - a. Loop diagrams
 - b. Tabulated listing of components in each control circuit or loop.
 - 4. Operating Procedures:
 - a. Routine and normal operating instructions.
 - b. Sequences required.
 - c. Special operating instructions.
 - 5. Maintenance Procedures:
 - a. Routine maintenance operations.
 - b. Guide to troubleshooting.
 - c. Disassembly, repair, and reassembly instructions.
 - d. Adjustment and checking instructions.
 - 6. Manufacturer's printed instructions regarding safety precautions for both:
 - a. Protection of personnel operating equipment and systems.
 - b. Prevention of damage to equipment and systems.
 - 7. List of original all of the manufacturer's components, spare parts with diagram, and recommended quantities to be maintained in storage by the Owner.

8. Other data as required under pertinent sections of Specifications.

- C. Prepare and include additional data when need for such data becomes apparent during instruction of Owner's personnel. Differences between the equipment O&M manual and the manufacturers training session shall result in the training and/or O&M Manual being corrected.

3.03 MANUAL FOR MATERIALS AND FINISHES:

- A. Building Products, Applied Materials, and Finishes: Include product data, with catalog number, size, composition, and color and texture designations. Provide information for re-ordering custom manufactured products.
- B. Instructions for Care and Maintenance: Include manufacturer's recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.
- C. Moisture Protection and Weather Exposed Products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.
- D. Additional Requirements: As specified in individual product specification sections.
- E. Provide a listing in Table of Contents for design data, with tabbed fly sheet and space for insertion of data.

3.04 ASSEMBLY:

- A. Insert index tabs labeled with the respective piece of equipment to separate individual manuals.
- B. Provide a Table of Contents at the front of each volume showing the equipment items in the order in which they appear in the volume. Each equipment items shall include the functional name, applicable specifications section, and the plan listing, if any.
- C. The preventive maintenance schedule shall be bound in the front of each section immediately following the index tab sheet. The schedule shall be identified with respect to the piece of equipment it is referring to.
- D. Sheet Size: 8-1/2 x 11 sheets. Drawings shall be on 11 x 17-inch sheets folded to 8-1/2 x 11 inches.
- E. Engrave on covers and end of binder, title OPERATIONS AND MAINTENANCE INSTRUCTIONS, name of Project, Owner's project number, date of Contract, and volume number with subject matter of contents, and Engineer's name.

END OF SECTION

SECTION 01 78 25

PLANT TESTING, STARTUP AND COMMISSIONING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide planning, functional completion testing, startup and commissioning as indicated and specified. Section includes:
 - 1. Plant Checkout Plan
 - 2. Functional Completion Testing
 - 3. Startup
 - 4. Commissioning

1.02 DEFINITIONS:

- A. The Plant Checkout Plan (the Plan) incorporates all aspects of functional completion testing, startup, commissioning, performance testing, training, and reliability tests to ensure the facility operates properly and meets design intent and performance.
- B. Functional Completion Testing is testing of the equipment and unit process systems to confirm that construction and installation has been completed in anticipation of initial startup of the equipment and unit process systems. Functional Completion Testing includes:
 - 1. Physical Checkout shall be defined as the process of physically inspecting products after they have been installed in the Work to determine if the Products have been properly and completely installed, and are ready for Field and/or Functional Testing. The requirements for Physical Checkout are contained in the pertinent technical specification(s) (if applicable) and in Paragraph 1.08 of this Section.
 - 2. Field Testing shall be defined as testing that is performed by the Contractor, with Supplier assistance, on Products after they have been installed in the Work, and after the performance of physical checkout, for the purpose of proving that the tested Products meet the requirements of the pertinent technical specifications. Administrative and minimum technical requirements for field testing are specified in Paragraph 1.08 of this Section, while additional technical requirements are contained in PART 3 of the pertinent technical specification(s). The test criteria are specified in Paragraph 1.08 of this Section.

- C. Startup shall be defined as the operation of equipment or unit process systems using clean water, air, or other fluids and gases as necessary to demonstrate the operation of the equipment or unit process systems with other equipment that is a part of, or a treatment process for the Facility. Administrative and minimum technical requirements for startup are specified in Paragraph 1.09 of this Section, while additional technical requirements are contained in PART 3 of the pertinent technical specification(s).
- D. Commissioning shall be defined as the operation of equipment or unit process systems using process liquids or process solids, plant support equipment, and plant utilities to demonstrate equipment or unit process systems are capable of processing water or wastewater at specified flows and conditions for a sustained period of operation as required by this section or equipment or unit process systems specifications. Successful Commissioning shall determine that the equipment or unit process systems are ready to begin Performance Testing. Administrative and minimum technical requirements for Commissioning are specified in Paragraph 1.10 of this Section, while additional technical requirements are contained in PART 3 of the pertinent technical specification(s).
- E. Performance Testing is defined as a test to demonstrate the specified throughput of the equipment and unit process systems while maintaining regulatory compliance with Federal, State, and Local government regulations and minimum compliance with the equipment or unit process systems performance requirements and guarantees.
- F. Reliability Testing is defined as a test performed as an extended operation of the constructed facilities to confirm that the equipment and unit process systems work together as a complete Facility under continuous operation for the specified period. The Reliability Test shall be conducted after all the major equipment and unit process systems have successfully completed Performance Testing in accordance with this Specification Section. Supplier's Representative, sometimes referred to in the technical specifications as a Factory-Trained Service Representative, shall be defined as a person, or persons provided by the Supplier, who is qualified by having the training and experience, to provide technical and/or process related advice, and/or assistance, relating to the installation or utilization of the Products provided by that same Supplier, for installation and utilization in the Work.
- G. The Testing and Checkout Coordinator shall be defined as the person provided by the Contractor to coordinate and oversee the total spectrum of testing and inspection activities required by the Contract Documents. The Testing and Checkout Coordinator shall have been in responsible charge of two similar Projects in the last four years.

1.03 ROLES AND RESPONSIBILITIES:

- A. The Contractor shall provide all outside services, materials, labor, supplies, test equipment and other items necessary to perform the Plant Testing, Startup and Commissioning specified herein. In addition, the Contractor shall arrange for and provide the participation or assistance of survey crews, quality control technicians, Supplier's representative(s), and required governmental agency representatives.

- B. The Contractor shall provide the services of the Supplier's representative(s) as follows:
 - 1. Assistance during installation as specified in PART 3 of the technical specifications and as specified herein.
 - 2. Field Testing as specified in PART 3 of the technical specifications and as specified herein.
 - 3. Startup as specified in PART 3 of the technical specifications and as specified herein.
 - 4. Commissioning as specified in PART 3 of the technical specifications and as specified herein.
- C. The Supplier's representative's activities required by this Section are in addition to the requirements for vendor training and other services specified elsewhere in the Contract Documents. Timing for the performance of these services is to be defined in the Contractors Checkout Plan, specified herein.
- D. The Engineer will review and comment on the Contractor's deliverables, participate in the physical inspection activities, witness the shop and field testing, witness functional testing, maintain the permanent record of all testing results, and provide verification of conformance to the specifications. The Engineer's right to perform inspections, witness tests or monitor or assess the Work and activities does not relieve the Contractor of its obligation to comply with the requirements of the Contract Documents nor does it imply completion of the Work.

1.04 SUBMITTALS:

- A. Submit the following in accordance with Section 01 33 00.
 - 1. Submit a Plant Checkout Plan and Functional Test Plan for the facility in accordance with Section 01 33 00.
- B. Qualification Data: For startup and commissioning team.
 - 1. Submit resumes, including three outside references, for each team member proposed for testing, startup, and commissioning. The qualifications of each team member shall include:
 - a. Type of training the team members has received for the specific equipment the startup and commissioning will cover, including dates and who provided the training.
 - b. Startup and commissioning work experience including the employers name and address, dates of employment and type of startup and commissioning provided and to whom.

- c. A minimum of five startup and commissioning references including: project name, project location, contact person's name, contact person's telephone number, contact person's role during the project, dates of startup and commissioning.
2. Engineer will review resumes. Based upon review of resumes, and contacts with references, Engineer will approve, request additional information, or reject proposed startup and commissioning team members.
3. If proposed startup and commissioning team member is rejected, Contractor shall submit resume and references on alternate team member(s) for acceptance.

1.05 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 61 00.
- B. Preparation of the plant checkout plan, functional completion testing and startup and commissioning shall be performed by personnel:
 1. Trained and experienced in O&M of the described equipment.
 2. Familiar with the requirements of this section.

1.06 PLANT CHECKOUT PLAN:

- A. The Contractor shall be responsible for preparing, coordinating, and executing the Plan.
 1. The Contractor shall use the resources of the equipment and unit process systems suppliers in this work, particularly for specific equipment and unit process systems.
 2. An initial draft of the Plan shall be submitted as indicated here:
 - a. The initial draft Plan for the Facility shall be completed and submitted by the Contractor to the Engineer for review. The Engineer will require 45 days to review the submittal and return with any exceptions noted.
 - b. The Contractor shall incorporate the Engineer's comments into the revised Plan within 30 days of receiving comments, and reissue the Plan to the Engineer and Owner.
 - c. The Contractor shall regularly schedule meetings with the Engineer and Owner to review and coordinate activities required by the Plan.
- B. The Contractor shall provide a dedicated field staff to support the Plan activities. Contractor shall be responsible for day to day activities and shall be the primary contact with the Engineer regarding Plan activities. Support staff shall include but not be limited

to designated mechanical, electrical and instrumentation and control engineers and technicians, and operating staff.

C. The Plan shall define:

1. The logical and systematic performance of physical inspections, field and functional tests, startup, commissioning, performance testing and reliability testing including:
 - a. A chronological schedule of all testing and inspection activities.
 - b. A checklist of all inspection and testing activities broken down by location, discipline, system, and device or item.
 - c. All blank forms proposed by the Contractor for verification or recording of the functional completion testing, startup, commissioning, performance testing, and reliability testing.
 - d. An index which cross references the forms to their intended application(s).
 - e. A list of all supplier certifications, including those required by the applicable technical specifications. Provisions shall also be included for retesting, in the event it is required.
2. A list of participants in functional completion testing, startup, commissioning, performance testing and reliability testing.
3. A list of special test equipment required for functional completion testing, startup, commissioning, performance testing, and reliability testing.
4. Sources of the test media (water, power, air.) for functional completion testing.
5. The proposed method of delivery of the media to the equipment to be tested during functional completion testing, startup, commissioning, performance testing, and reliability testing.
6. Temporary or interim connections for the sequencing of multiple units during functional completion testing, startup, commissioning, performance testing, and reliability testing.
7. Ultimate disposal of the test media after functional completion testing, startup, commissioning, performance testing, and reliability testing.

1.07 FUNCTIONAL COMPLETION TESTING:

- A. Functional Completion Testing shall be completed as construction and installation of equipment is completed to demonstrate that the equipment is ready for equipment and unit process systems startup.

1. Functional Completion Testing shall be done in a coordinated manner based on the Plan prepared by the Contractor.
 - a. The Owner's operating and maintenance staff shall be allowed to observe for the purposes of familiarization and training.
 - b. Additional witnesses, such as the Engineer, may be present to represent the Owner.
2. Functional Completion Testing procedures and documentation forms shall be developed by the Contractor. The procedures shall include a listing of items inspected for Functional Completion Testing.
3. If any equipment or unit process systems do not meet Functional Completion Testing requirements, it shall be the responsibility of the Contractor and/or equipment suppliers to make the necessary corrections or replacements and repeat the test.
4. The equipment and unit process systems shall not be started up or put into service until the Functional Completion Testing is completed as evidenced by a completed Functional Completion Testing certificate for the equipment or subsystem.
5. Modifications to the equipment and unit process systems required to meet Functional Completion Testing requirements shall be provided, and all retesting shall be performed at no additional cost to the Owner.
6. A Functional Completion Testing Certificate shall be prepared by the Contractor for each piece of equipment or unit process and submitted to the Engineer and Owner for review.

1.08 STARTUP:

- A. Startup activities for the Facility shall not be initiated until the requirements of Functional Completion Testing are completed for the equipment or unit process systems.
- B. The Contractor shall be responsible for startup.
 1. The Owner's operating and maintenance staff shall be allowed to observe for the purposes of familiarization and training.
 2. Additional witnesses, such as the Engineer, may be present to represent the Owner.
- C. For equipment or unit process systems that do not meet the specified Startup requirements, it shall be the responsibility of the Contractor and/or equipment or unit process systems suppliers to make the necessary corrections or replacements and repeat Startup at no additional cost to the Owner.

1.09 COMMISSIONING:

- A. Commissioning activities for the Facility shall not be initiated until the requirements of Startup are completed for the equipment or unit process systems.
- B. Commissioning shall be used by the Contractor and equipment or unit process suppliers to adjust, fine tune, modify and prepare the equipment or system for continuous operation and Performance Testing.
 - 1. Equipment shall not be operated without the guidance of qualified personnel having the knowledge and experience necessary to conduct proper operation thereof and obtain valid results.
 - 2. All required adjustments, tests, operation checks, and Startup and Commissioning activities shall be provided by qualified personnel.
 - 3. Contractor shall be responsible for planning, supervising, and executing the Startup and Commissioning of the equipment and unit process systems with the assistance of equipment or unit process systems suppliers in accordance with the Plan.
- C. The Contractor shall support the Owner in commissioning.
 - 1. The Owner's operating and maintenance staff shall be allowed to observe for the purposes of familiarization and training.
 - 2. Additional witnesses, such as the Engineer, may be present to represent the Owner.
- D. For equipment or unit process systems that do not meet Commissioning requirements, it shall be the responsibility of the Contractor and/or equipment or unit process systems suppliers to make the necessary corrections or replacements and repeat Commissioning at no additional cost to the Owner.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 PLANT CHECKOUT PLAN:

- A. The Plan shall include the following items as a minimum:
 - 1. Cover Sheet with Plant identification, title, date and other information as needed to properly identify the specific information for the Facility.

2. Status and revisions sheet with appropriate dates and signatures spaces to document the development and status of the document.
3. Table of Contents including Appendix.
4. Equipment and systems descriptions with anticipated break down for individual startup activities. This section shall define the individual “packages” for startup activities for the equipment or unit process systems.
5. Schedule of events for startup and other activities covered by the Plan.
 - a. The schedule shall define dates for completing activities for equipment and unit process systems.
 - b. The schedule shall be the Contractor’s best estimate of time sequence at the time of issuance.
 - c. The Contractor shall submit monthly schedule updates to the Plan.
 - d. The schedule shall follow the required sequencing as specified herein.
6. Sign-off sheets consisting of certification forms or completion reports required by the specifications shall be included in the Plan. Standard forms shall be developed by the Contractor for this purpose.
7. Reports, test results and other supporting data shall be collected by the Contractor for documentation of the specific details leading to the certification or completion.

3.02 FUNCTIONAL COMPLETION TESTING:

- A. Provide 30 days written notice to the Engineer for each functional completion test so that the Engineer, may witness the functional completion tests. The Engineer may witness the performance of any or all functional completion testing, at their option.
- B. Testing shall be conducted in accordance with the accepted Plan using applicable standard techniques reviewed by the Engineer and Owner.
 1. Local and remote instrumentation may be used to record test data where it is determined the devices have been calibrated and sufficient to obtain necessary data.
- C. The Contractor shall develop standard data sheets to document Functional Completion Testing requirements have been met for all equipment and unit process systems included in the Plan.
 1. As equipment testing is completed the appropriate data sheet shall be completed and signed by the responsible party and submitted to the Engineer for review and acceptance.

2. Data values shall be stated in the engineering units noted in the equipment specifications.
- D. In the event no reference to procedures is made, or no procedures for startup and commissioning are contained in a technical specification for the following test parameters, the following shall be the checkout requirements. Should these requirements conflict with the Supplier's recommendations or in any way be less stringent than the Supplier's requirements, they shall be superseded by the Supplier's requirements for checkout testing.
1. Measurement of wearing ring clearances for all pumps requiring assembly, so equipped:
 - a. Take two readings taken opposed to each other by 90 degrees.
 - b. All measured clearances shall be within Supplier's specifications for new installations. Replace and recheck rings found to be out of round or out of specified tolerance.
 2. Measurement of Impeller Bore for all pumps requiring assembly:
 - a. Take two readings opposed to each other by 90 degrees.
 - b. All measured clearances shall be within Supplier's specifications for new installations. Replace and recheck impellers found to be out of round or out of specified tolerance.
 3. Measurement of shaft runout for all rotating equipment requiring assembly:
 - a. Remove bearings from the shaft. Support shaft on pedestal rollers or in a lathe.
 - b. Check each shoulder on the shaft.
 - c. Take two readings for each shoulder, opposed to each other by 90 degrees.
 - d. All measured clearances shall be within Supplier's specifications for new installations. Replace and recheck shafts found to be out of round or out of specified tolerance.
 4. Vibration Measurements:
 - a. Provide vibrational signature testing and documentation for each piece of direct drive or close coupled rotating equipment with a motor HP of 100 or above and a rated operating speed in excess of 1999 RPM.

- b. Unless specified otherwise, the current edition of the Hydraulic Institute Standard, "Acceptable Field Vibration Limits" shall be the standard for vibrational testing.
- c. Take all specified vibrational readings in three directions: vertical, horizontal, and axial.
- d. Provide vibrational measurements in the following engineering units:
 - (1) Displacement in thousandths of an inch (mils), peak to peak.
 - (2) Velocity in inches per second (ips), peak to peak.
 - (3) Acceleration in feet per second per second (1g=32.3 ft/sec./sec.) zero to peak.
 - (4) Spike energy in g-SE.
 - (5) The vibrational readings shall be less than the device rotating frequency, and within the operating band specified by the Supplier.
 - (6) Amplitude Allowable Maximums:

RPM	Amplitude inches peak to peak:
3,000 and above	0.001
1,500 - 2,999	0.002
1,000 - 1,499	0.0025
999 and below	0.003

- 5. Belt Drives:
 - a. All belts shall ride within the sheave and not slip to the bottom of the groove(s).
 - b. Belt tension shall be in accordance with Supplier's recommendations.
 - c. Pulley alignment shall be within Supplier's recommendations.
- 6. Gear Drives and Reducers:
 - a. Check gears for lash at no less than three points around the gear.
 - b. Rotate gears a full 360 degrees while checking alignment.
- 7. Coupling/Shaft Alignment:
 - a. Perform all final alignments and checks with a dial indicator or a laser device. Feeler gauges and straight edges are not acceptable.

- b. Eliminate soft foot conditions prior to aligning.
 - c. When checking for final soft foot, any displacement in excess of 0.002" must be corrected.
 - d. When checking for pipe strain, any displacement in excess of 0.002" requires piping realignment.
 - e. Alignments will not be regarded as final until the grout is set and all piping has been attached. Demonstrate that alignment is not changed by attachment of piping.
 - f. Shim the driving element, never the driven element.
 - g. Take bracket sag corrections into account when using a dial indicator. Bracket sag shall be determined on a rigid pipe.
 - h. Mount a dial indicator to the driven element so that it can be rotated. Rotate both elements while aligning.
 - i. When aligning three coupled elements, align gear reduction elements with the driven element first, then align the driver to the gear reduction element.
 - j. Check all four alignments, i.e., angular alignment in the vertical and horizontal planes, and parallel alignment in the vertical and horizontal planes.
 - k. The acceptable alignment accuracy for flexible couplings is +0.005 inches, or the Supplier's specifications, whichever is more stringent.
 - l. The dial indicator must be perpendicular to the alignment surface.
 - m. Number hold down nuts prior to tightening. Loosen in reverse order. Tighten in ascending order.
 - n. Use only clean, deburred shims. Clean the machine base and feet from rust or burrs prior to alignment.
8. Measurement of Noise (dB):
- a. Eliminate noise sources generated by adjacent construction activity prior to testing.
 - b. Establish a background noise level prior to testing.
 - c. Perform noise level testing on each installed device as required by the technical specifications.

- d. The maximum noise level exposure is 85 dBA over eight hours continuous for office, shop, and other areas where the Owner's personnel will be performing their assigned duties.

9. Hydrostatic Testing:

- a. AWWA C600 standards latest edition are the standards for all hydrostatic testing.
- b. Visually inspect all welds prior to testing, for cracks, undercut on surface greater than 1/32-inches deep, lack of fusion on surface, reinforcement greater than Table 127.4.2 located in ANSI B31.1 Power Piping, and incomplete penetration (when accessible). Repair or rework as directed by the Engineer.
- c. At no time during hydrostatic testing shall any part of the piping system be subjected to a stress greater than 90 percent of its yield strength at test temperature.
- d. After 10 minutes of full hydrostatic test pressures, make an examination for leakage of all joints, connections, and all regions of high stress, such as around openings and thickness transition sections.
- e. Unless otherwise specified, the minimum required hydrostatic test pressure shall be 1.5 times the design pressure as specified and as indicated.
- f. Pressure holding time shall be 10 minutes plus the time required to inspect for leakage.
- g. Maximum pressure shall not exceed the maximum rated pressure for any component in the system being tested.

10. Electrical Equipment:

- a. The testing standards for electrical components are those contained in Section 26 05 10 and the pertinent technical specification(s).

E. Where required by the equipment specifications, the Contactor shall furnish an authorized, competent representative of the equipment or unit process supplier to supervise and coordinate the Functional Completion Testing program.

- 1. Instrument readings and other test data shall be tabulated by the Contractor.

F. Documentation Requirements:

- 1. Certificates are required for all Functional Completion Testing for equipment and unit process systems. Four copies of the completed certificates shall be supplied for review by the Engineer. Contents of the certificate shall be at a minimum:

- a. Contractor Review Comments, and Approval Page. This page shall include Certification by the preparer that he/she is the person responsible for the test data and the data is authentic and accurate. This page shall include a listing and signature of all witnesses to the test
- b. Equipment Suppliers Review Comments, and Approval Page. This page shall include Certification by the equipment or unit process systems suppliers that the equipment or unit process systems are properly installed and suitable for startup.
- c. Engineer Review Comments, and Approval Page.
- d. Process, Equipment, and P&IDs Involved in this Functional Completion Test
- e. Functional Completion Test Schedule
- f. Test Descriptions/Procedures
 - (1) Equipment or unit process systems tested.
 - (2) Test dates.
 - (3) Electrical Inspection and Tests
 - (4) Test results.
 - (5) Any repairs or corrections required to obtain acceptable test results.
 - (6) Calibration sheet for instrumentation or devices used for testing but not part of plant installation.
 - (7) Copies of calibration records for plant installed instrumentation
- g. Certify Mechanics and Installation. Inspection and certification to be conducted by equipment representative. Inspect and certify that each piece of equipment meets the following requirements:
 - (1) Not damaged in transportation or installation.
 - (2) Properly installed with no undue force imposed from piping or supports.
 - (3) Is properly lubricated.
 - (4) Motor rotation is correct.
 - (5) Free of overheating.

- (6) Free of vibration.
- (7) Free of noise.
- (8) Functions without overloading.
- (9) Piping and other connections are completed.
- (10) No leaks at equipment connections (static pressure testing).
- h. Certify Electric Valve Mechanics and Installation
- i. Inspect and certify that each valve meets the following requirements:
 - (1) Not damaged in transportation or installation.
 - (2) Properly installed with no undue force imposed from piping or supports.
 - (3) Is properly lubricated.
 - (4) Motor rotation is correct.
 - (5) Free of overheating.
 - (6) Free of vibration.
 - (7) Free of noise.
 - (8) Functions without overloading.
 - (9) Piping and other connections are completed.
 - (10) No leaks at equipment connections (static pressure testing).
- j. Inspection and certification to be conducted by Contractor.
- k. Instrumentation and Control Inspection and Tests
- l. Inspect and certify instrumentation and control circuits for the following:
 - (1) Loop checks have been completed for all signal and control circuits.
 - (2) All instruments have been calibrated.
 - (3) All instrumentation tubing has been pressure tested and any leaks repaired.
 - (4) Manual modes function as intended.

- (5) Protective interlocks function as intended.
 - (6) Remote modes function as intended.
 - (7) Automatic modes function as intended.
- m. Instrumentation tests include the following:
 - (1) Complete loop checks for all signals and controls. Control panel operates process properly in automatic mode.
- 2. Tests certificates shall be submitted no later than 30calendar days, after testing ends. The Engineer and Owner shall have no more than 30calendar days to complete a review and return with any exceptions noted.

3.03 STARTUP:

- A. Provide 30 days written notice to the Engineer for each startup procedure so that the Engineer, may witness each startup procedure. The Engineer may witness the performance of any or all each startup procedure, at their option.
- B. Startup shall begin at the conclusion of Functional Completion Testing, when the equipment or unit process systems are subjected to full operation using a process flow substitute.
 - 1. Startup activities shall be carried out with clean water or air, or other flows as required to show the equipment and unit process systems are functional.
 - 2. Process flows or process solids shall not be used for Startup.
 - 3. The various vendors, equipment suppliers and manufacturers shall provide on-site supervision and assistance for Startup services for the new facility.
- C. The Contractor shall coordinate all startup activities for equipment and unit process systems in accordance with the accepted Plan. The Contractor shall develop a detailed Startup plan as part of that Plan that includes the following as a minimum:
 - 1. Description of the overall, general startup process.
 - 2. List of equipment and unit process systems included for Startup activities.
 - 3. Detailed startup sequence of activities.
 - 4. Equipment and system boundaries as shown using marked-up P&IDs.
 - 5. Listing of staff and responsibilities for activities.
- D. Startup Requirements: The following are minimum requirements for completion of Startup activities:

1. Startup shall show that the equipment or unit process systems are suitable for continuous operation using clean water and other fluids or gases (no process fluids or solids) and that the flows and operating parameters are in compliance with specified design conditions.
 - a. Startup shall also demonstrate that local and remote instrumentation and controls are functioning properly and communicating with each other properly.
 - b. Equipment or unit processes shall be operated for a minimum of 10 days without interruptions in service.
 - c. If the startup fails, the contractor will be responsible for redoing the startup testing at no additional costs to the Owner.

E. Documentation Requirements:

1. A Startup certificate shall be prepared and submitted to the Engineer for review and returned with any exceptions noted. The reports shall include, but not be limited to, the following:
2. Contents of the certificate shall be at a minimum:
 - a. Contractor Review Comments and Approval Page. This page shall include Certification by the preparer that he/she is the person responsible for the test data and the data is authentic and accurate. This page shall include a listing and signature of all witnesses to the test. Certification by the Contractor that the equipment or the unit process systems were operated continuously for the specified period and that the equipment or unit process systems operated in compliance with the specified operating conditions, parameters and performance; and that the equipment or unit process systems are suitable for Commissioning.
 - b. Equipment Suppliers Review Comments and Approval Page. This page shall include Certification by the equipment or unit process systems suppliers that the equipment or unit process systems have been started up properly and operated within the design parameters. Certification by the equipment or unit process systems supplier that the equipment or the unit process systems were operated continuously for the specified period and that the equipment or unit process systems operated in compliance with the specified operating conditions, parameters and performance; and that the equipment or unit process systems are suitable for Commissioning.
 - c. Engineer Review Comments, and Approval Page.
 - d. Process, Equipment, and P&IDs Involved in this startup test.
 - e. Startup Schedule

f. Test Descriptions/Procedures

- (1) Equipment or unit process systems tested.
- (2) Test dates.
- (3) Electrical Inspection and Tests
- (4) Test results.
- (5) Any repairs or corrections required to obtain acceptable test results.
- (6) Calibration sheet for instrumentation or devices used for testing but not part of plant installation.

g. Appendix:

- (1) A summary of all data used in the calculations, including source, formulas with all terms defined.
- (2) Calculations for all data submitted, fully defined.
- (3) Copies of all raw field data sheets, including those indicating sampling point locations, and notes.
- (4) Production and/or operational data.
- (5) Calibration procedures and work sheets for sampling equipment.
- (6) Copies of calibration records for instrumentation.

3.04 COMMISSIONING:

- A. Provide 30 days written notice to the Engineer for each commissioning procedure so that the Engineer, may witness each commissioning procedure. The Engineer may witness the performance of any or all each commissioning procedure, at their option
- B. Commissioning shall begin at the conclusion of Startup Testing, wherein the equipment or unit process systems are subjected to full operation using the process flows.
 1. On successful completion of Startup, process flows and solids shall be used for commissioning the equipment and unit process systems to show the equipment and unit process systems function properly. Commissioning shall confirm the proper operation of the equipment and unit process systems with process fluids and process solids, adjustments shall be made, and the equipment or unit process systems shall be optimized and brought into compliance with design criteria.

2. Commissioning shall not be initiated with process flows and solids until the available flows and/or solids are representative of that required for the equipment or unit process systems for testing.
 3. The various vendors, equipment suppliers and manufacturers shall provide on-site supervision and assistance for Commissioning services for the new facility.
- C. The Contractor shall coordinate all Commissioning activities for equipment and unit process systems in accordance with the accepted Plan. The Contractor shall develop a detailed Commissioning plan as part of that Plan that includes the following as a minimum:
1. Description of the overall, general Commissioning process.
 2. List of equipment and unit process systems included for Commissioning activities.
 3. Detailed Commissioning sequence of activities.
 4. Equipment and system boundaries as shown using marked-up P&IDs.
 5. Listing of staff and responsibilities for activities.
- D. Commissioning Requirements: The following are minimum requirements for completion of Commissioning activities:
1. Commissioning shall show that the equipment and unit process systems are capable of continuous operation using process liquids and solids, chemicals, and utilities; and that the flows, operating parameters and performance requirements have been demonstrated for a minimum of 10 days of continuous operation, or the period required in the equipment specifications, whichever is longer.
 - a. Shutdowns that occur because of power outages, acts of God, failure of support systems not part of this contract will not be a cause of failure of the 10 days of continuous operation..
 2. If the commissioning fails, the contractor will be responsible for redoing the commissioning at no additional costs to the Owner.
- E. Training
1. Following successful equipment commissioning, conduct training for major pieces of equipment and SCADA systems.
 2. Training sessions shall be conducted by a qualified representative of the equipment manufacturer or the Owner. SCADA system training shall be conducted by the SCADA system integrator with plant personnel over the duration of project once controls screens begin development.

3. Durations and requirements of the equipment to receive training is specified in the individual equipment specification sections.
4. Provide an outline of planned training schedules to the Engineer for review. At a minimum, the agenda for equipment training shall include basic function, start-up and shut-down procedures, normal operational procedures, and normal maintenance.
5. The contractor shall video record, with audio, each session. Provide a separate media file (such as a DVD, usb, etc.) for each piece of equipment unless otherwise approved.

F. Documentation Requirements:

1. A Commissioning report shall be prepared and submitted to the Engineer for review and return with any exceptions noted. The reports shall include, but not be limited to, the following:
 - a. Contractor Review Comments and Approval Page. This page shall include Certification by the preparer that he/she is the person responsible for the test data and the data is authentic and accurate. This page shall include a listing and signature of all witnesses to the test. Certification by the Contractor that the equipment or the unit process systems were operated continuously for the specified period and that the equipment or unit process systems operated in compliance with the specified operating conditions, parameters and performance; and that the equipment or unit process systems are suitable for Performance Testing.
 - b. Equipment Suppliers Review Comments and Approval Page. This page shall include Certification by the equipment or unit process systems suppliers that the equipment or unit process systems have been commissioned properly and operated within the design parameters. Certification by the equipment or unit process systems supplier that the equipment or the unit process systems were operated continuously for the specified period and that the equipment or unit process systems operated in compliance with the specified operating conditions, parameters and performance; and that the equipment or unit process systems are suitable for Performance Testing.
 - c. Engineer Review Comments, and Approval Page.
 - d. Process, Equipment, and P&IDs Involved in this commissioning test.
 - e. Commissioning Schedule
 - f. Test Descriptions/Procedures
 - (1) Equipment or unit process systems tested.

- (2) Test dates.
- (3) Electrical Inspection and Tests
- (4) Test results.
- (5) Any repairs or corrections required to obtain acceptable test results.
- (6) Calibration sheet for instrumentation or devices used for testing but not part of plant installation.

g. Appendix:

- (1) A summary of all data used in the calculations, including source, formulas with all terms defined.
- (2) Calculations for all data submitted, fully defined.
- (3) Copies of all raw field data sheets, including those indicating sampling point locations, and notes.
- (4) Production and/or operational data.
- (5) Calibration procedures and work sheets for sampling equipment.
- (6) Copies of calibration records for instrumentation.
- (7) Commissioning Documentation and Reports

END OF SECTION

SECTION 01 78 27
RELIABILITY TEST

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies the Reliability Test work required as a basis for completion of the project.
 - 1. The Reliability Test is an extended operation test as part of the overall Completion Testing requirement.
 - 2. The Reliability Test shall be scheduled as specified herein and in accordance with Section 01 78 25.
- B. An extended operation Reliability Test shall be completed for the constructed facilities to confirm that the equipment and unit process systems provided by this contract work together as a complete Facility under continuous operation for the specified time period.
 - 1. The Reliability Test shall be conducted after all the major equipment and unit process systems have successfully completed commissioning and training.
- C. The Contractor will provide guidance for managing, supervising, and directing the Owner's designated operating and maintenance staff during the Reliability Test.
 - 1. The Contractor shall provide the services of equipment and systems suppliers to assist.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 RELIABILITY TEST PLAN:

- A. A detailed test plan shall be prepared and submitted to the Engineer for review and returned with comments prior to commencing the Reliability Test. The plan shall be prepared by the Contractor in conjunction with the equipment or unit process suppliers with review by the Engineer. Minimum requirements of the Reliability Test Plan shall be:
 - 1. A description of the schedule of events.
 - 2. A description of the instrument readings required and frequency of readings.

3. Daily data log sheets to be used that show data to be collected, frequency of recording, and location where readings will be taken. A description of the laboratory analysis required and procedures to be used.
4. The Owner shall analyze the samples in their laboratory or send samples to a certified laboratory for analysis. Testing shall be completed in accordance with Standards Methods for the Examination of Water and Wastewater, latest edition.
5. A description of the task assignments for data collection and how data will be assembled.
6. A description of sampling and analytical methods used.
7. Sample data certification sheet attesting that the data is accurate and authentic.

3.02 RELIABILITY TESTING:

- A. For the Performance and Reliability Test, equipment and unit process systems shall be operated to obtain stable operating conditions, typical of normal operation of the facility.
- B. Reliability Test operating data, shall be collected and submitted to the Engineer and Owner on a daily basis for review.
- C. Local and remote on-site instrumentation equipment shall be used to obtain necessary data to document operating parameters. Where local instrumentation is available, manual logging of the data shall be done in conjunction with the instrumentation readings to verify remote instrumentation readings. The operating data will be used by the Engineer to determine the successful completion of the test.
 1. The Facility shall be operated continuously for the period of 30 days to demonstrate sustainable, reliable operation while processing the normal plant process flows.
 - a. For the Reliability Test, plant data shall be collected and recorded to show that the Facility was operated in accordance with normal ranges and performance parameters for the facility and normal plant flow.
 - b. Components of the systems shall be those items associated with the system being operated and not a part of other idle systems.
 - c. Up to 4 hour shutdown periods for maintenance will be allowed during the test period. Shutdowns that occur because of utility power outages, acts of God, or failure of support systems not part of this contract, are exempt from the allowed shutdown periods. Operation of standby equipment or processes shall not be allowed unless part of the constructed system. If more than the allowed shut downs occur, corrective measures shall be taken by the Contractor and the test shall be re-run in its entirety at no additional cost to the Owner.

3.03 TEST COORDINATION:

- A. The Owner shall be responsible for staffing and operating the Facility for the Reliability Test.
- B. The Contactor shall furnish authorized competent representatives of the equipment or unit process systems suppliers to attend and assist with the Reliability Test.
 - 1. The equipment and unit process systems shall not be solely operated by these representatives.
 - 2. All modifications to operations must be through the Contractor and any changes in operation recommended by these representatives shall be thoroughly explained and documented to the operating staff.

3.04 DATA ACQUISITION AND ANALYSIS:

- A. Methods of data collection and analysis used for Reliability Testing to show compliance shall be as required by regulatory agencies, industry standards and as specified for that equipment or unit process.
- B. In addition to success operation of equipment including instrumentation and controls, motors, actuated valves, packaged process equipment, etc., collect the following minimum water quality data:
 - 1. Raw water turbidity, continuously collected and trended with plant instrumentation
 - 2. UF filtrate turbidity for each filter skid, continuously collected and trended with plant instrumentation.
 - 3. Raw water total suspended solids, collected three times per week.
 - 4. Raw water total alkalinity, pH, temperature, calcium, magnesium, arsenic, iron, manganese, aluminum, chloride, sulfate, bromide, total organic carbon, and total dissolved solids, collected once per week.
 - 5. UF backwash recycle total suspended solids, collected three times per week
 - 6. UF backwash recycle arsenic, collected once per week.
 - 7. Finished water pH (daily), free chlorine residual (daily), and total organic carbon (once per week).
 - 8. UF cleaning waste pH and chlorine residual sent to sewer, when a clean occurs or daily if multiple cleans occur.
 - 9. UF backwash waste total suspended solids sent to sewer, three times per week
 - 10. Volumes or weights of all chemicals used during the 30-day operational period.

11. Pressures at all pressure transmitters, continuously collected and trended with plant instrumentation.
12. Flows at all flow meters, continuously collected and trended with plant instrumentation.
13. Results of every membrane skid air integrity tests (pressure decay tests) including the calculated LRV. Required daily for each skid and following any clean-in-place procedure.

3.05 CERTIFICATION OF DATA:

- A. Certification of data will be required of the Contractor.

3.06 TEST FAILURE:

- A. Plant operating data shall be used to determine that the Facility has successfully completed the Reliability Test. If at any time the daily data does not indicate acceptable operation, the Engineer will notify the Contractor to change or modify operation to bring the operation back into acceptable ranges.
- B. In the event that the Reliability Test was not successfully completed, the Contractor shall repeat the test at no additional cost to the Owner.

3.01 REPORTS:

- A. Reports are required for all tests specified in the individual specifications for equipment and unit process. Report shall be provided by the manufacturer/supplier to the Engineer for review and returned with any exceptions noted.
- B. Test reports shall be submitted no later than 30 calendar days after testing ends. The Contractor shall assist and furnish required information in a timely manner including operating data sheets.
- C. The reports shall include, but not be limited to, the following:
 1. Cover. Including name and location of the plant, the equipment or unit process systems tested, name and address of the testing organization, and dates of the test.
 2. Certification. A page including a certification by the report preparer that he/she is the person responsible for the test data, and one by the Contractor or equipment or unit process systems certifying authenticity and accuracy of the report.
 3. Table of Contents.
 4. Introduction. Pertinent background information shall be presented in this Section. The information shall include, but not be limited to, the following:
 - a. Equipment or unit process systems tested.

- b. Test purpose.
 - c. Name and address of supplier, and testing organization.
 - d. Test dates.
 - e. Items or performance criteria tested.
 - f. Names of persons present for test.
 - g. Any other important background information.
5. Summary. A comprehensive summary of the test results with sufficient information and data necessary to evaluate the process with respect to the applicable performance specifications. This information shall include, but not be limited to, the following:
- a. A summary of the test results.
 - b. Comparison of test results with required performance criteria.
 - c. Process and operation data or parameters that can be used to verify operation at performance criteria.
 - d. A description and results of any analyses of samples collected during the test that supports the test results.
 - e. Discussion of errors, both real and apparent, in the test.
6. Methods. A description of the sampling and analytical methods used.
7. Operation. Facility Operation during Testing shall contain:
- a. Presentation of the process data for the test, with calculations where necessary to show the solids throughput or production to demonstrate that the operating conditions are sufficiently representative of those required for testing. Calculations may be included in the Appendix.
 - b. Process and control equipment flow diagram.
8. Appendix.
- a. A summary of all data used in the calculations, including source, formulas with all terms defined.
 - b. Calculations for all data submitted, fully defined.
 - c. Copies of all raw field data sheets, including those indicating sampling point locations, and notes.

- d. Laboratory reports, complete with analytical data sheets and chain of custody list.
- e. Production and/or operational data.
- f. Calibration procedures and work sheets for sampling equipment.
- g. Copies of calibration records for instrumentation.
- h. Pertinent correspondence concerning the test.
- i. Any other information necessary to assist the Owner in making a determination of compliance with the contract documents or to assist the Agency in making a determination of compliance with Federal, State, and Local regulations.

3.07 LETTER OF COMPLETION:

- A. After review and return with any exceptions noted of Reliability Testing Report, the Engineer shall provide a Letter of Completion (with exceptions noted) to the Contractor for the Facility.

END OF SECTION

SECTION 01 78 36

WARRANTIES AND BONDS

PART 1 - GENERAL

1.01 SCOPE OF WORK:

- A. This Section specifies general administrative and procedural requirements for warranties and bonds required by the Contract Documents, including manufacturer's standard warranties on products and special warranties.

1.02 DEFINITIONS:

- A. Standard Product Warranties are pre-printed written warranties published by individual manufacturers for particular products and are specifically endorsed by the manufacturer to the Owner.
- B. Special Warranties are written warranties required by or incorporated in the Contract Documents, either to extend time limits provided by standard warranties or to provide greater rights for the Owner.
- C. Standard Product Warranties and Special Warranties shall start on the date established as the date of Substantial Completion.

1.03 RELATED WORK:

- A. Refer to Conditions of Contract for the general requirements relating to warranties and bonds.
- B. General closeout requirements are included in Section 01 77 00.
- C. Specific requirements for warranties for the Work and products and installations that are specified to be warranted, are included in the individual Technical Sections.
- D. Certifications and other commitments and agreements for continuing services to Owner are specified elsewhere in the Contract Documents.

1.04 SUBMITTALS:

- A. Submit written warranties to the Owner prior to the date fixed by the Engineer for Substantial Completion. If the Certificate of Substantial Completion designates a commencement date for warranties other than the date of Substantial Completion for the Work, or a designated portion of the Work, submit written warranties upon request of the Owner.
- B. When a designated portion of the Work is completed and occupied or used by the Owner, by separate agreement with the Contractor during the construction period, submit properly

executed warranties to the Owner within fifteen days of completion of that designated portion of the Work.

- C. When a special warranty is required to be executed by the Contractor, or the Contractor and a subcontractor, supplier or manufacturer, prepare a written document that contains appropriate terms and identification, ready for execution by the required parties. Submit a draft to the Engineer for acceptance prior to final execution.
- D. Refer to individual Technical Sections for specific content requirements, and particular requirements for submittal of special warranties.
- E. At Final Completion, compile two copies of each required warranty and bond properly executed by the Contractor, or by the Contractor, subcontractor, supplier, or manufacturer. Organize the warranty documents into an orderly sequence based on the table of contents of the Contract Documents.
 - 1. Table of Contents: Neatly typed, in the sequence of the Table of Contents of the Contract Documents, with each item identified with the number and title of the specification Section in which specified, and the name of the product or work item.
 - 2. Document shall be searchable and not contain any scans or photographs.
 - 3. Provide a typed description of the product or installation, including the name of the product, and the name, address and telephone number of the installer, supplier, and manufacturer.

1.05 WARRANTY REQUIREMENT:

- A. Related Damages and Losses: When correcting warranted Work that has failed, remove and replace other Work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted Work.
- B. Reinstatement of Warranty: When Work covered by a warranty has failed and been corrected by replacement or rebuilding, reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation.
- C. Replacement Cost: Upon determination that Work covered by a warranty has failed, replace or rebuild the Work to an acceptable condition complying with requirements of Contract Documents. The Contractor is responsible for the cost of replacing or rebuilding defective Work regardless of whether the Owner has benefited from use of the Work through a portion of its anticipated useful service life.
- D. Owner's Recourse: Written warranties made to the Owner are in addition to implied warranties, and shall not limit the duties, obligations, rights and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the Owner can enforce such other duties, obligations, rights or remedies.

- E. Rejection of Warranties: The Owner reserves the right to reject warranties and to limit selections to products with warranties not in conflict with requirements of the Contract Documents.
- F. The Owner reserves the right to refuse to accept Work for the Project where a special warranty, certification, or similar commitment is required on such Work or part of the Work, until evidence is presented that entities required to countersign such commitments are willing to do so.
- G. Disclaimers and Limitations: Manufacturer's disclaimers and limitations on product warranties do not relieve the Contractor of the warranty on the Work that incorporates the products, nor does it relieve suppliers, manufacturers, and subcontractors required to countersign special warranties with the Contractor.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

(Not Used)

END OF SECTION

SECTION 02 32 14

VIBRATION MONITORING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide vibration monitoring as indicated and in compliance with Contract Documents.
 - 1. Furnish, install, maintain, monitor, and remove vibration monitoring equipment as specified and as indicated.
 - 2. Monitor vibrations, air blast overpressures and noise levels originating from construction operations as indicated or specified.
 - 3. Modify construction operation procedures if existing operation creates vibration, air blast overpressure, or noise exceeding specified amounts.
 - 4. Vibration monitoring for blasting shall conform to the requirements of this specification section and the requirements of all applicable Local and State Authorities.

1.02 QUALITY ASSURANCE:

- A. Provide in accordance with Section 01 43 00.
- B. Retain the services of an independent vibration consulting firm with the following in-house personnel to conduct the following vibration monitoring requirements:
 - 1. Preparation, signing and stamping of monitoring plans and daily reports, and overseeing monitoring and interpretation of monitoring equipment shall be performed by personnel with the following qualifications:
 - a. Be a State of Utah Registered Professional Engineer.
 - b. Have a minimum of 5 years' experience in the vibration consulting field.
 - c. Have successfully completed at least 5 projects with vibration-inducing operations, air blast overpressures, and noise levels equal to or more severe than those to be encountered.
 - 2. Installation, monitoring and interpretation of monitoring equipment shall be performed by personnel with the following qualifications:
 - a. Have at least 3 years' experience in the operation of monitoring equipment proposed for use and interpretation of records produced by such equipment.

- b. Have installed, operated, monitored and interpreted equipment and records on at least 3 projects with vibration-inducing operations, air blast overpressures, and noise levels from similar construction activities.
- 3. Performed and maintained calibration records on all instruments used to monitor the blasting program.

1.03 SUBMITTALS:

A. Submit the following shop drawings in accordance with Section 01 33 00.

- 1. Qualifications of the independent vibration consulting firm's Professional Engineer as specified in subparagraph 1.02.B.1 including the names of the 5 successful projects with names, current addresses, and telephone numbers of persons in charge of representing the owners or the owners at the time of monitored vibration-inducing operation, air blast overpressures, and noise levels.
- 2. Qualifications of the vibration consulting firm's personnel to install, operate and interpret the monitoring equipment as specified in subparagraph 1.02.B.2 including the name of the personnel and the names of the 3 projects per person which they installed, operated, monitored, and interpreted monitoring equipment with names, current addresses and telephone numbers of persons in charge of representing the owners or the owners at the time of monitored vibration-inducing operations, air blast overpressures, and noise levels.
- 3. Two weeks prior to commencement of blasting or other vibration inducing operations, submit in writing the plan for monitoring operations and equipment to be used to assure compliance with the vibration, air blast overpressure, and noise limitation. As a minimum, this plan shall provide for the following:
 - a. Recommended vibration limiting methods to meet the specified peak particle velocity limitations and locations for taking measurements.
 - b. Manufacturer's brochures and written operation instructions for seismograph recording equipment intended to be used for each vibration occurrence.
- 4. Daily reports, while blasting or performing other vibration-inducing operations, detailing each source of vibration, location of monitoring, and the vibration records highlighting peak particle velocities. For blasting, include the air blast overpressure records as well as a plot of particle velocity versus scaled distance. All daily reports shall be stamped and signed by the Vibration Consulting Firm's Professional Engineer.

PART 2 - PRODUCTS

2.01 EQUIPMENT:

- A. Provide a low frequency sensitive three-component seismic recording instrument with wave paper trace, variable trigger level setting, peak particle velocity memory operation (in inches/second) and air blast overpressure and sound level readout capability that meets the following criteria:
 - 1. Seismic Frequency Range: 2 to 200 Hertz (plus or minus 3 dB)
 - 2. Acoustic Frequency Range: 2 to 200 Hertz (plus or minus 1 dB)
 - 3. Velocity Range: 0.02 to 4.0 inches per second
 - 4. Sound Range: 90 to 140 dB linear
 - 5. Transducer: Three mutually perpendicular axes: radial, transverse, and vertical
 - 6. Recording: Time-history of waveform capability
- B. Manufacturers:
 - 1. Instantel, Inc., Kanata (Ottawa) Ontario, Canada
 - 2. Slope Indicator Co., Seattle, WA
 - 3. Thomas Instruments, Inc., Spoffard, NH

PART 3 - EXECUTION

3.01 EXAMINATION:

- A. Furnish specified instrumentation to be installed, operated and interpreted by the vibration consulting firm's personnel, as specified below and indicated.
- B. Monitor vibrations and record the entire particle velocity wave train, not just peak velocities. Obtain accurate, legible seismometer records of monitored vibrations.
- C. Perform all blasting and other vibration-inducing operations so that vibrations reaching adjacent structures and facilities are within specified limits.
- D. Monitor vibrations by measuring the peak particle velocity in the vicinity of work. Peak particle velocity is defined as a maximum vector sum of three velocity components, measured concurrently in mutually perpendicular directions at any point by an instrument. The peak particle velocity as measured by the vibration consulting firm's personnel on or at the location as specified in the submitted vibration monitoring plan, shall not exceed the limits specified below:

Type of Concrete	Age of Concrete (Hrs)	Peak Particle Velocity In./Sec
Mass Concrete (footings, mats, slab-on-grade, fill concrete, etc.)	0 – 120	0.7
	121 and over	2.0
Concrete Structures (walls, columns, elevated slabs, etc.)	0 – 120	0.7
	120 and over	2.0
Existing Structures, Residences or Utilities		0.5

- E. Air blast over pressures resulting from the blasting shall be recorded. Operate the instruments to make a permanent record for each blast.
- F. In the event any recordings indicate that vibration or air over pressure limits are being exceeded, immediately suspend all blasting and other vibration-inducing operations and submit a report to the Engineer. Revise operations to reduce vibrations and submit a copy of the revised procedure to the Engineer at no additional cost to the Owner.
- G. If evidence of displacement or damage to utilities, equipment, or structures is observed or reported, immediately notify the Engineer and discontinue operations creating the vibrations. Revise operation to reduce vibrations and submit a copy of the revised procedure to the Engineer.
- H. Restore or replace utilities, equipment, or structures damaged by vibrations or air blast overpressures at no additional cost to the Owner.

3.02 CONTRACT CLOSEOUT:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 02 41 00

DEMOLITION

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide demolition of existing conditions as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. United States Environmental Protection Agency (USEPA):
 - 1. 832: Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices.

1.03 SUBMITTALS:

- A. Submit the following in accordance with Section 01 33 00.
 - 1. Demolition Plan.
 - 2. Proposed landfill and/or recycle location(s) for disposal of materials.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Demolition Plan: Provide description of sequence, methods, and equipment used for demolition (including disposal). Include details and schedule to meet requirements for Wildlife Mitigation as shown on General Civil Notes on Drawing 00-C002.

1.05 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 PREPARATION:

A. Survey Markers and Monuments:

1. Provide three reference points, established by a licensed land surveyor, for each survey marker or monument temporarily removed. Record locations and designations of survey markers and monuments prior to removal.
2. Store removed markers and monuments during demolition work and replace upon completion of work. Reestablish survey markers and monuments in conformance with recorded reference points. Forward letter to Engineer, signed by a licensed land surveyor, verifying reestablishment of survey markers and monuments.

B. Burning of demolition debris is prohibited.

C. Protect existing structures, equipment, and appurtenances to remain.

D. Obtain permission from Engineer before abandoning or removing existing structures, materials, equipment, and appurtenances.

E. Maintain circulation of traffic within area at all times during demolition operations.

F. Make necessary arrangements with and perform work required by utility companies and municipal departments for discontinuance or interruption of utility services due to demolition work.

G. Confine apparatus, storage of materials, demolition work, new construction, and operations of workmen to areas that will not interfere with continued use and operation of the adjacent Raintree Apartments. Provide and maintain lights, barriers, and temporary passageways for free and safe access.

H. Provide shoring or bracing where necessary to prevent settlement or displacement of existing or new structures. Do not overload floors.

3.02 DEMOLITION:

A. Demolish and remove existing construction, utilities, equipment, and appurtenances.

B. Provide maximum practicable protection from inclement weather for materials, equipment, and personnel located in partially dismantled structures.

C. Protect persons and property throughout progress of work. Provide safe working conditions for personnel.

D. Wet down work during demolition operations to prevent dust from arising. Minimize spread of dust and airborne particles.

- E. Cap or plug with concrete or non-shrink grout, pipes and other conduits which are abandoned in place.
- F. Removed materials, equipment, and appurtenances, not designated for relocation, become property of Contractor, and shall be disposed of offsite at an approved facility.
- G. Trees, shrubs, and other “green” waste may be disposed off-site at the Provo City Composting Facility located at 1625 S Industrial Parkway.

3.03 SALVAGE:

- A. Store equipment to be salvaged or relocated as directed by Engineer. Protect salvaged items from damage during work.

3.04 REPAIR/RESTORATION:

- A. Repair or remove items that are damaged. Repair and install damaged items to condition at least equal to that which existed prior to start of work.

3.05 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 01 30
CONCRETE REPAIR

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide concrete repair as indicated and in compliance with Contract Documents.
- B. Complete repair mortar system installation in accordance with these specifications and the mortar system manufacturer's instructions regarding surface preparation, application, inspection and requirements for safety.
- C. Complete crack repair work in accordance with these specifications and crack repair material manufacturer's instructions.
- D. Complete joint repair work in accordance with these specifications and the joint repair material manufacturer's instructions.
- E. The areas of concrete repair shall be determined by the Engineer and shall include any location where acidic attack of the concrete surfaces has reached a depth of 1/2-inch or deeper and at any air voids, bugholes or poorly consolidated concrete areas where the specified filler/surfacer materials cannot be used for filling or surfacing of the concrete.
- F. If repair work is required for an area indicated to receive protective lining or coating, provide such repair in accordance with the requirements of this specification and the related lining specifications.
- G. The repair work specified herein is intended to cover the requirements for repair of concrete only, to a maximum depth of approximately 2-inch. If after blasting and cleaning, an area is discovered that requires a repair greater than 2-inch deep, or an area is discovered that requires repair or replacement of reinforcing steel notify the Engineer so that details may be provided to the Contractor to complete the repair.

1.02 REFERENCES:

1. 6D-173: "A Manual for Painter Safety"
2. 6F-163: "Surface Preparation of Steel or Concrete Tank Interiors"
3. TPC2: "Coatings and Linings for Immersion Service"

1.03 MEASUREMENT:

- A. Crack Repair: The quantities in linear feet to be measured for payment shall be the actual length of cracks repaired by the methods and materials specified under.
 1. Epoxy crack repair.
 2. Flexible polyurethane crack repair.
 3. Rigid polyurethane crack repair.
- B. Spall Repair Depth 2-inch or Less: The quantities in square feet to be measured for payment shall be the actual square footage of spalled concrete repaired by the method and materials specified under spall repair.
- C. Spall Repair Depth Greater than 2-inch: The quantities in cubic feet to be measured for payment shall be the actual cubic footage of spalled concrete repaired by the method and materials specified under spall repair.
- D. Joint Repair: The quantities in linear feet to be measured for payment shall be the actual length of joints repaired by the methods and materials specified under joint repair.

1.04 SUBMITTALS:

A. Submit the following in accordance with Section 01 33 00.

1. Procedures proposed for the accomplishment of repair work. Include a detailed description of the methods and equipment to be used for each operation, and the sequence of operations to be coordinated with other works in progress.
2. Manufacturer's recommendations and product data sheets for all repair materials including performance criteria, surface preparation, ambient condition requirements and applications, curing requirements, volatile organic compound (VOC) data, and safety requirements.
3. Material Safety Data Sheets (MSDS) for any materials brought on-site including all repair system materials, solvents and abrasive blast media.
4. Qualifications of foreman and epoxy gun operators and demonstration of meeting the minimum requirements specified.
5. Design Mixes: Provide concrete and cement mortar in conformance with Section 03 30 00 and as specified herein.
6. ANSI/NSF 61 Certification that repair material proposed for use in structures to contain potable water are non-toxic and have no adverse effect on the quality or appearance of potable water.

1.05 QUALITY ASSURANCE:

A. Comply with the requirements specified in Section 01 43 00.

B. Furnish the names of all subcontractors proposed for use for this work including necessary evidence and/or experience records to ascertain their qualifications in the application of epoxy, polyurethane polymer-modified and cement-based compounds.

C. Include in accepted applicator qualifications:

1. A minimum of five (5) years' experience in applying epoxy, polyurethane and polymer-modified and cement-based compounds similar to those specified in this Section.
2. A letter from the manufacturer of the specified materials, on the manufacturer's letterhead, signed by an officer of the company, stating that the subcontractor/applicator has been trained in the proper techniques for the preparation of the surface, and proper methods for mixing, placing, curing, and caring of the manufacturer's products. This letter shall further state that the subcontractor/applicator is on the manufacturer's approved list of contractors.

- D. Adhere strictly to the manufacturer's recommendations regarding temperature at time of application for all work. Do not use epoxy materials when either the temperature of the concrete to be repaired or the ambient temperature is below 50 degrees F. 24 hours before, during, or for a period of 48 hours after the completion of the repair. Temporary heat may be used to meet the specified requirements.
- E. Use new epoxy, repair materials and use within the shelf life limitations set forth by the manufacturer. Clearly mark the shelf life limitations of each container.
- F. The Contractor is ultimately responsible for the concrete repair work. Inspections by the Engineer or others do not limit the Contractor's responsibility.
- G. Make all parts of the work accessible for inspections by the Engineer. Correct any conditions not in conformance with the specifications at no additional cost to the Owner.
- H. Provide a Representative on site at all times when work is ongoing to represent the Contractor and to have authority to receive and execute all instructions given by the Engineer.
- I. Allow changes in the specified repair work methods only with the permission of the Engineer.
- J. Provide technical field support or training services required by the accepted material manufacturers at no additional cost to the Owner.
- K. Provide materials from a single manufacturer for all components of a single repair.

1.06 SERVICES OF MANUFACTURERS REPRESENTATIVES:

- A. Provide the services of a qualified manufacturer's technical representative to instruct the Contractor's personnel in the mixing, proper use and application of the epoxy, polyurethane, polymer-modified and cement-based compounds.
- B. Provide written certification from the manufacturers' representative that materials have been mixed and applied properly and surfaces to receive these products have been prepared properly, all in conformance with manufacturer's requirements.
- C. Provide on-site time required for the manufacturer's representative to achieve a successful installation at no additional cost to the Owner.

1.07 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements in Section 01 61 00.
- B. Provide shelter to store materials in area or areas designated by the Owner solely for this purpose. Confine mixing, thinning, clean-up and associated operations and storage of repair mortar materials debris before authorized disposal, to these areas.

- C. Mix all specified materials in the sheltered mixing operation and materials from direct sunlight and inclement weather. Protect facilities from staining and damage.
 - D. Do not dispose of waste materials on-site.
 - E. Store waste temporarily in closed, nonflammable containers until final disposal. Keep no rubbish in Contractor's area longer than 24 hours.
 - F. Deliver all materials to the job site in new, unopened containers. Each container shall bear the manufacturer's name and label. Labels on all material containers shall contain the following information:
 - 1. Name of product.
 - 2. Federal Specification Number if applicable.
 - 3. Manufacturer's batch number.
 - 4. Manufacturer's name.
 - 5. Generic type of material.
 - 6. Hazardous material identification label.
 - 7. Shelf life date.
 - G. Clearly mark all containers indicating any safety hazards associated with the use of or exposure to the materials.
 - H. Handle and store materials to prevent damage or loss of label. Protection of materials is the Contractor's responsibility.
- 1.08 PROJECT/SITE CONDITIONS:
- A. Environmental Requirements:
 - 1. Comply with the repair material manufacturer's recommendations as to environmental conditions under which materials can be applied and cured.
 - 2. Do not apply materials when dust is being generated.
 - B. Protection:
 - 1. Cover or otherwise protect finish work or other surfaces not being repaired.
 - C. Ventilation:
 - 1. Provide ventilation to meet product requirements prior to, during, and after application.

PART 2 - PRODUCTS

2.01 WATER:

- A. The water used for mixing concrete repair products shall be clear, potable and free of deleterious substances.

2.02 AGGREGATE:

- A. All aggregates shall conform to ASTM C33 and Section 03 30 00.

2.03 EPOXY BONDING AGENT:

- A. Epoxy bonding agent shall conform to ASTM C881 Type I, II, IV or V; Grade 2 for epoxy resin adhesives, depending on the application. The class of epoxy bonding agent shall be suitable for all ambient and substrate temperatures.

- B. Products:

1. Sika Corporation; Sikadur 32
2. The Euclid Chemical Company; Duralcrete

2.04 ANTI-CORROSION COATING:

- A. Anti-corrosion coating shall be a three-component, epoxy-modified cementitious material.

- B. Products:

1. Sika Corporation; Sika Armatex 110
2. Sto Concrete Restoration Division; CR 246
3. The Euclid Chemical Company; Duralprep

2.05 EPOXY CRACK REPAIR BINDER:

- A. Epoxy crack repair binder shall be a two-component, 100 percent solids, high-modulus, low viscosity epoxy adhesive suitable for crack grouting by injection.

- B. Products:

1. Sika Corporation; Sikadur 52
2. The Euclid Chemical Company; Duralcrete LV
3. BASF; SBC Concrex 1380

2.06 FLEXIBLE POLYURETHANE CRACK REPAIR MATERIAL:

- A. Flexible polyurethane crack repair material shall be a one-component, water-activated polyurethane hydrophilic injection grout capable of 700 percent expansion. Polyurethane grout shall form a tough flexible foam seal that is impenetrable to water.
- B. Products:
 - 1. Prime Resins; Prime Flex 900 XLV
 - 2. Avanti International; Scotch Seal 5600 Chemical Grout

2.07 RIGID POLYURETHANE CRACK REPAIR MATERIAL:

- A. Rigid polyurethane crack repair material shall be a one-component, water-activated polyurethane hydrophobic injection grout capable of 700 percent expansion. Polyurethane grout shall form a tough rigid foam seal that is impenetrable to water.
- B. Products:
 - 1. De Neef Construction Chemicals; Hydro-Active Cut
 - 2. Prime Resins; Prime Flex 920
 - 3. Sika Corporation; Sikafix HH LV

2.08 EPOXY REPAIR MORTAR:

- A. Epoxy Repair Mortar shall be two-component, 100 percent solids, 100 percent reactive epoxy resin system.
- B. Spall repair mortar for use in horizontal applications.
 - 1. Products:
 - a. BASF; Concreseive Paste LPL
 - b. Sika Corporation; Sikadur 22 Lo-Mod
- C. Spall repair mortar for use in vertical and overhead applications.
 - 1. Products:
 - a. Sika Corporation; Sikadur 23 Lo-Mod Gel

2.09 SPALL REPAIRS USING NON-SHRINK CEMENTITIOUS MORTAR:

A. Products:

1. BASF; EMACO S88 CI
2. BASF; Thorite
3. Sauereisen, Inc.; Underlayment F-120

2.10 SPALL REPAIRS USING POLYMER MODIFIED CEMENTITIOUS MORTAR:

A. Repair spalls repair not requiring formwork using a two-component, polymer-modified cementitious mortar having a minimum 28-day compressive strength of 7,000 psi.

B. Spall repair mortar for use in horizontal applications.

1. Products:

- a. Sika Corporation.; Sikatop 122 Plus
- b. The Euclid Chemical Company; Duraltop Fast Set

C. Spall repair mortar for use in vertical applications.

1. Products:

- a. Sika Corporation; Sikatop 123 Plus
- b. The Euclid Chemical Company; Duraltop Gel

2.11 SPALL REPAIRS REQUIRING FORMWORK:

A. Repair spalls repair requiring formwork using a two-component, polymer-modified cementitious mortar/pea gravel mixture and shall have a minimum 28-day compressive strength of 6,000 psi. Mix each unit of mortar with Saturated Surface Dry (SSD) pea gravel to form the repair material following the manufacturer's recommendations.

B. Products:

1. Sika Corp.; Sikatop 111 Plus
2. The Euclid Chemical Company; Duraltop Flowable Mortar

2.12 WATERPROOF MEMBRANE PATCH:

A. Waterproof membrane patch shall be a hypalon sealing strip secured to the concrete substrate with an epoxy adhesive.

- B. Install sealing system per manufacturer's recommendations.
- C. Products:
 - 1. Sika Corporation; Sikadur Combiflex
- 2.13 CEMENT BASED TEXTURED COATING:
 - A. Products:
 - 1. Sika Corporation; Sikatop 144
 - 2. The Euclid Chemical Company; Duraltop Coating
 - 3. BASF; Thoroseal/Acryl 60
- 2.14 SEALANT:
 - A. Concrete joint sealant shall be a two-component polyurethane sealant as specified in Section 03 15 00. Primers and bond breakers shall conform to the sealant manufacturer's recommendations.
- 2.15 EXPANSION JOINT FILLER:
 - A. Expansion joint filler shall be as specified in Section 03 15 00.
- 2.16 HYDRAULIC CEMENT COMPOUND PATCH AND REPAIR FOR LEAKS:
 - A. Products:
 - 1. Xypex; Patch'N Plug

PART 3 - EXECUTION

- 3.01 GENERAL REQUIREMENTS:
 - A. Perform exterior work during dry weather and appropriate temperature conditions in accordance with the manufacturer's recommendations. Protect unfinished work during inclement weather with tarpulins or heavy gage polyethylene sheeting.
 - B. Perform work in spaces within structures at temperature and conditions suitable for proper curing in accordance with the manufacturer's recommendations.
 - C. Coordinate concrete rehabilitation work with other work being performed.
 - D. Remove scaling, broken, loose and disintegrating materials by use of hand tools or power driven saws, down to solid unyielding material.

- E. Clean surfaces thoroughly of efflorescence, oils, grease and other objectionable material in area to be repaired in accordance with the manufacturer's recommendations.

3.02 EPOXY BONDING AGENT:

- A. Use epoxy bonding agent to adhere fresh mortar to existing concrete. Roughen existing concrete surfaces prior to application of bonding agent. Concrete surface shall be clean and sound, free of all foreign particles and laitance. Place repair material while bonding agent is still tacky or per the written instructions of the manufacturer. Reapply bonding agent if bonding agent cures prior to placement of repair material.
- B. Conform to all the requirements of ACI 503.4, and as specified herein.

3.03 ANTI-CORROSION COATING:

- A. Sandblast, clean and coat reinforcing steel that is cut or exposed during alteration and/or repair operations with an anti-corrosive coating.
- B. Cover all exposed parts of the steel with the coating and apply according to manufacturer's recommendations.

3.04 EPOXY CRACK REPAIR:

- A. Cracks on horizontal surfaces: When permitted by the Engineer, repair existing structural cracks by gravity feeding an epoxy crack repair binder into the prepared crack.
 - 1. Grout concrete surface at the crack to form a minimum 1/4-inch wide by 1/4-inch deep V-notch and clean to remove all loose and foreign particles. Fill crack with clean, dry sand and pour epoxy crack repair binder into V-notch, completely filling crack.
 - 2. As binder penetrates into crack, apply additional binder to the V-notch.
- B. Cracks on vertical or horizontal surfaces: Repair existing structural cracks by pressure injecting an epoxy crack repair binder into the prepared crack per Section 03 64 23. Seal cracked surfaces and install injection ports per manufacturer's recommendations.
 - 1. Do not cut reinforcement steel when drilling holes for injection ports. If rebar is encountered during drilling, abandon the hole and relocate. Patch the abandoned hole immediately with epoxy mortar flush with the surface of the existing concrete.
 - 2. Once the surface sealing material has cured, inject crack with epoxy crack repair binder as directed by the manufacturer.
 - 3. Remove injection ports upon satisfactory completion of crack injection and patch with epoxy mortar.

3.05 RIGID AND FLEXIBLE POLYURETHANE CRACK REPAIR:

- A. Repair leaking cracks by pressure injecting with a waterproof hydrophilic or hydrophobic injection grout seal crack surfaces and install injection ports per manufacturer's recommendations.
- B. Do not cut rebar when drilling holes for injection ports. If rebar is encountered during drilling, abandon the hole and patch immediately with epoxy mortar flush with the surface of the existing concrete.
- C. Once the surface sealing material has cured, inject crack with waterproof hydrophilic or hydrophobic injection grout as directed by the manufacturer.

3.06 SPALL REPAIR:

- A. Saw cut the perimeter of the repair area to a minimum depth of 1/4-inch below the surface of the concrete.
- B. Chip all loose concrete in the repair area to remove loose and degraded concrete to a minimum of 1/4-inch or until a sound substrate is reached.
- C. Clean the area and repair to the original dimensions with spall repair patching material according to the manufacturer's recommendations.
- D. Make final finished surface of patches flat, level and even with the existing concrete surface. Do not feather repair mortar to meet existing concrete surface.
- E. Finish final patches on horizontal surfaces consistent with the finish on the existing structure.

3.07 JOINT REPAIR:

- A. Remove sealant, bond breaker and joint filler.
- B. Remove unsound concrete on the joint faces.
- C. Remove laitance and provide a clean dry surface.
- D. Prepare an epoxy mortar by combining epoxy crack repair binder with aggregate following the manufacturer's instructions.
- E. Restore surface to original dimensions by troweling epoxy mortar onto the existing substrate in a manner to ensure bonding following the manufacturer's instructions.
- F. Cure repair in accordance with the manufacturer's instructions.
- G. Install new joint filler, bond breaker and sealant.

3.08 CEMENT BASED TEXTURED COATING:

- A. Clean existing concrete areas requiring a textured coating and apply the cement based textured coating according to manufacturer's recommendations.
- B. Complete other concrete rehabilitation prior to applying coating.

3.09 PATCH AND REPAIR OF LEAKS USING HYDRAULIC CEMENT COMPOUND:

- A. Prepare surface, mix, and install patch and plug material in accordance with manufacturer's instructions.

3.10 CURING:

- A. Cure repair materials in accordance with manufacturer recommendations.

3.11 CLEANING:

- A. Mechanically remove excess material from walls, floors, etc. after material has cured.
- B. Clean excess materials caused by work under this section from existing surfaces by the use of power sanders. Vacuum surfaces to receive final cleaning and finishing specified under other sections of the specifications. Sand cracks flush to adjacent surfaces.
- C. Remove misplaced sealants using methods and materials recommended by the manufacturers. Leave finished work and work area in a neat and clean condition.

3.12 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 05 10

LEAKAGE TESTING OF CONTAINMENT STRUCTURES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section describes the method of testing concrete containment structures for leakage. All containment structures shall be leak tested unless specifically exempted by the Engineer as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. American Concrete Institute (ACI):
 - 1. 350.1: Tightness Testing of Environmental Engineering Concrete Structures and Commentary.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Provide piping and equipment to test concrete structures for leakage as described herein.

PART 3 - EXECUTION

3.01 GENERAL:

- A. Hydrostatically test reinforced concrete structures which will contain fluids to determine that they conform to leakage criteria specified herein and are free of detectable leaks. Do not hydrostatically test walls that are to be restrained or laterally supported by slabs until slab concrete has obtained the specified compressive strength.
- B. Prior to testing, clean exposed surfaces by thoroughly hosing and removing surface laitance and loose matter from walls and slabs. Remove wash water and debris from the structures by means other than washing through plant piping. All potential leakage points shall be identified and repaired prior to filling the tank with water for the tightness test. Methods for repairing concrete shall be as described in Section 03 01 30.
- C. No backfilling, floor finish, concrete or mortar fill, wall insulation, gasproofing or protective coatings, or permanent pipe connections shall be applied to or installed in any new containment structures until they have been tested for leakage. Testing shall not be done until the concrete has reached its specified design strength.

3.02 LEAK TEST PROCEDURE:

- A. Leakage testing shall meet the provisions of ACI 350.1 – Tightness Testing of Environmental Engineering Concrete Structures. The test criterion shall be HST-NML (no measurable loss) for fully lined prior to tightness test, secondary containment structures; HST-050 (0.050 percent per day) for other tanks as defined by ACI 350.1; HST-100 (0.100 percent per day) for concrete paved reservoirs and channels.
- B. During the test period, the excavation around the structure shall be kept dewatered by the Contractor. Dewatering shall maintain the groundwater level to below the top of the base slab. The Contractor shall temporarily seal all bottom openings and wall openings below maximum water level in the structures, furnish and fill the structures to the design maximum water level with clean water. The Contractor shall make his own arrangements for handling the water for testing and its transfer from one structure to another and its final disposal.
- C. Filling rate shall not exceed 4-feet/24 hours of water depth, or a rate as permitted by the Engineer, with continuous monitoring. Filling shall be at a uniform rate.
- D. During the leakage test period, the Engineer will inspect the structure for leakage or change in volume. If moist spots become visible, indicating the existence of minor leaks, or if the water level indicates hidden leakage, the Contractor shall furnish all materials and do all work necessary to locate the leaks and make the structure watertight to the complete satisfaction of the Engineer. No additional compensation will be allowed for such work.
- E. If, in the opinion of the Engineer, during the course of the test weather conditions are such that it becomes difficult to accurately monitor the water level in the tank, the test shall be stopped, and started over again when weather permits, at no additional cost to the Owner.
- F. On conclusion of the test, the Contractor shall pump or drain the water from the structure and dispose of it without damage to structures or surrounding facilities.
- G. The water tightness test will be considered a pass when no wet spots are observed on the exterior surfaces of the containment structure during the water tightness test period and when the measured loss is less than the maximum specified.

3.03 REPAIR METHODS:

- A. Methods for repairing concrete not passing the leakage test shall be as described in Section 03 01 30.

3.04 CLOSEOUT ACTIVITIES

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 10 00
CONCRETE FORMWORK

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide design and furnish materials for fabricating, erecting and removing formwork, falsework and shoring for cast-in-place concrete as indicated and in compliance with Contract Documents.
- B. Use formwork to cast all cast-in-place concrete structures with the exception of neat-line dirt excavations and fillets with a dimensional extension to meet 3-inch rebar clearances.
- C. Provide and remove all formwork for electrical work as shown on the drawings or specified under electrical work.

1.02 REFERENCES:

- A. American Concrete Institute (ACI):
 - 1. 117/117R: Standard Tolerances for Concrete Construction and Materials.
 - 2. 309.2R: Identification and Control of Visible Effects of Consolidation on Formed Concrete Surfaces.
 - 3. 318/318R: Building Code Requirements for Structural Concrete and Commentary.
 - 4. 347: Guide to Formwork for Concrete.
 - 5. 347.3R: Guide to Formed Concrete Surfaces
- B. Engineered Wood Association (APA)
- C. National Institute of Product Standards and Technology
 - 1. Voluntary Product Standard PS 1 Structural Plywood
- D. National Sanitation Foundation (NSF):
 - 1. 61: Drinking Water System Components – Health Effects

1.03 DESIGN REQUIREMENTS:

- A. Design formwork in conformance with methodology of ACI 347R for anticipated loads, lateral pressures, depth of concrete placement and rate of concrete placement. Design

shall consider any special requirements due to the use of self-consolidating, plasticized and/or retarded set concrete. All forms and shoring shall be designed at the contractor's expense.

1.04 QUALIFICATIONS:

- A. Formwork Designer: Formwork, falsework, and shoring design shall be stamped by an engineer licensed in the State of Utah.

1.05 SUBMITTALS:

- A. Submit product data for form ties, spreaders, chamfer strips, void forms, form coatings, and bond breakers.
- B. Submit following shop drawings in accordance with Section 01 33 00.
 - 1. Layout of panel joints and tie hole pattern. Form Ties-Tapered Through-Bolts: Proposed method of sealing form tie holes.
 - 2. Product data for form ties, spreaders, chamfer strips, and bond breakers.
 - 3. Layout and locations of void forms.
 - 4. ANSI/NSF 61 Certification that form release agents proposed for use in structures to contain potable water are non-toxic and have no adverse effect on the quality or appearance of potable water.

1.06 QUALITY ASSURANCE:

- A. Comply with requirements in Section 01 43 00 and as specified.
- B. Design of Formwork:
 - 1. The Contractor shall assume responsibility for the design, engineering and construction of formwork. Forms shall be designed to produce concrete members identical in shape, lines and dimensions to members shown on the Contract Documents.
 - 2. When high range water reducer (superplasticizer) is used in concrete mix or when self-consolidated concrete is specified, forms shall be designed for full hydrostatic pressure per ACI 347.
 - 3. The formwork shall be designed for the loads and lateral pressures in accordance with ACI 347, ACI 318, and wind loads as specified by the local building code.
 - 4. Construction and contraction joints, openings, offsets, keyways, recesses, moldings, chamfers, blocking, screeds, bulkheads, waterstops, anchorages, inserts, and other features shall be provided.

- 5. Formwork shall be designed to be readily removable without impact, shock, or damage to 'green' concrete surfaces and adjacent materials.
 - 6. The maximum panel deflection shall be $1/360$ of the span between structural members.
 - C. Unless otherwise specified herein, formwork shall be constructed so that the concrete surfaces will conform to the tolerance limits as given in ACI 117.
 - D. Materials, fabrications and workmanship found defective shall be promptly removed and replaced and new acceptable work shall be provided in accordance with Contract requirements at no additional cost to the Owner.
- 1.07 DELIVERY, STORAGE AND HANDLING:
- A. Comply with the requirements in Section 01 61 00.
 - B. Materials shall be delivered to the site in an undamaged condition and at such intervals as will avoid delay in the work.
 - C. Material shall be stored and protected in a clean, properly drained location. Material shall be kept off the ground under a weather-tight covering permitting good air circulation. Formwork materials shall be stored on dry wood sleepers, pallets, platforms or other appropriate supports which have slope for positive drainage. Materials shall be protected from distortion, excessive stresses, corrosion and other damage. Materials shall not be stored on the structure in a manner that might cause distortion or damage to the supporting structure.

PART 2 - PRODUCTS

2.01 LUMBER:

- A. Lumber used in form construction shall be Douglas fir, No. 2 grade, S4S, Standard Grading and Dressing Rules No. 16, West Coast Lumber Inspection Bureau; or Southern Yellow Pine, No. 2, S4S, Standard Grade Rules Southern Pine Inspection Bureau. Boards shall be 4 inches or more in width.

2.02 PLYWOOD:

- A. Only grade-marked plywood conforming to APA shall be provided.
- B. Plywood used in form construction shall be Grade B-B, Class 1 plyform, mill-oiled, and sanded on both sides in conformance with U.S. Product Standard PS 1 Structural Plywood.
- C. Thickness shall be sized to maintain alignment and surface smoothness, but not less than 5/8-inch thick.

2.03 STEEL FORMS:

- A. Commercial grade sheets not less than 16 gage shall be provided.
- B. Stock material that is free from warps, bends, kinks, cracks, and rust or other matter that could stain the concrete shall be provided.
- C. Galvanized metal stay in place concrete form system may be used at non-exposed concrete joint surfaces only.
 - 1. Manufacturer:
 - a. AMICO Alabama Metal Industries Corporation, Birmingham, AL Stay-Form

2.04 FORM MATERIAL LOCATIONS:

- A. Wall Forms and Underside of Slabs and Beams:
 - 1. Materials: Plywood, hard plastic finished plywood, overlaid waterproof particleboard, or steel in new and undamaged condition, of sufficient strength and surface smoothness to produce specified finish.
- B. Column Forms:
 - 1. Rectangular Columns: As specified for walls.
 - 2. Circular Columns: Fabricated steel or fiber reinforced plastic with bolted together sections or spirally wound laminated fiber form internally treated with release agent for height of column.
- C. Slab-on-grade: Lumber, steel forms or plywood.
- D. All Other Forms: Materials as specified for wall forms.
- E. Rustication Grooves and Chamfer Strips: Nonabsorbent material, compatible with form surface, fully sealed on all sides prohibiting loss of paste or water between the two surfaces.
- F. Chamfer Strips: Wood, fully sealed on all sides prohibiting loss of paste or water between the two surfaces.

2.05 FORM TIES:

- A. Locate form ties on exposed surfaces in a uniform pattern. Place form ties so they remain embedded in the concrete except for a removable portion at each end. Form ties shall have conical or spherical type inserts with a maximum diameter of 1 inch. Construct form ties so that no metal is within 1-1/2 inch of the concrete surface when the

forms, inserts, and tie ends are removed. Do not use wire ties. Ties shall withstand all pressures and maintain forms within acceptable deflection limits.

- B. Flat bar ties for panel forms (not permitted for hydraulic structures) shall have plastic or rubber inserts having a minimum depth of 1-1/2 inch and sufficient dimensions to permit patching of the tie hole.
- C. Tapered form ties shall be tapered through-bolts or through-bolts that utilize a removable tapered sleeve.
- D. Wire ties are not permitted.
- E. Water Stop Ties: For water-holding structures, basements, pipe galleries, and accessible spaces below finish grade, furnish one of the following:
 - 1. Integral steel water stop 0.103 inch thick and 0.625 inch in diameter tightly and continuously welded to tie.
 - 2. Neoprene water stop 3/16-inch thick and 15/16 inch diameter whose center hole is one-half diameter of tie, or molded plastic water stop of comparable size.
- F. Elastic Vinyl Plug:
 - 1. Design and size of plug shall allow insertion with tool to enable plug to elongate and return to original length and diameter upon removal forming watertight seal.
 - 2. Manufacturer:
 - a. Dayton Superior, Miamisburg, OH; A58 Sure Plug.

2.06 BOND BREAKER:

- A. Bond breaker shall be a V.O.C.-compliant non-staining type that will provide a positive bond prevention.
- B. Manufacturers:
 - 1. Dayton Superior, Sure Lift J6LVOC
 - 2. Nox-Crete, Inc.; Silcoseal Select.

2.07 FORM CAULKING:

- A. Form caulking shall be a one-component, gun-grade silicone sealant that is capable of producing flush, watertight and non-absorbent surfaces and joints. Sealant shall be compatible with the type of forming material and concrete ingredients used.

B. Products:

1. Series 1200 Construction Caulking; GE Silicones, Waterford, NY.
2. Dow Corning 999-A; Dow Corning Co., Midland, MI.

2.08 CHAMFER STRIPS:

- A. Provide 3/4 inch by 3/4-inch chamfer strips milled from clear, straight-grain pine, surfaced each side, or having extruded vinyl type with or without nailing flange unless otherwise shown on the Contract Documents.

2.09 INSERTS:

- A. Provide galvanized cast steel or galvanized welded steel inserts, complete with anchors to concrete and fittings such as bolts, wedges and straps.

2.10 DOVETAIL ANCHOR SLOTS:

- A. Provide dovetail anchor slots manufactured from 22 gage, galvanized steel with removable felt or polyurethane filler shall be provided where specified or shown on the Contract Documents.

2.11 FORM RELEASE AGENT:

- A. Form release agent shall not bond with, stain, or adversely affect concrete surfaces and shall not impair subsequent treatments of concrete surfaces when applied to forms. A ready-to-use water-based material formulated to reduce or eliminate surface imperfections and containing no mineral oil or organic solvents.

- B. Certified as meeting the requirement of ANSI/NSF 61 for contact with potable water.

C. Manufacturers and Products:

1. BASF, Shakopee, MN; MasterFinish RL 211.
2. Cresset Chemical Company; Crete-Lease 20-VOC.
3. Dayton Superior; Farm Fresh XL.

PART 3 - EXECUTION

3.01 FORM TOLERANCES:

- A. Comply with the requirements of ACI 117 for tolerances for formed surfaces except as specified in Table 03 10 00-1.

Table 03 10 00-1	
Vertical alignment (plumbness)	1/4-inch in any 10 feet and 1-inch maximum for entire length
Vertical alignment (BNR Demonstration Facility Structure 3101 only.)	1/4-inch in total length (80 feet) or width (30 feet) of slab on grade.
Variation in the lines and surfaces of foundation mats, base slabs and walls	1/4-inch in any 10 feet and 1-inch max. for entire length
Variation from the level or from the grades indicated on the drawings	1/4-inch in any 10 feet
Variation of the linear building lines from established position in plan	1/2-inch in any 20 feet and 1-inch maximum for entire length
Variation of distance between walls	1/4-inch in any 10 feet and 1-inch maximum for entire length and height
Variation in the sizes and locations of sleeves, floor openings and wall openings	+1/4-inch -1/2-inch
Variation in cross-sectional dimensions of columns and beams and in the thickness of slabs and walls	-1/4-inch. +1/2-inch.
Offset between adjacent panels of formwork facing material	1/2-inch (ACI 117 Class C finish).
Offset between adjacent panels of formwork facing material for exposed surfaces where appearance is of importance	1/8-inch (ACI 117 Class A finish).

- B. Tolerances are not cumulative.
- C. Where equipment is to be installed, comply with manufacturer's tolerances if more restrictive than above.
- D. Failure of the forms to produce the specified concrete surface and surface tolerance shall be grounds for rejection of the concrete work. Rejected work shall be repaired or replaced at no additional cost to the Owner.

3.02 PREPARATION:

- A. Clean form surfaces to be in contact with concrete or foreign material prior to installation. Tape, gasket, plug, and/or caulk joints, gaps, and apertures in forms so that the joint will remain watertight and withstand placing pressures without bulging outward or creating surface irregularities.
- B. Coat form surfaces in contact with concrete with a form release agent prior to form installation.
- C. Keep form coatings off steel reinforcement, items to be embedded, and previously placed concrete.

- D. Steel Forms: Apply form release agent to steel forms as soon as they are cleaned to prevent discoloration of concrete from rust.
- E. Form liners to be installed for architectural concrete finish shall be in accordance to the manufacturer recommendations.
- F. Void Forms: protect void forms from exposure to moisture and damage prior to installation. See manufacturer recommendations.

3.03 ERECTION AND INSTALLATION:

- A. Forms shall be constructed in accordance with ACI 347 to required dimensions, plumb, straight and mortar tight, and all joints and seams shall be made mortar-tight. Forms shall be substantial, properly braced, and tied together to maintain position and shape and to resist all pressures to which they may be subject. Unless otherwise indicated on the Contract Documents, formwork shall be constructed so that the concrete surfaces will conform to the tolerance limits in ACI 117 and herein specified.
- B. Provide means for holding adjacent edges and ends of form panels tight and in accurate alignment to prevent the formation of ridges, fins, offsets, or similar surface defects in the finished concrete. Forms shall be tight and shall prevent the loss of mortar and fines during placing and vibration of concrete.
- C. Provide exterior corners in concrete members with chamfers as specified.
- D. Provide means for removing forms without damage to the surface of finished concrete.
- E. Do not embed any form-tying device or part thereof other than metal in the concrete.
- F. Locate large end of taper tie on the "wet" side of the wall.
- G. Use only form or form-tying methods that do not cause spalling of the concrete upon form stripping or tie removal.
- H. Form surfaces of concrete members except where placement of the concrete against the ground is shown in the drawings or as indicated below. The dimensions of concrete members shown in the drawings apply to formed surfaces, except where otherwise indicated. Placement of concrete against the ground shall be limited to footings.
- I. Openings shall be of sufficient size to permit final alignment of pipes or other items without deflection or offsets of any kind. Allow space for packing where items pass through the wall to ensure watertightness. Provide openings with continuous keyways and water stops. Provide a slight flare to facilitate grouting and the escape of entrained air during grouting. Provide formed openings with additional reinforcement as shown in the typical structural details. Reinforcing shall be at least 2 inches clear from the opening surfaces and encased items.

- J. Set anchor bolts and other embedded items accurately before placing concrete and hold securely in position until the concrete is placed and set. Check special castings, channels, or other metal parts that are to be embedded in the concrete prior to and again after placing concrete. Check nailing blocks, plugs, and strips necessary for the attachment of trim, finish, and similar work prior to placing concrete.

3.04 PROTECTION:

- A. During installation, the forms shall not be used as a storage platform nor as a working platform until the forms have been permanently fastened in position.
- B. Protect void forms from moisture until concrete placement.

3.05 PIPES AND WALL CASTINGS CAST IN CONCRETE:

- A. Install wall spools, wall flanges, and wall anchors before placing concrete. Do not weld, tie, or otherwise connect the wall castings or anchors to the reinforcing steel.
- B. Support pipe and fabricated fittings to be encased in concrete on concrete piers or pedestals. Concrete supports shall transfer loads to firm foundations so that no settlement will occur during construction.
- C. Pipes or wall castings located below operating water level shall have water stop ring collars and shall be cast in place. Pipes fitted with thrust rings shall be cast in place.
- D. Refer to Pipe Penetration Details on Drawings.

3.06 REMOVAL OF FORMS:

- A. Forms shall be removed in accordance with ACI 347 recommendations without damage to concrete and in a manner to ensure complete safety to the structure. Forms, form ties and bracing shall not be removed without specific permission of the Contractor's Registered Professional Engineer.
- B. The following table indicates the minimum allowable time after the last cast concrete is placed before forms, shoring, or wall bracing may be removed; during which the air surrounding the concrete is above 50 degrees F.

Table 03 10 00-2	
Sides of footings and encasements	18 hours
Walls, vertical sides of beams, girders, columns, and similar members not supporting loads	48 hours
Slabs, beams, and girders	48 hours (forms only)
Shoring for slabs, beams, and girders	Until concrete strength reaches specified 28-day strength

Wall bracing	Until top support or roof slab concrete reaches specified 28-day strength
--------------	---

- C. Form removal and reshoring may be allowed with approval of the Engineer of Record. Removal times will be increased if the concrete temperature following placement is permitted to drop below 50 degrees F.
- D. Do not remove supports and reshore.

3.07 PATCHING OF TAPERED TIE HOLES:

- A. Clear tie hole of all loose debris with a taper tie void brush and flush debris from tie hole with air or water.
- B. Install elastic vinyl plug from larger tie hole end in accordance with manufacturer's instructions using an insertion tool as recommended by the manufacturer.
- C. Coat entire annular surface of the hole with epoxy bonding compound prior to filling with non-shrink, non-metallic patching mortar. Apply epoxy in accordance with manufacturer's instructions.
- D. Fill each side of hole with mortar. Apply mortar to the "wet" side of the wall first. Consolidate mortar solidly into the hole.

3.08 ALUMINUM SURFACES IN CONTACT WITH CONCRETE:

- A. Coat aluminum surfaces that will be in contact with concrete per Section 09 96 00.

3.09 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 15 00

CONCRETE JOINTS AND ACCESSORIES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section describes materials, testing, and installation of concrete joints and accessories as specified and as shown on contract drawings.

1.02 REFERENCES:

- A. ASTM International (ASTM):

1. TT-S-00230C: Sealing Compound: Elastomeric Type, Single Component

F. National Sanitation Foundation (NSF):

1. 61: Drinking Water System Components – Health Effect

1.03 SUBMITTALS:

A. Submit following shop drawings in accordance with Section 01 33 00.

1. Manufacturer's printed data and application instructions for specified materials and locations where materials are to be used.

2. Submit material one samples of each type of water stops.

3. Submit layouts for joints for approval by Engineer of Record (EOR).

4. Certification that materials used within the joint system are compatible with each other.

5. For potable water, provide certification that joint materials meet the requirements of ANSI/NSF 61 for contact with potable water.

1.04 QUALITY ASSURANCE:

A. Comply with requirements in Section 01 43 00 and as specified.

B. Do not add, relocate or omit joints without written permission from the Engineer.

- C. Reject material exceeding expiration date for use.
- D. Clean concrete surfaces to receive expansion joint compound in accordance with the printed instructions of the joint compound manufacturer.
- E. In structures to contain potable water, use joint materials that are ANSI/NSF 61 approved for contact with potable water.

1.05 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements in Section 01 61 00.
- B. Transport, handle and deliver materials to the job site in the manufacturer's sealed bags, unopened containers or banded pallets.
- C. Store materials off the ground on a platform or skids and protect with covers from snow, rain and ground splatter.
- D. Store expansion joint compounds in a dry location where they cannot freeze.
- E. Store plastic products under cover in a dry location, out of direct sunlight.

1.06 MANUFACTURER'S SERVICES:

- A. Prior to joint preparation for joints receiving sealant materials, require joint manufacturer's technical representative to demonstrate, on site, joint preparation, priming, and sealant materials application for the Contractor's personnel performing joint work.

PART 2 - PRODUCTS

2.01 PVC WATERSTOP:

- A. Waterstops shall be extruded from a PVC compound and shall be lock-rib, center-bulb, retro-fit or flat-strip type as indicated in the Contract Drawings. Water stop shall comply with Corps of Engineers Specification CRD-C-572.
- B. PVC waterstops for construction joints: flat ribbed type, 6 inches wide unless otherwise noted on the Contract Drawings, with a minimum thickness of 3/8-inches.

1. Products:

- a. Sika Greenstreak; Model 679
- b. BoMetals, Inc.; Model FR-638
- c. Vinylex; Model R638

- C. PVC waterstop for contraction joints shall be ribbed with a center bulb, 6 inches wide with a minimum thickness of 3/8-inches. The center bulb shall have an O.D. not less than 7/8-inches.
1. Products:
 - a. Sika Greenstreak; Model 732
 - b. BoMetals, Inc.; Model RCB-638LB
 - c. Vinylex; Model RB638H
- D. PVC waterstop for expansion joints shall be ribbed with a center bulb, 9 inches wide with a minimum thickness of 3/8-inches . The center bulb shall have an O.D. not less than 1-3/8 inches.
1. Products:
 - a. Sika Greenstreak; Model 738
 - b. BoMetals, Inc.; Model RCB-938VLB
 - c. Vinylex; Model RB938H
- E. PVC waterstops for sealing existing concrete structures and new concrete placement shall be retro-fit type, 6 inches wide and 3-3/16 inches height with a minimum thickness of 3/8-inches. Attach waterstop to existing concrete using 1/4-inch by 2-1/4 inch stainless steel sleeve expansion bolt with stainless steel batten bars.
1. Products:
 - a. Sika Greenstreak; Model 609
 - b. BoMetals, Inc.; Model RF-638
- F. Provide waterstops resistant to chemical action with Portland cement, alkalies, acids, and not affected by mildew or fungi. It shall show no effect when immersed for 10 days in a 10 percent solution of sulfuric or hydrochloric acid, saturated lime solution or salt water. Water stops shall be such that any cross section will be dense, homogeneous, and free from porosity and other imperfections. They shall be symmetrical in shape. When tested in accordance with Federal Standard No. 601, the material shall meet the requirements in Table 03 15 00-1.

Table 03 15 00-1	
Requirement	ASTM Spec.
Tensile strength, 2,000 psi	D638
Hardness, Shore durometer, 60-70	D2240
Elongation, ultimate, 280	D638

Table 03 15 00-1	
Requirement	ASTM Spec.
Water absorption, dry weight, maximum (48 hours) 0.32 percent	D570
Specific gravity, 1.3	D792
Stiffness in flexure, 920 psi	D747
Cold brittleness, -35 degrees F	D746
Tear resistance, 290 lbs/inch	D624

2.02 HYDROPHILIC RUBBER WATERSTOP:

- A. Provide a bentonite free rubber waterstop. Waterstop shall expand by a minimum of 80 percent of dry volume in the presence of water to form a watertight joint seal without damaging the concrete in which it is cast. Provide minimum concrete cover as recommended by the waterstop manufacturer.

1. Products:

- a. Adeka; Ultraseal MC-2010MN
- b. Sika; Hydrotite

2.03 ELASTOMERIC JOINT SEALANT:

- A. Federal Specification TT-S-00230C Type 1, Class A, single component, cold applied, pourable, polyurethane.

1. Products:

- a. The Euclid Chemical Company; Eucolastic 1
- b. Tremco; Vulkem 45SSL

2.04 JOINT SEALANT FOR CONCRETE STRUCTURES:

- A. Joint sealant shall be a multipart, gray, non-staining, non-sagging, gun grade polyurethane sealant, which cures at ambient temperature to a firm, flexible, resilient, tear-resistant rubber. Sealant shall comply with ASTM C920, Type M, Grade P, Class 25 for horizontal joints and Grade NS, Class 25 for vertical joints and be recommended by the manufacturer for continuous immersion in water. Troweling of sealants into joints will not be permitted. Sealant shall meet requirements in Table 03 15 00-2.

Table 03 15 00-2	
Characteristic or Parameter	Technical Requirements
Pot life	1 to 3 hours
Hardness	35 Shore A, +/- 5
Elongation	650 percent, ASTM D412
Tensile strength	200 psi, ASTM D412

Table 03 15 00-2	
Characteristic or Parameter	Technical Requirements
Peel strength on concrete	No adhesion loss at 25 pounds
Temperature service range	40 to 167 degrees F
Immersion in water	Continuous

B. Products:

1. Tremco; Vulkem 227 or Vulkem 245 (for Type M, Grade P, Class 25)
2. Sika Corporation; Sikaflex-2CNS (for Grade NS, Class 25), Sikaflex-2CSL

C. For submerged applications, use multi-component chemical resistant polysulfide sealant conforming to ASTM C920, Type M, Grade NS, Class 25.

1. BASF; Sonolastic Two-part
2. The Euclid Chemical Company; Tammsflex NS

2.05 EPOXY JOINT SEALANT:

A. 100 percent solids per ASTM D1259, two-part epoxy with an instantaneous Shore D hardness of 50 to 65 per ASTM D2240.

1. Metzger-McGuire Co.; MM80 or Edge Pro50
2. The Euclid Chemical Company; Euco700

2.06 BACKING ROD FOR EXPANSION JOINTS:

A. Provide an extruded closed-cell polyethylene foam rod. The rod shall be 1/4-inch larger in diameter than the joint width. Where possible, provide full-length sections for the joint; minimize splices.

1. Industrial Systems Department; Minicel backer rod
2. Hercules, Inc.; Plastic Products Group

2.07 BOND BREAKER TAPE:

A. Provide an adhesive-backed glazed butyl or polyethylene tape that will adhere to the premolded joint material or concrete surface. The tape shall be the same width as the joint. The tape shall be compatible with the sealant.

2.08 PREMOLDED JOINT FILLER FOR PAVEMENTS AND SLABS:

A. Joint filler shall be pre-formed, non-extruded type constructed of closed-cell neoprene conforming to ASTM D1752, Type I.

- B. Bituminous-type preformed expansion joint filler conforming to ASTM D994.
- 2.09 PREMOLDED JOINT FILLER FOR LIQUID CONTAINMENT STRUCTURES:
 - A. Self-expanding cork per ASTM D1752, Type III.
 - B. Sponge Rubber per ASTM D1752, Type I. Preformed, non-extruded type constructed of closed-cell neoprene.
- 2.10 BOND BREAKER FOR JOINT COMPOUNDS:
 - A. Provide polyethylene tape.

PART 3 - EXECUTION

- 3.01 PVC WATERSTOPS:
 - A. Heat splice at ends and intersections. Provide waterstops that provide a continuous, uninterrupted watertight diaphragm throughout the entire joint system below the high water level and below grade.
 - B. Construct forms for construction joints to prevent injury to water stops. Hold water stops securely in position in the construction joints by wire ties, continuous bars, and rings as shown on contract drawings. Install water stops in construction, contraction and expansion joints in liquid containment structures and shown on contract drawings.
 - C. Use factory-made crosses, tees and ells. Make field splices with a thermostatically controlled heating iron in conformance with the manufacturer's current recommendations. Allow at least 10 minutes before pulling or straining the new splice in any way. The finished splices shall provide a cross section that is dense and free of porosity with tensile strength of not less than 80 percent of the unspliced materials.
 - D. Provide waterstops with an integral fastening system consisting of grommets or pre-punched holes.
- 3.02 JOINTS:
 - A. Make joints only at locations shown on the contract drawings or as permitted by the Engineer. Any addition or relocation of construction joints proposed by the Contractor, must be submitted to the Engineer for written permission.
 - B. Relocate additional joints where they least impair strength of the member. In general, locate joints within the middle third of spans of slabs, beams and girders. If a beam intersects a girder at the joint, offset the joint a distance equal to twice the width of the member being connected. Locate joints in walls and columns at the underside of floors, slabs, beams or girders and at tops of footing or floor slabs.

- C. Cast structural slabs and beams monolithically without horizontal joints unless specifically indicated on the drawings.
- D. Do not use horizontal joints within foundation mats, base slabs, footings, pile caps, slabs on grade or elevated beams and slabs.
- E. Provide joints in concrete fills and toppings at the same location as the joints in the supporting concrete.
- F. Provide waterstops in all wall and slab joints in liquid containment structures and at locations shown on the contract Drawings. Do not provide metal waterstops unless permitted by Engineer.
- G. Construction Joints:
 - 1. Provide flat ribbed waterstops at construction joints where shown on contract drawings and specified herein.
 - 2. Allow 48 hours between pours of adjacent slabs.
 - 3. Where joint key ways are shown on contract drawings form keyways by beveled strips or boards placed at right angles to the formed face. Except where otherwise shown on contract drawings or specified, keyways shall be at least 1-1/2 inches in depth over at least 25 percent of the width of the section.
 - 4. After the pour has been completed to the construction joint and the concrete has hardened, thoroughly clean the entire surface of the joint of surface laitance, loose concrete, foreign material, and expose clean aggregate by sandblasting or waterblasting the surface of construction joints before placing the new concrete. Care shall be taken to protect any exposed joint material, such as PVC waterstops.
 - 5. In case of emergency, place additional construction joints. (An interval of 45 minutes between two consecutive batches of concrete shall constitute cause for an emergency construction joint.)
- H. Contraction Joints:
 - 1. Provide center-bulb waterstop at contraction joints where shown on contract drawings and specified herein.
 - 2. Where specifically noted on the Drawings, coat the concrete surface with a bond breaker prior to placing new concrete against it. Avoid coating reinforcement or waterstops with bond breaker at these locations.

3. Full Contraction Joints:

- a. Do not extend reinforcement or other embedded items bonded to the concrete (except dowels bonded on only one side of joint) continuously through any expansion joint.
- b. Where shown on contract drawings provide stainless steel expansion joint dowels. Secure tightly stainless steel expansion joints in forms with rigid ties. Orient dowels to permit joint movement.

4. Partial Contraction Joints:

- a. Extend every other bar of reinforcement steel through partial contraction joints or as indicated on the drawings.

I. Control Joints:

1. Do not use control joints in liquid containing structures unless specifically indicated on the Contract Drawings.
2. Locate control joints as shown on the Contract Drawings.
3. Form control joints with control joint inserts or sawcuts.
4. For sawcutting:
 - a. Using early entry saws, saw joints in slabs before the formation of uncontrolled cracking (i.e., cracking that occurs at locations other than construction, control, or contraction joints) and as soon as the concrete has hardened sufficiently to permit cutting without chipping, spalling, or tearing.
 - b. Fill saw cut to full depth with elastomeric joint sealant for joints not exposed to vehicular traffic. Fill joints to full depth with epoxy joint sealant for joints exposed to vehicular traffic.
5. Unless noted otherwise on the Contract Drawings, total reduction in concrete member thickness shall be at least 1/4 the member thickness.

3.03 INSTALLATION OF JOINT SEALANTS:

- A. Immediately before installing the joint sealant, clean the joint cavity by sandblasting or power wire brushing. Install bond breaker tape per manufacturer's instructions.
- B. Apply masking tape along the edges of the exposed surface of the exposed joints.
- C. Application criteria for the sealant materials, such as temperature and moisture requirements and primer cure time, shall be in accordance with the recommendations of the sealant manufacturer.

- D. After the joints have been prepared as described above, apply the joint sealant. Apply the primer, if required, and joint sealant only with the equipment and methods recommended by the joint sealant manufacturer.
- E. Trowel the joints smooth with a tuck pointing tool wiped with a solvent recommended by the sealant manufacturer.
- F. After the sealant has been applied, remove the masking tape and any sealant spillage.
- G. Sealants used in water retaining structures shall achieve final cure at least seven days before the structure is filled with water.

3.04 LEAKAGE TESTING:

- A. Test hydraulic structures in accordance with Section 03 05 10.

3.05 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 15 20

ANCHORAGE IN CONCRETE AND MASONRY

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide specified anchor bolts complete with washers and nuts as indicated and in compliance with Contract Documents. Unless otherwise specified, anchor bolts shall be hot-dip galvanized or Type 304 or 316 stainless steel.

1.02 SPECIAL INSPECTION:

- A. Special inspection of anchor bolts shall be performed by the Special Inspector and in accordance with the IBC and the Statement of Special Inspections.

C. International Building Code (IBC):

1. International Building Code, 2018 Edition

1.04 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. A copy of this specification section, with addenda updates, with each paragraph check marked to show specification compliance or marked to show deviations.
 1. Data indicating load capacities
 2. Chemical resistance
 3. Temperature limitations
 4. Installation instructions
 5. Manufacturer's data and catalogue numbers
- C. All post installed anchors, adhesive and expansion type anchors shall be listed with at least one of the following agencies, ICC & ICC (ES). Submit ICC evaluation reports for adhesive and expansion type anchors as specified in paragraph 3.02 of this specification section.

- D. Design calculation in accordance with paragraph 2.04 of this specification section.
- 1.05 QUALITY ASSURANCE:
 - A. Comply with the requirements specified in Section 01 43 00.
- 1.06 DELIVERY STORAGE AND HANDLING:
 - A. Comply with the requirements specified in Section 01 61 00.

PART 2 - PRODUCTS

- 2.01 GENERAL:
 - A. Anchor bolt holes in equipment support frames shall not exceed the bolt diameters by more than 25 percent, up to a limiting maximum oversizing of 1/4 inch. Minimum anchor bolt diameter shall be 1/2 inch. Anchor bolts shall be furnished with leveling nuts, the faces of which shall be tightened against flat surfaces as shown to not less than 10 percent of the bolt's safe tensile stress.
 - B. Tapered washers shall be provided where mating surface is not square with the nut.
 - C. Expansion, wedge or adhesive anchors set in holes drilled in the concrete after the concrete is placed will not be permitted in substitution for anchor bolts except where otherwise specified. Upset threads shall not be acceptable.
- 2.02 MATERIALS:
 - A. Anchor bolt materials shall be as specified in Table 03 15 20-1 unless otherwise specified on the contract drawings.
- 2.03 ANTI-SEIZE COMPOUND:
 - A. All stainless steel embedded bolts, expansion anchors, and adhesive anchors shall be assembled with a stainless steel anti-seize compound such as molycote.
- 2.04 DESIGN:
 - A. Anchor bolts for equipment frames and foundations shall be designed in accordance with the IBC. The contractor designed anchor bolts are differed approval, and the "stamped" calculations and drawing shall be submitted to the engineer of record for review of general compliance with design intent. Calculations and shop drawings shall be submitted with the equipment submittal in accordance with the Section 01 33 00 for all anchorage details. All calculations must be made and signed by a civil or structural engineer currently registered in the State of Utah.
 - B. All anchor bolts resisting seismic forces shall be design based on cracked concrete requirement in ACI 318.

Table 03 15 20-1 Anchor Bolt Materials	
Material	Specification
Stainless Steel Anchor Bolts	ASTM A193, Grade B8M Class 1, AISI 316 or ASTM A320, Grade B8M Class 1, AISI 316
Stainless Steel Threaded Rods at Adhesive Anchors	ASTM F593 CW1 (1/4 inches to 5/8 inches Rod) ASTM F593 CW2 (3/4 inches to 1 1/2 inches Rod)
Stainless Steel Nuts and Washers	ASTM A194 Grade 8M, SS316 Nuts with Type 316 SS Washers (ASTM F594 Group 2 Type 316 SS Nuts at Adhesive Anchors)
Carbon Steel Anchor Bolts	ASTM F1554 (Grade 36) – Hot Dip Galvanized unless noted otherwise
High-Strength Carbon Steel Anchor Bolts	ASTM F1554 (Grade 55 Weldable per Supplementary Requirement S1) – Hot Dip Galvanized unless noted otherwise
Carbon Steel Nuts and Washers	ASTM A563 and ASTM F844
Concrete Expansion Anchors	Stainless Steel HILTI “KWIK BOLT TZ”; SIMPSON STRONG-TIE STRONG BOLT 2
Concrete Adhesive Anchoring System	HILTI HIT-HY 200; SIMPSON STRONG-TIE SET-XP
Stainless Steel Headed Anchor Studs	ASTM A276 or A493; Nelson Stud Welding, Inc.
Carbon Steel Headed Anchor Studs	ASTM A108; Nelson Stud Welding, Inc.

PART 3 - EXECUTION

3.01 GENERAL:

- A. Fieldwork, including cutting and threading, shall not be permitted on galvanized items. Dissimilar metals shall be protected from galvanic corrosion by means of pressure tapes, coatings or isolators. Grouting of anchor bolts with non-shrink or epoxy grouts, where specified, shall be in accordance with Section 03 60 00. All stainless steel anchor bolts and fasteners shall be assembled with stainless steel anti-seize compound.

3.02 INSTALLATION:

A. Cast-In-Place Anchor Bolts:

1. Anchor bolts to be embedded in concrete shall be placed accurately and held in correct position while the concrete is placed. Only where specifically shown on the contract plans recesses or blockouts shall be formed in the concrete and the metalwork shall be grouted in place in accordance with Section 03 60 00 after strength is attained. The surfaces of metalwork in contact with concrete shall be thoroughly cleaned.
2. After anchor bolts have been embedded, their threads shall be protected by grease and the nuts run on.
3. For grouting of anchor bolts, use non-shrink, non-metallic grout as specified in Section 03 60 00.

B. Adhesive Anchors:

1. Use of adhesive or capsule anchors shall be as shown on the contract drawings and shall be subject to the following conditions:
 - a. Use shall be limited to locations where exposure, on an intermittent or continuous basis, to acid concentrations higher than 10 percent, to chlorine gas, or to machine or diesel oils, is extremely unlikely.
 - b. Use shall be limited to applications where exposure to fire or exposure to concrete or rod temperature above 120 degrees F is extremely unlikely. Overhead applications (such as pipe supports), because of the above concerns, shall be disallowed.
 - c. Anchor diameter and grade of steel shall be per contract documents or per equipment supplier specifications. Anchor shall be threaded or deformed full length of embedment and shall be free of rust, scale, grease, and oils.
 - d. Embedment depth shall be as specified on the drawings. Adhesive capsules of different diameters may be used to obtain proper volume for the embedment, but no more than two capsules per anchor may be used. When installing different diameter capsules in the same hole, the larger diameter capsule shall be installed first. Any extension or protrusion of the capsule from the hole is prohibited.
 - e. All installation recommendations by the anchor system manufacturer shall be followed carefully, including, but not limited to, maximum hole diameter, minimum embedment, and minimum edge distance.
 - f. Holes shall have rough surfaces, such as can be achieved using a rotary percussion drill.

- g. Holes shall be blown clean with compressed air and be free of dust or standing water prior to installation.
 - h. Anchor shall be left undisturbed and unloaded for full adhesive curing period.
 - i. Concrete temperature (not air temperature) shall be compatible with curing requirements of adhesives per adhesive manufacturer. Anchors shall not be placed in concrete below 25 degrees F.
- 2. The Contractor shall supply the Engineer with the current ICC evaluation report from the ICC Evaluation Services for the particular brand of adhesive anchors to be used.

3.03 EXPANSION ANCHORS:

- A. Use of expansion anchors shall be as shown on the contract drawings and shall be subject to Conditions c, e, f, g, and h specified in paragraph 3.02-B.1 of this specification section.

3.04 FIELD QUALITY CONTROL:

- A. Testing: 10 percent of each type and size of drilled-in anchor shall be proof loaded by the independent testing laboratory. Adhesive anchors and capsule anchors shall not be torque tested unless otherwise directed by the Engineer. If more than 10 percent of the tested anchors fail to achieve the specified torque or proof load within the limits as defined on the Drawings, all anchors of the same diameter and type as the failed anchor shall be tested, unless otherwise instructed by the Engineer.
 - 1. Tension testing should be performed in accordance with ASTM E488.
 - 2. Torque shall be applied with a calibrated torque wrench.
 - 3. Proof loads shall be applied with a calibrated hydraulic ram. Displacement of adhesive and capsule anchors at proof load shall not exceed $D/10$, where D is the nominal anchor diameter.

3.05 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 21 00
REINFORCEMENT BARS

PART 1 - GENERAL

1.01 DESCRIPTION:

A. Provide concrete reinforcement as indicated and in compliance with Contract Documents:

1. Section Includes:
 - a. Reinforcement bars
 - b. Welded wire reinforcement
 - c. Reinforcement accessories

1.02 REFERENCES:

A. ASTM International (ASTM):

1. A82: Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.
2. A184: Standard Specification for Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
3. A185: Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete.
4. A496: Standard Specification for Steel Wire, Deformed, for Concrete Reinforcement.
5. A497: Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete Reinforcement.
6. A615: Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
7. A616: Standard Specification for Rail-Steel Deformed and Plain Bars for Concrete Reinforcement.
8. A617: Standard Specification for Axle-Steel Deformed and Plain Bars for Concrete Reinforcement.
9. A706: Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.

10. A767: Standard Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement.
11. A775: Standard Specification for Epoxy-Coated Reinforcement Steel Bars.
12. A884: Standard Specification for Epoxy-Coated Steel Wire and Welded Wire Reinforcement.
13. A955: Standard Specification for Deformed and Plain Stainless Steel Bars for Concrete Reinforcement.
14. A1064: Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

B. American Concrete Institute (ACI):

1. 301: Standard Specification for Structural Concrete.
2. 315: Details and Detailing of Concrete Reinforcement.
3. 318: Building Code Requirements for Structural Concrete.
4. 350: Building Code Requirements for Environmental Engineering Concrete Structures
5. SP-66: ACI Detailing Manual.

C. Concrete Reinforcing Steel Institute (CRSI):

1. Manual of Standard Practice.
2. Placing Reinforcing Bars.

D. American Welding Society (AWS):

1. D1.4: Structural Welding Code, Reinforcement Steel.

E. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

1.03 SUBMITTALS:

A. Unless otherwise acceptable to the Engineer, each submittal shall include reinforcement only for the individual structure to which it pertains.

B. Shop Drawings:

1. Submit bar lists and placing drawings for all reinforced concrete and masonry structures in accordance with Section 01 33 00.

2. Detail reinforcement in conformance with ACI SP-66.
 3. Clearly indicate bar sizes, spacings, locations and quantities of reinforcement steel and wire reinforcement, bending schedules, and supporting and spacing devices. Show joints, with applicable joint reinforcement.
 4. Coordinate bar splicing and placement with Contractor's concrete placing schedule and joint locations. Do not add or delete joints without permission from the Engineer.
 5. Show wall reinforcement in elevation.
 6. Show slab reinforcement in plan view.
 7. Show location and size of all penetrations greater than 12-inches in diameter or least dimension of the opening with the corresponding added reinforcement around the penetrations.
 8. Clearly show marking for each reinforcement item.
 9. Indicate locations of reinforcement bar cut-offs, splices and development lengths.
- C. Submit Certificates: Submit AWS qualification certificates for welders employed on the Work for the appropriate electrode and class of material. Submit certified copies of mill test reports of reinforcement analysis for each shipment of reinforcement with specific lots in shipments identified.
- D. Chemical composition of reinforcement steel: Ladle analysis indicating percentage of carbon, phosphorous, manganese and sulfur present in steel.
- E. Where mechanical couplers are required or permitted to be used to splice reinforcement steel, submit Manufacturer's literature that contains instructions and recommendations for installation for each type of coupler used; certified test reports that verify the load capacity of each type and size of coupler used; and Shop Drawings that show the location of each coupler with details of how they are to be installed in the formwork.
- 1.04 QUALITY ASSURANCE:
- A. Comply with requirements in Section 01 43 00 and as specified.
- B. Do not fabricate reinforcement until shop and placement drawings have been reviewed and accepted by the Engineer.
- C. Perform concrete reinforcement work in accordance with CRSI Manual of Practice, ACI 301, ACI SP-66 and ACI 318.
- D. An independent testing agency shall be retained by the Owner to visually inspect and test reinforcing steel welds in accordance with AWS D1.4.

1.05 QUALIFICATIONS:

- A. Welders: AWS qualified within previous 12 months.

1.06 INSPECTION AND TESTING:

- A. In no case shall any reinforcement steel be covered with concrete until the installation of the reinforcement has been observed by the Engineer and the Engineer's authorization to proceed with the concreting has been obtained. The Engineer shall be given 24 hours minimum prior notice of the readiness of placed reinforcement for observation. The forms shall be kept open until the Engineer has finished observations of the reinforcement steel.

1.07 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements in Section 01 61 00.
- B. Ship and store reinforcement steel with bars of the same size and shape fastened in bundles with durable tags, marked in a legible manner with waterproof markings showing the same "mark" designations as those shown on the submitted placing drawings.
- C. Store reinforcement steel off the ground, protected from standing water and kept free from free from mill scale, rust, dirt, grease or other foreign matter.

PART 2 - PRODUCTS

2.01 REINFORCEMENT STEEL:

- A. Reinforcement Steel: ASTM A615, 60 ksi yield grade; deformed billet steel bars, unfinished.
- B. Reinforcement Steel: ASTM A706, 60 ksi yield strength; deformed low-alloy steel bars, unfinished.
- C. Spiral reinforcement shall be cold-drawn steel wire conforming to the requirements of ASTM A82.
- D. Welded Wire Reinforcement:
 - 1. Provide welded wire reinforcement conforming to ASTM A185 in flat sheets.
 - 2. Provide deformed welded wire reinforcement conforming to ASTM A497 in flat sheets.
 - 3. Provide support bars and reinforcement bar supports as specified herein to obtain the concrete cover indicated.

4. Provide welded wire reinforcement heavier than W2.9 in flat sheets.

2.02 ACCESSORY MATERIALS:

- A. Tie Wire: Minimum 16 gage annealed type.
- B. Chairs, Bolsters, Bar Supports, and Spacers: Sized and shaped for strength and support of reinforcement during concrete placement.
- C. Special Chairs, Bolsters, Bar Supports, and Spacers Adjacent to Weather Exposed Concrete Surfaces: Plastic type; size and shape.
- D. Provide 3-inch by 3-inch plain precast concrete blocks, precast concrete doweled blocks or concrete brick for support of bottom reinforcement in foundation mats, base slabs, footings, pile caps, grade beams and slabs on grade. Provide block thickness to produce concrete cover of reinforcement as indicated.
- E. Mechanical Couplers:
 1. Reinforcement Tension Bar Splicers:
 - a. Manufacturers: Cadweld or Lenton rebar splicers by Erico Products, Inc. and Dayton Barsplice, Inc.
 - b. Manufacturers: DB-SAE splicer system by Richmond Screw Anchor Company, Inc., C2D rebar flange coupler by Williams Form Engineering Corporation (special order required) and Lenton Form Saver by Erico Products, Inc.
 - c. Develop minimum 125 percent of yield capacity of bars spliced in tension when tested as assembly in accordance with ASTM A370 and A615.
- F. Reinforcement Compression Bar Splicers:
 1. Manufacturers:
 - a. G-Loc splicers by Gateway Building Products Division
 - b. Speed-Sleeve by Erico Products, Inc.
- G. Provide epoxy for grouting reinforcement bars specifically formulated for such application for the moisture condition, application temperature, and orientation of the hole to be filled.
- H. Epoxy grout shall meet the requirements in Section 03 60 00.

2.03 FABRICATION:

- A. Fabricate concrete reinforcement in accordance with CRSI Manual of Standard Practice.

- B. Weld reinforcement in accordance with AWS D1.4 only when permitted by the Engineer.
- C. Locate reinforcement splices not indicated on Drawings, at point of minimum stress. Review location of splices with Engineer.
- D. Cold bend bars. Do not straighten or rebend bars.
- E. Do not heat reinforcement steel to bend or straighten.
- F. Bend bars around a revolving collar having a diameter of not less than that recommended by the ACI 318.
- G. Cut bar ends that are to be butt spliced or threaded by saw cutting. Terminate such ends in flat surfaces within 1-1/2 degrees of a right angle to the axis of the bar.

PART 3 - EXECUTION

3.01 INSTALLATION:

- A. Place, support and secure reinforcement against displacement. Do not deviate from required position. Place reinforcement a minimum of 2 inches clear of any metal pipe or fittings.
- B. Position dowels accurately. Rigidly support, align and securely tie dowels normal to the concrete surface before concrete placement. Setting dowels into wet concrete is prohibited.
- C. Position wall dowels projecting from base slabs on grade with templates or guides held in place above the concrete placement line. Position the templates to obtain the required clearance between the dowels and the face of the walls.
- D. Bars additional to those indicated that may be found necessary or desirable by the Contractor for the purpose of securing reinforcement in position shall be provided by the Contractor at no additional cost to the Owner.
- E. Do not extend continuous reinforcement or other fixed metal items through expansion joints. Provide 2 inches clearance from each face of expansion joint.
- F. Provide additional reinforcement bars to support top reinforcement in slabs. Do not shift reinforcement bars from positions in upper layers to positions in lower layers as a substitute for additional support bars.
- G. Support reinforcement steel in accordance with CRSI "Placing Reinforcement Bars" with maximum spacing of 4 feet-0 inches.

- H. Tie reinforcement steel at intersections in accordance with CRSI “Placing Reinforcement Bars”:
1. Maximum tie spacing for footings, walls and columns: every third intersection or 3 feet-0 inches.
 2. Maximum spacing for slabs and other work: every fourth intersection or 3 feet-0 inches.
 3. Tie a minimum of 25 percent of all intersecting bars in foundation mats, base slabs, footings, pile caps, slabs on grade and elevated slabs.
 4. Secure all dowels in place before placing concrete.
 5. Tie wires shall be bent away from the forms and from finished concrete surfaces in order to provide the required concrete coverage.
- I. Locate reinforcement to avoid interference with items drilled in later, such as concrete anchors as identified on the Contract Drawings.
- J. Extend welded wire reinforcement to within 2 inches of edges of slab or section. Lap sheets at least 12 inches or two wire spaces, whichever is greater, at ends and edges and wire tightly together. Stagger end laps.
- K. Unless shown otherwise on Drawings, place welded wire reinforcement in slabs on grade between the upper third point and mid-point of slab. Placing welded wire reinforcement on the subgrade and pulling it up during concrete placement is not permitted.
- L. Support welded wire reinforcement placed over the ground on wired concrete blocks (dobies) spaced not more than 3 feet on centers in any direction.
- M. Support welded wire reinforcement placed over horizontal forms on slab bolsters spaced not more than 30 inches on center.
- N. Mechanical coupler systems may be substituted for dowels at Contractor’s option when permitted by Engineer.
- O. Provide additional reinforcement bars to support ties and stirrups in beams where top reinforcement is not continuous.
- P. Securely support and tie reinforcement steel to prevent movement during concrete placement.
- Q. Ship, handle and place stainless steel reinforcement bars such that they do not come into direct contact with carbon steel. Use stainless steel or non-metallic tie wires and bar chairs. Use nylon, PVC, or polyethylene spacers where stainless steel bar must be attached to carbon steel, to maintain a minimum 1-inch clearance.

- R. Unless otherwise shown on the Drawings or permitted by the Engineer, do not bend reinforcement bars that project from in-place concrete.
- S. Do not weld reinforcement steel bars (including tack welded) either during fabrication or erection unless specifically shown on the Drawings or specified herein, or unless prior written permission has been obtained from the Engineer. Immediately remove bars that have been welded, including tack welds, without such permission from the work. Comply with AWS D1.4 when welding of reinforcement is or called for.
- T. Reinforcement steel interfering with the location of other reinforcement steel, conduits or embedded items may be moved within the specified tolerances or one bar diameter, whichever is greater. Make greater displacement of bars to avoid interference only with the permission of the Engineer. Do not cut reinforcement to install inserts, conduits, mechanical openings or other items without the prior permission from the Engineer.
- U. Reinforcement shall be clean and free from loose mill scale, dirt, grease, oil, form release agent, dried concrete or any material reducing bond with concrete.
- V. Setting bars and welded wire reinforcement on layers of fresh concrete as the work progresses or adjusting reinforcement during the placement of concrete is prohibited.
- W. Provide and place safety caps on all exposed ends of vertical reinforcement that pose a danger to injury or life safety.

3.02 CONCRETE COVER OVER REINFORCEMENT BARS:

- A. Conform to ACI 318 for concrete cover over reinforcement.

3.03 REINFORCEMENT AROUND OPENINGS AND PENETRATIONS:

- A. Accommodate placement of formed openings and penetrations.
- B. Unless specific additional reinforcement around openings and penetrations is shown on the Drawings, provide additional reinforcement steel on each side of opening or penetration equivalent to one half of the cross-sectional area of the reinforcement steel interrupted by an opening or penetration. The bars shall have sufficient length to be fully developed at each end beyond the opening or penetration.
- C. Refer to details on Drawings for additional diagonal bars around openings or penetrations and bar extension length on each side of openings or penetrations.
- D. Where welded wire fabric is used provide extra reinforcement using fabric or deformed bars around opening or penetration.

3.04 SPLICING OF REINFORCEMENT:

- A. Splices may be used to provide continuity due to bar length limitations. Minimum length of bars spliced for this reason is 30 feet. Do not splice reinforcement that is detailed to be continuous in the Drawings.
- B. Stagger bar splices.
- C. Provide tension lap splices at all laps in compliance with ACI 318. Use Class B splices at all locations, unless otherwise noted.
- D. Except as otherwise indicated on the Drawings, stagger splices in circumferential reinforcement in circular walls using Class B tension splices. Do not splice adjacent bars within the required lap length.
- E. Make reinforcement continuous through construction joints.
- F. Reinforcement may be spliced at construction joints provided that entire lap is placed within only one concrete placement.

3.05 ACCESSORIES:

- A. Provide accessories such as chairs, chair bars and the like in sufficient quantities and strength to adequately support the reinforcement and prevent its displacement during the erection of the reinforcement and the placement of concrete.
- B. Use precast concrete blocks where the reinforcement steel is to be supported over soil.
- C. Provide stainless steel bar supports or steel chairs with plastic tips where the chairs are set on forms for a concrete surface that will be exposed to weather, high humidity or liquid (including bottom of slabs over liquid containing areas) unless otherwise noted on contract documents.
- D. Do not use metal chairs, ferrous clips, nails, etc. that extend to the surfaces of the concrete. Do not use stones, brick or wood block supports.
- E. Do not use alternate methods of supporting top steel in slabs, such as steel channels supported on the bottom steel or vertical reinforcement steel fastened to the bottom and top mats unless permitted by the Engineer.
- F. Mechanical Couplers:
 - 1. Couplers that are located at a joint face can be a type that can be set either flush or recessed from the face as indicated.
 - 2. Seal couplers during concrete placement to completely eliminate concrete or cement paste from entering.

3. Recess couplers intended for future connections a minimum of 1/2 inch from the concrete surface. After the concrete is placed, plug the coupler with plastic plugs that have an O-ring seal and the recess filled with sealant to prevent any contact with water or other corrosive materials.
4. Unless indicated otherwise, provide mechanical coupler spacing and size to match the spacing and size of the reinforcement indicated for the adjacent section.

3.06 FIELD QUALITY CONTROL:

- A. Remove reinforcement with kinks or bends not shown on shop or placement drawings. Remove such reinforcement from job site and replace with new fabricated steel. Do not field bend reinforcement unless reinforcement is indicated or specified to be field bent.
- B. Protect reinforcement from rusting, deforming, bending, kinking and other injury. Clean in-place reinforcement that has rusted or been splattered with concrete using sand or water blasting prior to incorporation into the Work.

3.07 CONTRACT CLOSEOUT:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 30 00
CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide cast-in-place concrete as indicated and in compliance with Contract Documents.

1.03 SUBMITTALS:

A. Submit the following shop drawings in accordance with Section 01 33 00.

B. Product Data:

1. Manufacturer's specifications and instructions including Material Safety Data Sheets (MSDS) for admixtures and curing materials. Manufacturer's certification of compatibility of all admixtures.

C. Shop Drawings:

1. Provide certificate that cement used complies with ASTM C595 and these specifications.
2. Provide certificates that aggregates comply with ASTM C33 and contain less than 1 percent asbestos by weight or volume. Submit gradation analysis with concrete mix designs.
3. Provide certificate of compliance with these specifications from the manufacturer of the concrete admixtures.
4. For each formulation of concrete proposed, prepare mix designs in accordance with ACI 318, Chapters 4 and 5, except as modified herein. Submit mix design for review by the Engineer at least 15 days before placing of any concrete.
5. For potable water service, provide certification that materials used in concrete, or the curing and repair of concrete, meet the requirements of ANSI/NSF 61 for contact with potable water.
6. Proposed special procedures for protection and curing of concrete under hot and cold weather conditions.
7. Proposed special procedures for protection of concrete under wet weather placement conditions.
8. ACI 301, Section 8 applies for all concrete elements thicker than 48 inches.

9. Provide in mix designs gradation of aggregate. Gradation shall be preformed within 4 months prior to submittal.
 - a. Gradation:
 - (1) List gradings and percent passing through each sieve for coarse, fine, and combined aggregates.
 - (2) Testing shall be performed within 4 months prior to submittal.
 - b. Provide evidence not more than 120 days old showing compliance with the requirements of Article Materials, Paragraph B, including the following:
 - (1) Deleterious substances in fine aggregate per ASTM C33, Table 2.
 - (2) Deleterious substances in coarse aggregate per ASTM C33, Table 4.
 - c. Alkali Aggregate Reactivity: Aggregate shall be classified as non-potentially reactive in accordance with ASTM C33, Table 3 as tested using methods from ASTM C227. Include documentation of test results per applicable standards.
 10. Admixtures: Manufacturer's catalog cut sheets and product data sheets for each admixture used in proposed mix designs.
- D. Informational Submittals:
1. Preinstallation Conference minutes.
 2. Statement of Qualification:
 - a. Batch Plant: Certification under National Ready Mix Concrete Association (NRMCA) Program for Certification of Ready-Mixed Concrete Production Facilities or approved equal.
 - b. Mix designer. NRMCA Concrete Technologist Level 2 or licensed professional engineer.
 - c. Testing agency credentials according to ASTM C1077 and ASTM E329
 - (1) Field tester(s): ACI Concrete Field Testing Technician, Grade 1
 - (2) Laboratory staff: ACI Concrete Strength Testing Technician and Concrete Laboratory Testing Technician, Grade I with supervisor being Grade II.
 3. Field test reports.
 4. Recorded temperature data from concrete placement where specified.

5. Concrete Delivery Tickets:

- a. For each batch of concrete before unloading at Site.
- b. In accordance with ASTM C94, including requirements 14.2.1. through 14.2.10.
- c. Indicate amount of mixing water withheld and maximum amount that may be permitted to be added at Site.

E. Test and Evaluation Reports:

1. Provide results of drying shrinkage tests from trial concrete mixes by the Contractor's testing laboratory firm.

F. Manufacturer's Instructions:

1. Provide epoxy bonding compound manufacturer's specific instructions for use. Provide manufacturer's data sheets as to suitability of product to meet job requirements with regard to surface, pot life, set time, vertical or horizontal application, and forming restrictions.

G. Shrink Test Results:

1. Provide shrink test results for Class A2 concrete mixes in accordance with ASTM C157 as modified herein

H. Field Quality Control Submittals:

1. Provide delivery tickets for ready-mix concrete or weighmasters certificate per ASTM C94, including weights of cement and each size aggregate and amount of water added at the plant and record of pours. Record the amount of water added on the job on the delivery ticket. Water added at the plant shall account for moisture in both coarse and fine aggregate.

1.04 SHRINKAGE TESTS:

- A. The testing laboratory shall perform drying shrinkage tests for the trial batches as specified herein.
- B. Fabricate, cure, dry, and measure specimens in accordance with ASTM C157 modified as follows:
 1. Remove specimens from molds at an age of 23 hours plus or minus 1 hour after trial batching, place immediately in water at 70 degrees F, plus or minus 3 degrees F for at least 30 minutes, measure within 30 minutes thereafter to determine original length, and then submerge in saturated lime water at 73 degrees F plus or minus 3 degrees F. At age seven days, make measurement to determine expansion, expressed as a percentage of

original length. This length at age seven days shall be the base length for drying shrinkage calculations (zero days' drying age).

2. Then, store specimens immediately in a humidity-controlled room maintained at 73 degrees F, plus or minus 3 degrees F and 50 percent, plus or minus 4 percent relative humidity for the remainder of the test. Make and report measurements to determine shrinkage expressed as percentage of base length separately for 7, 14, 21, and 28 days of drying after 7 days of moist curing.
 - C. Compute the drying shrinkage deformation of each specimen as the difference between the base length (at zero days' drying age) and the length after drying at each test age. Compute the average drying shrinkage deformation of the specimens to the nearest 0.0001 inch at each test age. If the drying shrinkage of any specimen departs from the average of that test age by more than 0.0004 inch, disregard the results obtained from that specimen. Report results of the shrinkage test to the nearest 0.001 percent of shrinkage. Take compression test specimens in each case from the same concrete used for preparing drying shrinkage specimens. These tests shall be considered a part of the normal compression tests for the project.
 - D. The maximum concrete shrinkage for specimens cast in the laboratory from the trial batch, as measured at 21-day drying age or at 28-day drying age, shall be 0.036 or 0.042 percent, respectively. Use a mix design for construction that has first met the trial batch shrinkage requirements.
 - E. If the trial batch specimens do not meet the shrinkage requirements, revise the mix design and/or materials and retest.
- 1.05 QUALITY ASSURANCE:
- A. Provide in accordance with Section 01 43 00.
 - B. Unless otherwise indicated, materials, workmanship, and practices shall conform to the following standards:
 1. Local building codes.
 2. ACI 301, "Structural Concrete for Buildings".
 3. ACI 318, "Building Code Requirements for Reinforced Concrete".
 4. ACI 350, "Code Requirements For Environmental Engineering Concrete Structures".
 5. ANSI/NSF 61, "Drinking Water System Components – Health Effects."
 - C. Where provisions of pertinent codes and standards conflict with this specification, the more stringent provisions govern.

- D. Concrete not meeting the minimum specified 28-day design strength shall be cause for rejection and removal from the work.
- E. Perform concrete work in conformance with ACI 301 unless otherwise specified.
- F. Do not use admixtures, including calcium chloride, which will cause accelerated setting of cement in concrete.
- G. Do not place concrete until design mix, material tests and trial concrete batch mix compression test results are accepted by the Engineer.
- H. The Owner shall employ a testing laboratory to test conformity of materials to specifications. Concrete testing shall be performed by an ACI Concrete Field Technician, Grade I or equivalent. Allow free access to obtain test samples.
- I. Methods of Sampling and Testing:
 - 1. Fresh Concrete Sampling: ASTM C172
 - 2. Specimen Preparation: ASTM C31
 - 3. Compressive Strength: ASTM C39
 - 4. Air Content: ASTM C231
 - 5. Slump: ASTM C143
 - 6. Temperature: ASTM C1064
 - 7. Unit Weight: ASTM C138
 - 8. Obtaining Drilled Cores: ASTM C42
 - 9. Drying Shrinkage: ASTM C157
- J. Acceptance of Structure: Acceptance of completed concrete work requires conformance with dimensional tolerances, appearance and strength as indicated or specified.
- K. Hot weather concrete to conform to ACI 305R and as specified herein.
- L. Cold weather concrete to conform to ACI 306R and as specified herein.
- M. Reject concrete delivered to job site that exceeds the time limit or temperature limitations specified. Refer to paragraph 3.02.A for limits.
- N. Do not place concrete in water or on frozen or uncompacted ground.
- O. Workability:

1. Concrete shall be of such consistency and composition that it can be worked readily into the forms and around the reinforcement without excessive vibrating and without permitting the materials to segregate or free water to collect on the surface.
 2. Adjust the proportions to secure a plastic, cohesive mixture, and one that is within the specified slump range.
 3. To avoid unnecessary changes in consistency, obtain the aggregate from a source with uniform quality, moisture content, and grading. Handle materials to minimize variations in moisture content that would interfere with production of concrete of the established degree of uniformity and slump.
- 1.06 DELIVERY, STORAGE, AND HANDLING:
- A. Provide in conformance with Section 01 66 10 and as specified herein.
 - B. Deliver concrete to discharge locations in watertight agitator or mixer trucks without altering the specified properties of water-cement ratio, slump, air entrainment, temperature and homogeneity.
 - C. Reject concrete not conforming to specification, unsuitable for placement, exceeding the time or temperature limitations or not having a complete delivery batch ticket.
- 1.07 SITE CONDITIONS:
- A. Do not place concrete until conditions and facilities for making and curing control test specimens are in compliance with ASTM C31 and as specified herein.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Cement:
 1. Hydraulic Blended Cement, ASTM C595, Type 1L.
 2. Use only one brand of cement in any individual structure. Use no cement that has become damaged, partially set, lumpy, or caked. Reject the entire contents of the sack or container that contains such cement. Use no salvaged or reclaimed cement.
 3. Maximum tricalcium aluminate shall not exceed 8 percent. The maximum percent alkalis shall not exceed 0.6 percent.
- B. Fly Ash:
 1. Provide fly ash conforming to the following requirements:

- a. Class F fly ash conforming to ASTM C618 for chemical and physical properties.
- b. Supplemental requirements in percent:
 - (1) Maximum carbon content: 3 percent
 - (2) Maximum sulfur trioxide (SO₃) content: 4 percent
 - (3) Maximum loss on ignition: 3 percent
 - (4) Maximum water requirement (as a percent of control): 100 percent
 - (5) Fineness, maximum retained on No. 325 sieve: 25 percent
- 2. Fly ash used in concrete that contacts potable water shall be certified as meeting the requirements of ANSI/NSF 61.
- C. Ground Granulated Blast Furnace Slag (GGBF):
 - 1. GGBF, when used, shall meet the requirements of ASTM C989, Grade 100 or better.
 - 2. GGBF used in concrete that contacts potable water shall be certified as meeting the requirements of ANSI/NSF 61.
- D. Silica Fume:
 - 1. The use of silica fume and other natural pozzolans is not permitted.
- E. Fine Aggregates:
 - 1. Clean, sharp, natural sand conforming to requirements of ASTM C33 with a fineness modulus between 2.50 and 3.0.
- F. Coarse Aggregate:
 - 1. Well graded crushed stone, natural rock conforming to requirements of ASTM C33, and shall contain less than 1 percent asbestos by weight or volume.
 - 2. Limit deleterious substances in accordance with ASTM C33, Table 3, Severe Weathering Regions, limit clay lumps not to exceed 1.0 percent by weight, and limit loss when tested for soundness using magnesium sulfate to 12 percent.
- G. Water and Ice:
 - 1. Use water and ice free from injurious amounts of oil, acid, alkali, salt, organic matter or other deleterious substances and conforms to requirements of ASTM C94.

2. Water shall not contain more than 500 mg/L of chlorides nor more than 500 mg/L of sulfate.
 3. Heat or cool water to obtain concrete temperatures specified, and in conformance with ACI 305R and ACI 306R.
- H. Color Additive for Exterior Electrical Duct Encasement:
1. For exterior electrical duct concrete encasements, use a red color additive for identification purposes.
- I. Concrete Admixtures:
1. Maintain compressive strength and maximum water-cement ratios specified in Table 03 30 00-1 when using admixtures. Include admixtures in solution form in the water-cement ratio calculations.
 2. Do not use any admixture that contains chlorides or other corrosive elements in any concrete. Admixtures shall be nontoxic after 30 days.
 3. Use admixtures in compliance with the manufacturer's printed instructions. The manufacturer shall certify the compatibility of multiple admixtures used in the same mix.
 4. Do not use admixtures in greater dosages than recommended by manufacturer.
 5. Air Entrainment:
 - a. Class A concrete; an air-entraining admixture conforming to ASTM C260.
 - b. Products:
 - (1) BASF Corporation; MasterAir AE 90.
 - (2) Sika Corporation; AER-C.
 - c. Adjust the admixture content to accommodate fly ash or pozzolan requirements, and other admixtures when used, in order to obtain the specified air content.
 6. Water Reducing:
 - a. Class A concrete; a water-reducing admixture conforming to ASTM C494, Type A and compatible with the air-entraining admixtures. The amount of admixture added to the concrete shall be in accordance with the manufacturer's recommendations.
 - b. Products:

- (1) BASF Corporation; Polyheed Series
 - (2) Sika Corporation, Plastocrete 161
 - (3) WR Grace & Co.; Darex II-AEA
 - (4) Euclid Chemical Company; Eucon NW
7. Water Reducing and Retarding:
 - a. Class A concrete; a water-reducing and retarding admixture conforming to ASTM C494, Type D and compatible with the air-entraining admixtures. The amount of admixture added to the concrete shall be in accordance with the manufacturer's recommendations.
 - b. Products:
 - (1) BASF Corporation; Pozzolith Series
 - (2) Sika Corporation; Plastiment
 - (3) Euclid Chemical company; Eucon WR-91
8. Mid-Range Water-Reducing Admixture (Superplasticizer):
 - a. Class A concrete; a water-reducing and retarding admixture conforming to ASTM C494, Type A and F and compatible with the air-entraining admixtures. The amount of admixture added to the concrete shall be in accordance with the manufacturer's recommendations.
 - b. Products:
 - (1) BASF Corporation; MasterPolyheed 900
 - (2) Sika Corporation; SikaPlast 200
 - (3) Euclid Chemical company; Eucon MR
9. High-Range Water-Reducing Admixture (Superplasticizer):
 - a. Class A concrete; a High-Range water-reducing admixture conforming to ASTM C494, Type F or ASTM C1017, Type I.
 - b. Products:
 - (1) BASF Corporation; Glenium Series
 - (2) WR Grace & Co.; Daracem 19

(3) Euclid Chemical Company; Eucon SP

10. Shrinkage Reducing Admixture:

- a. Class A concrete; shrinkage-reducing admixture is permitted to be used in the mix to meet shrinkage limitations provided that specified strength are met and there is no reduction in sulfate resistance and no increase in permeability. Quantity of shrinkage-reducing admixture used in the mix shall be added to the quantity of water for purposes of determining the water/cementitious materials ratio.
- b. Products:
 - (1) BASF Corporation; MasterLife SRA 20
 - (2) GCP Applied Technologies; Eclipse
 - (3) The Euclid Chemical Company; Eucon SRA

J. Epoxy Bonding Agent:

- 1. Epoxy bonding agent shall conform to ASTM C881 Type I, II, IV or V; Grade 2 for epoxy resin adhesives. The class of epoxy bonding agent shall be suitable for ambient and substrate temperatures.
- 2. Products:
 - a. Sika Corporation; Sikadur 32, Hi-Mod
 - b. Sika Corporation; Sikadur 32, Hi-Mod LPL
 - c. BASF Corporation, MasterEmaco ADH 326

K. Curing Compound:

- 1. Liquid form, which will form impervious membrane over, exposed surface of concrete when applied to fresh concrete by means of spray gun. Compound shall not inhibit future bond of floor covering or concrete floor treatment. Use Type I-D compound with red fugitive dye, Class B, having 18 percent minimum solids conforming to ASTM C309.
- 2. Provide a copy of manufacturer's certification that the curing compound meets the requirements of ANSI/NSF 61 for concrete surfaces that will be in contact with potable water.
- 3. Products:
 - a. BASF Building Systems; MasterKure 1315WB.

- b. The Euclid Chemical Company; Super Diamond Clear VOX.
- c. W. R. Meadows, Inc.; VOCOMP-30.
- d. Dayton Superior Corp; Cure and Seal 30 percent.

L. Burlap Mats:

- 1. Conform to AASHTO M182.

M. Sisal-Kraft Paper and Polyethylene Sheets for Curing:

- 1. Conform to ASTM C171.

N. Crystalline Waterproofing:

- 1. Provide crystalline waterproofing in all foundation, slabs, and all concrete of water retaining structures; wells, well roof slabs, and below grade structures.
- 2. Cementitious crystalline waterproofing admixture shall be added to concrete at time of batching.
- 3. Products:
 - a. Xypex; Admix C-1000NF, Admix C-2000NF, or Admix C-500

2.02 MIXES:

A. Conform to ASTM C94, except as modified by these specifications.

B. Air content, for Class A shall be as determined by ASTM C231:

- 1. 5 +/- 1-1/2 percent for concrete using 1-1/2 inch maximum aggregate size.
- 2. 6 +/- 1-1/2 percent for concrete using 1-inch maximum aggregate size.
- 3. 6 +/- 1-1/2 percent for concrete using 3/4-inch maximum aggregate size.
- 4. 7 +/- 1-1/2 percent for concrete using 1/2 -inch maximum aggregate size.

C. Provide concrete with the following compressive strengths at 28 days and proportion it for strength and quality requirements in accordance with ACI 318. The resulting mix shall not conflict with limiting values specified in Table 03 30 00-1.

Table 03 30 00-1				
Class	Type of Work	28-Day Minimum Compressive Strength (psi)	Minimum Cementitious Content (lbs per C.Y.)	Maximum Water/ Cement Ratio
A	Concrete for all process and liquid containing structures, concrete grout and concrete not otherwise specified.	4,500	560	0.42
B	Site Pavement, Sidewalks and Curbs	3,000	420	0.45
B-1	Concrete topping over precast and metal deck.	3,000	420	0.45
C	Concrete fill below structure foundations, pipe encasement, miscellaneous unreinforced concrete.	2,000	188	0.60
E	Precast concrete	5,000	560	0.40

D. Measure slump in accordance with ASTM C143:

1. Proportion and produce the concrete to have a maximum slump of 4 inches. Proportion and produce the concrete for filling driven pipe piles to have a slump of 6 inches. A tolerance of up to 1 inch above the indicated maximum is allowed for individual batches provided the average for all batches or the most recent 10 batches tested, whichever is fewer, does not exceed the maximum limit. Concrete of lower than usual slump may be used provided it is properly placed and consolidated.
2. Mixes containing water reducers shall have a maximum slump of 6 inches after the addition of a mid-range water reducer and maximum slump of 8 inches after the addition of a high range water reducer.
3. Mixes containing water reducers shall have a maximum slump of 6 inches after the addition of a mid-range water reducer, and Class A-1 concrete shall have a maximum slump of 9 inches after the addition of a high range water reducer.

E. Pozzolan Content:

1. Fly ash shall not exceed 20 percent of the total cementitious content.
2. Ground Granulated Blast Furnace Slag (GGBF) will be permitted as a substitute for fly ash at no additional cost to the Owner, in the event that Class F Fly Ash is not available. The slag substitution shall be in the same proportions and

percentages of the total cementitious material as shown for fly ash. A higher percentage of GGBF will be allowed if permitted by the Engineer to suit project needs.

F. Aggregate Size:

1. Aggregate size shall be 3/4-inch maximum for slabs and sections 8 inches thick and less. Aggregate size shall be 1 inch maximum for sections greater than 8 inches and less than 17 inches. Aggregate size shall be 1-1/2 inches maximum for all larger slabs and sections. Aggregate size for floor or roof topping slab shall be maximum 3/8-inch.
2. Combined aggregate grading shall be as shown in the following table:

Table 03 30 00-2					
Maximum Aggregate Size	1-1/2 inch	1 inch	3/4-inch	1/2-inch	3/8-inch
Aggregate Grade per ASTM C33	467	57	67	7	8

2.03 CONCRETE TEMPERATURE MONITORING EQUIPMENT:

- A. Equipment used to monitor concrete temperature during the curing period shall consist of electronic equipment capable of continuously monitoring and logging the temperature of the concrete, embedded in the concrete at the locations indicated in the Thermal Control Plan.
- B. As a minimum the equipment shall consist of an enclosed, battery operated logger embedded in the concrete, attached wires extending to and from the surface of the concrete, and a handheld reader that can be attached to the wires and logger data downloaded.
- C. Manufacturers:
 1. IntelliRock System, by Engius.
 2. The Command Center Maturity System, by the Transtec Group, Inc.

PART 3 - EXECUTION

3.01 INSPECTION:

- A. Examine the subgrade and the conditions under which work is to be performed and notify the Engineer in writing of unsatisfactory conditions. Do not proceed with the

work until unsatisfactory conditions are corrected to comply with specified subgrade conditions in a manner acceptable to the Engineer.

3.02 MIXING AND TRANSPORTING CONCRETE:

- A. General: Conform to concreting procedures set forth in ASTM C94, ACI 304R and as specified herein.
1. Transport concrete to discharge locations without altering the specified properties of water-cement ratio, slump, air entrainment, temperature and homogeneity.
 2. Discharge concrete into forms in accordance with Table 03 30 00-3 after cement has entered mixing drum or before the drum has revolved 300 revolutions after the addition of water, whichever occurs first. Do not add water at the jobsite unless permitted by the Engineer. If it is necessary to add water to obtain the specified slump, add water per ASTM C94, but do not exceed the maximum water content in the reviewed concrete design mix. Added water shall be incorporated by additional mixing of at least 35 revolutions.
 3. Do not add water to concrete containing high range water reducing admixture. Do not add water to concrete in delivery equipment not acceptable for mixing.
 4. Keep a record showing time and place of each placement of concrete, together with transit-mix delivery slips certifying the contents of the pour.
 5. Discharge of concrete shall be completed within the limits set out in Table 03 30 00-3.

Table 03 30 00-3	
Maximum Time to Concrete Discharge	
Concrete Temperature	Limit
Over 90 Degree F	Remove concrete from jobsite and discard concrete
86 to 90 Degree F	45 minutes
81 to 85 Degree F	60 minutes
70 to 80 Degree F	75 minutes
Below 70 Degree F	90 minutes

- B. Conveying: Convey concrete from agitator or mixer truck to place of final deposit in forms by one of the following methods:
1. Buckets or hoppers with discharge gates having a clear opening equal to not less than one-third the maximum interior horizontal area or five times the maximum aggregate size being used, whichever is greater, and side slopes of not less than 60 degrees to horizontal.
 2. Buggies or wheelbarrows equipped with pneumatic tires.

3. Round bottom, metal or metal-lined chutes with inclined slope of between 2 to 3 feet horizontally to 1 foot vertically and of sufficient capacity to avoid overflow.
4. Circular drop pipes with a top diameter of at least eight times the maximum aggregate size, but not less than 6 inch, or tapered to not less than six times maximum aggregate size.

3.03 CONCRETE ACCEPTANCE:

- A. Accept or reject each batch of concrete delivered to the point of agitator or mixer truck discharge. Sign delivery batch tickets to indicate concrete acceptance.
- B. Reject concrete delivered without a complete concrete delivery batch ticket as specified herein. The concrete supplier will furnish copies of the signed batch ticket to the Contractor and Engineer.
- C. The testing agency shall perform field tests at the point of agitator or mixer truck discharge. Accept or reject concrete on the basis of conformity with slump, air content and temperature specified.
- D. The testing agency shall inspect concrete transit truck's barrel revolution counter and gauge for measuring water added to the concrete. Reject concrete that exceeds the maximum barrel revolution of 300, the limits in Table 03 30 00-3 or concrete that has water content exceeding the specified water-cement ratio.
- E. Reject concrete not conforming to specification before discharging into the forms.

3.04 VAPOR RETARDER:

- A. Install vapor retarder material under all interior floor slabs on ground whether indicated on the drawings or not.
- B. Install material with 6 in. lap at joints and seal joints with tape as recommended by the vapor retarder manufacturer. Tape material cut for slab penetrations to the pipe, conduit or other items passing through the slab. Use tape recommended by the vapor retarder manufacturer.
- C. Install vapor retarder without punctures or tears and protect against punctures and breaks.

3.05 PREPARATION AND COORDINATION:

- A. Contractor shall notify the Engineer of readiness to place concrete in any portion of the work a minimum of 48 hours prior to concrete placement. Failure to provide this notification will be cause for delay in placing until observations can be completed.
- B. Reinforcement, installation of waterstop, positioning of embedded items, and condition of formwork will be observed by the Engineer prior to concrete placement.

- C. Coordinate the sequence of placement such that construction joints will occur only as designed.
- D. Schedule sufficient equipment for continuous concrete placing. Provide for backup equipment and procedures to be taken in case of an interruption in placing. Provide backup concrete vibrators at the project site. Test concrete vibrators the day before placing concrete.
- E. Compact the subgrade and/or bedding. Saturate the subgrade approximately eight hours before placement and sprinkle ahead of the placement of concrete in areas where vapor barrier is not used. Remove standing water, mud, and foreign matter before concrete is deposited.
- F. Where shown on contract drawings, intentionally roughen surfaces of set concrete in a manner to expose bonded aggregate uniformly at joints.
- G. Where concrete is required to be placed and bonded to existing concrete, coat the contact surfaces with epoxy bonding agent. The method of preparation and application of the bonding agent shall conform to the manufacturer's recommendations.

3.06 CONCRETE PLACEMENT:

- A. Placement shall conform to ACI 304R as modified by these specifications.
- B. Alternate sections of concrete walls and slabs may be cast simultaneously. Do not place adjacent sections of walls and slabs until three days after placement of first placed concrete.
- C. Do not place concrete until free water has been removed or has been diverted by pipes or other means and carried out of the forms, clear of the work. Do not deposit concrete underwater, and do not allow free water to rise on any concrete until the concrete has attained its initial set. Do not permit free or storm water to flow over surfaces of concrete so as to injure the quality or surface finish.
- D. Do not place concrete during inclement weather. Protect concrete placed from inclement weather. Keep sufficient protective covering ready at all times for this purpose.
- E. Deposit concrete at or near its final position to avoid segregation caused by rehandling or flowing. Do not deposit concrete in large quantities in one place to be worked along the forms with a vibrator.
- F. Deposit concrete in walls and columns continuously and in level layers 4 feet thick. Avoid inclined layers and cold joints. Place concrete at lower portion of slope first on sloping surfaces.
- G. Deposit concrete slab on grade in forms continuously and in level layers 1 to 2 feet thick. Avoid inclined layers and cold joints. Place concrete at lower portion of slope first on sloping surfaces.

- H. Do not deposit partially hardened concrete in forms. Retempering of partially hardened concrete is not permitted. Remove partially hardened concrete from site at no additional compensation.
- I. Do not allow concrete to fall freely in forms to cause segregation (separation of coarse aggregate from mortar). Limit maximum free fall of concrete to 4 feet. Do not move concrete horizontally more than four feet from point of discharge. Space points of deposit not more than eight feet apart.
- J. At least two hours shall elapse after depositing concrete in the columns or walls before depositing in beams, girders, or slabs supported thereon. Place beams, girders, brackets, column capitals, and haunches monolithically as part of the floor or roof system, unless otherwise shown on contract drawings.
- K. Consolidate concrete using mechanical vibrators operated within the mass of concrete and/or on the forms conforming to procedures set forth in ACI 309R and as specified herein.
- L. Conduct vibration to produce concrete of uniform texture and appearance, free of honeycombing, streaking, cold joints or visible lift lines.
- M. Conduct vibration in a systematic manner with regularly maintained vibrators. Furnish sufficient backup units at job site. Use vibrators having minimum frequency of 8,000 vibrations per minute and of sufficient amplitude to consolidate concrete. Use not less than one vibrator with crew for each 35 to 40 cubic yards of concrete placed per hour.
- N. Insert and withdraw vibrator vertically at a uniform spacing over the entire area of placement. Space distances between insertions such that spheres of influence of each insertion overlap.
- O. Use additional vibration with pencil vibrators on vertical surfaces and on exposed concrete to bring full surface of mortar against the forms to eliminate air voids, bug holes and other surface defects. Employ the following additional procedures for vibrating concrete as necessary to maintain proper consolidation of concrete:
 - 1. Reduce distance between internal vibration insertions and increase time for each insertion.
 - 2. Insert vibrator as close to face of form as possible without contacting form or reinforcement.
 - 3. Thoroughly vibrate area immediately adjacent to waterstops without damaging the waterstop.
 - 4. Use spading as a supplement to vibration where particularly difficult conditions exist.

P. Pumping Concrete:

1. Conform to the recommendations of ACI 304.2R except as modified herein.
2. Base pump size on rate of concrete placement, length of delivery pipe or hose, aggregate size, mix proportions, vertical lift, and slump of concrete.
3. Use pipe with inside diameter of at least three times the maximum coarse aggregate size, but not less than 2 inches.
4. Do not use aluminum pipes for delivery of concrete to the forms.

Q. Waterstops:

1. Prevent displacement of waterstops during concrete placement.

3.07 CURING AND PROTECTION:

A. General:

1. Protect concrete from premature drying, hot or cold temperatures, and mechanical injury, beginning immediately after placement and maintain concrete with minimal moisture loss at relatively constant temperature.
2. Comply with curing procedures set forth in ACI 301, ACI 308 and as specified herein.
3. Perform hot weather concreting in conformance with ACI 305R and as specified herein when the ambient atmospheric temperature is 80 degrees F or above.
4. Perform cold weather concreting in conformance with ACI 306R.
5. Concrete required to be moist cured shall remain moist for the entire duration of the cure. Repeated wetting and drying cycles of the curing process will not be allowed.

B. Curing Duration:

1. Start initial curing after placing and finishing concrete as soon as free moisture has disappeared from unformed concrete surfaces. Initial curing starts as soon as concrete achieves final set. Forms left tightly in place are considered as part of the curing system, provided that wooden forms are kept moist by wetting three times a day. Keep continuously moist for not less than 72 hours.
2. Begin final curing procedures immediately following initial curing and before the concrete has dried. Continue final curing for at least 7 days and in accordance with ACI 301 procedures for a total curing period, initial plus final, of at least 10 days.
3. Avoid rapid drying at the end of the final curing period.

C. Curing Requirements:

1. Unformed Surfaces: Protect finished slabs from direct rays of the sun to prevent checking, crazing and plastic shrinkage. Cover and cure entire surface of newly placed concrete immediately after completing finishing operations and water film has evaporated from surface or as soon as marring of concrete will not occur.
2. Formed Surfaces: Minimize moisture loss for formed surfaces exposed to heating by the sun by keeping forms wet until safely removed. Keep surface continuously wet by warm water spray or warm water saturated fabric immediately following form removal unless otherwise permitted by the Engineer.
3. Water Containment Structures: Moist cure by the application of water to maintain the surface in a continually wet condition unless otherwise permitted by the Engineer. Use water that is free of impurities that could etch or discolor exposed concrete surfaces. Other concrete: Moist cure by moisture-retaining cover curing, or the use of curing compound.

D. Curing Methods:

1. Water Curing: Water curing is required for all water retention structures for foundations, floors, and walls. Use water curing for unformed surfaces. Continuously water cure all exposed concrete for the entire curing period. Provide moisture curing by any of the following methods:
 - a. Keeping the surface of the concrete continuously wet by ponding or immersion.
 - b. Continuous water-fog spray or sprinkling.
 - c. Covering the concrete surface with curing mats, thoroughly saturating the mats with water, and keeping the mats continuously wet with sprinklers or porous hoses. Place curing mats to provide coverage of the concrete surfaces and edges, with a 4 inch lap over adjacent mats. Weight down the curing cover to maintain contact with the concrete surface.
2. Sealing Materials:
 - a. Use common sealing materials such as plastic film or waterproofing (Kraft) paper.
 - b. Lap adjacent sheets a minimum of 12 inch. Seal edges with waterproof tape or adhesive. Use sheets of sufficient length to cover sides of concrete member.
 - c. Place sheet materials only on moist concrete surfaces. Wet concrete surface with fine water spray if the surface appears dry before placing sheet material.

- d. The presence of moisture on concrete surfaces at all times during the prescribed curing period is proof of acceptable curing using sheet material.
- 3. Membrane Curing Compound:
 - a. Apply membrane-curing compound uniformly over concrete surface by means of roller or spray at a rate recommended by the curing compound manufacturer, but not less than 1 gallon per 150 square foot of surface area. Agitate curing material in supply container immediately before transfer to distributor and thoroughly agitate it during application for uniform consistency and dispersion of pigment.
 - b. Do not use curing compounds on construction and expansion joints or on surfaces to receive liquid hardener, dustproofer/sealer, concrete paint, tile, concrete fills and toppings or other applications requiring positive bond unless removed by pressure washing or sand blasting.
 - c. Reapply membrane-curing compound to concrete surfaces that have been subjected to wetting within 3 hours after curing compound has been applied by method for initial application.
- E. Protection from environmental conditions: Maintain the concrete temperature above 50 degrees F continuously throughout the curing period. Make arrangements before concrete placing for heating, covering, insulation or housing to maintain the specified temperature and moisture conditions continuously for the curing period.
 - 1. When the atmospheric temperature is 80 degrees F and above, or during other climatic conditions which will cause too rapid drying of the concrete, make arrangements before the start of concrete placing for the installation of wind breaks or shading, and for fog spraying, wet sprinkling, or moisture-retaining covering.
 - 2. Protect the concrete continuously for the entire curing period.
 - 3. Maintain concrete temperature as uniformly as possible and protect from rapid atmospheric temperature changes.
 - 4. Avoid temperature changes in concrete that exceed 5 degrees F in any one hour and 50 degrees F in any 24-hour period.
- F. Protection from physical injury: Protect concrete from physical disturbances such as shock and vibration during curing period. Protect finished concrete surfaces from damage by construction equipment, materials, curing procedures and rain or running water. Do not load concrete in such a manner as to overstress concrete.
- G. Protection from Deicing Agents: Do not apply deicing chemicals to concrete.

3.08 FIELD QUALITY CONTROL:

A. Hot Weather Requirements

1. During hot weather, give proper attention to ingredients, production methods, handling, placing, protection, and curing to prevent excessive concrete temperatures or water evaporation in accordance with ACI 305R and the following.
2. When the weather is such that the temperature of the concrete as placed would exceed 90 degrees F, use ice or other means of cooling the concrete during mixing and transportation so that the temperature of the concrete as placed will not exceed 90 degrees F.
3. Take precautions when placing concrete during hot, dry weather to eliminate early setting of concrete. This includes protection of reinforcing from direct sunlight to prevent heating of reinforcing, placing concrete during cooler hours of the day, and the proper and timely application of specified curing methods.

B. Cold Weather Requirements:

1. Provide adequate equipment for heating concrete materials and protecting concrete during freezing or near-freezing weather in accordance with ACI 306R and the following.
2. When the temperature of the surrounding atmosphere is 40 degrees F or is likely to fall below this temperature, use heated mixing water not to exceed 140 degrees F. Do not allow the heated water to come in contact with the cement before the cement is added to the batch.
3. When placed in the forms during cold weather, maintain concrete temperature at not less than 55 degrees F. Materials shall be free from ice, snow, and frozen lumps before entering the mixer.
4. Maintain the air and the forms in contact with the concrete at temperatures above 40 degrees F for the first five days after placing, and above 35 degrees F for the remainder of the curing period. Provide thermometers to indicate the ambient temperature and the temperature 2 inches inside the concrete surface.

C. Backfill Against Walls:

1. Do not place backfill against walls until the concrete has obtained a compressive strength equal to the specified 28-day compressive strength. Where backfill is to be placed on both sides of the wall, place the backfill uniformly on both sides.
2. Do not backfill the walls of structures that will be laterally restrained or supported by suspended slabs or slabs on grade until the slab is placed and the concrete has reached the specified compressive strength.

D. Concrete Testing:

1. Concrete quality testing will be performed on the concrete by independent testing agency retained by the Owner.
2. The testing agency will use concrete samples provided by the Contractor at the point of agitator or mixer truck discharge to perform slump (per ASTM C143), air content (per ASTM C231), and temperature tests (per ASTM C1064) and for field control test specimens.
3. The testing agency will submit test reports of concrete field measurements specified above to the Contractor and to the Engineer.
4. Provide and maintain facilities for safe storage and proper curing of concrete test specimens on the project site, as required by ASTM C31.
5. Concrete Quality Test Specimen:
 - a. Perform sampling and curing of test specimen in accordance with ASTM C31.
 - b. Testing agency personnel will record truck and load number from the delivery batch ticket, the concrete placement location of each specimen, the date, concrete strength, slump, air content and temperature.
 - c. The testing agency will cast a minimum of one set of 6 test specimens, each 4-inch diameter by 8-inch long cylinders according to the following volumes:
 - (1) when concrete placement in a single day is less than 200 CY: for each 50 cubic yards of each mix design of concrete per structure,
 - (2) when concrete placement in a single day is greater than 200 CY: for each 100 cubic yards of each mix design of concrete per structure,
 - (3) but not less than once a day nor less than once for each 5,000 square feet of surface area of foundation mats, base slabs, columns, walls or elevated slabs and floor beams.
 - d. Test cylinders in accordance with ASTM C39. Test one cylinder at 7 days for information; test three cylinders at 28 days for acceptance; and hold two reserve cylinders for verification. Strength acceptance will be based on the average of the strengths of the three cylinders tested at 28 days. If one cylinder of a 28-day test manifests evidence of improper sampling, molding, or testing, other than low strength, discard it and use a reserve cylinder for the test result.

6. The Contractor may take field control test specimens for small quantities of concrete.
7. Concrete acceptance shall be based on the requirements of ACI 318 and ACI 350.
8. Field cured cylinders conforming to ASTM C31 will be required to determine field compressive strength of concrete. Laboratory cured cylinders for concrete quality testing shall not be used for determining field compressive strength.
9. Concrete Coring:
 - a. When the concrete quality test specimen compression tests fail to be in compliance with the Contract Documents or when the Engineer detects deficiencies in the concrete, the Contractor will take concrete cores at least 2 inches in diameter from the structure in conformance with ASTM C42 at locations determined by the Engineer.
 - b. Obtain at least three representative cores from each member or area of concrete that is considered potentially deficient.
 - c. Obtain additional cores to replace cores that show evidence of having been damaged subsequent to or during removal from the structure.
 - d. The testing agency shall compression test the cores taken from the structure in conformance with ASTM C39 and submit test strength test results of cores specified above to the Contractor and to the Engineer.
 - e. All costs associated with coring and testing of cores will be borne by the Contractor at no additional cost to the Owner.

3.09 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 34 00

CONTROLLED LOW STRENGTH MATERIAL (CLSM)

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide and install Controlled Low Strength Material (CLSM) as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. American Concrete Institute (ACI):
 - 1. 229R: Controlled Low-Strength Materials
 - 2. 301: Specifications for Structural Concrete
 - 3. 304R: Guide for Measuring, Mixing, Transporting and Placing Concrete
 - 4. 305R: Hot Water Concreting
 - 5. 306R: Cold Water Concreting
 - 6. 308: Standard Practice for Curing Concrete
 - 7. 318: Building Code Requirements for Structural Concrete and Commentary
- B. ASTM International (ASTM):
 - 1. C31: Practice for Making and Curing Concrete Test Specimens in the Field
 - 2. C33: Specification for Concrete Aggregates
 - 3. C39: Test Method for Compressive Strength of Cylindrical Concrete Specimens
 - 4. C94: Standard Specification for Ready-Mixed Concrete
 - 5. C138: Standard Test Method for Unit Weight, Yield, and Air Content (Gravimetric) of Concrete
 - 6. C143: Standard Test Method for Slump of Hydraulic-Cement Concrete
 - 7. C150: Standard Specification for Portland Cement
 - 8. C172: Practice for Sampling Freshly Mixed Concrete

9. C231: Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method
10. C494: Standard Specification for Chemical Admixtures for Concrete
11. C618: Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Portland Cement Concrete
12. C940: Standard Test Method for Expansion and Bleeding of Freshly Mixed Grouts for Preplaced-Aggregate Concrete in the Laboratory
13. C1064: Test Method for Temperature of Freshly Mixed Portland Cement Concrete
14. D75: Practice for Sampling Aggregates

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 1. CLSM mix design and results of strength tests from trial mixes by the Contractor's testing laboratory firm.
 2. Submit manufacturer's Stable-Air Generator Admixture product data, installation instructions and recommendations for material use.
 3. Test and Performance - Submit the following data:
 - a. Any required deviations from prescribed tests and special handling instructions for test specimens.
 - b. Controlled Low Strength Material shall have a minimum strength of 200 psi according to ASTM C39 at 56 days after placement.
 - c. Controlled Low Strength Material shall have minimal subsidence and bleed water which is measured as a final bleeding of less than 2.0 percent (retains 98.0 percent of original height after placement, approximately 1/4-inch per foot of depth) as measured in Section 10 of ASTM C940.
 - d. Controlled Low Strength Material shall have a unit weight of 90 - 110 lbs./ft³ measured at the point of placement.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Do not place CLSM until design mix, material tests and trial batch mix compression test results are approved by the Engineer. Approvals are required at least 30 days before placing any production CLSM.

- C. Employ an independent testing laboratory, acceptable to the Engineer to test conformity of materials to specifications and to design CLSM mixes.
 - D. Furnish, pay for, and deliver representative samples of sufficient quantity of cement, aggregates and admixtures required for trial batch mixes to the testing laboratory. Obtain materials from the batching plant that will be supplying production CLSM in conformance with ASTM D75.
 - E. Measure all materials for CLSM, including water, with equipment and facilities suitable for accurate measurement and capable of being adjusted in conformance with ASTM C94. Use scales certified by local Sealer of Weights and Measures within one year of use and accurate when static load tested to plus or minus 0.4 percent of total capacity of scale. Batch all materials by weight except admixtures that may be batched by volume.
 - F. The testing laboratory will take control test specimens; conduct slump tests and measure air content and temperature in the field.
 - G. Methods of Sampling and Testing:
 - 1. Fresh Concrete Sampling: ASTM C172
 - 2. Specimen Preparation: ASTM C31
 - 3. Compressive Strength: ASTM C39
 - 4. Air Content: ASTM C231
 - 5. Slump: ASTM C143
 - 6. Temperature: ASTM C1064
 - 7. Unit Weight: ASTM C138
- 1.05 DELIVERY STORAGE AND HANDLING:
- A. Comply with the requirements specified in Section 01 66 10.
 - B. Order CLSM from batching plant so that trucks arrive at discharge locations when material is required.
 - C. Deliver CLSM to discharge locations in watertight agitator or mixer trucks without altering the specified properties of water-cement ratio, slump, air entrainment, temperature, and homogeneity.
 - D. Reject CLSM not conforming to specification, unsuitable for placement, exceeding the time or temperature limitations or not having a complete delivery batch ticket.

1.06 PROJECT/SITE CONDITIONS:

- A. Do not place CLSM until conditions and facilities for making and curing control test specimens are in compliance with ASTM C31 and as specified herein.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Furnish Portland cement conforming to ASTM C150. Use one approved brand from one mill throughout the contract term unless otherwise approved by the Engineer. Use Type II for all work, unless otherwise specified.
- B. Water:
 - 1. Use water that is potable and free from injurious amounts of oil, acid, alkali, organic matter, or other deleterious substances, and conforms to the requirements for water in ASTM C94, and as specified herein.
 - 2. The maximum water-soluble chloride ion in the water shall not exceed 0.060 percent by weight of cement.
- C. Aggregates:
 - 1. Use aggregates for CLSM conforming to ASTM C33 and to the following requirements.
- D. Admixtures:
 - 1. General Requirements: ASTM C494.
- E. Fly Ash: Provide fly ash conforming to the following requirements:
 - 1. Class F fly ash conforming to ASTM C618 for chemical and physical properties.
 - 2. Supplemental requirements in percent:
 - a. Maximum carbon content 3 percent
 - b. Maximum sulfur trioxide (SO₃) content 4 percent
 - c. Maximum loss on ignition 3 percent
 - d. Maximum water requirement (as a percent of control) 100 percent
 - e. Fineness, maximum retained on No. 325 sieve 25 percent

2.02 MIXES:

- A. Mix design shall produce a consistency that will result in a flowable product at the time of placement that does not require manual means to move it into place.
- B. Provide mix with compressive strength of maximum 200 psi when measured 56 days after placement.
- C. Controlled Low Strength Material shall have minimal subsidence and bleed water which is measured as a Final Bleeding of less than 2.0 percent (retains 98.0 percent of original height after placement, approximately 1/4-inch per foot of depth) as measured in Section 10 of ASTM C940 "Standard Test Method for Expansion and Bleeding of Freshly Mixed Grouts for Preplaced-Aggregate Concrete in the Laboratory".
- D. The fresh unit weight shall be 90 - 110 lbs./ft³, except where specified, and in the absence of strength data the cementitious content shall be a maximum of 150 lbs./cy.

PART 3 - EXECUTION

3.01 INSTALLATION:

- A. Batch, mix and deliver CLSM in conformance with ASTM C94. Batch all constituents at a central batching or mixing plant.
- B. Seasonal Conditions:
 - 1. Conform to ACI 305R and as specified herein for hot weather concreting. Do not add retarder admixture to any concrete.
 - 2. Conform to ACI 306R and as specified herein for cold weather concreting. Do not add accelerator admixture to any concrete.

3.02 TRANSPORTING AND MIXING:

- A. Conform to concreting procedures set forth in ACI 304R and as specified herein.
- B. Transport CLSM to discharge locations without altering the specified properties of water-cement ratio, slump, air entrainment, temperature and homogeneity.

3.03 FIELD TESTING:

- A. General:
 - 1. The testing laboratory will use concrete samples taken at the point of agitator or mixer truck discharge to perform slump, air content, and temperature tests and for field control test specimens.
- B. Notification of Delivery:

1. Notify the Engineer of concrete deliveries a minimum of 48 hours in advance of the scheduled placement. Include within this notification, the mix design and quantity of concrete, method and location of placement, frequency of trucks, ordered slump and time of initial delivery.
2. Furnish delivery batch ticket to the representative from the owner's testing laboratory or to the Engineer representative in the field with each batch delivered to the discharge locations in conformance with ASTM C94.

C. Test Measurements at Discharge:

1. The testing laboratory firm will take measurement of concrete slump, air content and temperature for each 50 cubic yards of each mix design but not less than once a day. The laboratory will conduct the slump, air content and temperature test measurements in conformance with ASTM C143, ASTM C231, and ASTM C1064, respectively.
2. The testing laboratory will submit test reports of field measurements specified above to the Contractor and to the Engineer.

D. Control Test Specimens:

1. The testing laboratory will cast a minimum of one set of three field control test specimens in conformance with ASTM C31 for each 150 cubic yards of each mix design of concrete but not less than once each day for each mix placed that day.
2. Laboratory personnel will record truck and load number from the delivery batch ticket, the concrete placement location of each specimen, the date, concrete strength, slump, air content, temperature and truck driver's name.
3. Furnish tightly constructed nonabsorbent test cylinder molds. Use molds of same type and manufacture for all test specimens. Leave molds on cylinders until received in testing laboratory.
4. Furnish boxes for initial curing of test cylinders in conformance with ASTM C31 from time of fabrication until they are transported to the testing laboratory.
5. The testing laboratory will compression test one of each set of three specimens at seven days. Immediately notify the Contractor and the Engineer if the seven-day strength is deficient. Test the two remaining cylinders at 56 days for concrete strength acceptance. The acceptance test result is the average of the strengths of the two specimens tested at 56 days. The laboratory firm will submit compression test results of the control test specimens to both the Contractor and the Engineer. Evaluation and acceptance of concrete shall conform to ACI 301 and ACI 318.

3.04 CURING AND PROTECTION:

- A. Protect CLSM from premature drying, hot or cold temperatures, and mechanical injury, beginning immediately after placement and maintain concrete with minimal moisture loss at relatively constant temperature.
- B. Comply with curing procedures set forth in ACI 301, applicable portions of ACI 308 and as specified herein.
- C. Perform hot weather concreting in conformance with ACI 305R and as specified herein when the ambient atmospheric temperature is 80 degrees F or above.
- D. Perform cold weather concreting in conformance with ACI 306R and as specified herein when the ambient atmospheric temperature is 40 degrees F or below.
- E. Protect Controlled Low Strength Material from traffic until sufficient strength has been achieved for further construction operations.

3.05 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 41 13

PRECAST CONCRETE HOLLOW CORE PLANKS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide precast, prestressed, concrete hollow core planks including grouting of joints as indicated and in compliance with Contract Documents.
- B. Provide structural concrete topping in accordance with contract documents and Section 03 30 00.

1.02 REFERENCES:

4. A185: Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete
5. A416: Standard Specification for Steel Strand, Uncoated Seven-Wire for Prestressed Concrete
6. A615: Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
7. A706: Specification for Low-Alloy Steel Deformed Bars for Concrete Reinforcement
8. C33: Standard Specification for Concrete Aggregates
9. C150: Standard Specification for Portland Cement
10. D412: Standard Test Method for Rubber Properties in Tension

E. American Welding Society (AWS):

1. D1.1: Structural Welding Code, Steel
2. D1.4: Structural Welding Code, Reinforcing Steel

F. Prestressed Concrete Institute (PCI):

1. MNL-116: Manual for Quality Control for Plants and Production of Precast and Prestressed Concrete Products

1.03 DESIGN CRITERIA:

- A. Design precast concrete hollow core planks in accordance with ACI 318 and PCI standards.
- B. Precast concrete hollow core plank shall be designed for the following:
 1. Dead Loads: Weight of unit, concrete topping, roof dead loads.
 2. Live Loads: As show on contract documents.
 3. Wind, Snow, Seismic, loads based on criteria shown on contract documents.
 4. Design planks for piping and equipment loads to be supported by the member. As a minimum the planks shall be designed for a uniform piping load of 15 pounds per square foot or a concentrated load of 2,000 pounds located at any point along the length of the member, whichever produces the most severe condition.

5. Handling and erection stresses.
6. Maximum deflection of span/240 for roof plank under live load.
7. Maximum deflection of span/360 for floor plank under live load.
8. Grouted keys shall be capable of transmitting horizontal shear force of 3000 pounds/foot.

1.04 QUALIFICATIONS:

- A. Fabricator: Company specializing in manufacturing the work of this section with five years' experience.
- B. Erector: Company specializing in erecting the work of this section with five years' experience.
- C. Welder: Qualified within previous 12 months in accordance with AWS.
- D. Design planks under direct supervision of Professional Structural Engineer experienced in design of this Work and licensed in the State that the units are to be installed in.

1.05 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 1. Completely detailed shop drawings for all precast, prestressed concrete planks. Indicate all dimensions, plank layout, architectural details, prestressing strands, reinforcing steel, inserts, connections, openings, edge conditions, bearing requirements, support conditions, lifting devices and openings intended to be field cut.
 2. Mark each member for identification. Show mark on erection plan and place legibly on unit at time of manufacture.
 3. Indicate design load and fire rating of units.
 4. Drawings shall bear the signature and seal of a Registered Professional Engineer employed by the precast manufacturer and licensed in the State of Utah.
 5. Calculations showing load intensities and combinations and deflections and cambers considered in design. Calculation shall bear the signature and seal of a Registered Professional Engineer employed by the precast manufacturer and licensed in the State of Utah.
 6. Concrete mix design.
 7. Test results of concrete mix used for production of the units.

1.06 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Fabrication and quality control shall conform to MNL-116.
- C. The precast concrete manufacturing plant shall conform to the requirements of the Prestressed Concrete Institute Plant Certification Program.
- D. Furnish written welding procedure for all welds in conformance with the AWS.
- E. If a welder or welding operator has not been engaged in a specific welding process for a period of 12 months or more, that individual shall be deemed unqualified and shall not perform work on the project until the individual has been qualified again by testing in conformance with AWS.
- F. Maintain duplicate qualification and certification records at the job site readily available for examination.

1.07 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.
- B. Store planks on clean blocking, off the ground and protected from rain and ground splatter. Cover planks with durable covers of canvas, heavy waterproof paper or plastic sheeting. Secure covers firmly and protect the planks from dust, dirt or other materials that may stain concrete.
- C. Separate stacked units with dunnage across the full width of each plank.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Furnish Portland cement conforming to ASTM C 150, Type I. Use one accepted brand from one mill throughout the contract term unless otherwise accepted by the Engineer. Use cement of uniform color.
- B. Use Concrete Aggregates that conform to ASTM C33. Size of coarse aggregate no larger than 3/4-inch but not exceeding space and cover requirements of prestressing and reinforcing steel.
- C. Water:
 - 1. Use water for concrete that is potable and free from injurious amounts of oil, acid, alkali, organic matter or other deleterious substances, and conforms to the requirements for water in ASTM C94, and as specified herein.

2. The maximum water-soluble chloride ion in the water shall not exceed 0.060 percent by weight of cement.
- D. Concrete: Regular weight structural concrete with a minimum compressive strength of 5,000 psi at 28 days.
- E. Provide tensioning steel tendons with uncoated, seven wire, lowlax prestressing strand conforming to ASTM A416, Grade 270.
- F. Provide reinforcement steel with deformed bars conforming to ASTM A615, Grade 60.
- G. Provide weldable reinforcement with deformed bars conforming to ASTM A706, Grade 60, when welding is specified.
- H. Provide welded wire reinforcement conforming to ASTM A185.
- I. Steel Plates: ASTM A36, Hot-Dip Galvanized
- J. Metal inserts: Hot-dip galvanized ferrous metal conforming to ASTM A123 and ASTM A153. Do not embed aluminum in concrete.
- K. Bearing strip: 1/8-inch thick multi-monomer plastic.
- L. Grout: Mixture having not less than one part Portland cement to three parts fine sand and a minimum compressive strength of 3,000 psi at 28 days.

PART 3 - EXECUTION

3.01 FABRICATION:

- A. Fabricate concrete planks in accordance with M.L.-116 and Section 03 30 00.
- B. Extrude hollow-core planks in a factory with closely controlled mixing, placing and curing conditions. Cast solid planks in a factory. Do not cast units on site. Produce finished products free of honeycombs and voids with straight, true edges and surfaces.
- C. Machine finish top surface of plank except surfaces of planks to receive concrete topping shall be mechanically roughened by wire brush after casting.
- D. Provide a flat, smooth, steel form finish of uniform appearance on underside of plank.
- E. Cast all openings larger than 6-inch in greatest dimension or having an area of more than 36 square inches into planks at time of fabrication and properly reinforce. Smaller openings may be core-drilled in field when permitted by the Engineer who was responsible for the design of the precast planks.

- F. Incorporate welding clips, inserts, anchors, and sleeves indicated on drawings or required into planks at time of fabrication. Do not paint surfaces in contact with concrete or surfaces requiring field welding.
- G. Cure planks in accordance with MNL-116.

3.02 TOLERANCES:

- A. Erect members level and plumb within allowable tolerances. Conform to PCI MNL-116S.

3.03 INSTALLATION:

- A. Inspect bearing surfaces and ensure that the bearing surfaces are level and at the proper elevation.
- B. Place continuous bearing strips along bearing surfaces such that planks are uniformly supported across the full widths of the units.
- C. Lift and support members during transportation and erection at same points where members will be supported in completed structure.
- D. Remove protruding elements of lifting devices after erection of members.
- E. Protect members during lifting, transportation and handling operations against overstress, damage to surfaces and excessive forces. Do not install cracked or damaged planks. Only minor surface patching is permitted.
- F. Erect and install planks in accordance with manufacturer's written instructions using experienced workmen. Accurately place and adjust planks to correct alignment and elevation before securing in place. Locate connections and welds in accordance with accepted shop drawings. Inspect welded connections before covering with concrete topping or roofing materials.
- G. Alignment: Level and match underside of adjacent planks by, jacking, shoring or loading to produce a uniform ceiling plane.
- H. Grout joints between planks using the specified grout. Make bottom of joints smooth in areas where underside of plank is exposed. Trowel top of joints smooth. Remove grout that seeps from joints between planks before it hardens.
- I. Field cutting or coring is not permitted without the written permission of the Engineer who was responsible for the design of the precast planks. Powder driven fasteners into planks are not permitted.
- J. When permitted by the Engineer who was responsible for the design of the precast planks, cutting or coring of plank may be performed after grout in shear keys have attained their design strength.

3.04 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 60 00

GROUT

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Furnish all labor, materials, equipment, and incidentals required, and install grout complete as shown on the Drawings and as indicated and in compliance with Contract Documents.

1.02 SUMMARY:

A. Section Includes:

1. Material for grouting reinforcing bars, anchor bolts into existing or newly placed concrete.
2. Material for grouting under bearing plates for columns or beams.
3. Materials for grouting under equipment.
4. Materials for miscellaneous grouting including but not limited to railing posts, equipment guides, bollards, precast concrete joints and supports etc.

1.03 REFERENCE STANDARDS:

A. American Association of State Highway and Transportation Officials (AASHTO):

1. M182: Burlap Cloth made from Jute or Kenaf

B. American Petroleum Institute (API):

1. RP 686: Recommended Practice for Machinery Installation and Installation Design

C. ASTM International (ASTM):

1. C33: Standard Specification for Concrete Aggregates
2. C150: Standard Specification for Portland Cement
3. C531: Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical Resistant Mortars, Grouts, and Monolithic Surfacing
4. C827: Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens from Cementitious Mixes

5. C1107: Standard Specification for Packaged Dry, Hydraulic, Cement Grout (Non-shrink)

6. D695: Standard Test Method for Compressive Properties of Rigid Plastics

D. U.S. Army Corps of Engineers Standard (CRD):

1. C621: Corps of Engineers Specification for Non-shrink Grout

1.04 DESIGN REQUIREMENTS:

A. Design grout and related anchorage systems in accordance with the design loads specified on the contract drawings or as required by the equipment manufacturer.

B. The design and selection of the grout and grouting system shall be based on the duration and magnitude of the load and the frequency of application. The use of a grout for a specific application shall be verified by the manufacturer of the grout.

1.05 SUBMITTALS:

A. Submit the following shop drawings in accordance with Section 01 33 00.

B. Product Data:

1. Commercially manufactured non-shrink, non-metallic cementitious grout:

a. Include catalog cuts, technical data, storage requirements, product life, working time after mixing, temperature considerations, conformity to referenced ASTM standards, and Material Safety Data Sheet (MSDS).

2. Commercially manufactured non-shrink epoxy grout:

a. Include catalog cuts, technical data, storage requirements, product life, working time after mixing, temperature considerations, conformity to referenced ASTM Standards and Material Safety Data Sheet (MSDS).

3. Cement Grout:

a. Include the type and brand of the cement, the gradation of the fine aggregate, product data on any proposed admixtures, and the proposed mix of the grout.

4. Concrete Grout:

a. Include data for concrete as delineated in Section 03 30 00. This includes the mix design, constituent quantities per cubic yard, and the water/cement ratio.

5. Bonding Agent:

- a. Include catalog cuts, technical data, storage requirements, product life, working time after mixing, temperature considerations, conformity to referenced ASTM standards, and Material Safety Data Sheet (MSDS).

C. Laboratory Test Reports.

1. Submit laboratory test data as required under Section 03 30 00 for concrete to be used as concrete grout.

D. Mill test reports for each shipment of cement, regardless of quantity, prior to incorporation into the work.

E. Manufacturer's specifications and instructions for all admixtures, curing materials, adjustable inserts and non-shrink non-metallic grout. Manufacturer's certification of compatibility of all admixtures.

1.06 QUALITY ASSURANCE:

A. Qualifications

1. Grout manufacturer to have a minimum of 5 years' experience in the production and use of the type of grout proposed for the Work.

B. Field Testing

1. Field testing and inspection services required will be provided by the Owner. Provide assistance in the sampling of materials and provide any ladders, platforms, etc. for access to the Work. Comply with the applicable ASTM Standards for testing.
2. The field testing of concrete grout will be as specified for concrete in Section 03 30 00.
3. Take compression test specimens from the first placement of each type of grout to ensure compliance with these Specifications.
 - a. Compression tests and fabrication of specimens for cement grout and non-shrink grout will be performed as specified in ASTM C109 at intervals during construction as selected by the Engineer. A set of three specimens will be made for testing at one, seven and 28 days.
 - b. Compression tests and fabrication of specimens for epoxy grout will be performed as specified in ASTM C579, Method B. A set of three specimens will be made for testing at seven days.

1.07 RESPONSIBILITIES:

- A. Assist the Owner in obtaining specimens for testing and furnish all materials necessary for fabricating the test specimens.
- B. The cost of laboratory tests on grout will be paid by the Owner except where test results show the grout to be defective. In such case, the Contractor shall pay for the tests, removal and replacement of defective work, and re-testing all at no cost to the Owner.

1.08 WARRANTY:

- A. Warrant the materials and products specified in this Section against defective materials and workmanship with the manufacturer's standard warranty, but for no less than one year from the date of substantial completion.
- B. Warrant the work against defects for one year from the date of substantial completion.

1.09 DELIVERY, STORAGE, AND HANDLING:

- A. Comply with the requirements in Section 01 66 10.
- B. Deliver materials to the jobsite in original, unopened packages, clearly labeled with the manufacturer's name, product identification, batch numbers, and printed instructions.
- C. Store materials in accordance with the manufacturer's recommendations. Total storage time from date of manufacture to date of installation shall be limited to six months or the manufacturer's recommended storage time, whichever is less.
- D. Reject material that becomes damp, lumpy or otherwise unacceptable and immediately remove from the site and replace with acceptable material at no cost to the Owner.
- E. Deliver non-shrink cement based grouts as pre-blended, prepackaged mixes requiring only the addition of water.
- F. Deliver non-shrink epoxy grouts as premeasured, prepackaged, three component systems requiring only blending as directed by the manufacturer.

1.10 SERVICES OF MANUFACTURER'S REPRESENTATIVE:

- A. The Contractor shall provide the services of a qualified manufacturer's technical representative who shall instruct the Contractor's personnel in the mixing, proper use and application of the non-shrink grout and epoxy grout.
- B. The manufacturer's representative shall provide written certification that materials have been mixed and applied properly and surfaces to receive these products have been prepared properly, all in conformance with manufacturer's requirements.
- C. The on-site time required for the manufacturer's representative to achieve a successful installation shall be at the expense of the Contractor.

PART 2 - PRODUCTS

2.01 GENERAL:

- A. Provide materials produced by one manufacturer or supplier in order to provide standardization of appearance.

2.02 APPLICATION:

- A. Unless indicated otherwise, provide grouts as listed below:

Table 03 60 00-1	
Type of Grout	Application
Cement Grout	Surface repairs
Non-Shrink – Class I	Storage tanks and other non-motorized equipment.
	Filling block-out spaces for embedded items such as railing posts, gate guide frames, etc. (Where placement time is less than 20 minutes.)
	Repair of holes and defects in concrete members that are not water bearing and not in contact with soil or other fill material.
Non-Shrink – Class II	Column base plates.
	Filling block-out spaces for embedded items such as railing posts, gate guide frames, etc. (Where placement time exceeds 20 minutes.)
	Under precast concrete elements.
Non-Shrink Epoxy	Machinery subject to severe shock loads and high vibration.
Concrete Grout	Toppings and concrete/grout fill, bottom of liquid containing concrete walls.

2.03 MATERIALS:

- A. Non-shrink Class I Grout:

1. Non-shrink Class I Grout shall have a minimum 28-day compressive strength of 5000 psi, when mixed at a fluid consistency.
2. Non-shrink Class I grout shall meet the requirements of ASTM C1107, Grade B or C, when mixed to fluid, flowable and plastic consistencies.
3. Products:
 - a. Sika Corporation; SikaGrout 212
 - b. Master Builders, Inc.; Set Grout

- c. The Euclid Chemical Company; Euco NS

B. Non-shrink Class II Grout:

1. Non-shrink grout shall be a high precision, fluid, extended working time grout. The minimum 28-day compressive strength shall be 7,500 psi, when mixed at a fluid consistency.
2. Grout shall have an extended working time of 30 minutes minimum when mixed to a fluid consistency as defined in ASTM C827 at temperature extremes of 45 to 90 degrees F in accordance with ASTM C1107.
3. Non-shrink grouts shall meet the requirements of ASTM C1107; Grade B or C when tested using the amount of water needed to achieve fluid consistency per ASTM C939.
4. The grout when tested shall not bleed or segregate at maximum allowed water.
5. Products:
 - a. Master Builders, Inc.; Masterflow 928
 - b. The Euclid Chemical Company; Hi-Flow Grout
 - c. Sika Corporation; SikaGrout 212

C. Cement Grout:

1. Cement grouts shall be a mixture of one part portland cement conforming to ASTM C150 types I, II, or III and one to two parts sand conforming to ASTM C33 with sufficient water to place the grout. The water content shall be sufficient to impart workability to the grout, but not to the degree that it will allow the grout to flow.
2. Cement grout materials shall be as indicated in Section 03 30 00.

D. Concrete Grout:

1. Concrete grout shall conform to the requirements of Section 03 30 00 except as specified herein. Proportion with cement, coarse and fine aggregates, water, water reducer, and air entraining agent to produce a mix having an average strength of 5,000 psi at 28 days. Coarse aggregate size shall be 3/8-inch maximum. Keep the W/C ratio as low as practical while still retaining sufficient workability.

E. Non-shrink Epoxy-Based Grout:

1. Provide a pre-proportioned, three component, 100 percent solids system consisting of epoxy resin, hardener, and blended aggregate. It shall have a compressive strength of 14,000 psi in seven days when tested in conformity with ASTM D695 and have

a maximum thermal expansion of 30×10^{-6} when tested in conformity with ASTM C531.

2. Products:

- a. Master Builders, Inc.; Ceilcote 648 CP
- b. U.S. Grout Corporation; Five Star Epoxy Grout
- c. Sika Corporation; Sikadur 42 Grout-Pak
- d. The Euclid Chemical Company; High Strength Epoxy Grout

F. Dry Pack Grout:

- 1. Make dry pack (to be packed or tamped in place) at no slump consistency.
- 2. When mixing the batch, add only enough water to the dry materials to produce a rather stiff mixture. Additions of water may be made in small increments until the desired consistency is obtained.

G. Non-epoxy Bonding Compound:

- 1. Provide non-epoxy bonding compound that is re-wetable for up to two weeks.
- 2. Products:
 - a. Larsen Products Corporation; Weldcrete
 - b. Sta-Dry Manufacturing Corporation; Link
 - c. The Euclid Chemical Company; Euco Weld

2.04 CURING MATERIALS:

- A. Curing materials for cement grout shall be as specified in Specification 03 30 00 and as recommended by the manufacturer for prepackaged grouts.

PART 3 - EXECUTION

3.01 GENERAL:

- A. Grout shall not be placed until base concrete has attained its design strength, unless authorized otherwise by the Engineer.
- B. Prepare surfaces for curing, and protection of cement grout in accordance with Section 03 30 00.

- C. Shade the work sites from sunlight for at least 24 hours before and 48 hours after grouting.
- D. Contact the grout manufacturer's representative for assistance on hot and cold weather grouting techniques and precautions if applicable.

3.02 PREPARATION:

- A. Clean concrete surfaces to receive grout free of ice, frost, dirt, grease, oil, curing compounds, laitance and paints, and free of all loose or unsound material or foreign matter that may affect the bond or performance of the grout.
- B. Roughen concrete surfaces by chipping, sandblasting, or other mechanical means to ensure bond of the grout to the concrete. Remove loose or broken concrete. Irregular voids or projecting coarse aggregate need not be removed if they are sound, free of laitance and firmly embedded into the parent concrete.
- C. Remove all loose rust, oil or other deleterious substances from metal embedments prior to the installation of the grout.
- D. Wash concrete surfaces clean and keep them moist for at least 24 hours prior to the placement of cementitious or cement grout. Saturate by covering the concrete with a plastic sheet or using either a soaker hose, flooding the surface or other method acceptable to the Engineer. Remove visible water from the surface upon completion of the 24-hour period prior to grouting. Use an accepted adhesive bonding agent in lieu of surface saturation when accepted by the Engineer for each specific location of grout installation.
- E. Epoxy based grouts do not require the saturation of the concrete substrate. Surfaces in contact with epoxy grout shall be completely dry before grouting.
- F. Construct grout forms or other leak proof containment. Forms shall be lined or coated with release agents recommended by the grout manufacturer.
- G. Support equipment during alignment and installation of grout by shims, wedges, blocks, or other accepted means. Prevent the shims, wedges, and blocking devices from bonding to the grout by appropriate bond breaking coatings and remove them after grouting unless otherwise accepted by the Engineer.
- H. The embedment depth for epoxy grouted anchor bolts and threaded rod anchors shall be at least 15 bolt or rod diameters, unless otherwise indicated on the drawings. Holes shall be prepared for grouting as recommended by the grout manufacturer.

3.03 INSTALLATION:

- A. Anchor bolts and threaded rod anchors:
 - 1. Anchor bolts and threaded rod anchors shall be clean, dry and free of grease and other foreign matter when installed. The bolts, rods and bars shall be set and positioned and the epoxy grout shall be placed and finished in accordance with the

recommendations of the grout manufacturer. Care shall be taken to ensure that all spaces and cavities are filled with epoxy grout, without voids. During assembly of all threaded stainless steel components, anti-seize thread lubricant shall be liberally applied to the threaded portion not embedded in concrete grouting machinery foundations

2. Block out the original concrete or finish off a sufficient distance below the bottom of the machinery base to provide for the thickness of grout shown on the Contract Drawings. After the machinery has been set in position and placed at the proper elevation by steel wedges, the space between the bottom of the machinery base and the original placement of concrete shall be filled with a pourable non-shrink grout. Grout and grouting procedure shall be in accordance with API 686.

B. Cement Grouts and Non-shrink Cementitious Grouts:

1. Mix in accordance with manufacturer's recommendations. Do not add cement, sand, pea gravel, or admixtures without prior approval by the grout manufacturer and the Engineer.
2. Avoid mixing by hand. Pre-wet the mixer and empty excess water. Add premeasured amount of water for mixing, followed by the grout. Begin with the minimum amount of water recommended by the manufacturer and then add the additional water required to obtain workability. However, do not exceed the manufacturer's maximum recommended water content.
3. Place grout into the designated areas in a manner that will avoid segregation or entrapment of air. Do not vibrate grout to release air or to consolidate the material. Placement should proceed in a manner that will ensure the filling of all spaces and provide full contact between the grout and adjoining surfaces. Provide grout holes as necessary. Place grout rapidly and continuously to avoid cold joints. Do not place cement grouts in layers. Do not add additional water to the mix (re-temper) after initial stiffening.
4. Just before the grout reaches its final set, cut back the grout to the substrate at a 45-degree angle from the lower edge of bearing plate unless otherwise accepted by the Engineer.
5. Begin curing immediately after form removal, cutback, and finishing. Keep grout moist and within its recommended placement temperature range for at least 24 hours after placement or longer if recommended by the manufacturer.

C. Non-Shrink Epoxy Grouts:

1. Apply bonding agent, if required, in accordance with the requirements of the grout manufacturer. Mix in accordance with the procedures recommended by the manufacturer. Do not vary the ratio of components or add solvent to change the consistency of the grout mix. Do not over mix. Mix full batches only to maintain

proper proportions of resin, hardener, and aggregate. Partial mixes will be rejected and will require the suspect grout to be removed and be replaced.

2. Monitor ambient weather conditions and contact the grout manufacturer for special placement procedures to be used for temperatures below 60 degrees F or above 90 degrees F.
3. Place grout into the designated areas in a manner that will avoid trapping air. Placement methods shall ensure the filling of all spaces and provide full contact between the grout and adjoining surfaces. Provide grout holes as necessary.
4. The extension of grout horizontally beyond base plate shall be less than or equal to the grout thickness.
5. Epoxy grouts are self-curing and do not require the application of water. Maintain the formed grout within its recommended placement temperature range for at least 24 hours after placing, or longer if recommended by the manufacturer.

D. Concrete Grout:

1. Provide the underlying concrete surface with a broomed finish. Protect and keep the surface clean until placement of concrete grout.
2. Remove the debris and clean the surface of all dirt and other foreign materials.
3. Saturate the concrete surface for at least 24 hours prior to placement of the concrete grout. Remove excess water just prior to placement of the concrete grout. Place a cement slurry immediately ahead of the concrete grout so that the slurry is moist when the grout is placed. Work the slurry over the surface with a broom until it is coated with approximately 1/16- to 1/8-inch thick cement paste.

E. Dry Pack:

1. Dry pack consistency shall be such that the grout is plastic and moldable but will not flow.
2. The use of pneumatic pressure for dry-packed grouting requires acceptance of the Engineer.

3.04 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 03 64 23

CRACK REPAIR EPOXY INJECTION GROUTING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide crack repair epoxy injection grout as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. American Association of State Highway and Transportation Officials (AASHTO):
 - 1. T237: Standard Method of Test for Testing Epoxy Resin Adhesive.
- B. American National Standards Institute (ANSI).
- C. ASTM International (ASTM):
 - 1. C882: Standard Specification for Test Method for Bond Strength of Epoxy-Resin System Used with Concrete by Slant Shear.
 - 2. D570: Standard Test Method for Water Absorption of Plastics.
 - 3. D638: Standard Test Method for Tensile Properties of Plastics.
 - 4. D648: Standard Test Method for Deflection Temperature of Plastics under Flexural Load in the Edgewise Position.
 - 5. D695: Standard Test Method for Compressive Properties of Rigid Plastics.
 - 6. D790: Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

1.03 DEFINITIONS:

- A. Crack: Complete or incomplete separation of concrete into two or more parts produced by breaking or fracturing.
- B. Crack Injection: method of sealing or repairing cracks by injecting a polymer.
- C. Large Cracks: wider than 0.008 inch, inject all.
- D. Moderate Cracks: width greater than or equal to 0.005 inch and less than 0.008 inch, inject leaking cracks.

- E. Small Cracks: width equal to 0.005 inch or less. Repair leaking cracks per method approved by Engineer if unable to inject.

1.04 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 - 1. Physical and chemical properties for epoxy adhesives.
 - 2. Technical data for metering, mixing, and injection equipment.
 - 3. Drawings and photos of proposed injection locations. Do not proceed with injection until review by Engineer is complete.
 - 4. Manufacturer's recommended surface preparation procedures and application instructions for epoxy adhesives.
 - 5. Installation instructions for repairing core holes with epoxy grout.
 - 6. Manufacturer's Certificate of Compliance: certified test results for each batch of epoxy adhesive.
 - 7. Statements of Qualification for Epoxy Adhesive:
 - a. Manufacturer's site representative.
 - b. Injection applicator.
 - c. Injection pump operating technician.
 - 8. Epoxy adhesive two component ratio and injection pressure test records for concrete crack repair work.

1.05 SPARE PARTS:

- A. Comply with the requirements specified in Section 01 61 00.

1.06 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Qualifications for Epoxy Injection Staff:
 - 1. Manufacturer's site representative:
 - a. Capable of instructing successful methods for restoring concrete structures utilizing epoxy injection process.

- b. Understands and is capable of explaining technical aspects of correct material selection and use.
 - c. Experienced in the operation, maintenance, and troubleshooting of application equipment.
- 2. Injection crew and job foreman shall provide written and verifiable evidence showing compliance with the following requirements:
 - a. Licensed and certified by epoxy manufacturer.
 - b. Minimum 3 years' experience in successful epoxy injection for at least 10,000 linear feet of successful crack injection including 2,000 linear feet of wet crack injection to stop water leakage.

1.07 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.
- B. Packing and Shipping: package adhesive material in new sealed containers and label with following information:
 - 1. Manufacturer's name.
 - 2. Product name and lot number.
 - 3. ANSI Hazard Classification.
 - 4. ANSI recommended precautions for handling.
 - 5. Mix ratio by volume.
- C. Storage and Protection: Store adhesive containers at ambient temperatures below 110 degrees F and above 45 degrees F.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

- A. Materials, equipment, and accessories specified in this Section shall be products of:
 - 1. BASF Building Systems, Shakopee, MN; SCB Concrasive Series
 - 2. Sika Corporation, Lyndhurst, NJ; Sikadur Series
 - 3. The Euclid Chemical Company, Cleveland, OH; Euco Series

2.02 EPOXY ADHESIVE:

- A. Two-component A and B structural epoxy adhesive for injection into cracks or other voids in concrete structures for bonding or grouting.
- B. Adhesive Properties:

	Test Method	
7-day, Tensile Strength, psi	ASTM D638	5,000 min.
Tensile Elongation @ Break, percent	ASTM D638	1.0% min.
Compressive Yield Strength, 7 days @ 73 degrees F, psi	ASTM D695 ^a	8,000 min.
Compressive Modulus, psi	ASTM D695 ^a	1.5x10 ⁵ min.
Heat Deflection Temperature, °F	ASTM D648 ^a	120 min. ^a
Water absorption @ 24 hours, maximum %	ASTM D570	1.0
Bond Strength @ 2 days psi	ASTM C882	1,000 min.
Bond Strength @ 14 days psi	ASTM C882	1,500 min.
Slant Shear Strength: (5,000 psi Compressive Strength Conc.) (Where test results are available psi.)	AASHTO T237 ^b	
Cured 3 days @ 40 degrees F—Wet Concrete		3,500 min.
Cured 1 day @ 77 degrees F—Dry Concrete		5,000 min.
Cured 3 days @ 77 degrees plus or minus 3 degrees F		5,000 min.
^a Cure test specimens so that peak exothermic temperature of adhesive does not exceed 100 degrees F.		
^b See referenced specifications for preparation method of test specimens.		

2.03 SURFACE SEAL:

- A. Sufficient strength and adhesion for holding injection fittings firmly in place, and to resist pressures preventing leakage during injection.
- B. Capable of removal after injection adhesive has cured.

2.04 SOURCE QUALITY CONTROL:

- A. Test Requirements: perform tests for each batch of adhesive.
- B. Pot Life Test:
 - 1. Condition Components A and B to required temperature.

2. Measure components in ratio of Component B as stated on manufacturer's label into an 8-fluid ounce paper cup.
 3. Start stopwatch immediately and mix components for 60 seconds using wooden tongue depressor, take care to scrape sides and bottom of cup periodically.
 4. Probe mixture once with tongue depressor every 30 seconds, starting 2 minutes prior to minimum specified pot life.
 5. Pot Life Definition: time at which a soft stringy mass forms in center of cup.
- C. Fabrication of Slant Shear Specimens for Testing Bond of Injectable Adhesives to Wet Concrete at 40 degrees F:
1. Scope: Test method for preparation of diagonal concrete mortar blocks used in determining slant shear strength of low viscosity injectable adhesives in accordance with AASHTO T237 when concrete is wet.
 2. Materials:
 - a. Diagonal concrete mortar blocks prepared in accordance with AASHTO Test Method T237 and cured to produce a mortar with compressive strength of 5,000 psi or greater.
 - b. Paraffin wax.
 - c. Masking Tape: 3/4 inch wide.
 - d. Suitable 20-mil-thick shim stock.
 3. Preparation:
 - a. Place a 20-mil shim between diagonal faces of two blocks and align so ends and sides are square.
 - b. Bind block with masking tape covering gap between blocks.
 - c. Leave a gap between blocks on one face uncovered for removal of shim and application of adhesive.
 - d. Paint melted paraffin wax over masking tape.
 - e. Shallow dam may be built up around opening using paraffin wax or modeling clay to help retain adhesive.
 - f. Apply suitable capping compound to each end of specimen producing smooth surfaces perpendicular to longitudinal axis of block.
 - g. Remove shim stock from gap opening.

- h. Soak specimen in water at 40 degrees F, plus or minus 3 degrees F for at least 24 hours.
- i. After soaking, remove specimen, shake free water from surface and gap opening.
- j. Prepare liquid adhesive.
- k. Within 5 minutes after removing specimen from water, start flowing adhesive into crack without entrap air bubbles.
- l. Place specimen in 40 degrees F, plus or minus 3 degrees F ambient for curing within 15 minutes after removing specimen from water for bonding. Do not expose specimen to temperatures beyond 77 degrees F during the 15-minute period.
- m. Cure specimen for 72 hours, plus or minus 4 hours at 40 degrees F, plus or minus 3 degrees F.

PART 3 - EXECUTION

3.01 GENERAL:

- A. Structurally repair cracks in structures as specified in Section 03 30 00.
- B. Cracks: repair by injection of epoxy adhesive.

3.02 PREPARATION:

- A. Free cracks from loose matter, dirt, laitance, oil, grease, salt, and other contaminants.
- B. Clean cracks in accordance with epoxy adhesive manufacturer's instructions.
- C. Clean surfaces adjacent to cracks from dirt, dust, grease, oil, efflorescence, and other foreign matter detrimental to bond of surface seal system.
- D. Do not use acids and corrosives for cleaning, unless neutralized prior to injecting epoxy.

3.03 APPLICATION:

- A. Sealing: apply surface seal in accordance with manufacturer's instructions to designated crack face prior to injection; seal surface of crack to prevent escape of injection epoxy.
- B. Entry Ports:
 - 1. Establish openings for epoxy entry in surface seal along crack.

2. Determine space between entry ports equal to thickness of concrete member to allow epoxy to penetrate to the full thickness of the wall.
3. Provide a means to prevent concrete dusts and fines from contaminating the crack or ports when drilling.
4. Space entry ports closer together to allow adjustment of injection pressure to obtain minimum loss of epoxy to soil at locations where:
 - a. Cracks extend entirely through wall.
 - b. Backfill of walls on one side.
 - c. Difficult to excavate behind wall to seal both crack surfaces.
5. Core drill to verify epoxy depth where only one side of wall is exposed.

C. Epoxy Injection:

1. Store epoxy at minimum of 70 degrees F.
2. Start injection into each crack at lowest elevation entry port.
3. Continue injection at first port until adhesive begins to flow out of port at next highest elevation.
4. Plug first port and start injection at second port until adhesive flows from next port.
5. Inject entire crack with same sequence.

D. Finishing:

1. Cure epoxy adhesive after cracks have been completely filled to allow surface seal removal without draining or runback of epoxy material from cracks.
2. Remove surface seal from cured injection adhesive.
3. Finish crack face flush with adjacent concrete.
4. Indentations or protrusions caused by placement of entry ports are not acceptable.
5. Remove surface seal material and injection adhesive runs and spills from concrete surfaces.

3.04 EQUIPMENT:

- A. Portable, positive displacement-type pumps with in-line metering to meter and mix two adhesive components, and inject mixture into crack.

B. Pumps:

1. Electric or air powered with interlocks providing positive ratio control of proportions for the two components at nozzle.
2. Primary injection pumps for each material of different mix ratio, including a standby backup pump of similar ratio.
3. Capable of immediate compensation for changes in resins.
4. Do not use batch mix pumps.

C. Discharge Pressure: automatic pressure controls capable of discharging mixed adhesive at pressures up to 200 psi, plus or minus 5 percent, and able to maintain pressure.

D. Automatic Shutoff Control: provide sensors on both Component A and B reservoirs for stopping machine automatically when only one component is being pumped to mixing head.

E. Proportioning Ratio Tolerance: maintain epoxy adhesive manufacturer's prescribed mix ratio within a tolerance of plus or minus 5 percent by volume at discharge pressure up to 160 psi.

F. Ratio/Pressure Check Device:

1. Two independent, valved nozzles, capable of controlling flow rate and pressure by opening or closing valve to restrict material flow.
2. Pressure gauge, capable of sensing pressure behind each valve.

3.05 FIELD QUALITY CONTROL:

A. Epoxy Adhesive Two Component Ratio Tests:

1. Disconnect mixing head and pump two adhesive components simultaneously through ratio check device.
2. Adjust discharge pressure to 160 psi for both adhesive components.
3. Simultaneously discharge both adhesive components into separate calibrated containers.
4. Compare amounts simultaneously discharged into calibrated containers during same time period to determine mix ratio.
5. Complete test at 160 psi discharge pressure and repeat procedure for 0 psi discharge pressure.

6. Run ratio test for each injection unit at beginning and end of each injection work day, and when injection work has stopped for more than 1 hour.
7. Document and maintain complete accurate records of, ratios and pressure checks.

B. Injection Pressure Test:

1. Disconnect mixing head of injection equipment and connect two adhesive component delivery lines to pressure check device.
2. Pressure Check Device:
 - a. Two independent valved nozzles capable of controlling flow rate and pressure by opening or closing of valve.
 - b. Pressure gauge capable of sensing pressure buildup behind each valve.
3. Close valves on pressure check device and operate equipment until gauge pressure on each line reads 160 psi.
4. Stop pumps and observe pressure; do not allow pressure gauge to drop below 150 psi within 3 minutes.
5. Run pressure test for each injection equipment unit:
 - a. Beginning and end of each injection work day.
 - b. When injection work as stop for more than 45 minutes.
6. Check tolerance to verify equipment capable of meeting specified ratio tolerance.

C. Crack Injection Tests:

1. Initial Cores:
 - a. 4-inch-diameter for full crack depth taken from Engineer's selected locations.
 - b. Take three cores in first 100 linear feet of crack repaired and one core sample for each 500 linear feet thereafter.
2. Provide suitable containers for storage, curing, and transportation of test specimens.
3. Methods of Testing Cores:
 - a. Penetration: Visual examination.
 - b. Bond Strength/Compression Test: concrete failure prior to adhesive failure.

4. Test Requirements:

- a. Penetration: minimum of 90 percent of crack shall be full of epoxy adhesive.
- b. Bond Strength/Compression Test: concrete failure before adhesive failure, or 6,500 psi with no failure of either concrete or adhesive.

5. Evaluation and Acceptance of Tests:

- a. If initial cores pass tests as specified, epoxy adhesive injection at area represented by cores will be accepted.
- b. If initial cores fail either by lack of penetration or bond strength, crack repair shall not proceed further until areas represented by cores are re-injected or repaired and retested for acceptance.
- c. Obtain verifying core samples, number and location as selected by Engineer, after rework of areas represented by failed initial cores is complete.

6. Core Hole Repair:

- a. Correct as result of testing on notification from Engineer.
- b. Refill initial and verifying core holes with an epoxy grout tamped and rodded in-place to form a dense fill.
- c. Finish surface to blend with adjacent concrete.

3.06 TESTS AND INSPECTIONS:

- A. Special inspection, testing, and professional observation shall be provided by the Contractor as indicated in the Statement of Special Inspection in the Drawings and in Section 01 45 33.
- B. Special Inspector shall verify that manufacturer and installer's procedures and instructions for surface preparation and installation are followed.

3.07 ALTERNATIVE CRACK REPAIRS:

- A. Where specifically approved in writing by the Engineer, alternative crack repair products and procedures may be used, as Specified in Section 03 01 30.
- B. Each individual location where alternative crack repair products or procedures are used, shall be approved in writing by the Engineer, prior to beginning work or installing the alternative products.

3.08 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 04 22 00
CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Decorative concrete masonry units.
3. Cast stone trim.
4. Mortar and grout.
5. Steel reinforcing bars.
6. Masonry-joint reinforcement.
7. Embedded flashing.
8. Miscellaneous masonry accessories.
9. Masonry-cell insulation.

B. Related Requirements:

1. Section 07 19 00 for water repellents applied to unit masonry assemblies.

1.02 DEFINITIONS

- A. CMU(s): Concrete masonry unit(s).
- B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. For decorative CMU and cast stone trim, include full range of manufacturer's colors and textures.

B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Show fabrication and installation details for cast stone trim units. Include dimensions, details of reinforcement and anchorages if any, and indication of finished faces.
3. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315. Show elevations of reinforced walls.
4. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

C. Samples for Initial Selection:

1. Decorative CMUs, in the form of small-scale units.
2. Cast stone trim.
3. Colored mortar.

D. Samples for Verification: For each type and color of the following:

1. Decorative CMUs.
2. Cast stone trim.
3. Colored mortar. Make Samples using same sand and mortar ingredients to be used on Project.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Material Certificates: For each type and size of the following:

1. Masonry units.
 - a. Include material test reports substantiating compliance with requirements.
 - b. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.
2. Cast stone trim.
3. Integral water repellent used in CMUs.
4. Cementitious materials. Include name of manufacturer, brand name, and type.

5. Mortar admixtures.
 6. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
 7. Grout mixes. Include description of type and proportions of ingredients.
 8. Reinforcing bars.
 9. Joint reinforcement.
 10. Anchors, ties, and metal accessories.
- C. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
1. Include test reports for mortar mixes required to comply with property specification. Test in accordance with ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91/C91M for air content.
 2. Include test reports, in accordance with ASTM C1019, for grout mixes required to comply with compressive strength requirement.
- D. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined in accordance with TMS 602/ACI 530.1/ASCE 6.
- E. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.
- 1.06 QUALITY ASSURANCE
- A. Testing Agency Qualifications: Qualified in accordance with ASTM C1093 for testing indicated.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
1. Refer to Drawings and Section 01 43 39.
 2. Protect accepted mockups from the elements with weather-resistant membrane.
 3. Approval of mockups is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.
 - a. Approval of mockups is also for other material and construction qualities specifically approved by Engineer in writing.

- b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.
- E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.08 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
 - 1. Extend cover a minimum of 24 inches (600 mm) down both sides of walls, and hold cover securely in place.
- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
- C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
 - 1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations for Masonry Units: Obtain exposed, exterior masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required. This includes both the exterior split-face and smooth CMU.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.02 PERFORMANCE REQUIREMENTS

- A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.
 1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) in accordance with TMS 602/ACI 530.1/ASCE 6.
 2. Determine net-area compressive strength of masonry by testing masonry prisms in accordance with ASTM C1314.

2.03 UNIT MASONRY, GENERAL

- A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6 except as modified by requirements in the Contract Documents.

- B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work.
- C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.
 - 1. Where fire-resistance-rated construction is indicated, units are listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.04 CONCRETE MASONRY UNITS

- A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
 - 1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
 - 2. Provide bullnose units for outside corners unless otherwise indicated.
- B. Integral Water Repellent: Provide units made with integral water repellent for exterior exposed units and where indicated.
 - 1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested in accordance with ASTM E514/E514M as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, show no visible water or leaks on the back of test specimen.
- C. Masonry Cell Insulation: Where indicated, units contain rigid, specially shaped, molded-polystyrene insulation units complying with ASTM C578, Type I, designed for installing in cores of masonry units.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Concrete Block Insulating Systems; KORFIL or a comparable product by one of the following:
 - a. Shelter Enterprises Inc.
 - 2. Physical Properties:
 - a. Typical Density: Minimum 1.05 lbs/cu. ft.
 - b. Thermal Resistance (R-value/inch): 5.00
- D. CMUs: ASTM C90.
 - 1. Density Classification: Normal weight.

2. Size (Width): Manufactured to dimensions 3/8 inch (10 mm) less-than-nominal dimensions.
 3. Application: Interior partitions.
- E. Decorative CMUs: ASTM C90.
1. Basis-of-Design Product: Subject to compliance with requirements, provide Sunroc Masonry or comparable product by one of the following:
 - a. AMCOR Masonry
 - b. Echelon Masonry
 2. Density Classification: Normal weight.
 3. Size (Width): Manufactured to dimensions specified in "CMUs" Paragraph.
 4. Application: Exterior walls including split-face and smooth CMU.
 5. Colors and Textures: Refer to Drawings.

2.05 MASONRY LINTELS

- A. General: Provide one of the following:
1. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.06 CAST STONE TRIM UNITS

- A. Cast Stone Units: Comply with ASTM C1364.
1. Trim units including wall caps where indicated on Drawings.
- B. Fabricate units with sharp arris with indicated texture on all exposed surfaces unless otherwise indicated.
1. Slope exposed horizontal surfaces 1:12 to drain unless otherwise indicated.
 2. Provide drips on projecting elements unless otherwise indicated.
- C. Fabrication Tolerances:
1. Variation in Cross Section: Do not vary from indicated dimensions by more than 1/8 inch (3 mm).

2. Variation in Length: Do not vary from indicated dimensions by more than 1/360 of the length of unit or 1/8 inch (3 mm), whichever is greater, but in no case by more than 1/4 inch (6 mm).
3. Warp, Bow, and Twist: Not to exceed 1/360 of the length of unit or 1/8 inch (3 mm), whichever is greater.
4. Location of Grooves, False Joints, Holes, Anchorages, and Similar Features: Do not vary from indicated position by more than 1/8 inch (3 mm) on formed surfaces of units and 3/8 inch (10 mm) on unformed surfaces.

D. Cure Units as Follows:

1. Cure units in enclosed, moist curing room at 95 percent relative humidity and temperature of 100 deg F (38 deg C) for 12 hours or 70 deg F (21 deg C) for 16 hours.
2. Keep units damp and continue curing to comply with one of the following:
 - a. No fewer than five days at mean daily temperature of 70 deg F (21 deg C) or above.
 - b. No fewer than seven days at mean daily temperature of 50 deg F (10 deg C) or above.

E. Acid etch units after curing to remove cement film from surfaces to be exposed to view.

F. Colors and Textures: As selected by Engineer from manufacturer's full range.

2.07 MORTAR AND GROUT MATERIALS

A. Hydraulic Blended Cement: ASTM C595, Type IL . Provide natural color or white cement as required to produce mortar color indicated.

1. Alkali content is not more than 0.1 percent when tested in accordance with ASTM C114.

B. Hydrated Lime: ASTM C207, Type S.

C. Cement-Lime Mix: Packaged blend of cement and hydrated lime containing no other ingredients.

D. Masonry Cement: ASTM C91/C91M.

E. Mortar Cement: ASTM C1329/C1329M.

F. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C979/C979M. Use only pigments with a record of satisfactory performance in masonry mortar.

- G. Colored Cement Products: Packaged blend made from cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.
 - 1. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
 - 2. Pigments does not exceed 10 percent of cement by weight.
 - 3. Mortar color: As selected by Engineer from manufacturer's full range
- H. Aggregate for Mortar: ASTM C144.
 - 1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 - 2. For joints less than 1/4 inch (6 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
 - 3. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- I. Aggregate for Grout: ASTM C404.
- J. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent from same manufacturer.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Euclid Chemical Company (The); an RPM company.
 - b. GCP Applied Technologies Inc.
 - c. Master Builders Solutions.

K. Water: Potable.

2.08 REINFORCEMENT

- A. Uncoated Steel Reinforcing Bars: ASTM A615/A615M or ASTM A996/A996M, Grade 60.
- B. Vertical Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

2.09 TIES AND ANCHORS

- A. General: Ties and anchors extend at least 1-1/2 inches (38 mm) into masonry but with at least a 5/8-inch (16-mm) cover on outside face.
- B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:
 - 1. Mill-Galvanized, Carbon-Steel Wire: ASTM A82/A82M, with ASTM A641/A641M, Class 1 coating.
 - 2. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A82/A82M, with ASTM A153/A153M, Class B-2 coating.
 - 3. Stainless Steel Wire: ASTM A580/A580M, Type 304.
 - 4. Galvanized-Steel Sheet: ASTM A653/A653M, Commercial Steel, G60 zinc coating.
 - 5. Steel Sheet, Galvanized after Fabrication: ASTM A1008/A1008M, Commercial Steel, with ASTM A153/A153M, Class B coating.
 - 6. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304.
 - 7. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
 - 1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch- (6.35-mm-) diameter, hot-dip galvanized steel wire.
 - 2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- (4.76-mm-) diameter, hot-dip galvanized steel wire.
- D. Partition Top Anchors: 0.105-inch- (2.66-mm-) thick metal plate with a 3/8-inch- (9.5-mm-) diameter metal rod 6 inches (152 mm) long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.
- E. Rigid Anchors: Fabricate from steel bars 1-1/2 inches (38 mm) wide by 1/4 inch (6.35 mm) thick by 24 inches (610 mm) long, with ends turned up 2 inches (51 mm) or with cross pins unless otherwise indicated.
 - 1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A153/A153M.

2.10 EMBEDDED FLASHING MATERIALS

- A. Metal Flashing: Provide metal flashing complying with SMACNA's "Architectural Sheet Metal Manual" and as follows:
 - 1. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.016 inch (0.40 mm) thick.
 - 2. Fabricate continuous flashings in sections 96 inches (2400 mm) long minimum, but not exceeding 12 feet (3.7 m). Provide splice plates at joints of formed, smooth metal flashing.
 - 3. Fabricate metal drip edges for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches (76 mm) into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam sheds water.
 - 4. Fabricate metal drip edges from stainless steel. Extend at least 3 inches (76 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees and hemmed.
 - 5. Fabricate metal expansion-joint strips from stainless steel to shapes indicated.
 - 6. Solder metal items at corners.
- B. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from UV-resistant, high-density polyethylene. Cell flashing pans have integral weep spouts designed to be built into mortar bed joints and that extend into the cell to prevent clogging with mortar.
- C. Solder and Sealants for Sheet Metal Flashings:
 - 1. Solder for Stainless Steel: ASTM B32, Grade Sn60, with acid flux of type recommended by stainless steel sheet manufacturer.
- D. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.11 MISCELLANEOUS MASONRY ACCESSORIES

- A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene or urethane.
- B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

- C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).

2.12 MORTAR AND GROUT MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
 - 1. Do not use calcium chloride in mortar or grout.
 - 2. Use hydraulic blended cement mortar unless otherwise indicated.
 - 3. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
- C. Mortar for Unit Masonry: Comply with ASTM C270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
 - 1. For reinforced masonry, use Type S.
 - 2. For exterior, above-grade, load-bearing and nonload-bearing walls and parapet walls; for interior load-bearing walls; for interior nonload-bearing partitions; and for other applications where another type is not indicated, use Type S.
- D. Pigmented Mortar: Use colored cement product or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.
 - 1. Pigments does not exceed 10 percent of cement by weight.
 - 2. Application: Use pigmented mortar for exposed mortar joints with the following units:
 - a. Decorative CMUs.
- E. Grout for Unit Masonry: Comply with ASTM C476.
 - 1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.
 - 2. Proportion grout in accordance with ASTM C476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 2000 psi.

3. Provide grout with a slump of 8 to 11 inches (200 to 280 mm) as measured in accordance with ASTM C143/C143M.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
 2. Verify that foundations are within tolerances specified.
 3. Verify that reinforcing dowels are properly placed.
 4. Verify that substrates are free of substances that would impair mortar bond.
- B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Build chases and recesses to accommodate items specified in this and other Sections.
- B. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.
- C. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

3.03 TOLERANCES

- A. Dimensions and Locations of Elements:
 1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch (12 mm) or minus 1/4 inch (6 mm).
 2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch (12 mm).
 3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch (6 mm) in a story height or 1/2 inch (12 mm) total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2-inch (12-mm) maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2-inch (12-mm) maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2-inch (12-mm) maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2-inch (12-mm) maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2-inch (12-mm) maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2-inch (12-mm) maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch (1.5 mm).

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm), with a maximum thickness limited to 1/2 inch (12 mm).
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch (3 mm).
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch (9 mm) or minus 1/4 inch (6 mm).
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm).

3.04 LAYING MASONRY WALLS

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

- B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.
- C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4 inches (100 mm). Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.
- D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
- E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
- G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.
- H. Fill cores in hollow CMUs with grout 24 inches (600 mm) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.
- I. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
 - 1. Install compressible filler in joint between top of partition and underside of structure above.
 - 2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch (13-mm) clearance between end of anchor rod and end of tube. Space anchors 48 inches (1200 mm) o.c. unless otherwise indicated.
 - 3. Wedge nonload-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
 - 4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 07 84 43.

3.05 MORTAR BEDDING AND JOINTING

- A. Lay hollow CMUs as follows:

1. Bed face shells in mortar and make head joints of depth equal to bed joints.
 2. Bed webs in mortar in all courses of piers, columns, and pilasters.
 3. Bed webs in mortar in grouted masonry, including starting course on footings.
 4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
- B. Set cast-stone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
 2. Wet joint surfaces thoroughly before applying mortar.
 3. Rake out mortar joints for pointing with sealant.
- C. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

3.06 MASONRY-CELL FILL INSTALLATION

- A. Install molded-polystyrene insulation units into masonry unit cells before laying units.

3.07 MASONRY-JOINT REINFORCEMENT

- A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (150 mm).
1. Space reinforcement not more than 16 inches (406 mm) o.c.
 2. Space reinforcement not more than 8 inches (203 mm) o.c. in foundation walls and parapet walls.
 3. Provide reinforcement not more than 8 inches (203 mm) above and below wall openings and extending 12 inches (305 mm) beyond openings in addition to continuous reinforcement.
- B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
- C. Provide continuity at wall intersections by using prefabricated T-shaped units.
- D. Provide continuity at corners by using prefabricated L-shaped units.
- E. Cut and bend reinforcing units as directed by manufacturer for continuity at corners, returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.08 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

- A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
 - 1. Provide an open space not less than 1 inch (25 mm) wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
 - 2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
 - 3. Space anchors as indicated, but not more than 24 inches (610 mm) o.c. vertically and 36 inches (915 mm) o.c. horizontally.

3.09 CONTROL AND EXPANSION JOINTS

- A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
- B. Form control joints in concrete masonry as follows:
 - 1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
 - 2. Install preformed control-joint gaskets designed to fit standard sash block.
 - 3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
 - 4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.

3.10 LINTELS

- A. Provide concrete or masonry lintels where shown and where openings of more than 12 inches (305 mm) for brick-size units and 24 inches (610 mm) for block-size units are shown without structural steel or other supporting lintels.
- B. Provide minimum bearing of 8 inches (200 mm) at each jamb unless otherwise indicated.

3.11 FLASHING

- A. General: Install embedded flashing at ledges and other obstructions to downward flow of water in wall where indicated.
- B. Install flashing as follows unless otherwise indicated:

1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
 2. At lintels, extend flashing a minimum of 6 inches (150 mm) into masonry at each end. At heads and sills, extend flashing 6 inches (150 mm) at ends and turn up not less than 2 inches (50 mm) to form end dams.
 3. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches (38 mm) or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Section 07 92 00 for application indicated.
 4. Install metal drip edges with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 07 92 00 for application indicated.
 5. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall, and adhere flexible flashing to top of metal drip edge.
 6. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.
- C. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.
- D. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.

3.12 REINFORCED UNIT MASONRY

- A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
 2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

- B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6.
- C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
 - 1. Comply with requirements in TMS 602/ACI 530.1/ASCE 6 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
 - 2. Limit height of vertical grout pours to not more than 60 inches (1520 mm).

3.13 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements is done at Contractor's expense.
- B. Inspections: Special inspections in accordance with Level 3 in TMS 402/ACI 530/ASCE 5.
 - 1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
 - 2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
 - 3. Place grout only after inspectors have verified proportions of site-prepared grout.
- C. Testing Prior to Construction: One set of tests.
- D. Testing Frequency: One set of tests for each 5000 sq. ft. (464 sq. m) of wall area or portion thereof.
- E. Concrete Masonry Unit Test: For each type of unit provided, in accordance with ASTM C140 for compressive strength.
- F. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, in accordance with ASTM C780.
- G. Mortar Test (Property Specification): For each mix provided, in accordance with ASTM C780. Test mortar for mortar air content and compressive strength.
- H. Grout Test (Compressive Strength): For each mix provided, in accordance with ASTM C1019.

3.14 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.
- C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Engineer's approval of sample cleaning before proceeding with cleaning of masonry.
 - 3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 - 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 - 5. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.

END OF SECTION

SECTION 05 10 50

STRUCTURAL ALUMINUM

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide Structural aluminum products, including sheet, pipe, extrusions, and associated accessories as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. ASTM International (ASTM):
 - 1. B209: Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - 2. B221: Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes
 - 3. B308: Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles
- B. American Welding Society (AWS):
 - 1. A5.10: Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods
 - 2. D1.2: Structural Welding Code - Aluminum

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. A copy of this specification section, with addenda updates, with each paragraph check marked to show specification compliance or marked to show deviations.
- C. Manufacturer's information and catalog data showing compliance with this specification and a full description of the product.
- D. Shop Drawings:
 - 1. Submit in advance of fabrication complete information necessary for the fabrication of each component and part of the structural aluminum. Including but not limited to the following:
 - a. Member size and length

- b. Bill of materials
 - c. Material specifications
 - d. Bolt hole size and bolt size
 - e. Cuts, copes, and bevels
 - f. Piece marks for field assembly
 - g. Detail of each connection or typical connection
 - h. Splices
2. Submit erection drawings showing complete information necessary for the erection of each component part of the structural aluminum. Including but not limited to the following:
- a. Dimensions for alignment and elevations of each member.
 - b. Location of members and attachments by match-marking of piece numbers.
 - c. Type and location of each field connection.
 - d. Number of shear connectors on each member.
 - e. Detail of each field connection or typical connection.
 - f. Anchor bolts and setting plans.
3. Do not develop shop drawings by using reproductions of contract drawings. Identify each shop drawing detail by contract drawing detail title.
4. Indicate shop welding and the required nondestructive testing by welding symbols and nondestructive testing symbols as shown in the latest edition of AWS A2.4.
- a. Fully explain special conditions with notes or details.
 - b. Welding symbols for groove welds shall indicate the groove depth required to obtain the specified effective throat thickness for the welding process and position of welding to be used.
 - c. The details of groove welds, joints, and preparation of base material shall be referenced to prequalified joints specified in AWS D1.2 and shall clearly distinguish between complete joint penetration and partial joint penetration.
5. Fillet weld symbols shall indicate required weld size to obtain the specified effective throat thickness and effective length. For fillet weld lengths not specified provide a continuous weld.

- E. Test Reports: Certified copies of mill tests or reports from a recognized commercial laboratory including chemical and tensile properties of each shipment of structural metal or part thereof having common properties. Tests and analyses shall be made in accordance with applicable ASTM Standards.
 - F. Welder's certificates
- 1.04 SPARE PARTS:
- A. Comply with the requirements specified in Section 01 61 00.
- 1.05 QUALITY ASSURANCE:
- A. Comply with the requirements specified in Section 01 43 00.
 - B. Qualifications:
 - 1. Perform welding of structural metals with welders who have a current AWS certificate for the type of welding to be performed.
 - 2. Remove welders performing unsatisfactory work, or require to requalify.
 - 3. Weld inspections may use gamma ray, magnetic particle dye penetrant, or other aids to visual inspection to examine any part of welds or all welds.
 - 4. Contractor shall bear costs of retests on defective welds.
 - 5. Contractor shall bear costs in connection with qualifying welders.

PART 2 - PRODUCTS

2.02 MATERIALS

- A. Structural sheet aluminum: ASTM B209, Alloy 6061-T6.
- B. Structural aluminum: ASTM B308, Alloy 6061-T6.
- C. Extruded aluminum: ASTM B221, Alloy 6063-T42.
- D. Isolating sleeves and washers:
 - 1. As indicated on the Drawings and as specified in Section 03 15 20.
- E. Miscellaneous Materials:
 - 1. Furnish supplementary parts necessary to complete each item even where such work is neither definitely indicated on the Drawings nor specified.

2. Size, form, attachment, and location shall conform to the best of current practice.
3. Conform to applicable ASTM Standards for materials not otherwise specified.

2.03 FABRICATION:

A. Aluminum Layout:

1. Center punch hole centers, and punch or scribe cutoff lines, except where marks would remain on fabricated material.
2. Apply temperature correction where necessary in layout of critical dimensions. Use a coefficient of expansion of 0.000013 per degree of Fahrenheit.

B. Cutting Aluminum:

1. Material 1/2-inch thick or less: Shear, saw, or cut with a router.
2. Material more than 1/2-inch thick: Saw or rout.
3. Make cut edges true and smooth, free from excessive burrs or ragged breaks.
4. Avoid reentrant cuts wherever possible. Where used, fillet by drilling prior to cutting.
5. Do not flame cut aluminum alloys.
6. Punch or drill rivet or bolt holes to finished size before assembly:
 - a. Make finished diameter of holes for bolts 1/16-inch maximum larger than nominal bolt diameter.
 - b. Make holes cylindrical and perpendicular to principal surface.
 - c. Do not permit holes to drift in a manner to distort metal.

C. Aluminum Forming and Assembly:

1. Do not heat structural aluminum, except as follows:
 - a. Heat aluminum to 400 degrees F for 30 minutes maximum, to facilitate bending or welding.
 - b. Heat only when proper temperature controls and supervision can ensure that limitations on temperature and time are observed.

D. Before assembly, remove chips lodged between contacting surfaces.

E. Welding Aluminum:

1. Perform welding of aluminum in accordance with AWS D1.2.
2. Weld aluminum in accordance with the following:
 - a. Preparation:
 - (1) Remove dirt, grease, forming or machining lubricants, and organic materials from areas to be welded by cleaning with a suitable solvent or by vapor degreasing.
 - (2) Additionally, etch or scratch brush to remove oxide coating just prior to welding when inert gas tungsten arc welding method is used.
 - (3) Oxide coating may not need to be removed if welding is performed by automatic or semi-automatic inert gas shielded metal arc.
 - (4) Suitably prepare edges to ensure 100 percent penetration in butt welds by sawing, chipping, machining, or shearing. Do not cut with oxygen.
 - b. Filler metal: Aluminum alloys conforming to the requirements of AWS A5.10 and AWS classification ER 4043, ER 5654, ER 5554, ER 5183, ER 5356, or ER 5556.
 - c. Perform welding of structures which are to be anodized using filler alloys which will not discolor when anodized, AWS ER 5654, ER 5554, ER 5183, ER 5356, or ER 5556.
 - d. Perform welding by using a non-consumable tungsten electrode with filler metal in an inert gas atmosphere (TIG) or using a consumable filler metal electrode in an inert gas atmosphere (MIG).
 - e. Do not use welding process that requires use of a welding flux.
 - f. Neatly make welded closures.
 - g. Where weld material interferes with fit or is unsightly in appearance, grind it smooth.
 - h. Make welds full penetration welds unless otherwise indicated on the Drawings.

2.04 FINISHES:

A. Coating for dissimilar metals:

1. Alkali resistant bitumastic:
 - a. Manufacturers: One of the following:

- (1) Carboline, Bitumastic Super Service Black.
 - (2) Tnemec, 46-465.
 - (3) Wasser, MC-Tar.
- b. Minimum dry film thickness of coating shall be 20-mils, applied as two 10-mils coats.

PART 3 - EXECUTION

3.01 INSTALLATION:

- A. Install structural aluminum products as indicated on the Drawings and as specified.
- B. Install structural aluminum products accurately and securely, true to level, plumb, in correct alignment and grade, with all parts bearing or fitting structure or equipment for which intended.
- C. Do not cock out of alignment, redrill, reshape, or force fit fabricated items.
- D. Place anchor bolts or other anchoring devices accurately and make surfaces which bear against structural items are smooth and true to level.
- E. Rigidly support and brace structural products needing special alignment to preserve straight, level, even, smooth lines, and keep braced until concrete, grout, or dry pack mortar has hardened for a minimum 48-hour period.
- F. Interface with other products:
 1. Where aluminum comes in contact with dissimilar metals, use stainless steel bolts or anchors and separate or isolate the dissimilar metals with isolating sleeves and washers as specified in Section 03 15 20.
 2. Do not paint exposed aluminum surfaces. Remove markings and leave surfaces clean. Coat those parts of aluminum which will be cast into concrete, and those parts of aluminum which will come in contact with masonry, concrete, or wood, with an alkali resistant bitumastic coating as defined in Article 2.03.
 3. Coat those parts of aluminum which will be cast into concrete or which will be in contact with concrete, grout, masonry, wood, or other materials that will cause the aluminum to corrode, with an alkali resistant bitumastic coating as defined in Article 2.04.

3.02 EXAMINATION:

- A. Verification of conditions: Examine Work in place to verify that it is satisfactory to receive the Work of this Section. If unsatisfactory conditions exist, do not begin this Work until such conditions have been corrected.

3.03 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 12 00
STRUCTURAL STEEL

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. The term "Structural Steel" is used as defined in accordance with the AISC Code of Standard Practice.
- B. Provide structural steel as specified and as shown on contract drawings.

1.02 REFERENCES:

- A. American Institute of Steel Construction (AISC):
 - 1. 303: Code of Standard Practice for Steel Buildings and Bridges
 - 2. 325: Manual of Steel Construction, Fifteenth Edition
 - 3. 326: Structural Steel Detailing Manual
 - 4. 348: Specification for Structural Joints using ASTM A325 or A490 Bolts
 - 5. 360-16: Specification for Structural Steel Buildings
- B. ASTM International (ASTM):
 - 1. A6: Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling.
 - 2. A36: Specification for Carbon Structural Steel.
 - 3. A53: Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless
 - 4. A108: Standard Specification for Steel Bars, Carbon and Alloy, Cold-Finished
 - 5. A123: Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - 6. A143: Practice for Safeguarding Against Embrittlement of Hot-Dip Galvanized Structural Steel Products and Procedures for Detecting Embrittlement.
 - 7. A153: Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

8. A194: Specification for Carbon and Alloy-Steel Nuts for Bolts for High-Pressure and High-Temperature Service.
9. A307: Specification for Carbon Steel Bolts and Studs, 60,000 PSI Tensile Strength.
10. A384: Practice for Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies.
11. A385: Practice for Providing High Quality Zinc Coatings (Hot-Dip).
12. A449: Specification for Quenched and Tempered Steel Bolts and Studs.
13. A500: Standard Specification for Steel for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
14. A563: Specification for Carbon and Alloy Steel Nuts.
15. A572: Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.
16. A780: Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
17. A992: Standard Specification for Steel for Structural Shapes for Use in Building Framing.
18. B695: Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel.
19. F436: Specification for Hardened Steel Washers.
20. F1554: Standard Specification For Anchor Bolts, Steel, 36, 55, and 105 ksi Yield.
21. F3125: Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, 120 ksi and 150 ksi Minimum Tensile Strength.

C. American Welding Society (AWS):

1. D1.1: Structural Welding Code – Steel

D. Occupational Safety and Health Administration (OSHA):

1. Safety and Health Standards for the Construction Industry, 29 CFR 1926 Subpart R Safety Standards for Steel Erection.

E. Governing Building Code:

1. International Building Code (IBC).

1.03 DESIGN CRITERIA:

- A. Structural Connections: AISC Specification for Structural Steel Buildings. Design connections not fully detailed on the Drawings to resist the loads shown on the Contract Drawings or specified.
- B. Where beam end reactions are not shown, design the connection for one-half the total allowable uniform load in kips for beams laterally supported at the given span, as determined by the tables for allowable loads on beams in the AISC Manual of Steel Construction, in addition to any axial loads identified on the Drawings.
- C. Unless otherwise noted on Contract Drawings, design connections for ASTM F3215 bolts, bearing-type connection with threads included in shear plane.

1.04 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 1. Submit in advance of fabrication complete information necessary for the fabrication of each component and part of the structural steel framing. Include the following:
 - a. Member size and length.
 - b. Bill of materials.
 - c. Material specifications.
 - d. Bolt hole size and bolt size.
 - e. Cuts, copes, and bevels.
 - f. Piece marks for field assembly.
 - g. Detail of each connection or typical connection.
 - h. Splices.
 2. Submit erection drawings showing complete information necessary for the erection of each component part of the structural steel framing. Include the following:
 - a. Dimensions for alignment and elevations of each member.
 - b. Location of members and attachments by match-marking of piece numbers.

- c. Type and location of each field connection.
 - d. Number of shear connectors on each member.
 - e. Detail of each field connection or typical connection.
 - f. Anchor bolts and setting plans.
- 3. Do not develop shop drawings by using reproductions of contract drawings. Identify each shop drawing detail by contract drawing detail title.
- 4. Indicate both shop and field welding and the required nondestructive testing by welding symbols and nondestructive testing symbols as shown in the latest edition of AWS A2.4.
 - a. Fully explain special conditions with notes or details.
 - b. Welding symbols for groove welds shall indicate the groove depth required to obtain the specified effective throat thickness for the welding process and position of welding to be used.
 - c. The details of groove welds, joints, and preparation of base material shall be referenced to prequalified joints specified in AWS Figures 3.2 through 3.11 and shall clearly distinguish between complete joint penetration and partial joint penetration.
 - d. Fillet weld symbols shall indicate required weld size to obtain the specified effective throat thickness and effective length. For fillet weld lengths not specified provide a continuous weld.
- 5. Welding Procedures: Prepare written welding procedures for both shop and field welds, which are deemed prequalified in accordance with AWS Code Section 3 and make the procedures available to the testing agency at the fabricator's plant. Prior to use of submit other for review procedures along with tests required to qualify the procedure in accordance with AWS Code Section 3.2.3.
- 6. Submit sequence-of-welding outline.
- 7. Submittals for Evidence of Conformity to Specifications: Certified mill test reports containing results of chemical and mechanical test as specified by ASTM A6 for the following material:
 - a. Structural steel shapes
 - b. Structural steel bars
 - c. Structural steel plates

In addition to the certified mill test reports, the fabricator shall provide an affidavit stating that the structural steel furnished meets the requirements of ASTM specification for the grade furnished. Test any of the members not represented by certified mill test reports by the testing laboratory in accordance with ASTM specification for chemical and physical properties. The contractor is responsible for the cost of sampling and testing.

8. Submit manufacturer's certification and test data that the following items furnished conform to the following specifications:
 - a. High-strength bolts including nuts and washers. Provide Connection type N per the AISC handbook unless otherwise noted in the drawings.
9. Proposed Substitutions: Submit for review in sketch form prior to submittal of shop drawings substitutions of members or modifications of details, if proposed by the Contractor. Submit in sketch form for review corrections for inaccuracy that result in a change from the structural drawing or final shop drawing details. Make such substitutions or corrections only when permitted by the Engineer.
10. Qualification test reports bearing witness certification by an independent testing laboratory for each welder, welding operator and tacker to be employed in the work.

1.05 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Test and inspect structural steel in accordance with Section 01 45 33.
- C. Provide structural steel in accordance with AISC Standard for Structural Steel Buildings and the Code of Standard Practice for Steel Buildings and Bridges, unless otherwise specified herein.
- D. Use connections shown or, if not shown, select connections to support half the AISC maximum uniform load for the indicated beam size and span.
- E. Steel fabricator shall have 5 years' experience minimum in structural steel fabrications.
- F. Steel erector shall have 5 years' experience minimum in structural steel erection.
- G. Welding Qualification and Certification:
 1. Furnish written welding procedure for welds in conformance with the AWS D1.1.
 2. Each welder, welding operator and tack welder shall be certified by test to perform type of work required in conformance with AWS D1.1.

3. If a welder or welding operator has not been engaged in a specific welding process for a period of six months or more, that individual shall be deemed unqualified and shall not perform work on the project until the individual has been qualified again by testing in conformance with AWS D1.1.
4. Maintain duplicate qualification and certification records at the job site readily available for examination.

H. Tolerances:

1. Maintain tolerances conforming to AISC Code of Standard Practice.
2. Permissible variation tolerances conforming to ASTM A6.

I. Tension Calibrator:

1. Provide certification by an independent testing laboratory confirming the accuracy of the tension-measuring device when slip-critical connections and connections subject to direct tension are being used. Confirm accuracy not more than 30 days prior to use on project and at intervals not more than six months thereafter.
2. Provide tension calibrator measuring device at the job site when high-strength bolts in slip-critical connections and connections subject to direct tension are being installed and tightened.
3. Conform to the AISC Specification for Structural Joints for frequency and of number confirmation tests to be performed and the test procedure.
4. Return tension calibrator measuring device to the independent testing laboratory for certification if Engineer questions its accuracy.

1.06 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements in Section 01 61 00.
- B. Load structural members in such a manner that they may be transported and unloaded without being over-stressed, deformed or otherwise damaged.
- C. Protect structural steel members and packaged materials from corrosion and deterioration. Store material in a dry area.
- D. Support materials stored outdoors above ground surfaces on wood runners and protected with acceptable effective and durable covers.
- E. Do not place materials on the structure in a manner that might cause distortion or damage to the members or the supporting structures. Repair or replace damaged materials or structures as recommended by the Engineer.

1.07 FIELD MEASUREMENTS:

- A. Verify dimensions and make any field measurements necessary and be fully responsible for accuracy and layout of the work.
- B. Review the Contract Drawings and report any discrepancies to the Engineer for clarification prior to starting fabrication.

PART 2 - PRODUCTS

2.01 STRUCTURAL STEEL:

- A. W shapes in conformance with ASTM A992 unless otherwise indicated or specified.
- B. C, M, S and HP shapes in conformance with ASTM A572, Grade 50, unless otherwise specified or shown on contract drawings.
- C. Angles, plates and bars in conformance with ASTM A36.
- D. Round, square and rectangular structural tube members (HSS) in conformance with ASTM A500, Grade C.
- E. Steel pipe in conformance with ASTM A53, Grade B.
- F. Hot-Dip Galvanized Carbon Steel in conformance with ASTM A123.

2.02 FASTENERS:

- A. Carbon Steel Bolts, Nuts and Washers: ASTM A307, Grade A.
- B. High-strength fasteners in conformance with ASTM F3125, Type 1.
- C. Nuts and washers ASTM A563 and F 436.
- D. Hot-dip Galvanized Bolts, nuts and washers in conformance with ASTM A153.
- E. Mechanically Galvanized Bolts, nuts and washers in conformance with ASTM B695.

2.03 ANCHOR BOLTS:

- A. Steel anchor bolts in conformance with ASTM F1554, Grade 36.

2.04 CRANE RAILS:

- A. Provide in conformance with crane manufacturer's requirements and as indicated or specified. Provide materials needed for fabrication and construction of crane rails, including:
 - 1. Joint bar bolts: ASTM A449 or ASTM F3125
 - 2. Joint bar nuts: ASTM A563, Grade B or ASTM F3125

2.05 WELDING:

- A. Class E70XX electrodes
- B. Provide equipment for welding, electrodes, welding wire and fluxes capable of producing indicated welds when used by certified welders under AWS welding procedures. Provide welding materials that comply with requirements of AWS Structural Welding Code.

2.06 SHOP FABRICATION:

- A. Fabricate each element and connection as indicated on the fabrication shop drawings accepted by the Engineer. Fabricate and shop assemble work to the greatest extent practical in conformance with following publications:
 - 1. AISC Manual of Steel Construction
 - 2. AISC Specification for Structural Joints
 - 3. AISC Detailing Manual
 - 4. AWS Structural Welding Code

2.07 CONNECTIONS:

- A. Connect members with ASTM F3125 high strength bolts unless otherwise specified or shown on contract drawings. Provide clean-cut holes without torn or ragged edges and remove outside burrs.
- B. Provide high-strength bolted construction assembly in accordance with AISC Specifications for Structural Joints. Bolted parts shall fit solidly together when assembled and shall not be separated by gaskets or any other interposed compressible material. Free joint surfaces burrs and foreign materials. Score hot-dipped galvanized contact surfaces with a wire brush or blasted prior to assembly. Grinding of surfaces is not permitted. If the thickness of the material is not greater than the normal diameter of the bolt plus 1/8 inch, the holes may be punched. If the thickness of the material is greater than the normal diameter of the bolt plus 1/8 inch, drill it full size or subpunched 1/16 inch smaller than the bolt diameter and reamed to full size. Provide holes for work

to be secured to structural steel framing and for the passage of work through steel framing members. Provide threaded nuts, threaded units, or other items welded to framing, which receive other work. Provide normal bolt hole diameters not more than 1/16 inch in excess of the normal bolt diameter unless otherwise specified in contract drawings. Provide required slotted or oversize bolt holes as specified in the AISC Specification for Structural Joints Section 3.3. Tighten each bolt to provide the minimum tension shown in Table 8.1 of AISC Specification for Structural Joints for the size and grade of bolts used. Tighten bolts in accordance with the manufacturer's specifications.

- C. Provide full cross section bearing on milled ends of columns, crane rails, monorails, and bearing stiffeners.
- D. Welded Connections:
 - 1. Weld connections indicated or specified.
- E. Make connections with ASTM A307 carbon steel bolts when specified or shown in contract drawings.
- F. Provide anchor rods with washer and heavy hex nuts. Provide hot-dip galvanized anchor rods, washers and heavy hex nuts with galvanized steel.

2.08 GALVANIZE:

- A. Provide hot-dip galvanizing in conformance with ASTM A123, Grade 100 to steel indicated or specified to be galvanize coated in the Drawings.
- B. Provide hot-dip galvanizing, in conformance with ASTM A153, to bolts, nuts and washers that will be used with galvanized steel.
- C. Complete fabrication and prepare surfaces of steel by removing weld spatter, flux, residue, burrs and metal surface defects before galvanizing. Clean weldments with power wire brush prior to galvanizing.
- D. Provide steel dipped into solution of zinc chloride plus ammonium chloride immediately prior to galvanizing.
- E. Tap bolt nuts after hot-dip galvanizing in conformance with ASTM A563.
- F. Inspect galvanized material for compliance with these specifications. Mark the material with a clearly visible stamp indicating the name of the galvanizer, the ASTM number and the weight of zinc coating in ounces per sq. ft.

2.09 GALVANIZE TOUCH-UP:

- A. Galvanize Touch-Up: Where galvanizing is damaged, touch-up abraded areas, using brushed-on method, with zinc-rich coating. Touch-up repair with zinc-rich coating of not less than 3 mil and not more than 6 mil dry film thickness.

- B. Touch-up damaged galvanized surfaces with one of the following zinc rich coatings:
 - 1. Endupor, zinc-rich coating by Dampney Manufacturing Co., Everett, MA
 - 2. ZiRP, zinc-rich coating by Duncan Galvanizing Corp., Everett, MA
 - 3. ZRC Cold Galvanizing Compound or ZRC Galvilite by ZRC Worldwide, Division of Norfolk Corp., Marshfield, MA

PART 3 - EXECUTION

3.01 ERECTION OF STRUCTURAL STEEL:

- A. Conform to the IBC and referenced AISC standards. Brace and secure work until permanent connections are completed. Provide accessories and fasteners to secure the work in place whether or not shown or specified. Comply with OSHA requirements.
- B. Erect structural steel with qualified, experienced personnel. Plan and lay out steel to require minimum of cutting. Erect work plumb, square, and true to line and level and in precise positions. Provide temporary bracing and guys to counteract loads and stresses to which structure may be subjected, including those due to erection equipment and its operation. Do not encumber premises with material or equipment.
- C. Splice members only where shown or specified. On exposed welded connections, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces. Comply with AISC specifications for bearing, adequacy of temporary connections, alignment, and the removal of paint on surfaces adjacent to field welds. Do not enlarge holes in members by burning or the use of drift pins, except in secondary bracing members. Ream holes that must be enlarged to place bolts. Do not use gas-cutting torches in the field for correcting fabrication errors in the structural framing.
- D. Erect, plumb, level, and align each individual member within the tolerance defined in Section 7 and Commentary of the AISC Code of Standard Practice, allowing for weld shrinkage during erection for assurance that the end product is within specified tolerance. Establish and maintain the building line for use in plumbing the exterior columns.

3.02 DAMAGED MEMBERS:

- A. During erection, straighten or replace members that are bent, twisted, or damaged. If heating is required in straightening, perform heating by methods that ensure uniform temperature throughout entire member. When required by the Engineer, remove members that are impaired strength and replace with new members at no additional cost to Owner.

3.03 MISFITS AT BOLTED CONNECTIONS:

- A. Immediately notify the Engineer where misfits in erection bolting are encountered. The Submit a method to remedy the misfit for review by the Engineer. The Engineer will determine whether the remedy is acceptable or if the member must be refabricated.
- B. Do not enlarge incorrectly sized or misaligned holes in members by burning or by the use of drift pins. Notify the Engineer immediately and submit a proposed method of remedy for review by the Engineer.

3.04 ANCHOR BOLTS:

- A. Install anchor bolts by using templates, setting drawings, and instructions provided by the fabricator. Verify positions of bolts prior to delivery of steel; report errors or deviation for adjustment. After anchor bolts have been embedded, protect threads by applying grease and by having the nuts screwed on until the metalwork is installed.

3.05 COLUMN BASEPLATES AND BEARING PLATES:

- A. Set columns with base plates attached and bearing plates for beams and similar structural members to their proper alignment and elevation using shim packs. Set loose column bases level to their proper alignment and elevation by use of shim packs or as shown in the contract drawings. Tighten anchor bolts after members have been positioned and plumbed. Do not remove protruding wedges, shims, or other leveling devices but cut off flush with the baseplate prior to packing with grout.

3.06 CONNECTIONS:

- A. Securely bolt members to maintain steel in position during field welding and final bolting and accommodate dead loads, wind, and erection stresses.
- B. Tighten high-strength bolted connections in accordance with AISC Specification for Structural Joints using ASTM F3125 Bolts and manufacturer's specifications.
- C. Perform shop-welded construction in accordance with AWS D1.1 Sections 2 through 6, whichever is applicable. Use only welded joints deemed as being prequalified in accordance with AWS Code Section 4, which are selected from AWS Code Figures 3.2 through 3.11.
- D. Common Bolts: Tighten ASTM A307 and nonslip critical bolts to snug tight plus one-quarter turn with upset bolt threads to preclude loosening, or use self-locking nuts.
- E. Do not reuse galvanized high-strength bolts, nuts and washers.

3.07 CRANE RAILS:

- A. Installation: Provide in conformance with crane manufacturer's printed instructions and as specified or as shown on contract drawings.

- B. Fasten crane rails to runway beam with rail clamps, in pairs, one each side of rail, spaced not more than 30 inch centers. Bolt each clamp to runway beam top flange with two bolts and self-locking nuts. Allow 1/32-inch clearance between clamp plate and top of rail flange and 1/4-inch clearance between clamp plate and edge of rail flange to provide a "floating rail" in conformance with AISC Manual. Do not use hook bolts. Center crane rail on the runway beam. In no case shall the crane rail eccentricity be greater than three-fourths of the runway beam web thickness. The entire assembly will be rejected if the crane rail eccentricity exceeds the three-fourths limitation. Replace and remove entire rejected assembly from job site at no additional cost to the Owner.
 - C. Install crane rails with milled ends and tight joints at splices. Use bolted splice bars to maintain joint alignment in conformance with AISC Manual. Do not use welded butt joints.
 - D. Retighten splice bolts within 30 days and in conformance with AISC Manual.
- 3.08 CLEAN-UP:
- A. Upon completion of the work, remove surplus materials, rubbish, and debris resulting from the operations, including disused equipment and implements of service, and leave the entire structure and site, insofar as the work of this section is concerned, in a neat, clean condition.
- 3.09 CLOSEOUT ACTIVITIES:
- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 21 00

STEEL JOISTS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide open web steel joists and long span steel joists as indicated and in compliance with Contract Documents.
- B. Provide bridging in accordance with the SJI, OSHA requirements and as indicated and in compliance with Contract Documents.
- C. Provide accessories in accordance with SJI requirements.

1.02 REFERENCES:

- A. American Institute of Steel Construction (AISC):
 - 1. 303: Code of Standard Practice for Steel Buildings and Bridges.
 - 2. 325: Manual of Steel Construction, Allowable Stress Design.

- C. American Welding Society (AWS):
 - 1. D1.1: Structural Welding Code – Steel.

D. Occupational Safety and Health Administration (OSHA):

1. Steel Erection Standard 29 CFR 1926.757.

E. Steel Joist Institute (SJI):

1. OWS: Open Web Steel Joists, K-Series.
2. SJI Load Tables:
 - a. Standard Specifications for Open Web Steel Joists, K-Series.
 - b. Code of Standard Practice for Steel Joists and Joist Girders.
3. TD9: Handling and Erection of Steel Joists and Joist Girders.

F. Steel Structures Painting Council (SSPC):

1. SP15: Commercial Grade Power Tool Cleaning.

1.03 DESIGN CRITERIA:

- A. Design joists for the dead loads based on floor and roof systems shown on the Contract Documents.
- B. Design joists for the live loads plus any special loads shown on the Contract Documents.
- C. Design joists for an additional superimposed load to account for piping, sprinklers, electrical conduit and components, equipment and ductwork. Design for a minimum of 20 psf or the actual weight of the items above.
- D. Design joists and connections for a net uplift of 20 psf unless otherwise indicated on the Contract Documents.

1.04 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 1. Complete and checked shop and erection drawings for steel joists and components.
 - a. Indicate standard designations, number, sizes, lengths, spacing and locations of joists, camber, bridging, connections, bearing plates, attachments and top and bottom chord extensions.
 - b. Shop and erection drawings for steel joists shall be reviewed by Engineer prior to fabrication.
 - c. Mill and material certifications.

- B. Certification, signed and sealed by a Professional Engineer employed by the joist manufacturer and registered in the State where the joists will be installed, indicating the codes and specifications to which the joist design conforms and stating that members, elements and connections are designed to withstand the specified loads.
- C. Qualification test reports bearing witness certification by an independent testing laboratory for each welder, welding operator and tacker to be employed in the work.

1.05 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Design joists and connections for the loads, moments and chord forces indicated on the Contract Documents.
- C. Allowable deflection for steel joists shall be $L/240$ of clear span under indicated uniform live load.
- D. Steel joist design, manufacture, handling and installation shall conform to the AISC and SJI Standard Specifications and load and weight tables.
- E. Bridging size and installation shall be as prescribed by the SJI.
- F. Provide special joists where required to carry concentrated or other special loads.
- G. Steel joists shall be SJI approved.
- H. Each welder, welding operator and tack welder shall be certified by test to perform type of work required in conformance with the SJI and AWS D1.1.

1.06 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 61 00.
- B. Storage and handling shall conform to the SJI Technical Digest #9.
- C. Transport, handle and store materials to protect from weather, rusting, corrosion or other damage.
- D. Store joists on substantial timbers and blocking with webs of joists vertical. Cover and protect from snow, rain and ground splatter
- E. Deliver, store and handle in a manner that prevents overstressing, deformation or damage.
- F. Prevent damage to shop coat.

PART 2 - PRODUCTS

2.01 STEEL JOISTS:

- A. Fabricate steel joists in accordance with the shop drawings, AISC, and the SJI standard specifications.
- B. Provide top and bottom chord extensions as shown on Contract Drawings. Top chord extensions shall be Type R.
- C. Provide sloped bearing ends where joist slope exceeds 1/4-inch per foot (0.5 percent).
- D. Provide bearing lengths in accordance with the SJI unless greater bearing lengths are indicated on the Contract Documents.
- E. Joist Seats:
 - 1. Seats for K-Series joists shall be 2-1/2 inches in depth and shall extend a minimum of 2-1/2 inches over steel supports, except as noted on the drawings.
 - 2. Seats for LH-Series and DLH-Series joists shall be 5 inches (125 mm) in depth and shall extend a minimum of 4 inches (100 mm) over steel supports.
 - 3. Fabricate with special seats as shown on shop drawings.
- F. Provide additional web members at points of application of concentrated loads to transfer loads to panel points.

2.02 JOIST BRIDGING:

- A. Provide bridging and bridging anchorage in accordance with the SJI and OSHA, Steel Erection Standard 29 CFR 1926.757 requirements.
- B. Provide cross bridging between the last two joists at the end of a bridging line such as at end walls or expansion joints.
- C. Provide a line of bridging near each of the first bottom chord panel points for joists subjected to uplift.
- D. Provide bridging to brace the top chord of joists supporting standing seam roofing under gravity loads.
- E. Minimum bridging shall be provided as required and where indicated on the Contract Documents
- F. Manufacturer of joists shall furnish bridging and bridging anchorage.

2.03 CONNECTIONS:

- A. Provide bolted connections using ASTM A325 bolts.
- B. Provide welded connections in conformance with the AISC, SJI, and AWS.

2.04 SHOP PAINTING:

- A. Provide shop painting in accordance with Section 09 96 00.
- B. Remove loose scale, rust or other foreign materials from fabricated joists and accessories.

PART 3 - EXECUTION

3.01 PREPARATION:

- A. Coordinate placement of anchorages in concrete and masonry construction for securing bearing plates, angles and bridging anchors.
- B. Verify that completed construction is ready for and will support steel joist and joist girder placement.
- C. Notify the Engineer if discrepancies are found. Do not proceed or install joists and joist girders in areas of discrepancy until those discrepancies have been fully resolved.

3.02 JOISTS:

- A. Steel joist erection shall comply with AISC, SJI, and OSHA, Steel Erection Standard 29 CFR 1926.757.
- B. Install in accordance with the SJI specifications, manufacturer's printed instructions and as indicated and specified.
- C. Install in straight parallel lines at spacing indicated within a tolerance of 1/4-inch plus or minus.
- D. Secure by welding to steel support beams or steel bearing plates.
- E. Do not apply loads to joists until secured in place and bridging is installed and anchored at its ends.
- F. Do not use damaged joists. Replacement joists shall be furnished at Contractor's expense.

3.03 BRIDGING:

- A. Bridging and bridging anchorage shall be provided in accordance with the SJI instructions and OSHA, Steel Erection Standard 29 CFR 1926.757 requirements.

3.04 FIELD BOLTED CONNECTIONS:

- A. Provide bolted connections between joist and columns that are not braced in at least two directions by structural steel members.

3.05 FIELD WELDING:

- A. Perform field welding in accordance with the AWS D1.1, SJI and shop drawings.
- B. No field welding will be permitted unless indicated on shop drawings.

3.06 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 31 00

STEEL DECK

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide steel deck as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. American Concrete Institute (ACI):
 - 1. 318: Building Code Requirements for Structural Concrete
- B. American Iron and Steel Institute (AISI):
 - 1. Specifications for the Design of Cold-Formed Steel Structural Members

 - 1. A611: Standard Specification for Steel, Sheet, Carbon, Cold-Rolled Structural Quality
 - 2. A653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 3. A780: Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings
- D. American Welding Society (AWS):
 - 1. D1.3: Structural Welding Code - Sheet Steel
- E. Factory Mutual Engineering Corporation (FM):
 - 1. 1-28: Loss Prevention Data
- F. Steel Deck Institute (SDI):
 - 1. Publication No. 23: Design Manual for Floor Decks and Roof Decks
 - 2. Publication No. 29: Design Manual for Composite Decks, Form Decks, Roof Decks and Cellular Deck Floor Systems with Electrical Distribution

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 - 1. Submit complete manufacturer's specifications and installation instructions. Include manufacturer's certification showing compliance with these specifications.
 - 2. Submit detailed shop drawings showing layout of steel deck panels, anchorage details, openings, and every condition requiring closure panels, supplementary framing, special jointing, deck reinforcement, support locations or other accessories. Include professional structural engineer stamp on drawings for steel deck.
 - 3. Submit manufacturer's literature indicating steel deck load capacity for various deck styles, gages, spans and depth indicated or specified.
 - 4. Submit product data for mechanical fasteners to be used.
 - 5. Submit qualification test reports bearing witness certification by an independent testing laboratory for each welder and welding operator to be employed in the work

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Comply with the current editions of codes and regulations including current editions or revisions and supplements of the following relevant reference standards:
 - 1. IBC
 - 2. AISI "Specifications for the Design of Cold-Formed Steel Structural Members."
 - 3. AWS D1.3, "Structural Welding Code – Sheet Steel."
 - 4. SDI "Design Manual for Floor Decks and Roof Decks" and "Design Manual for Composite Decks, Form Decks, Roof Decks and Cellular Deck Floor Systems with Electrical Distribution."
- C. Qualifications of Erector: The erector shall have at least three years' experience in the erection of steel decking.
- D. Qualifications of Welding:
 - 1. Qualify welding processes and welding operators in accordance with AWS D1.3.
 - 2. Decking welded in place, is subject to inspection and testing. When welds are found defective, pay for testing and removal and replacing that portion of decking.

- E. Replace or repair damaged galvanized material as recommended by the Engineer.

1.05 DESIGN CRITERIA:

- A. Compute section properties of steel deck in conformance with AISI Specification for the Design of Cold-Formed Steel Structural Members.
- B. Material and steel deck profiles shall conform to the applicable requirements of the Steel Deck Institute specifications.
- C. Steel roof deck shall be capable of supporting all superimposed dead load and the live load shown on contract drawings with a maximum fiber stress in the deck of 20,000 psi. Superimposed dead loads and all loads to be suspended from the decking shall be accounted for in the design of the deck units.
- D. Anchor steel deck to the supporting members to resist an uplift of 45 psf for eave overhangs and 30 psf for all other roof areas unless noted otherwise on contract drawings.
- E. Maximum allowable deflection of roof deck under live load shall not exceed $L/240$ of the span.
- F. Steel deck shall be capable of supporting a construction load of 200 pounds distributed over a 1 foot width at midspans and at the ends of cantilevers with a maximum fiber stress of 26,000 psi and a maximum deflection of $L/240$.
- G. Steel floor deck shall be capable of supporting the dead load and live load indicated compositely with concrete with a maximum fiber stress in the deck of 20,000 psi. Superimposed dead loads and all loads to be suspended from the decking shall be accounted for in the design of the deck units.
- H. Steel floor deck shall be capable of supporting the weight of wet concrete without the need for temporary shoring during concrete placement.
- I. Maximum allowable deflection of composite floor deck under live load shall not exceed $L/360$ of the span.
- J. Design deck to account for construction loads as determined by the Steel Deck Institute construction loading criteria. As a minimum, the steel floor deck shall be capable of supporting the combined weight of the deck, the wet concrete and a 20 psf uniform load or 150 pound concentrated load over a 1 foot width at mid-spans and at the ends of cantilevers with a maximum fiber stress of 21,600 psi and a maximum deflection of $L/180$ or 3/4-inch relative to the supporting members.

1.06 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 61 00.

- B. During loading, transporting, and unloading prevent damage and injury to ends, sides, and faces of panels.
- C. When delivered to the jobsite, store the steel decking off the ground and cover to protect material from the elements. Slope to permit drainage.

PART 2 - PRODUCTS

2.01 STEEL ROOF DECK:

- A. Steel roof decking type, depth and thickness shall be shown on contract drawings, but not less than 20 gage (0.034 inches).
- B. Form steel roof decking from steel conforming to ASTM A653 Structural Quality.
- C. Galvanize steel roof panels in accordance with ASTM A653, Coating Designation G-90.
- D. Steel roof deck is designed for 3-span condition. If less spans are used, notify Engineer.

2.02 STEEL FLOOR DECK:

- A. Steel floor decking type, depth and thickness shall be as shown on contract drawings but not less than 20 gage (0.034 inches).
- B. Whenever possible, deck shall be multi-span and shall not require shoring during the concrete placement procedure.
 - 1. Concrete: 3,000 psi at 28 days conforming to Section 03 30 00.
- C. Where fire resistance rated assemblies are required, provide UL-listed units. Identify steel deck bundles with labels bearing the UL mark.

2.03 ACCESSORIES:

- A. Provide ridge plates, valley plates, closures, flashing and sump pans manufactured from galvanized steel sheet conforming to the requirements of ASTM A653, structural quality, with a minimum yield stress of 33,000 psi and G90 coating.
 - 1. Ridge plates, valley plates, flat plates at changes in deck direction, closures, accessories and flashings: 18 gage
 - 2. Sump Pans: Flat, recessed, 14 gage
 - 3. Welding Washers: 16 gage

2.04 WELDING ELECTRODE:

- A. Use E60XX or higher welding electrodes.

2.05 FABRICATION:

- A. Form deck units in lengths to span three or more support spacings with flush, telescoped, or nested 2-inch end laps and nesting side laps, unless otherwise shown or specified. Laps shall be made over supports. Provide deck configurations complying with SDI "Basic Design Specifications."
- B. Fabricate roof sump pans from a single piece of galvanized sheet steel of the same quality as the deck units; with level bottoms and sloping sides to direct water flow to the drain, unless otherwise shown. Provide sump pans to receive roof drains and with bearing flanges not less than 3 inches wide. Recess pans to less than 1-1/2 inches below the roof deck surface, unless otherwise shown or required by deck configuration.
- C. Fabricate metal closure strips of galvanized sheet steel of the same quality as the deck units. Form to the configuration required to provide tight-fitting closures at open ends and sides of decking.
- D. Provide decking accessories, including closures and filler strips. Provide closure plates and other attachments at openings through decking for ducts, shafts, and other penetrations. Where decking changes directions and at perimeter, closures shall be of galvanized sheet steel of the same quality as the deck units unless otherwise indicated.
- E. Provide special width panels to result in continuous bearing of the deck on supports that are parallel to the deck ribs. Such bearing is required at the edge of the deck, supporting walls below the deck, and at deck openings.
- F. Provide special width panels, beam filler panels, or split panels at flanges of structural steel beam supports which are parallel to the deck ribs and which will have steel connectors attached to the beam flange.

PART 3 - EXECUTION

3.01 PREPARATION:

- A. Check supporting elements for correct layout and alignment. Correct any deficiencies before securing deck units.
- B. Remove debris from surfaces to support steel deck.

3.02 INSTALLATION:

- A. Install decking and accessories on structural supports in conformance with Steel Deck Institute specifications, the Steel Deck Institute Manual of Construction with Steel Deck, in accordance with placement plans, and as indicated and specified.
- B. Place steel decking with edges up and flutes at right angles to supports. End laps shall always occur over supports, with a minimum end lap of 2-inch for attachment.

- C. Begin placement of steel decking panels at corner of building to maintain alignment. Lap sheets one-half flute at side laps. Attach sheets to top chord of supports by plug weldings. Fasten each end lap in the trough of the flutes at each corner (through four thicknesses of metal) and at center of end lap. Limit the spacing between adjacent points of attachment to 18 inches maximum over supports.

- D. Permanently fasten deck panels to the structural supports immediately after placement.

3.03 WELDED ATTACHMENT:

- A. Anchor decking to supporting members with puddle welds in accordance with the attachment pattern shown on the shop drawings.

3.04 CUTTING AND FITTING:

- A. Perform all cutting and fitting of units.
- B. Do not make holes that are not indicated on manufacturer's shop drawings without prior written permission of Engineer.

3.05 ACCESSORIES:

- A. Provide flashing, ridge and valley plates; sump pans and other accessories necessary. Install sump pan at each roof drain.
- B. Close open ends of cell runs with cell closures at columns, openings, walls, etc. and ends where cells change direction.
- C. Provide and weld flashings into position to close openings between steel deck units and columns, beams and girders.
- D. Provide other closures and flashings required and as recommended by deck manufacturer.
- E. Fasten all closures, flashings and sump pans by tack welding at a maximum spacing of 24-inches on center, but not less than one weldment on each corner.
- F. Provide special end and side closures at spandrels and openings to act as edging.

3.06 REPAIR OF ZINC COATINGS:

- A. Clean weldments by chipping or wire brushing to remove all slag immediately prior to applying galvanized touch-up.
- B. Clean with wire brush and prime coat all cut edges with galvanized touch-up as specified herein.
- C. Apply galvanize touch-up immediately upon completion of cleaning weldments, abraded and damaged areas. Conform to the following requirements:

1. Galvanize Touch-Up: Where galvanizing is damaged, touch-up abraded areas, using brushed-on method, with zinc-rich coating. Touch-up repair with zinc-rich coating of not less than 3 mil and not more than 6 mil dry fil thickness.
2. Repair galvanizing using paints containing zinc dust in conformance with ASTM A780.

D. Materials:

1. Dampney Manufacturing Co.; Epodur 1870
2. Duncan Galvanizing Corp.; ZiRP
3. ZRC Worldwide, Division of Norfolk Corp.; ZRC Cold Galvanizing Compound or ZRC Galviline

3.07 CLEANING:

- A. Remove oil, grease, dirt and debris from deck and leave ready for work of next trade.

3.08 PROTECTION:

- A. Do not use deck units for storage or working platforms until permanently secured in position.
- B. Assure that construction loads do not exceed carrying capacity of deck.

3.09 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 40 10

COLD-FORMED STEEL FRAMING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide cold-formed steel stud and joist systems, design, connections, bracing, fasteners, and related accessories as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

1. 900: Standard for Safety Air Filter Units

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. Delegated Design Submittals: For each device, equipment or appurtenance provide written certification from Professional Engineer licensed in the State of Utah stating that supports systems, anchorage and equipment have been designed according to the requirements of Section 1613 of the building codes of Utah, ASCE/SEI 7, and in accordance with Specification 01 41 20. Submit calculations stamped by a Professional Engineer licensed in the State of Utah for support systems and anchorage for wind, seismic, and all other pertinent loads.
- C. Submit complete layout drawings and lists for metal framing. Submit member sizes, materials, details, connections, and fasteners for studs, joists, lintels, bracing, and runners. Submit calculations for design of lintels and their supports that are signed and stamped by a Civil Engineer registered in the State of Utah.

- D. Operation and Maintenance Data:
 - 1. Operation and maintenance manuals shall be specific to equipment purchased and crossing out of non-applicable items is not acceptable.
 - 2. Comply with requirements of Section 01 78 23.
- 1.04 CODES AND STANDARDS:
 - A. IBC, Chapter 22, Section 2210
 - B. "Specifications for the Design of Cold-Formed Steel Structural Members" by AISI.
 - C. Welding: Structural Welding Code, AWS D1.1.
 - D. Welding Qualifications: Qualify welders and welding procedures in accordance with AWS D1.1. Provide certification that welders employed in the work have been engaged in the qualified welding procedure within the last six months.
- 1.05 SPARE PARTS:
 - A. Comply with the requirements specified in Section 01 61 00.
 - B. Provide spare parts that are identical to and interchangeable with similar parts installed.
 - C. Provide a list of recommended spare parts for the first year of operation and for the first five years of operation, including a price list and location of the nearest facility from which all spare parts can be obtained.
- 1.06 DESIGN:
 - A. Design lintels over openings in walls and their connections and supports for all dead, live, wind, and seismic loads tributary thereto.
 - B. Use design loads prescribed by the IBC. Use the prescribed wind and seismic loads considering the project location.
- 1.07 QUALITY ASSURANCE:
 - A. Comply with the requirements specified in Section 01 43 00.
- 1.08 DELIVERY STORAGE AND HANDLING:
 - A. Comply with the requirements specified in Section 01 66 10.
- 1.09 WARRANTY:
 - A. Comply with the requirements specified in Section 01 78 36.

PART 2 - PRODUCTS

2.01 STUDS, JOISTS, AND RUNNERS

- A. Studs and joists shall be cold-formed galvanized steel channels with section properties and sizes conforming to those indicated in the drawings. Material shall conform to ASTM A653, SS Grade 50.
- B. Runners shall be cold-formed galvanized steel having the same gauge as the studs unless otherwise noted. Material shall conform to ASTM A653, SS Grade 33.
- C. Hot-dipped galvanizing of members shall conform to ASTM A653.
- D. Provide punch-outs in member webs at 24 inches on center and 12 inches from ends.

2.02 LATERAL WALL BRACING:

- A. Provide cold-formed hot-dipped galvanized steel channels 1 1/2 inches deep with flanges not less than 7/16-inch wide. Use hot-dipped galvanized steel clips as recommended by the stud manufacturer for the depth and gauge of studs used.

2.03 CLIPS, CLOSURES, AND STIFFENERS:

- A. Provide cold-formed hot-dipped galvanized steel accessories as recommended by the stud and joist manufacturer to construct the cold-formed member framing system.

2.04 FASTENERS:

- A. Use fasteners or welds of the type and size recommended by the manufacturer unless otherwise noted in the drawings. Do not use powder-actuated fasteners closer than 3 inches from concrete edges or corners. Use self-drilling screws complying with ASTM C1513 or welded connections between metal members.

PART 3 - EXECUTION

3.01 STUD WALLS:

- A. Locate and align floor tracks accurately. Secure to floor with 5/32-inch-diameter power-driven anchors at 24 inches on center unless noted otherwise and not less than 6 inches from ends of each piece of floor track. Install anchors with washers.
- B. Abutting lengths of runner shall each be securely anchored to a common structural element, butt-welded, or spliced.
- C. Align ceiling tracks by plumbing up from floor tracks. Fasten to structure above or to suspended ceiling furring channels with screws at 24 inches on center. Provide bridging when tracks parallel furring channels. Partitions not supported by suspended ceiling shall

be braced at top to floor or roof structure above. Design bracing for a 5-psf lateral load on partitions.

- D. Install metal studs in floor and ceiling tracks or to floor or roof as shown and attach to tracks with screws. Do not use spliced studs. Space studs as shown in drawings. Where not shown or noted, spacing shall be 16 inches on center.
 - E. Horizontally reinforce partitions extending from floor to top with lateral wall bracing channels running through studs at 3-foot on center spacing which are welded or screwed to the studs as recommended by the stud manufacturer.
 - F. Use doubled studs beneath joists and at corners and openings.
 - G. Install reinforcing plates as recommended by the stud manufacturer for the mounting of items on or in partitions, furred walls, or shafts. Firmly and solidly mount items attached to or in gypsum board surfaces.
 - H. Erection technique shall result in plumb and straight walls with no waves or buckles or unevenness at joints. Finished walls shall have a maximum variation of 1/8 inch in 10 feet when checked in any direction with a 10-foot straightedge.
 - I. Do not cut or drill holes through members unless specifically detailed or permitted by the Owner's Representative.
 - J. Do not wire-tie framing members. Use screws or welds.
 - K. Use no splices in studs or runners in braced panels, shear wall panels, or over lintels.
- 3.02 CLOSEOUT ACTIVITIES:
- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 50 00
MISCELLANEOUS METAL

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section includes metal fabrications not specifically included in other Sections and required for completion of work as shown on Contract Drawings and in accordance with Contract Documents.
- B. Furnish labor, materials, equipment and incidentals necessary to install the products specified.

1.02 REFERENCES:

- A. American Society of Mechanical Engineers (ASME):

 - 5. A123: Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - 6. A153: Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - 7. A193: Standard Specification for Alloy-Steel and Stainless Steel Bolting Materials for High Temperature or High Pressure Service and Other Special Purpose Applications.
 - 8. A240: Standard Specification for heat-resisting chromium and chromium-nickel stainless steel plate, sheet, and strip for pressure vessels.

9. A276: Standard Specification for Stainless Steel Bars and Shapes.
10. A307: Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
11. A366: Standard Specification for Steel, Sheet, Carbon, Cold-Rolled, Commercial Quality.
12. A489: Standard Specification for Carbon Steel Lifting Eyes.
13. A500: Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
14. A501: Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.
15. A536: Standard Specification for Ductile Iron Castings. (Applies to Early Work Package 2 only.)
16. A569: Steel, Carbon (0.15 Maximum, Percent) Hot-Rolled Sheet and Strip Commercial Quality.
17. A570: Steel, Sheet and Strip, Carbon, Hot-Rolled, Structural Quality.
18. A572: Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel
19. A576: Steel Bars, Carbon, Hot-Wrought, Special Quality.
20. A675: Steel Bars, Carbon, Hot-Wrought, Special Quality, Mechanical Properties.
21. A786: Rolled Steel Floor Plates.
22. A929: Standard Specification for Steel Sheet, Metallic-Coated by the Hot-Dip Process for Corrugated Steel Pipe
23. A992: Standard Specification for Structural Shapes.
24. B26: Specification for Aluminum-Alloy Sand Castings.
25. B211: Specification for Aluminum-Alloy Bars, Rods, Profiles and Tubes.
26. B209: Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
27. B221: Specification for Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes, and Tubes.
28. B247: Specification for Aluminum and Aluminum-Alloy Die Forgings, Hand Forgings and Rolled Ring Forgings.

29. B308: Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.
 30. B429: Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.
 31. D1056: Standard Specification for Flexible Cellular Materials—Sponge or Expanded Rubber.
 32. F436: Standard Specification for Hardened Steel Washers.
 33. F541: Standard Specification for Alloy Steel Eyebolts.
 34. F593: Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.
 35. F594: Standard Specification for Stainless Steel Nuts.
 36. F844: Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use.
 37. F1554: Standard Specification of Anchor Bolts, steel, 36, 55 and 105-ksi Yield Strength.
 38. F2329: Standard Specification for Zinc Coating, Hot-Dip, Requirements for Application to Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners.
 39. F3125: Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, 120 ksi and 150 ksi Minimum Tensile Strength.
- C. American Institute of Steel Construction (AISC):
1. ANSI/AISC 360-5: Specification for Structural Steel Buildings
 2. AISC Manual of Steel Construction, Thirteenth Edition
- D. American Welding Society (AWS):

 2. MBG 532: Heavy Duty Metal Bar Grating Manual

3. MBG 533: Welding Specifications for Fabrication of Steel, Aluminum and Stainless Bar Grating

F. Aluminum Association:

1. Aluminum Design Manual–Specifications and Guidelines for Aluminum Structures.
 - a. AA M31C22A41
 - (1) M31: Mechanical Finish, Fine Satin
 - (2) C22: Finish, Medium Matte
 - (3) A41: Clear Anodic Coating, Class I

G. National Sanitation Foundation (NSF):

1. 61: Drinking Water System Components – Health Effects

H. Submit the following shop drawings in accordance with Section 01 33 00.

1. Submit shop drawings and product data showing materials of construction and details of installation for all items furnished under this Section. Shop drawings shall show sizes of members, method of assembly, anchorage and connection to other members.
2. Test Reports:
 - a. Submit certified copies of mill test reports on each steel, stainless steel, or aluminum proposed for use showing the physical properties and chemical analysis.
3. Product Data:
 - a. Manufacturer’s catalog sheets on pre-manufactured items.
4. Miscellaneous Submittals:
 - a. Provide International Conference of Building Officials (ICBO) or other similar building code organization recommendations regarding safe allowable design loads for concrete anchors.
5. Stamped by Professional Engineer registered in State where the project is located.

1.03 DESIGN CRITERIA:

- A. Structural Connections: AISC Specification for Structural Steel Buildings. Design connections not fully detailed on the Drawings to resist the loads shown on the Contract Drawings or specified.

- B. Where beam end reactions are not shown, design the connection for one-half the total allowable uniform load in kips for beams laterally supported at the given span, as determined by the tables for allowable loads on beams in the AISC Manual of Steel Construction, in addition to any axial loads identified on the Contract Drawings.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Test and inspect structural assemblies in accordance with Section 01 45 33.
- C. Design connections not detailed on the Drawings under direct supervision of a Professional Engineer experienced in design of this work and licensed in the State of Utah.
- D. Steel:
 - 1. Conform to codes for arc and gas welding in building construction of AWS and to AISC Specifications. Surfaces to be welded shall be free from loose scale, rust, grease, paint, and other foreign material, except mill scale that will withstand vigorous wire brushing may remain. Perform no welding when base metal is lower than 0 degrees F.
 - 2. Qualify welding operators in accordance with AWS D1.1. Qualification tests shall be run by a recognized testing laboratory acceptable to the Engineer at Contractor's expense.
- E. Aluminum:
 - 1. Weld with gas metal arc (GMA) or gas tungsten arc (GTA) processes in accordance with AWS.
- F. Adhesive Anchors:
 - 1. Adhesive Anchor Installers shall be trained and certified by manufacturer.
- G. Galvanized Coating:
 - 1. Company specializing in hot-dip galvanizing after fabrication and following procedures of Quality Assurance Manual of the American Galvanizers Association.

1.05 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 61 00.
- B. Insofar as practical, factory assemble items specified herein. Package, ship and tag unassembled materials in a manner that will protect materials from damage and will facilitate identification and field assembly.
- C. Package stainless steel items in a manner to provide protection from carbon impregnation.

- D. Protect painted coatings and hot-dip galvanized finishes from damage due to metal banding and rough handling. Use padded slings and straps.
- E. Deliver items to be incorporated into the work of other trades in sufficient time to be checked prior to installation.
- F. Store fabricated items in a dry area, not in direct contact with ground.

1.06 FIELD MEASUREMENTS:

- A. The Contractor shall verify all dimensions and shall make any field measurements necessary and shall be fully responsible for accuracy and layout of the work.
- B. The Contractor shall review the Contract Drawings and any discrepancies shall be reported to the Engineer for clarification prior to starting fabrication.

PART 2 - PRODUCTS

2.01 MISCELLANEOUS METAL SHAPES, CASTINGS, BOLTS AND ACCESSORIES:

A. Structural Steel Shapes:

- | | |
|---------------------------------------|----------------------------|
| 1. W Shapes: | ASTM A992, 50 ksi |
| 2. S, C and MC Shapes: | ASTM A36 |
| 3. L Shapes: | ASTM A36 |
| 4. HSS Square and Rectangular Shapes: | ASTM A500, Grade C, 50 ksi |
| 5. HSS Round Shapes: | ASTM A500, Grade C, 46 ksi |
| 6. Pipe Shapes: | ASTM A53, Grade B, 35 ksi |
| 7. Plates and Bars: | ASTM A36 |
| 8. Steel Sheets: | ASTM A366 |

B. Stainless Steel Shapes:

- | | |
|-------------------------------------|----------------------------|
| 1. Exterior and Submerged Uses: | AISI, Type 316 |
| 2. Industrial Uses: | AISI, Type 316 |
| 3. Interior and Architectural Uses: | AISI, Type 304 |
| 4. For Welding: | AISI, Type 304L, Type 316L |

5. Shapes and Bars ASTM A276
6. Plate, Sheet and Strip ASTM A240
- C. Aluminum Shapes:
 1. Structural Shapes ASTM B308, Alloy 6061-T6
 2. Extruded Pipe ASTM B429, Alloy 6063-T6
 3. Aluminum Sheet and Plate ASTM B209, Alloy 6061-T6
- D. High Strength Bolts for Steel Members ASTM F3125
- C. Steel Washers ASTM F436
- D. Plain Unhardened Steel Washers: ASTM F844
- E. Anchor Bolts: ASTM F1554, Grade 36 standard headed bolts with heavy hex nuts, Grade A washers, hot-dip galvanized, unless otherwise specified.
- F. Stainless Steel Bolts and Nuts: F593 and F594, AISI Type 316
- G. Connection Bolts for Wood Members: ASTM A307, galvanized where specified
- H. Iron Castings: ASTM A48, Class 35
- I. Galvanizing: ASTM A123, Zn w/0.5 percent minimum Ni.
- J. Galvanizing, hardware: ASTM A153, Zn w/0.5 percent minimum Ni.
- 2.02 POST INSTALLED ANCHORS:
 - A. Mechanical Expansion Type Anchors: Anchors shall be qualified per ICC-ES AC193.
 1. Products:
 - a. Hilti Corporation, Kwik-Bolt TZ
 - b. Dewalt, Power Stud SD1+ Stud Anchor
 - c. Simpson Strong Tie, Strong Bolt
 2. General:
 - a. Use Zinc or chromate-plated carbon steel where totally embedded, in interior locations with controlled humidity and other protected locations, unless otherwise specified on Contract Drawings.

- b. Use stainless steel in other locations or when attaching aluminum and stainless steel.
 - c. Do not use expansion anchors in submerged and dynamic load applications.

B. Drop-In Anchors: Anchors shall be qualified per ICC-ES AC01.

1. Products:

- a. Hilti Corporation, HDI Drop-In Anchor
- b. Dewalt Fasteners, Steel Drop-In

2. General:

- a. Use Zinc or chromate-plated carbon steel in interior locations with controlled humidity and other protected locations, unless otherwise specified on Contract Drawings.
- b. Use stainless steel in other locations or when attaching aluminum and stainless steel.
- c. Do not use drop-in anchors in corrosive or humid areas or when subjected to dynamic loads.

C. Adhesive Anchors:

1. Products:

- a. Hilti Corporation, HIT-HY 200
- b. Dewalt Fasteners, PE1000+ Epoxy Adhesive Anchoring System
- c. Simpson Strong Tie, SET-XP Epoxy-Tie or Acrylic-Tie

2. General:

- a. Adhesive anchors shall be hot-dipped galvanized.
- b. Use stainless steel in other locations or when attaching aluminum and stainless steel. Anchors in submerged locations shall be stainless steel Type 316.

2.03 ANCHOR CHANNEL INSERTS:

- A. Make anchor channels from channel profiles with “T” anchors shop welded to back of channels. Furnish anchor channels with head bolts, channels, nuts for a complete installation. Material shall be Stainless Steel Type 304.

2.04 WEDGE INSERTS:

A. Manufacturers:

1. Gateway Building Products
2. Richmond Screw Anchor Company

B. General:

1. Malleable iron casting, 3/4-inch minimum size with minimum combined working load capacity of 1,300 pounds in shear and 1,000 pounds in tension.
2. Stainless Steel bolts and hardware.

2.05 EYE BOLTS:

- A. Provide eyebolts of the welded-eye or forged type, carbon steel hot-dipped galvanized steel per ASTM F2329.
- B. Provide threaded carbon steel lifting eyes that comply with ASTM A489, Type 1, Style B.
- C. Provide threaded alloy steel eyebolts that comply with ASTM F541 and ASME B18.5, Type 1, long length.

2.06 GRATING SUPPORT ANGLES AND FRAMING:

- A. Provide stainless steel support angles embedded in concrete. Angles shall be 1/4-inch thick, inside depth of support angle shall equal depth of bearing bar, inside length of support angle leg shall equal depth of grating. Provide 1 inch by 1/4-inch by 8 inches long bent anchor bars or 3/8-inch diameter by 6 inch headed anchor studs welded to backs of angles at 18 inches on center. (Applies to Early Work Package 2 only.)
- B. Provide stainless steel support angles embedded in concrete. Angles shall be equal depth of bearing bar, inside length of support angle leg shall equal depth of grating, but not less than 1-3/4 inch. Provide long bent anchor bars or headed anchor studs welded to backs of angles as indicated on the Contract Drawings.
- C. For fiberglass reinforced plastic grating provide supports and framing in accordance with Section 06 60 10.

2.07 METAL FRAMES:

- A. Provide door, hatch, and grille frames, and other frames fabricated from structural shapes, as indicated on the Contract Drawings.
- B. Fabricate frames from rolled steel sections or rolled steel sections and steel plates. Select sections for trueness of web and flange. Straighten members so finished frames are uniform, square, and true throughout length and depth of assembled units.

- C. Connect built-up members of frames by plug welding. Miter or cope and join members with continuous welding beads. Provide temporary spreader bars to prevent springing frames out of shape prior to and during erection.

2.08 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
- C. Fabricate units from slotted channel framing where indicated.
- D. Furnish inserts for units installed after concrete is placed.
- E. Galvanize miscellaneous framing and supports where indicated.
- F. Prime miscellaneous framing and supports with primer specified in Section 099600 "High-Performance Coatings" where indicated.

2.09 ABRASIVE METAL NOSINGS

- A. Cast aluminum, with an integral-abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
 - 1. Cross-hatched nosings, 4 inches (100 mm) wide, with 1/4-inch- (6-mm-) thick 1-inch (25-mm) lip, for casting into concrete.
- B. Cast stainless steel, Type 316, with checkered plate, as-cast mill finish. Fabricate units in lengths necessary to accurately fit openings or conditions.
 - 1. Cross-hatched nosings, 2 inches (50 mm) wide, with 1/4-inch- (6-mm-) thick 1-inch (25-mm) lip, for casting into concrete.
- C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
- D. Drill for mechanical anchors and countersink. Locate holes not more than 4 inches (100 mm) from ends and not more than 12 inches (300 mm) o.c., evenly spaced between ends, unless otherwise indicated. Provide closer spacing if recommended by manufacturer.
 - 1. Provide two rows of holes for units more than 5 inches (125 mm) wide, with two holes aligned at ends and intermediate holes staggered.
- E. Apply bituminous paint to concealed surfaces of cast-metal units.

2.10 STRAP ANCHORS AND STUD ANCHORS:

- A. Provide anchors for frames, curbs, sills, and other metal fabrications anchored into concrete or masonry. Fabricate anchors from strap iron, bent to shape, or of weldable studs, welded to backs of members. Where size and spacing not noted, provide 1 inch by 1/4-inch strap anchors or 3/4-inch diameter studs for concrete and 1-1/2 inch by 1/8-inch strap anchors for masonry. Space masonry anchors to fit jointing of adjacent masonry work at 4 feet on center. Space concrete anchors at 3 feet on center.
- B. Where anchors and plates or clips are to be built in for attachment of later Work, provide bolts in plates or clips, welded to back, with threaded ends extended.
- C. For attaching Work to concrete where anchors or inserts cannot be built in, provide concrete anchors or machine bolts and screws.

2.11 NEOPRENE GASKET:

- A. Provide soft, closed-cell neoprene gasket material suitable for exposure to sewage and sewage gases conforming to ASTM D1056, Type 2, Class C, and Grade 1.
- B. Unless otherwise shown on Contract Drawings, provide neoprene gaskets with a minimum thickness of 1/4-inch.
- C. Furnish neoprene gaskets without skin coat.

2.12 MAINTENANCE HOLE STEPS:

- A. Manufacturers:
 - 1. Aluminum:
 - a. Neenah Foundry Inc., Type R-1982-W
 - b. Campbell.
 - 2. Cast Iron:
 - a. Neenah Foundry Inc., Type R-1980-J
 - b. Campbell, Type Pattern 2581
 - 3. Plastic Coated Steel:
 - a. 3/8-inch diameter steel reinforcing rod with molded plastic cover.

B. General:

1. Provide aluminum for wet wells, cast-in-place maintenance holes, and where shown, except noted below for precast maintenance holes. Separate dissimilar metals. Provide epoxy coating for aluminum to be in contact with concrete.
2. Provide aluminum for wet wells, cast-in-place maintenance holes, and where shown, except noted below for precast maintenance holes. Separate dissimilar metals.
3. Provide cast iron or plastic coated steel for precast maintenance holes only.

2.13 MAINTENANCE HOLE COVERS AND FRAMES:

A. Manufacturers:

1. Neenah Foundry Inc.
2. Campbell

B. General:

1. Assemblies shall be of dimension and type as shown on Contract Drawings.

2.14 STEEL BOLLARDS:

- A. Galvanized steel pipe bollards shall be fabricated to dimensions and details shown in Contract Drawings. Fabricated bollards from 6 inch nominal outside diameter Schedule 80 steel pipe.
- B. Fabricate bollards with 3/8-inch- (9.5-mm-) thick, steel baseplates for bolting to concrete slab. Drill baseplates at all four corners for 3/4-inch (19-mm) anchor bolts.
- C. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.
- D. Finish: Where indicated on Drawings:
 1. Prime and field paint, color as indicated on Drawings. Refer to Section 099600 "High-Performance Coatings."
 - a. Applied Markings: Adhesive, white reflective markings, applied to painted bollards.
 2. Provide HDPE bollard cover with reflective markings, colors as indicated on Drawings.

2.15 FABRICATION:

A. Connections and Workmanship:

1. Fabricate details and connection assemblies in accordance with Contract Drawings and Specifications, with projecting corners clipped and filler pieces welded flush.
2. Fit work together in fabrication shop and deliver complete or in parts, ready to be set in-place or assembled in field.
3. Provide work true to detail; with clean, straight, sharply defined profiles and smooth surfaces of uniform color and texture free from defects impairing strength or durability.
4. Provide clips, lugs, brackets, straps, plates, bolts, nuts, washers, and similar items, as required for fabrication and erection.
5. Provide castings of uniform quality, free from blowholes, porosity, hard spots, shrinkage distortion; smooth and well cleaned by shot blasting.
6. Welding:
 - a. Provide rigid and continuous welds or spot welded as specified and as shown on Contract Drawing. Dress the face of welds flush and smooth. Close fit exposed joints and locate where least conspicuous.
 - b. Weld aluminum work on the unexposed side when possible in order to prevent pitting or discoloration.
 - c. Weld aluminum in compliance with the latest edition of AWS D1.2. Support and clamp component parts of built-up members in proper position for welding.
 - d. Weld shop connections and bolt or field weld connections, unless otherwise specified.
 - e. Grind exposed edges of welds to 1/8-inch minimum radius. Grind burrs, jagged edges, and surface defects smooth.
 - f. Prepare welds and adjacent areas so there is:
 - (1) No undercutting or reverse ridges on weld bead.
 - (2) No weld spatter on or adjacent to weld or other area to be painted or coated.
 - (3) No sharp peaks or ridges along weld bead.
7. Bolting:
 - a. Use bolts of lengths required so bolts do not project more than 1/4-inch beyond face of nut. Do not use washers unless specified. Provide hexagonal head bolts with hexagonal nuts.

- b. Provide holes required for connection of adjacent or adjoining work wherever noted on Drawings. Locate holes for bolting equipment to supports to tolerance of +/- 1/16-inch of dimensions indicated.
- B. Galvanizing:
 - 1. Galvanize after fabrication by hot-dipped process conforming with ASTM A123.
 - 2. Ship and handle in manner to avoid damage to zinc coating.
- C. Painting of aluminum in contact with concrete:
 - 1. Coat areas of aluminum fabrications in contact with concrete with high solids epoxy or phenolic epoxy having a minimum volume solids of 80 percent (ASTM D2697). Maximum thickness of an individual coating shall not exceed the manufacturer's recommendation.
 - 2. Manufacturers:
 - a. PPG, Amerlock 400 or 400VOC
 - b. PPG, PITT-GUARD® Direct-to-Rust Epoxy Mastic Coating 97-145 series
 - c. Tnemec, Chembuild Series 135

PART 3 - EXECUTION

3.01 EXAMINATION:

- A. Upon receipt of material at job site, inspect all materials for shipping damage. Replace damaged items at no cost to Owner.
- B. Examine supports for size, layout and alignment.
- C. Correct defects considered detrimental to proper installation.

3.02 INSTALLATION:

- A. Provide items such as bolts, shims, blocks, nuts, washers, and wedging pieces to complete installation.
- B. Erect to lines and levels, plumb and true, and in correct relation to adjoining Work. Secure parts using concealed connections when practicable.
- C. Plumb and true vertical members to tolerance of +/- 1/8 inch in 10 feet. Level horizontal members to tolerance of +/- 1/8 inch in 10 feet.

- D. Use steel bolts to connect structural steel members. Use stainless steel bolts to connect structural aluminum members.
 - E. Anchor Bolts and Concrete Anchors:
 - 1. Preset anchor bolts using templates. Do not use concrete anchors in place of anchor bolts.
 - 2. After anchor bolts are embedded, protect projecting threads by applying grease and having the nuts installed until the time of installation of equipment or metalwork.
 - 3. Do not install concrete anchors until concrete has reached specified minimum compressive strength.
 - 4. Install concrete anchors in accordance with anchor manufacturer recommendation. Embedment depth of anchor shall be as recommended by the anchor manufacturer, but not less than as shown on Contract Drawings.
 - 5. Locate concrete anchors to clear reinforcing bars in concrete.
 - F. Weld headed anchor studs in accordance with manufacturer's recommendations.
 - G. Do not place new holes or enlarge unfair holes by use of cutting torch.
 - H. Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
 - 1. Anchor supports for overhead doors securely to, and rigidly brace from, building structure.
 - I. Bollards:
 - 1. Anchor bollards, where indicated, with anchor bolts. Provide four bolts at each bollard unless otherwise indicated. Embed anchor bolts at least 4 inches (100 mm) in concrete.
 - 2. Anchor bollards in place with concrete footings where indicated. Center and align bollards in holes 3 inches (75 mm) above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.
 - 3. Fill bollards solidly with concrete, mounding top surface to shed water.
- 3.03 PAINTING, REPAIR, AND PROTECTION:
- A. Prepare surface of aluminum in contact with concrete.

1. Prepare aluminum surface by solvent or steam cleaning per SSPC SP-1; do not use alkali cleaning. Then dust blast.
 2. Paint aluminum in contact with concrete with three or more coats of high solids epoxy or phenolic epoxy. Under no circumstances shall aluminum contact dissimilar metal.
- B. Under no circumstances shall aluminum contact dissimilar metal.
- C. Between aluminum grating, aluminum stair treads, or aluminum handrail brackets and steel supports, insert 1/4-inch thick neoprene isolator pads, 85 +/- 5 Shore A durometer, sized for full width and length of bracket or support.
- D. Apply an anti-seize compound on all stainless steel fasteners to prevent galling.
- E. Field Repair of Damaged Galvanized Coatings:
1. Clean and repair Zinc coating that has been burned by welding, abraded, or otherwise damaged after installation. Clean damage area by wire brushing and removing all traces of welding flux and loose or cracked zinc coating.
 2. Coat surfaces using zinc-rich paint.
- F. Field repair of damaged primer.
1. Touch up abrasions in the shop primer immediately after erection. Paint areas left unprimed for welding with primer after welding.
- 3.04 CLOSEOUT ACTIVITIES:
- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 51 10

STEEL AND STAINLESS STEEL LADDERS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide ladders as indicated and in compliance with Contract Documents.
 - 1. Section Includes:
 - a. Vertical steel and stainless steel ladders
 - 2. Related Requirements:
 - a. Section 11 24 29 "Facility Fall Protection" for ladder fall protection systems.

1.02 PERFORMANCE/DESIGN CRITERIA:

- A. Ladders shall conform to OSHA and IBC requirements.
- B. Vertical ladders shall be designed to withstand a minimum of two loads of 250 pounds (1.1 kN) each, concentrated between any two consecutive attachments. The number and spacing of additional loads shall be in accordance with the anticipated usage of the ladder. Individual steps or rungs shall be designed to support a load of 250 pounds (1.1 kN) applied at any point.

1.03 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 - 1. Shop drawings showing clearly the location, size and details of all members
 - 2. Indicate materials, dimensions, connection attachments, anchorage, size and type of fasteners, holes, finishes, and accessories for ladders.
 - 3. Reference materials of construction by ASTM designation and grade.
 - 4. Indicate welds including length and size of all shop and field welds by symbols conforming to AWS standards.
 - 5. Letter certifying that ladders are designed and detailed to meet the requirements of standards, building codes, specifications and design criteria herein described.
- B. Product Data:
 - 1. Manufacturer's catalog sheets on pre-manufactured items.

2. Manufacturer's specifications, load tables, anchor details, and installation details.

C. Certificates:

1. Welders' Certificates: Certifying welders employed on the Work, verifying AWS qualification within the previous 12 months.
2. Manufacturer's Certificate: Certify that Products meet or exceed specified requirements.
3. Certificate stating that the zinc coating conforms to the ASTM specified requirements.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Obtain field measurements and elevations prior to preparation of shop drawings and fabrication.
- C. Welding Qualification and Certification:
 1. Furnish written welding procedure for all welds in conformance with AWS Structural Welding Code.
 2. Use welders, tackers and welding operators certified by test to perform type of work required in conformance with AWS Structural Welding Code. Maintain current test records certified by an independent testing laboratory.
 3. Maintain duplicate qualification and certification records at the job site readily available for examination.

1.05 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10
- B. Identify and match-mark materials, items and fabrications, for installation and field assembly.
- C. Deliver items to jobsite as complete units, wherever practicable, ready for installation or erection, with anchors, hangers, fasteners and miscellaneous metal items required for installation.
- D. Carefully handle and store materials, protected from weather, corrosion and other damage.
- E. Store off the ground on suitable supports.
- F. Accept material on site. Inspect for damage.

- G. Do not incorporate damaged materials in the work.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Steel materials and welding electrodes per Section 05 12 00.
- B. Stainless Steel:
1. AISI Type 304 unless otherwise indicated or specified. AISI Type (or Grade) 304L for welding.
 2. AISI Type 316 unless otherwise indicated or specified. AISI Type (or Grade) 316L for welding.
 3. Shapes and Bars: ASTM A276.
 4. Sheet, strip, plate and flat bar: ASTM A167.
 5. Pipe: ASTM A312.
 6. Tubing: ASTM A269.
- C. Welding Electrodes:
1. Welding electrodes for structural steel shall conform to AWS A5.5. Use electrodes in the E-70 series.
 2. Welding electrodes for stainless steel shall conform to AWS A 5.4. Use electrodes as follows:

Table 05 51 10-1	
Stainless Steel Material	Welding Electrode Material
Type 304	E308
Type 304L	E347
Type 316	E316
Type 316L	E318

2.02 FABRICATION:

- A. General:
1. Fabricate true to shape, size and tolerances as indicated and specified.
 2. Straighten work bent by shearing or punching.

3. Dress exposed edges and ends of metal smooth, with no sharp edges and with corners slightly rounded.
4. Provide sufficient quantity and size of anchors for the proper fastening of the work.
5. Fabricate details and connection assemblies in accordance with drawings, with projecting corners clipped and filler pieces welded flush.
6. Provide clips, lugs, brackets, straps, plates, bolts, nuts, washers, and similar items, for fabrication and erection.
7. Use connections of type and design required by forces to be resisted, and to provide secure fastening.
8. Fit work together in fabrication shop and deliver complete, or in parts, ready to be set in place.

B. Welding:

1. Grind exposed edges of welds to a 1/8 inch (3.2 mm) minimum radius. Grind burrs, jagged edges and surface defects smooth.
2. Prepare welds and adjacent areas such that there is no undercutting or reverse ridges on the weld bead and no sharp peaks or ridges along the weld bead.
3. Grind embedded pieces of electrode or wire flush with adjacent surface of weld bead.

C. Bolting:

1. Provide galvanized stud bolts, nuts and washers for fastening galvanized steel material.
2. Provide holes required for the connection of adjacent or adjoining work wherever noted on drawings. Locate holes for bolting to supports to a tolerance of 1/16-inch (2 mm) of exact dimensions indicated.

2.03 VERTICAL LADDERS:

- A. Fabricate ladders as shown in the drawings. Ladders shall be welded steel construction and galvanized after fabrication or Type 304/316 stainless steel, as indicated in the contract drawings.
- B. Minimum diameter of rungs shall be 3/4-inch (20 mm). The distance between rungs, cleats, and steps shall not exceed 12 inches (300 mm) and shall be uniform throughout the length of the ladder.
- C. The minimum clear length of rungs or cleats shall be 16 inches (400 mm).

- D. Coat rungs with coarse grain nonskid epoxy coating No. 6901T44 as supplied by McMaster-Carr Supply Company or acceptable equivalent product. Color of coating shall be gray. Apply nonskid coating per manufacturer's recommendations.

2.04 SECURITY COVERS FOR LADDERS:

- A. Provide 6-foot (1,830 mm) high security covers at bottom of ladders. Equip covers with hinges on one side and locking clasp on the other side. Covers shall be 14-gauge galvanized steel or 14-gauge stainless steel, to match ladder material, as manufactured by Carbis Inc., Core Terminal Products, or acceptable equivalent product.

PART 3 - EXECUTION

3.01 GENERAL:

- A. Set and secure in place as indicated. Where bolted connections are used, draw together and draw nuts tightly. Use bolts of lengths required so that they do not project more than 1/4-inch (6 mm) beyond face of nut. Do not use washers unless specified. Provide hexagonal head bolts with hexagonal nuts.
- B. Locate anchors and anchor bolts and build into connecting work.
- C. Install ladders in accordance with shop drawings.

3.02 LADDERS:

- A. Anchor uprights to wall with angles or bent plates welded to uprights and anchored to wall. Grind welds smooth where required. Provide assemblies with no sharp or rough surface.
- B. Secure interior ladders to floor slabs with floor flanges.
- C. Provide fall prevention system as indicated.
- D. Provide angles, struts, rod hangers, closure plates, and brackets indicated.

3.03 REPAIR OF GALVANIZED SURFACES:

- A. Repair or replace metal with damaged galvanized surfaces at no additional cost to the Owner. Repair galvanized surfaces per Section 09 96 00.

3.04 PAINTING:

- A. Painting and coating of steel ladders furnished and applied as specified in Section 09 96 00.

3.05 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 05 51 19

METAL GRATING STAIRS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Aluminum grating stairs.
2. Galvanized steel grating stairs.
3. Railings and guards.

B. Related Requirements:

1. Section 05 53 00 "Metal Grating, Cover Plates, and Access Hatches" for metal gratings used in cover plate applications.
2. Section 06 60 10 "Fiberglass Reinforced Products and Fabrications" for FRP gratings, stairs, and railings.

1.02 COORDINATION

A. Coordinate installation of anchorages for metal stairs, railings, and guards.

1. Furnish setting drawings, templates, and directions for installing anchorages, including anchor bolts, blocking for attachment of wall-mounted handrails, and items with integral anchors, that are to be embedded in concrete or masonry.
2. Deliver such items to Project site in time for installation.

B. Schedule installation of railings and guards so wall attachments are made only to completed walls.

1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.

1.03 ACTION SUBMITTALS

A. Product Data: For metal grating stairs and the following:

1. Gratings.

B. Shop Drawings:

1. Include plans, elevations, sections, details, and attachment to other work.
 2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
 3. Include plan at each level.
 4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.
- C. Delegated Design Submittal: For stairs, railings, and guards, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the State in which Project is located.
- B. Welding certificates.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 2. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
1. Keep stair members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 2. Protect stair members and packaged materials from corrosion and deterioration.
 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
 - a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 to design stairs, railings, and guards, including attachment to building construction.
- B. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Uniform Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
 - 2. Concentrated Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
 - 4. Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
 - 5. Limit deflection of treads, platforms, and framing members to $L/360$.
- C. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
 - b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
 - 3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- D. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to ASCE/SEI 7 and in accordance with Section 01 42 00.

1. Component Importance Factor: 1.0.

2.02 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Provide galvanized finish for all steel.
- C. Steel Plates, Shapes, and Bars:
 1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
 2. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.
 3. Steel Bars for Grating Treads: ASTM A36/A36M or steel strip, ASTM A1011/A1011M or ASTM A1018/A1018M.
 4. Steel Wire Rod for Grating Crossbars: ASTM A510/A510M.
- D. Steel Tubing for Railings and Guards: ASTM A500/A500M (cold formed) or ASTM A513/A513M.
- E. Steel Pipe for Railings and Guards: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
- F. Aluminum Plates, Shapes, and Bars:
 1. Plate: Alloy 6061-T6, Mill Finish, Heat Treatable.
 2. Structural Shapes: Alloy 6061-T6, ASTM B 308
 3. Sheet Aluminum: ASTM B209 (ASTM B209M), Alloy 5052, H32 or H22 Temper.
 4. Round Pipe: Alloy 6061-T6, ASTM B429
 5. Square Tubing: Alloy 6063-T52, Extruded
 6. Rectangular Tubing: Alloy 6063-T52, Extruded
 7. Aluminum- Alloy Bars: ASTM B211 (ASTM B211M), Alloy 6061-T6
- G. Aluminum Bars for Grating Treads: ASTM B221 (ASTM B221M) extruded aluminum, alloys as follows:
 1. 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.

2. 6061-T1, for grating crossbars.

H. Aluminum for Railings and Guards:

1. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
2. Extruded Bars and Tubing: ASTM B221 (ASTM B221M), Alloy 6063-T5/T52.
3. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
 - a. Provide Schedule 80 pipe unless otherwise indicated.
4. Drawn Seamless Tubing: ASTM B210/B210M, Alloy 6063-T832.
5. Plate and Sheet: ASTM B209 (ASTM B209M), Alloy 6061-T6.
6. Die and Hand Forgings: ASTM B247 (ASTM B247M), Alloy 6061-T6.
7. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.03 FASTENERS

- A. General: Provide Type 316 stainless steel fasteners.
 1. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings and Guards to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings and guards to other types of construction indicated and capable of withstanding design loads.

2.04 MISCELLANEOUS MATERIALS

- A. Welding Electrodes: Comply with AWS requirements.
- B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with ASTM A780/A780M and compatible with paints specified to be used over it.

2.05 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, railings, guards, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.

- B. B. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Fit and shop assemble stair in the largest practical sections for delivery to the job site.
 - 1. Disassemble units only as necessary for shipping and handling limitations.
 - 2. Clearly mark units for reassembly and coordinated installation.
- F. Miter the stringers at changes in direction with joints tightly fitted and secured by continuous welds and grind with #3 NOMMA Finish. Make exposed joints butt tight. Ease exposed edges to a small uniform radius.
- G. Close and fit the ends of stringers at the floor or landing to the floor surface. On the landings and platforms where they are part of the stair framing, carry the wall stringers around and above the finished level of the platform to form a base of the height as shown.
- H. Provide standard prefabricated aluminum grating treads and aluminum nosings with extruded re-enforced profile with non-slip ribs.
 - 1. Mechanically fasten grating treads with aluminum bearing angle to stringers.
 - 2. Grating bearing bars shall be spaced 1-3/16-inches on center and cross bars shall be spaced at 4-inches on center. Cross bars shall be flush at top with bearing bars
 - 3. All Grating edges shall be banded.
 - 4. Unless noted other, all grating at treads and landings will not be welded to supports, provided saddle clips as required for attachment. Limit weight of each section to no more that 50-pounds.
 - 5. Provide aluminum riser plates welded to grating tread, unless drawings indicate other.
- I. Fabricate railings and guards to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of member, post spacings, wall bracket spacing, and anchorage, but not less than that needed to withstand indicated loads.

2.06 FINISHES

- A. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- C. Aluminum Mill Finish: AA-M12, nonspecular as fabricated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF METAL STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 - 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stair in accordance with the manufacture's recommendations and approved shop drawings.
- D. Install components plumb and level, accurately fitted, free from distortion or defects.
- E. Securely bolt or anchors, plates, angles, hangers, and struts required for connecting stairs to structure.
- F. Provide welded field joints where specifically indicated or shop drawings. Perform field welding in accordance with the appropriate AWS Specification.

- G. Obtain approval prior to site cutting or creating adjustments not scheduled.
- H. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
- I. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.

END OF SECTION

SECTION 05 52 13

PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Aluminum railings.
2. Stainless Steel railings.

B. Related Requirements:

1. Section 05 51 19 "Metal Grating Stairs" for railings associated with metal grating stairs.
2. Section 07 72 00 "Roof Accessories" for railings associated with roof hatches.

1.02 COORDINATION

- ###### A.
- Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Manufacturer's product lines of mechanically connected railings.
2. Fasteners.
3. Post-installed anchors.
4. Handrail brackets.
5. Bituminous paint.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Delegated Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For delegated design professional engineer.
- B. Welding certificates.
- C. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.
- D. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.
- E. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.05 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 2. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces of railings from damage by applying a strippable, temporary protective covering before shipping.

1.07 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 to design railings, including attachment to building construction.
- B. B. Structural Performance: Railings, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.

- b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
- 2. Infill of Guards:
 - a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- 2.02 METALS, GENERAL
 - A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
 - B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
- 2.03 ALUMINUM RAILINGS
 - A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
 - B. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
 - C. Extruded Bars and Tubing: ASTM B221 (ASTM B221M), Alloy 6063-T5/T52.
 - D. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
 - 1. Provide Schedule 80 pipe unless otherwise indicated.
 - E. Drawn Seamless Tubing: ASTM B210/B210M, Alloy 6063-T832.
 - F. Plate and Sheet: ASTM B209 (ASTM B209M), Alloy 6061-T6.
 - G. Die and Hand Forgings: ASTM B247 (ASTM B247M), Alloy 6061-T6.
 - H. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.04 STAINLESS STEEL RAILINGS

- A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- B. Tubing: ASTM A554, Grade MT 316L.
- C. Pipe: ASTM A312/A312M, Grade TP 316L.
- D. Castings: ASTM A743/A743M, Grade CF 8M or CF 3M.
- E. Plate and Sheet: ASTM A240/A240M or ASTM A666, Type 316L.

2.05 FASTENERS

- A. Fastener Materials:
 - 1. Aluminum Railing Components: Type 316 stainless steel fasteners.
 - 2. Stainless Steel Railing Components: Type 316 stainless steel fasteners.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction and capable of withstanding design loads.
- C. Fasteners for Interconnecting Railing Components:
 - 1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193.
 - 1. Alloy Group 1 (A1) stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.06 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for metal alloy welded.
 - 1. For aluminum and stainless steel railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- B. Bituminous Paint: Cold-applied asphalt emulsion, complying with ASTM D1187/D1187M.

2.07 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
 - 1. Clearly mark units for reassembly and coordinated installation.
 - 2. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water.
 - 1. Provide weep holes where water may accumulate.
 - 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #2 welds; good appearance, completely sanded joint, some undercutting and pinholes okay.
- I. Gates: Form gates from metal tube of same material, size, and shape as top rails, with infill to match guards. Provide with cam-type, self-closing hinges for fastening to wall and

overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.

- J. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.
- K. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection, using an epoxy structural adhesive, if this is manufacturer's standard splicing method.
- L. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- M. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
- N. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.
- O. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
- P. Provide anchorage devices for connecting railings to concrete or masonry work.
 - 1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 - 2. Coordinate anchorage devices with supporting structure.

2.08 ALUMINUM FINISHES

- A. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Mill Finish: AA-M12, nonspecular as fabricated.

2.09 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces.
 3. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Stainless Steel Pipe and Tubing Finishes:
1. 180-Grit Polished Finish: Uniform, directionally textured finish.
- D. Stainless Steel Sheet and Plate Finishes:
1. Directional Satin Finish: ASTM A480/A480, No. 4.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.02 INSTALLATION, GENERAL

- A. Perform cutting, drilling, and fitting required for installing railings.
1. Fit exposed connections together to form tight, hairline joints.
 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 4. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 5. Set posts plumb within a tolerance of 1/16 inch in 3 feet (2 mm in 1 m).
 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (6 mm in 3.5 m).
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

- C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.03 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws, using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending 2 inches (50 mm) beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within 6 inches (150 mm) of post.

3.04 ANCHORING POSTS

- A. Anchor posts to substrate surfaces with flanges, angle type, or floor type, as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For aluminum railings, attach posts as indicated, using fittings designed and engineered for this purpose.
 - 2. For stainless steel railings, weld flanges to post and bolt to supporting surfaces.

3.05 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with flanges connected to railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends.
- C. Install railing gates level, plumb, and secure for full opening without interference.
 - 1. Attach hardware using tamper-resistant or concealed means.
 - 2. Adjust hardware for smooth operation.

3.06 CLEANING

- A. Clean aluminum by washing thoroughly with clean water and soap and rinsing with clean water.

3.07 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 05 53 00

METAL GRATING, COVER PLATES, AND ACCESS HATCHES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide metal grating, cover plates and access hatches as indicated and in compliance with Contract Documents.
- B. This section includes:
 - 1. Aluminum Bar Grating
 - 2. Steel Grating
 - 3. Aluminum Cover Plates
 - 4. Floor Access Hatches
- C. Furnish all labor, materials, equipment and incidentals necessary to install the products specified.
- D. Related Requirements:
 - 1. Section 05 51 10 "Steel and Stainless Steel Ladders" for ladders including those used at floor access hatches.
 - 2. Section 05 51 19 "Metal Grating Stairs" for aluminum and steel grating stair assemblies.
 - 3. Section 05 52 13 "Pipe and Tube Railings" for safety railings used at floor access hatches.
 - 4. Section 07 72 00 "Roof Accessories" for roof hatches.

2. AAMA 607.1: Voluntary Guide Specification and Inspection Methods for Clear Anodic Finishes for Architectural Aluminum

1.03 DESIGN CRITERIA:

A. Grating and Cover Plates:

1. Provide grating and cover plates of minimum depth shown on contract drawings, not exceeding manufacturer's maximum recommended span, and meeting the following load and deflection criteria.
 - a. 100 psf uniform live load or 300 pounds concentrated live load, whichever produces maximum stress
 - b. $L/360$ maximum deflection under uniform live load of 100 psf

B. 12,000 psi maximum flexural stress

C. Interior hatches for the Clearwell shall be "shoe-box" type designed to handle a live load of 625 psf and shall meet the requirements of the Utah Administrative Code Section R309-545-14.

1.04 SUBMITTALS:

A. Submit the following shop drawings in accordance with Section 01 33 00.

1. Detail shop drawings indicating:
 - a. Dimensions.
 - b. Sectional assembly.
 - c. Location and identification mark.
 - d. Connections and fastening methods.
 - e. Size and location of supporting frames required.
 - f. Materials of construction.
 - g. Installation instructions.
2. Catalog data and design tables showing limits for span length and deflection under load.

1.05 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Obtain field measurements prior to preparation of shop drawings and fabrication.
- C. Steel:
 - 1. Conform to codes for arc and gas welding in building construction of AWS and to AISC Specifications. Prepare surfaces to be welded according to requirements of AWS D1.1. No welding shall be done when base metal lower than 0 degrees F.
 - 2. Qualify welding operators in accordance with AWS D1.1.
- D. Aluminum:
 - 1. Weld with gas metal arc (GMA) or gas tungsten arc (GTA) processes in accordance with manufacturer's recommendations as accepted and in accordance with recommendations of AWS D1.2.

1.06 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.
- B. Store to avoid damage.
- C. Remove material that has become damaged as to be unfit for use.
- D. Identify and match-mark all materials, items, and fabrications for installation and field assembly.

1.07 FIELD MEASUREMENTS:

- A. Verify dimensions and make any field measurements necessary and be fully responsible for accuracy and layout of the work.
- B. Review the Contract Drawings and report any discrepancies to the Engineer for clarification prior to starting fabrication.

PART 2 - PRODUCTS

2.01 STEEL GRATING:

- A. Manufacturers:
 - 1. IKG Borden Metal Products Co.; Type B or W/B.
 - 2. Ohio Gratings, Inc.; Type DT or SGCS Series. (Special order required)

3. McNichols Co.; GW Series (where called for on Contract Drawings)
- B. Provide steel grating material conforming to ASTM A36.
 - C. Provide grating size as indicated on the Contract Drawings.
 - D. Fabricate in standard size sections where possible with a maximum panel weight of no more than 80 pounds.
 - E. Apply bearing bar banding at ends of grating sections and at fixture or pipe openings where two or more bearing bars are cut.
 - F. Anchor grating to support members using stainless steel saddle clips.
 - G. Exterior grating shall be serrated. Provide interior surface with mill finish.
 - H. Hot dip galvanize steel grating after fabrication in accordance with ASTM A123.
- 2.02 ALUMINUM BAR GRATING:
- A. Manufacturers:
 1. IKG Borden Metal Products Co.; Type S/B or B/F.
 2. Ohio Gratings, Inc.; Type SG or ADT Series.
 3. McNichols Co.; GAL or GAA and GBB Series.
 - B. Provide aluminum alloy 6063-T6 grating material.
 - C. Provide grating as indicated on the Contract Drawings.
 - D. Fabricate in standard size sections where possible with a maximum panel weight of no more than 80 pounds.
 - E. Apply bearing bar banding at ends of grating sections and at fixture or pipe openings where two or more bearing bars are cut.
 - F. Anchor grating to support members using stainless steel saddle clips.
 - G. Exterior grating shall be serrated. Provide interior surface with mill finish.
- 2.03 ALUMINUM COVER PLATE:
- A. Provide floor checkered plates conforming to the following aluminum alloys and tempers with a mill finish:
 1. Angles

- a. Extruded: AA 6063-T5
- b. Structural: AA 6061-T6
- 2. Checkered Plate: AA 6061-T6
- 3. Anchors Bolts, Washers, and Nuts: Stainless Steel Type 316

B. General:

- 1. Fabricate with a maximum panel weight of no more than 80 pounds.
- 2. Provide flush type lifting handles for all section of checkered plates.
- 3. Provide a raised pattern, non-skid surface.
- 4. See drawings for stiffener spacing.
- 5. Thickness as shown on contract drawings.

C. Furnish fixed cover checkered plates complete with frames, anchors, lifting handles and stainless steel flush head screw fastenings.

D. Furnish hinged checkered plate covers complete with frames, anchors, lifting handles and heavy duty hinges. Provide a minimum of two hinges of Type 316L stainless steel, with stainless steel pins and fastenings for each checkered plate section.

2.04 FLOOR ACCESS HATCHES (H-1, H-2, H-3, H-4, H-5 AND H-6):

A. Manufacturers of Prefabricated Floor Access Hatches:

- 1. USF Fabrication, Inc.
- 2. East Jordan Iron Works

B. Component Fabrication:

- 1. Provide access hatches and frames of type and size as shown on Schedule.
- 2. Where hatches are noted with curb mounting, the cover shall overlap the frame and extend down 2 inches. Provide 3/16-inch thick minimum aluminum structural angle with holes for securing to curb. Provide weathertight perimeter gasket.
- 3. Where hatches are noted with drainage channel, drainage channel frame shall be 1/4-inch thick trough frame with continuous anchor flange around perimeter. Weld 1-1/2 inch diameter drain coupling to frame trough unless indicated otherwise on Drawings.
- 4. Door leaves:

- a. 300 PSF hatches shall have 1/4-inch minimum aluminum diamond plate with reinforcing on underside for live load. Provide stainless steel safety chain and attachments for end of double-leaf door assembly when open.
 - b. 150 PSF hatches shall have 3/16-inch minimum aluminum diamond plate with reinforcing on underside for live load.
5. Door Hardware:
- a. Equip doors with heavy stainless steel hinges with stainless steel pins. Hinges shall be through bolted to cover and frame with stainless steel bolts.
 - b. Equip doors with fully enclosed compression springs and hold - open arm with positive locking device with conveniently positioned release handle for easy and controlled closing.
 - c. Hardware shall be Type 316 stainless steel.
 - d. Stainless steel snap lock mounted on bottom of door leaf with a removable topside handle and socket recessed in cover.
 - e. Hinged hasp on exterior door surface.
 - f. Cylinder lock with keyway protected by a threaded cover plug.
6. Factory finish on aluminum surfaces shall be AA-M12A41 (Mechanical finish, nonspecular, anodic coating, architectural Class I, clear coating 0.7 mil complying with AAMA 607.1 on exposed surfaces
7. Manufacturer shall warranty in writing against defects in materials or workmanship for five years.
8. Fall Protection Safety Grate:
- a. Color shall be safety orange.
 - b. Provide torsion rod lift assistance for ease of operation.
 - c. Provide an aluminum or stainless steel hold open arm to automatically lock the panel in the fully open 90 degree position.
 - d. Provide a stainless steel release handle for closing the grating panel with a provision for locking the panel to prevent unauthorized access.
 - e. All other hardware shall be Type 316 stainless steel.

2.05 CLEARWELL INSIDE ACCESS HATCH (H-7, H-8, AND H-9)

- A. Manufacturers of Prefabricated Clearwell Inside Access Hatches, or approved equal:

1. USF Fabrication, Inc.
2. Babcock Davis

B. Component Fabrication:

1. Provide access hatches and frames of type and size as shown on Contract Drawings.
2. Hatches shall have a close fitting shoebox type cover which extends down around the frame at least two inches with a gasket between the cover and the frame. The three non-hinged sides of the hatch shall be provided with adjustable cam levers (pressure locks) to tighten the cover against the gasket to ensure the hatch is watertight. Hinge fasteners must be completely concealed to inhibit tampering.
3. Door leaf: 1/4-inch Type 316 stainless steel diamond plate with reinforcing on underside for live load. Hatches shall be single leaf only.
4. Door Hardware:
 - a. Equip doors with heavy stainless steel hinges with stainless steel pins. Hinges shall be through bolted to cover and frame with stainless steel bolts.
 - b. Equip doors with fully enclosed compression springs and hold - open arm with positive locking device with conveniently positioned release handle for easy and controlled closing.
 - c. Hardware shall be Type 316 stainless steel.
 - d. The interior and exterior handles eliminated, have no penetrations in the cover, and shall have a concealed padlock hasp.
5. Manufacturer shall warranty in writing against defects in materials or workmanship for five years.
6. Fall Protection Safety Net (Ozone Contact Basin Hatches):
 - a. The hatch safety net shall be made of strong polyester netting which attaches to the frame by corrosion resistant stainless steel hardware.
7. Fall Protection Safety Grate (Main Clearwell Equipment Hatches):
 - a. Color shall be safety orange.
 - b. Provide torsion rod lift assistance for ease of operation.
 - c. Provide a stainless-steel hold open arm to automatically lock the panel in the fully open 90-degree position.

- d. Provide a stainless steel release handle for closing the grating panel with a provision for locking the panel to prevent unauthorized access.
 - e. All other hardware shall be Type 316 stainless steel.
 - C. Fall Protection Grating: Grating panel(s) shall be aluminum with a powder coat paint finish that is safety yellow in color. Panel shall be designed to meet the requirements of OSHA standard 29 CFR1926.502(c) and be equipped with a hold open device to lock the grating panel(s) in the open position. Hold open device and all hardware shall be Type 316 stainless steel.
 - D. Finishes: Factory finish shall be mill finish aluminum with bituminous coating applied to the exterior of the frame.
- 2.06 TRAFFIC RATED HATCH (H-10 AND H-11)
- A. Manufacturers of Prefabricated Traffic Rated Hatches, or approved equal:
 - 1. EJ
 - B. Component Fabrication:
 - 1. Provide access hatches and frames of type and size as shown on Contract Drawings.
 - 2. Hatches shall have a frames constructed from ASTM A536 grade 70-50-05 ductile iron and covers constructed from ASTM A536 grade 80-55-06 ductile iron.
 - C. Hatches shall be designed, tested, and rated for heavy duty daily traffic.
 - D. Hatches shall be supplied with security type hex bolt locking system capable of tightening the cover against the EPDM gasket to ensure the hatch is watertight. Hinge fasteners must be completely concealed to inhibit tampering. Hatch hardware shall be Type 316 stainless steel.
 - E. Traffic rated hatches shall be equipped with lift assist and self-engaging safety bar.
 - F. Manufacturer shall warranty in writing against defects in materials or workmanship for five years.
 - G. Fall Protection Safety Gate
 - 1. Color shall be safety orange.
 - 2. Provide torsion rod lift assistance for ease of operation.
 - 3. Provide a stainless-steel hold open arm to automatically lock the panel in the fully open 90-degree position.

4. Provide a stainless steel release handle for closing the grating panel with a provision for locking the panel to prevent unauthorized access.
 5. All other hardware shall be Type 316 stainless steel.
 6. Grating shall be designed to meet the requirements of OSHA standard 29 CFR1926.502(c)
- H. Finishes: Factory finish shall be uncoated ductile iron.

PART 3 - EXECUTION

3.01 EXAMINATION:

- A. Upon receipt of material at job site, inspect all materials for shipping damage. Damaged items shall be replaced at no cost to Owner.
- B. Examine supports for size, layout, and alignment. Surface shall be free of debris.
- C. Correct defects considered detrimental to proper installation.

3.02 PROTECTION:

- A. Protect aluminum from contact with dissimilar metals or concrete. Under no circumstances shall aluminum directly contact concrete or dissimilar metal.
- B. Apply one coat of bituminous paint coating.
- C. Before coating application, clean contact surfaces, remove dirt, grease, oil, foreign substances, followed by immersing in, or wipe thoroughly with, an acceptable solvent. Rinse with clean hot water and dry thoroughly.

3.03 INSTALLATION:

- A. Install and make connections in accordance with accepted submittals and manufacturer's written instructions.
- B. Install materials accurately in location and elevation, level and plumb. Field fabricate as necessary for accurate fit.
- C. Coordinate and furnish anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction.

3.04 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

HATCH SCHEDULE

HATCH STYLE	LOCATION	CLEAR OPENING DIMENSIONS	MATERIAL	FRAME TYPE	MOUNT STYLE	LEAF	LOAD RATING	DRAIN INSTALLED	Fall Protection	Locking	Section
H-1	BACKWASH SUPPLY TANK #1	30" X 30"	ALUMINUM	ANGLE	CURB	SINGLE	150 PSF	NO	Aluminum Grating	NO	2.04

END OF SECTION

SECTION 06 10 00
ROUGH CARPENTRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wood products.
2. Wood-preservative-treated lumber.
3. Fire-retardant-treated lumber.
4. Miscellaneous lumber.
5. Plywood backing panels.

B. Related Requirements:

1. Section 06 16 00 "Sheathing" for sheathing, subflooring, and underlayment.

1.02 DEFINITIONS

A. Lumber grading agencies, and abbreviations used to reference them, include the following:

1. NeLMA: Northeastern Lumber Manufacturers' Association.
2. NLGA: National Lumber Grades Authority.
3. SPIB: The Southern Pine Inspection Bureau.
4. WCLIB: West Coast Lumber Inspection Bureau.
5. WWPA: Western Wood Products Association.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.

2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.04 INFORMATIONAL SUBMITTALS

A. Material Certificates:

1. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.

1.05 DELIVERY, STORAGE, AND HANDLING

- ##### A.
- Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.01 WOOD PRODUCTS

- ##### A.
- Lumber: Comply with DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
1. Factory mark each piece of lumber with grade stamp of grading agency.
 2. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry wood products.
 3. Dress lumber, S4S, unless otherwise indicated.

2.02 WOOD-PRESERVATIVE-TREATED LUMBER

- A. Preservative Treatment by Pressure Process: AWP A U1, Use categories as follows:
 - 1. UC3A: Coated products in exterior construction not in contact with ground but exposed to all weather cycles including intermittent wetting. Include the following items:
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - 2. After treatment, redry wood to 19 percent maximum moisture content.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

2.03 FIRE-RETARDANT-TREATED LUMBER

- A. General: Where fire-retardant-treated materials are indicated, materials are to comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
 - 1. Treatment is not to promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.
 - 3. Interior Type A: Treated materials are to have a moisture content of 28 percent or less when tested in accordance with ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.
 - 4. Design Value Adjustment Factors: Treated lumber is to be tested according to ASTM D5664 and design value adjustment factors are to be calculated according to ASTM D6841.

- C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent. Kiln-dry plywood after treatment to maximum moisture content of 15 percent.
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency and other information required by authorities having jurisdiction.
- E. Application: Treat items indicated on Drawings, and the following:
 - 1. Concealed blocking.
 - 2. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
 - 3. Plywood backing panels.

2.04 MISCELLANEOUS LUMBER

- A. Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
 - 1. Blocking.
 - 2. Nailers.
 - 3. Rooftop equipment bases and support curbs.
- B. Dimension Lumber Items: Construction or No. 2 grade lumber of any species.
- C. Roofing Nailers: Structural- or No. 2-grade lumber or better; kiln-dried Douglas fir, southern pine, or wood having similar decay-resistant properties.
- D. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

2.05 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: Plywood, DOC PS 1, Exterior, A-C, fire-retardant treated, in thickness indicated or, if not indicated, not less than 1/2-inch (13-mm) nominal thickness.

2.06 FASTENERS

- A. General: Fasteners are to be of size and type indicated and comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than 1-1/2 inches (38 mm) into wood substrate.
 - 1. Where rough carpentry is in area of high relative humidity, provide fasteners of Type 304 stainless steel.

- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Set work to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locate nailers, blocking, and similar supports to comply with requirements for attaching other construction.
- B. Install plywood backing panels by fastening to studs or masonry; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.
- C. Provide blocking as indicated and as required to support facing materials, fixtures, specialty items, and trim.
 - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches (406 mm) o.c.
- D. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- E. Comply with AWPAC M4 for applying field treatment to cut surfaces of preservative-treated lumber.
 - 1. Use inorganic boron for items that are continuously protected from liquid water.
 - 2. Use copper naphthenate for items not continuously protected from liquid water.
- F. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- G. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
 - 1. Table 2304.10.1, "Fastening Schedule," in ICC's International Building Code (IBC).
 - 2. ICC-ES evaluation report for fastener.

- H. Securely attach roofing nailers to substrates by anchoring and fastening to withstand bending, shear, or other stresses imparted by Project wind loads and fastener-resistance loads as designed in accordance with ASCE/SEI 7.
- I. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.02 INSTALLATION OF WOOD BLOCKING AND NAILERS

- A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach wood blocking to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.
- C. Attach wood roofing nailers securely to substrate to resist the designed outward and upward wind loads indicated on Drawings and in accordance with ANSI/SPRI ED-1, Tables A6 and A7.

END OF SECTION

SECTION 06 16 00

SHEATHING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wall and parapet sheathing.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for plywood backing panels.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Wall and parapet sheathing.

B. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

C. Shop Drawings:

1. Show locations and extent of sheathing, accessories, and assemblies specific to Project conditions.
2. Include details for sheathing joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.01 WALL AND PARAPET SHEATHING

A. Glass-Mat Gypsum Sheathing: ASTM C1177/C1177M.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Certainteed; SAINT-GOBAIN.
 - b. Continental Building Products Inc.
 - c. Gold Bond Building Products, LLC provided by National Gypsum Company.
 - d. USG Corporation.
2. Type and Thickness: Type X, 5/8 inch (15.9 mm) thick, unless otherwise indicated.

2.02 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. For parapet and wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M or of Type 304 stainless steel.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
1. For steel framing less than 0.0329 inch (0.835 mm) thick, use screws that comply with ASTM C1002.
 2. For steel framing from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick, use screws that comply with ASTM C954.

2.03 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant for Paper-Surfaced and Glass-Mat Gypsum Sheathing: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated and complying with requirements for elastomeric sealants specified in Section 07 92 00.
- B. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches (50 mm) wide, 10 by 10 or 10 by 20 threads/inch (390 by 390 or 390 by 780 threads/m), of type recommended by sheathing and tape manufacturers for use with silicone emulsion

sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. Table 2304.10.1, "Fastening Schedule," in the ICC's International Building Code.
 - 2. ICC-ES evaluation report for fastener.
- D. Retain first paragraph below if using wood framing. Revise to indicate other kinds of nails if required.
- E. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- F. Coordinate parapet and wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- G. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- H. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.02 INSTALLATION OF GYPSUM SHEATHING

- A. Comply with GA-253 and with manufacturer's written instructions.
 - 1. Fasten gypsum sheathing to cold-formed metal framing with screws.
 - 2. Install panels with a 3/8-inch (9.5-mm) gap where non-load-bearing construction abuts structural elements.

3. Install panels with a 1/4-inch (6.4-mm) gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Seal sheathing joints in accordance with sheathing manufacturer's written instructions.
1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
 2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

END OF SECTION

SECTION 06 41 16

PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Plastic-laminate-clad architectural cabinets.
2. Cabinet hardware and accessories.
3. Miscellaneous materials.

B. Related Requirements:

1. Section 06 10 00 for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.
2. Section 12 36 61.16.

1.02 COORDINATION

- ###### A.
- Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.

1.03 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

B. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Show large-scale details.
3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
4. Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.

C. Samples for Initial Selection: For each type of exposed finish.

D. Samples for Verification: For the following:

1. Plastic Laminates: 12 by 12 inches (300 by 300 mm), for each type, color, pattern, and surface finish required.
 - a. Provide one sample applied to core material with specified edge material applied to one edge.
2. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer and Installer.
- B. Product Certificates: For each type of product.

1.05 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Manufacturer of products.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.07 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.

- C. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.01 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

- A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of cabinets indicated for construction, finishes, installation, and other requirements.
- B. Architectural Woodwork Standards Grade: Custom.
- C. High-Pressure Decorative Laminate: ISO 4586-3, grades as indicated or if not indicated, as required by quality standard.
- D. Exposed Surfaces:
 - 1. Plastic-Laminate Grade: HGS.
 - 2. Edges: PVC T-mold matching laminate in color, pattern, and finish.
- E. Semiexposed Surfaces:
 - 1. Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, ISO 4586-3.
 - a. Edges of Plastic-Laminate Shelves: PVC T-mold matching laminate in color, pattern, and finish.
 - b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, ISO 4586-3, grade to match exposed surface.
 - 2. Drawer Sides and Backs: Solid-hardwood lumber.
 - 3. Drawer Bottoms: Hardwood plywood.
- F. Dust Panels: 1/4-inch (6.4-mm) plywood or tempered hardboard above compartments and drawers unless located directly under tops.
- G. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, ISO 4583-3, grade to match exposed surface.
- H. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with glued dovetail joints.

I. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. Refer to Drawings.

2.02 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Wood Moisture Content: 4 to 9 percent.

B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade 130.

2. Particleboard (Medium Density): ANSI A208.1, Grade M-2.

3. Softwood Plywood: DOC PS 1, medium-density overlay.

2.03 CABINET HARDWARE AND ACCESSORIES

A. Butt Hinges: 2-3/4-inch (70-mm), five-knuckle steel hinges made from 0.095-inch-(2.4-mm-) thick metal, and as follows:

B. Wire Pulls: Back mounted, solid metal, 5 inches (127 mm) long, 2-1/2 inches (63.5 mm) deep, and 5/16 inch (8 mm) in diameter.

C. Catches: Push-in magnetic catches, ANSI/BHMA A156.9, B03131.

D. Adjustable Shelf Standards and Supports: ANSI/BHMA A156.9, B04071; with shelf rests, B04081.

E. Shelf Rests: ANSI/BHMA A156.9, B04013; metal.

F. Drawer Slides: ANSI/BHMA A156.9.

1. Heavy-Duty (Grade 1HD-100 and Grade 1HD-200): Side mount or Undermount.

a. Type: Full extension.

b. Material: Aluminum, Galvanized steel ball bearing, Stainless steel, or Zinc-plated ball bearing slides.

2. General-purpose drawers more than 3 inches (75 mm) high, but not more than 6 inches (150 mm) high and not more than 24 inches (600 mm) wide, provide 75 lb (34 kg) load capacity.
 3. File drawers more than 6 inches (150 mm) high or more than 24 inches (600 mm) wide, provide 100 lb (45 kg) load capacity.
- G. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.
- H. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
1. Satin Stainless Steel: ANSI/BHMA 630.
- I. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.
- 2.04 MISCELLANEOUS MATERIALS
- A. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- B. Adhesive for Bonding Plastic Laminate: Type II water-resistant type as selected by fabricator to comply with requirements.
1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.
- 2.05 FABRICATION
- A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.
- B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.02 INSTALLATION

- A. Architectural Woodwork Standards Grade: Install cabinets to comply with quality standard grade of item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
- C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.
- D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm) using concealed shims.
 - 1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 - 2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 - 3. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches (400 mm) o.c.

3.03 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semiexposed surfaces.

END OF SECTION

SECTION 06 51 00.01

FIBERGLASS REINFORCED PLASTIC (FRP) BAFFLES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide and test fiberglass baffles and appurtenances as indicated and in compliance with Contract Documents which includes, but is not limited to:
 - 1. FRP Baffle Wall Panels
 - 2. FRP Columns
 - 3. FRP Wall Angles
 - 4. Column Base Plates
 - 5. Fasteners and Connections

1.02 REFERENCES:

- A. ASTM International (ASTM):
 - 1. D256: Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics
 - 2. D570: Standard Test Method for Water Absorption of Plastics
 - 3. D638: Standard Test Method for Tensile Properties of Plastics
 - 4. D696: Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30 Degree C and 30 Degree C with a Vitreous Silica Dilatometer
 - 5. D790: Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials
 - 6. D2583: Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor
- B. NSF International (NSF):
 - 1. ANSI/NSF 61: Drinking Water System Components - Health Effects

1.03 DESIGN CRITERIA

- A. Design load, considered as uniform loading over the entire wall, shall include fluid flow pressure plus any dynamic pressure associated with mechanical equipment. Actual load requirements, which vary with process, shall be specified by the Design Engineer.
 - 1. Design Load: Load for design shall be the greater of water differential or wind load but not a combination of the two.
 - a. Water Differential: 2 inches, w.c. (Considered as a uniform load over the entire wall)
 - 2. Deflection Limits and Factors of Safety
 - a. Baffle Panels: $L/D = 90$ (not to exceed panel depth); Factor of Safety = 2.0
 - b. Columns: $L/D = 100$, Factor of Safety = 2.5

1.04 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
 - 1. Layout drawings and design calculations stamped and signed by a professional engineer licensed in the State of Utah.
 - 2. Materials listing including resins and fiberglass content and thicknesses. List the Type of resins manufacturer, composition, and characteristic.
 - 3. Method of attachment, size of fasteners and weights of each section.
 - 4. Dimensions and thickness of all fiberglass components.
 - 5. Shop drawing data for accessory items.
 - 6. Certified setting plans, with tolerances, for anchor bolts.
 - 7. Manufacturer's literature as needed to supplement certified data.
 - 8. Operating and maintenance instructions and parts lists.
 - 9. Listing of reference installations as specified with contact names and telephone numbers.
 - 10. Shop and field inspection reports.
 - 11. Shop test results: Certified test reports of the physical and mechanical properties as specified herein.
 - 12. Qualifications of field service engineer.

13. Recommendations for short and long-term storage.
 14. Special tools.
 15. Number of service person-days provided and per diem field service rate.
 16. The latest ISO 9001 series certification.
 17. NSF 61 approval
 18. Material Certification:
 - a. Provide certification from the equipment manufacturer that the materials of construction specified are recommended and suitable for the service conditions specified and indicated. If materials other than those specified are proposed based on incompatibility with the service conditions, provide technical data and certification that the proposed materials are recommended and suitable for the service conditions specified and indicated including an installation list of a minimum of five (5) installations in operation for a minimum of five (5) years. Provide proposed materials at no additional cost to the Owner.
 - b. Where materials are not specified, provide technical data and certification that the proposed materials are recommended and suitable for the service conditions specified and indicated.
- B. A copy of the contract mechanical process and structural drawings, with addenda that are applicable to the equipment specified in this section, marked to show all changes necessary for the equipment proposed for this specification section. If no changes are required, mark all drawings with “No changes required” or provide a statement that no changes are required.
1. Failure to include all drawings or a statement applicable to the equipment specified in this section will result in submittal return without review until a complete package is submitted.
- C. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance or marked and indexed to indicate requested deviations and clarifications from the specified requirements.
1. If deviations and clarifications from the specifications are indicated, therefore requested by the Contractor, provide a detailed written justification for each deviation and clarification.
 2. Failure to include a copy of the marked-up specification sections and or the detailed justifications for any requested deviation or clarification will result in

submittal return without review until marked up specifications and justifications are submitted in a complete package.

1.05 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Baffle wall system shall be the product of one manufacturer to ensure coordination and compatibility of parts.
- C. Manufacturer of baffle wall system must be the Manufacturer and Fabricator of fiberglass components utilized in the baffle system. The manufacturer of the fiberglass components shall take full responsibility for products, materials, and design. In addition, a certification letter from the Manufacturer shall state that Manufacturer takes full responsibility for design and use of products as specified. No split responsibility of product manufacturing, fabrication, design, or quality of fiberglass components purchased by Contractor will be acceptable.
- D. Supplier of baffle wall system shall manufacture and fabricate all fiberglass components utilized for baffle wall system in its own facility, which must be ISO9001 certified.
- E. Warranty: Provide a two (2) year warrantee from material and workmanship defects.
- F. Manufacturer of baffle wall system shall have completed within the last five years a minimum of five (5) projects of similar type as those required in this scope.
- G. Contractor shall be responsible for verifying all field dimensions for development and approval of manufacturer's drawings.
- H. Coordination: Baffle manufacturer shall coordinate the fabrication of the baffles with the contractor in regard to the Clearwell configurations.
- I. Services of Manufacturer's Representative as stated in Section 01 61 00 and as specified herein.
- J. Provide services of factory-trained Service Technician, specifically trained on type of equipment specified:
 - 1. Service Technician must be present on site for all items listed below. Person-day requirements listed are exclusive of travel time, and do not relieve Contractor of the obligation to place equipment in operation as specified.
 - 2. Installation: Inspect location of anchor bolts; setting, leveling, alignment and field erection:
 - a. 1/2 person-day per Clearwell.

3. Any additional time required of the factory trained service technician to assist in placing the equipment in operation, or testing or to correct deficiencies in installation, equipment, or material shall be provided at no additional cost to the Owner.

K. All components used in a water treatment process must be NSF 61 approved.

1.06 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

- A. The standard for design, characteristics, and performance shall be based on materials and components provided by Enduro Composites, Inc.
- B. Should equipment which differs from the first named in this Section be offered, such equipment shall be acceptable only on the basis that they meet this Specification in full and any revision in the design and/or construction of the structure, piping, appurtenant equipment required to accommodate such a substitution shall be made at no additional cost to the Owner and be as approved by the Engineer.
- C. FRP Baffle manufacturer shall be:
1. Enduro Composites, Inc.
 2. NEFCO
 3. Or approved equal

2.02 MATERIALS:

- A. Fiberglass -reinforced polyester plastic, molded by "matched-die" or acceptable equivalent method.
- B. Baffle panels, FRP columns, FRP angles, and associated components shall be ANSI/NSF Standard 61 certified for potable water application.
1. Certification shall be by approved, independent third party, and in Baffle Manufacturer's name.
 2. Certifications of raw materials, not in Baffle Manufacturer's name, shall not be acceptable.
- C. Minimum physical properties.

Minimum Physical Laminate	Minimum Value	Test Method
Tensile strength	40,000 psi	ASTM D638
Flexural strength	32,000 psi	ASTM D790
Flexural modulus	1,035,000 psi	ASTM D790
Impact, Notches, Izod, foot pound per inch	15	ASTM D256
Barcol Hardness (average)	Barcol 40	ASTM D2583
Average coefficient of thermal expansion – inch per inch, per degrees F	16×10^{-6}	ASTM D696
Water absorption (percent 24 hr)	0.02	ASTM D570

D. Make hardness tests on the resin-rich surfaces of the test sample. Test samples type, preparation, and conformance to the requirements of the ASTM test methods designated above.

E. Minimum glass content: 30 percent.

1. Molding process to produce a uniform, smooth finish free of porous or dry areas and voids.
2. Mold edges of plates, holes, and notches into the plates at the factory.

F. Air bubbles and other irregularities, including pits, will be cause for rejection.

G. Materials in contact with the water shall not impart any substances harmful to health or detrimental to the quality of the water and shall not impart any taste or odor to the water.

2.03 FRP BAFFLE PANELS:

A. Provide baffle panels of the sizes and lengths as indicated on the Contract Drawings and as specified.

1. FRP baffle panels shall be ribbed profile in 4-inch depth x 26-inch height coverage (full panel dimension).
2. FRP baffle panels shall be minimum of 1/8-inch (0.125 inch) thick.
3. FRP baffle panels shall have (top) horizontal ribs that slope to minimize sediment build-up.
4. FRP baffle panels shall comply with the structural requirements in Part 1. 1.05 Design Criteria.
5. FRP material shall include glass fiber reinforcements 40% (minimum) of the material weight embedded within UV Stabilized, Polyester Resin. Color shall be standard gray.

6. FRP material shall have surfacing veil on both sides.
7. Factory cut edges and drilled holes shall be sealed with ANSI/NSF 61 approved material.

2.04 FRP STRUCTURAL FRAMING AND ANGLES

- A. Provide structural framing and angles of the sizes and lengths as required per the manufacturer's design calculations.
 1. FRP framing shall comply with the structural requirements in Part 1. 1.05 Design Criteria.
 2. FRP vertical columns may be anchored into the floor slab and roof deck. Both the floor slab and roof decks are sloping.
 3. FRP angles shall be a minimum of 3/8" (0.375 inch) thickness and 90 degrees.
 4. Manufacturer shall factory attach FRP angles to FRP columns (as applicable).
 5. Installing contractor shall field attach FRP angles to concrete structure.
 6. FRP material shall include glass fiber reinforcements 50% (minimum) of the material weight embedded within UV Stabilized, Polyester Resin. Color shall be standard gray.
 7. FRP material shall have surfacing veil on both top and bottom sides.
 8. Factory cut edges and drilled holes shall be sealed with ANSI/NSF 61 approved material.

2.05 OTHER STRUCTURAL COMPONENTS

- A. Provide other structural components of the sizes and lengths as required per the manufacturer's design calculations.
 1. Column base plates or angles shall be Type 316 Stainless Steel
 2. Base plates or angles (shall be field attached unless noted otherwise on drawings.
 3. Base plates made of FRP shall not be allowed.
 4. Base plates must be a full moment connection.

2.06 HARDWARE

- A. Fasteners, anchorage, and other structural hardware shall be Type 316 Stainless Steel and shall be provided, sized, and designed by the Baffle Wall Manufacturer.

- B. All submerged anchors shall be epoxy adhesive type meeting NSF 61 requirements (size as required).

PART 3 - EXECUTION

3.01 MATERIAL HANDLING

- A. At the time of delivery, all materials shall be inspected for shipping damage. Freight company and Manufacturer shall be notified immediately of any damage or quantity shortages.
- B. Contractor shall protect FRP materials from cuts, scratches, gouges, abrasions, and impacts. When lifting crated FRP materials, spreader bars shall be used (not wire slings or chains unless materials are fully protected). FRP components shall not be dragged across one another unless separated by a non-scratching spacer.

3.02 INSTALLATION:

- A. Install items in accordance with accepted shop drawings, manufacturer's printed instructions and as indicated.
- B. Before placing and attaching components, Contractor shall confirm the alignment and location of column base plates, surfaces, brackets, saddles, etc. All bearing surfaces must be level, flat, clean, and free of debris.
- C. Contractor shall install pads, curbs or piers to modify uneven or sloped concrete surfaces to create a flat, level surface for baffle system attachment.
- D. Contractor shall field cut materials as required and shown on the Manufacturer's drawings.
- E. Use factory drilled mounting holes. Field cutting will only be allowed as accepted by the Engineer to complete the structure and accommodate in-tank obstructions.
- F. Coat all field cut or drilled edges in accordance with the manufacturer's recommendations to prevent fiberblossoming or fraying with an NSF 61 approved material.
- G. Accurately set embedded items using templates.
- H. Contractor shall install beams and connections as shown on the approved layout drawings. Field modifications (cuts, copes, holes, etc.) unless shown on the drawings are not allowed without the manufacturer's written approval. Shim FRP beams with approved materials only.

- I. Before placement of baffle panels, contractor shall check alignment and location of FRP framing members and existing structure. Baffle panels shall be nested at side-lap conditions.
 - J. Contractor shall adjust FRP baffle panels for proper bearing and alignment. The first panel installed at the bottom of the wall must have the side with a flat end (not an upturn) at the bottom.
 - K. Contractor shall drill holes for fasteners through baffle panel and support beam. Coat with NSF 61 material per paragraph 3.02.F above.
 - L. Contractor shall fasten baffle panels to structural supports as shown on the approved layout drawings. Unless noted otherwise, FRP baffle panels shall be attached to each support with a minimum of three (3) nut and bolt assemblies with minimum 1.25-inch diameter Fender washers. At panel side laps, fastening shall be through two panels. Refer to manufacturer's installation instructions and drawings for proper fastener selection and procedure.
 - M. Contractor shall place and fasten other miscellaneous components or hardware as shown on the approved drawings.
 - N. Erect all equipment in conformity with accepted high-quality standards, using skilled workmen of the appropriate trades.
- 3.03 CONTRACT CLOSEOUT:
- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 06 60 10

FIBERGLASS REINFORCED PRODUCTS AND FABRICATIONS

PART 1 - GENERAL

1.01 DESCRIPTION:

A. This section includes:

1. FRP Grating and Treads
2. Molded Grating
3. FRP Structural Shapes
4. FRP Stairs
5. FRP Railing

B. Furnish all labor, materials, equipment and incidentals necessary to install the fiberglass polymer products as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

A. ASTM International (ASTM):

1. D70: Standard Test Method for Density of Semi-Solid Bituminous Materials (Pycnometer Method).
2. D256: Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.
3. D635: Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
4. D638: Standard Test Method for Tensile Properties of Plastics.
5. D695: Standard Test Method for Compressive Properties of Rigid Plastics.
6. D696: Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30 Degree C and 30 Degree C with a Vitreous Silica Dilatometer.
7. D732: Standard Test Method for Shear Strength of Plastics by Punch Tool.
8. D790: Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

9. D792: Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement.
10. D2583: Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.
11. D3918: Standard Terminology Relating to Reinforced Plastic Pultruded Products.
12. E84: Standard Test Method for Surface Burning Characteristics of Building Materials.
13. G152: Standard Practice for Operating Open Flame Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials
14. G153: Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials

1.03 SUBMITTALS:

A. Submit the following shop drawings in accordance with Section 01 33 00.

1. Detail shop drawings indicating:
 - a. Dimensions
 - b. Sectional assembly
 - c. Location and identification mark
 - d. Connections, connections to structure and fastening methods
 - e. Size and location of supporting frames required
 - f. Materials of construction
 - g. Installation instructions
2. Catalog data and design tables showing limits for span length and deflection under various and concentrated loads.
3. Stamped by Professional Engineer registered in State where the project is located.

1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Furnish material from an ISO-9001 certified manufacturer of proven ability who has regularly engaged in the manufacture and installation of FRP systems.

C. Provide documentation showing that the Contractor doing this work has a minimum of 5 years' experience in the manufacture and installation of FRP systems similar to that indicated for this project, with sufficient capacity to produce required units without causing delay of work.

D. Install materials in accordance with the manufacturer's instructions.

1.05 DELIVERY STORAGE AND HANDLING:

A. Comply with the requirements specified in Section 01 66 10.

B. Store materials during and after shipment to prevent cracking, twisting, bending, breaking, chipping or damage of any kind to materials, including damage due to over exposure to sun.

C. Remove material that is damaged from the site, at no cost to the Owner.

D. Identify and match-mark all materials, items, and fabrications for installation and field assembly.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Seasafe, Inc.

B. Strongwell

C. IMCO Reinforced Plastics, Inc.

D. International Grating, Inc.

E. Fibergrate Composite Structures, Inc.

F. If the Contractor chooses to substitute equipment other than a named manufacturer, any additional costs required to accommodate such equipment shall be made without a change in the Contract Price or Contract Time and at no additional cost to the Owner.

2.02 GENERAL:

A. Provide new materials free from defects and imperfections that might affect performance of finished product.

B. After fabrication, seal cut ends, holes and abrasions of FRP shapes with a compatible resin coating to prevent intrusion of corrosion and moisture.

C. Fabricate so that exposed surfaces are smooth and true to form.

- D. Manufacture FRP products using vinyl ester resin with flame retardant and UV inhibitor additives. Provide synthetic surface veil covering exterior surface. Provide FRP shapes with flame spread of 25 or less in accordance with ASTM E84.
- E. Provide FRP products exposed to weather with ultraviolet inhibitor and one mil thick UV coating to shield from ultra-violet light.
- F. Provide Type 316L stainless steel metal accessories unless noted otherwise. Provide concrete anchors that comply with Section 05 50 00.

2.03 FRP GRATING AND STAIR TREADS:

A. Design Requirements:

1. Grating:

- a. Design grating and support system to sustain dead loads and superimposed live loads.
- b. 100 psf uniform live load or 300 pound concentrated live load, whichever produces maximum stress.

2. Stair Treads:

- a. 100 psf uniform live load or 300 pound concentrated live load on an area of 4 square inches located in the center of the tread, whichever produces greater stress.

3. Deflection:

- a. 1/4-inch maximum under uniform live load of 100 psf for grating and stair treads
- b. Span: $L/240$ maximum for support members

- B. Fabricate grating and Stair Treads from pultruded bearing bars and cross rods. Assemble grating using a locking cross-rod design that makes a permanent connection between the cross-rod and bearing bar, and is completely bond into a one-piece panel.
- C. Color shall be gray. Stair treads shall have a safety yellow nosing.
- D. Provide grating with a slip resistant epoxy grit surface.
- E. Use Type 316L stainless steel grating hold down clamps spaced as required by manufacturer, but not greater than 4 feet on center. Provide two at each support with a minimum of four per panel.

- F. At roof walkway locations provide rubber feet by grating manufacture between roofing and bottom of grating, spaced as required by manufacturer, but no greater than 4 feet on center. Provide minimum of 4 per panel
- G. Position grating sections flat and square with ends bearing minimum 1-1/4 inches on supporting structure.
- H. Provide embedded angle support frames with continuous integral anchor for grating set in concrete openings unless noted otherwise.
- I. Maximum Grating Clearances:
 - 1. 1/4-inches from vertical steel sections
 - 2. 1/2-inches from concrete and masonry walls
 - 3. 1/4-inches between sections and at ends

2.04 MOLDED GRATING:

- A. Design Requirements:
 - 1. Grating:
 - a. Design grating and support system to sustain dead loads and superimposed live loads.
 - b. 100 psf uniform live load or 300 pound concentrated live load, whichever produces maximum stress.
 - 2. Deflection:
 - a. 1/4-inches maximum under uniform live load of 100 psf for grating.
 - b. Span: L/240 maximum for support members.
- B. Continuous glass filament reinforcement, approximately 30 percent glass to resin ratio.
- C. Resin rich exterior surfaces free of air bubbles and dry glass.
- D. Color shall be gray.
- E. Provide a slip resistant quartz grit applied surface.
- F. Provide Type 316L stainless steel hold down clamps spaced as required by manufacturer, but not greater than 4 feet on center. Provide two at each support with a minimum of four per panel.

- G. Position grating sections flat and square with ends bearing minimum 1-1/4 inches on supporting structure.
- H. Set grating set in concrete openings with embedded angle support frames having continuous integral anchor.
- I. Maximum Grating Clearances:
 - 1. 1/4-inches from vertical steel sections.
 - 2. 1/2-inches from concrete and masonry walls.
 - 3. 1/4-inches between sections and at ends

2.05 STRUCTURAL SHAPES:

- A. Design requirements:
 - 1. Design Loads:
 - a. Design structural framing to sustain dead loads and superimposed live loads.
 - b. 100 psf uniform live load or 300 pound concentrated live load, whichever produces maximum stress.
 - 2. Deflection:
 - a. Span: $L/240$ maximum
- B. Manufacture structural shapes by the pultrusion process.
- C. Provide structural shapes with a UV inhibitor.
- D. Provide structural shapes containing a glass fiber reinforced polyester ester resin matrix, approximately 50 percent glass by weight with a synthetic surface veil outer layer covering the exterior surfaces. Provide glass strand rovings shall be for longitudinal strength. Provide continuous strand glass mats or stitched reinforcements shall for transverse strength.
- E. Provide Type 316L stainless steel bolts and washers.
- F. Abrade joint surfaces to be bonded to remove surface gloss and be free of burrs or other foreign materials that would prevent proper adhesion.

2.06 STAIRS:

- A. Fabricate from FRP structural shapes form material as specified.
- B. If rise and runs are not noted on Drawings, use OSHA standards for rise and run.

- C. Provide Stair Treads from material as specified.
- D. Provide handrail from material as specified.
- E. Use Type 316 stainless steel bolts throughout.

2.07 RAILING:

- A. Design Requirement:
 - 1. Design railing system to meet the configuration and loading requirements of OSHA, IBC or local buildings codes. Apply requirements of the most stringent code.
- B. Fully bond all post to rail connections with an epoxy adhesive and with an internal connection for added strength and durability. Provide smooth transitions between post and rail connections.
- C. Provide kickplates where required by OSHA. Kick plate shall be 4 inches by 1/2-inch (corrugated) by 1/4-inch thick pultruded shape attached to posts with stainless connectors.
- D. Color shall be safety yellow.
- E. Fabricate handrail to standard two-rail design unless noted otherwise.
 - 1. Post Locations:
 - a. No greater than 12 inches from horizontal or vertical change in handrail direction.
 - b. Post centers shall be no greater than 60 inches apart on any straight run of rail.
 - c. Post centers shall be no greater than 48 inches apart on inclined rail section.
- F. Provide side mounted, base mounted, embedded, or removable anchorage mounted handrail as noted on Drawings.
- G. Accurately locate handrail sections and erect plumb and level.

PART 3 - EXECUTION

3.01 EXAMINATION:

- A. Remove and replace damaged items at no cost to Owner.
- B. Examine supports for size, layout and alignment. Maintain surfaces free of debris.

3.02 INSTALLATION:

- A. Install and make connections in accordance with accepted submittals and manufacturer's written instructions.
- B. Install materials accurately in location and elevation, level and plumb. Field fabricate as necessary for accurate fit.
- C. Coordinate and furnish anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction.

3.03 CLOSEOUT ACTIVITIES:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 07 14 16

COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Polyurethane waterproofing.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review waterproofing requirements including, but not limited to, the following:
 - a. Surface preparation specified in other Sections.
 - b. Minimum curing period.
 - c. Forecasted weather conditions.
 - d. Special details and sheet flashings.
 - e. Repairs.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Shop Drawings:

1. Indicate locations and extent of waterproofing.
2. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Field quality-control reports.
- C. Sample Warranties: For special warranties.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1.06 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.
 - 1. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.
 - 2. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.
- B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.07 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace waterproofing that fails in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain waterproofing materials, protection course, from single source and from single manufacturer.

2.02 POLYURETHANE WATERPROOFING

- A. Single-Component, Modified Polyurethane Waterproofing: ASTM C836/C836M and coal-tar free.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. CETCO is a subsidiary of Minerals Technologies Inc.
 - b. Carlisle Coatings & Waterproofing Inc.
 - c. Master Builders Solutions.
 - d. Tremco Incorporated.

2.03 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.
 1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Primer: Manufacturer's standard primer, sealer, or surface conditioner; factory-formulated.
- C. Sheet Flashing: 50-mil- (1.3-mm-) minimum, nonstaining, uncured sheet neoprene.
 1. Adhesive: Manufacturer's recommended contact adhesive.
- D. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.
- E. Joint Sealant: Multicomponent polyurethane sealant, compatible with waterproofing; ASTM C920, Type M, Class 25 or greater; Grade NS for sloping and vertical applications; Use NT exposure; and as recommended by manufacturer for substrate and joint conditions.
 1. Backer Rod: Closed-cell polyethylene foam.
- F. Protection Course: Manufacturer's recommended protection course for vertical applications.

2.04 INSULATION

- A. Insulation: Comply with Section 07 21 00 for general building insulation, including foundation insulation.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, holes, and other voids.

3.03 PREPARATION AT TERMINATIONS, PENETRATIONS, AND CORNERS

- A. Prepare surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, sleeves, and corners in accordance with waterproofing manufacturer's written instructions and to recommendations in ASTM C1471/C1471M.
- B. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.

3.04 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrate in accordance with waterproofing manufacturer's written instructions and to recommendations in ASTM C1471/C1471M. Before coating surfaces, remove dust and dirt from joints and cracks in accordance with ASTM D4258.
- B. Install sheet flashing and bond to deck and wall substrates where required in accordance with waterproofing manufacturer's written instructions.

3.05 INSTALLATION OF WATERPROOFING

- A. Apply waterproofing in accordance with manufacturer's written instructions and to recommendations in ASTM C1471/C1471M.
- B. Start installing waterproofing in presence of manufacturer's technical representative.

3.06 PROTECTION

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Protect installed insulation drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

END OF SECTION

SECTION 07 19 00
WATER REPELLENTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Penetrating water repellents.

B. Related Requirements:

1. Section 04 20 00 for integral water-repellent admixture for unit masonry assemblies.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data Submittals:

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Applicator.
- B. Product Certificates: For each type of water repellent.
- C. Preconstruction Test Reports: For water-repellent-treated substrates.
- D. Field quality-control reports.
- E. Sample Warranty: For special warranty.

1.05 QUALITY ASSURANCE

- A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.
- B. Mockups: Prepare mockups of each required water repellent on each type of substrate required to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Apply to mockup shown on Drawings and as specified in Section 01 43 39 "Mockups."
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.06 FIELD CONDITIONS

- A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied in accordance with manufacturers' written instructions and warranty requirements:
 1. Concrete surfaces and mortar have cured for not less than 28 days.
 2. Building has been closed in for not less than 30 days before treating wall assemblies.
 3. Ambient temperature is above 40 deg F (4.4 deg C) and below 100 deg F (37.8 deg C) and will remain so for 24 hours.
 4. Substrate is not frozen and substrate-surface temperature is above 40 deg F (4.4 deg C) and below 100 deg F (37.8 deg C).
 5. Rain or snow is not predicted within 24 hours.
 6. Not less than 24 hours have passed since surfaces were last wet.
 7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.

1.07 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer and Applicator agree(s) to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period.
 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Performance: Water repellents must meet the following performance requirements as determined by testing on substrates representing those indicated for this Project.
- B. Water Absorption: Minimum 90 percent reduction of water absorption after 24 hours for treated compared to untreated specimens when tested according to the following:

1. Concrete Masonry Units: ASTM C140.
- C. Water-Vapor Transmission: Comply with one or both of the following:
1. Maximum 10 percent reduction in water-vapor transmission of treated compared to untreated specimens, in accordance with ASTM E96/E96M.
 2. Minimum 80 percent water-vapor transmission of treated compared to untreated specimens, in accordance with ASTM D1653.
- D. Water Penetration and Leakage through Masonry: Minimum 90 percent reduction in leakage rate of treated compared to untreated specimens, in accordance with ASTM E514/E514M.
- E. Durability: Maximum 5 percent loss of water-repellent performance after 2500 hours of weathering in accordance with ASTM G154 compared to water-repellent-treated specimens before weathering.
- 2.02 PENETRATING WATER REPELLENTS
- A. Penetrating Low-VOC Silane Water Repellent: Clear, containing 100 percent active content of silane; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dayton Superior Corporation.
 - b. Euclid Chemical Company (The); an RPM company.
 - c. Master Builders Solutions.
 - d. PROSOCO, Inc.
 - e. Pecora Corporation.
- B. Penetrating Low-VOC Silane/Siloxane-Blend Water Repellent: Clear, containing 10 percent or more active content of silane and siloxane blend with 400 g/L or less of VOCs.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Euclid Chemical Company (The); an RPM company.
 - b. Master Builders Solutions.
 - c. PROSOCO, Inc.

- d. Pecora Corporation.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.
 - 1. Verify that surfaces are clean and dry in accordance with water-repellent manufacturer's requirements. Check moisture content in three representative locations by method recommended by manufacturer.
 - 2. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
 - 3. Verify that required repairs are complete, cured, and dry before applying water repellent.
- B. Test pH level in accordance with water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. New Construction and Repairs: Allow concrete and other cementitious materials to age before application of water repellent, in accordance with repellent manufacturer's written instructions.
- B. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product in accordance with water-repellent manufacturer's written instructions.
- C. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.
- D. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.
- E. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.

3.03 APPLICATION OF WATER REPELLENTS

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.
- B. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.

3.04 FIELD QUALITY CONTROL

- A. Testing of Water-Repellent Material: Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when water repellent is being applied:
 - 1. Owner will engage the services of a qualified testing agency to sample water-repellent material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
 - 2. Testing agency will perform tests for compliance of water-repellent material with product requirements.
 - 3. Owner may direct Contractor to stop applying water repellents if test results show material being used does not comply with product requirements. Contractor to remove noncomplying material from Project site, pay for testing, and correct deficiency of surfaces treated with rejected materials, as approved by Engineer.
- B. Coverage Test: In the presence of Engineer, hose down a dry, repellent-treated surface to verify complete and uniform product application. A change in surface color will indicate incomplete application.
 - 1. Notify Engineer seven days in advance of the dates and times when surfaces will be tested.
 - 2. Reapply water repellent until coverage test indicates complete coverage.

3.05 CLEANING

- A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by Engineer.
- B. Comply with manufacturer's written cleaning instructions.

END OF SECTION

SECTION 07 21 00
THERMAL INSULATION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Extruded polystyrene foam-plastic board insulation.
2. Glass-fiber blanket insulation.
3. Mineral-wool blanket insulation.
4. Mineral-wool board insulation.

B. Related Requirements:

1. Section 04 22 00 "Concrete Unit Masonry" for insulation installed in masonry cells.
2. Section 07 53 23 "Ethylene-Propylene-Diene-Monomer (EPDM) Roofing" for insulation specified as part of roofing construction.
3. Section 09 29 00 "Gypsum Board" for sound attenuation blanket used as acoustic insulation.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Extruded polystyrene foam-plastic board insulation.
2. Glass-fiber blanket insulation.
3. Mineral-wool blanket insulation.
4. Mineral-wool board insulation.

1.03 INFORMATIONAL SUBMITTALS

- A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Research Reports: For foam-plastic insulation, from ICC-ES.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect foam-plastic board insulation as follows:
 - 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 - 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
 - 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes less than 25 and 450 when tested in accordance with ASTM E84.
- B. Fire-Resistance Ratings: Comply with ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.
- C. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.
- D. Thermal-Resistance Value (R-Value): R-value as indicated on Drawings in accordance with ASTM C518.

2.02 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION (INSUL-5)

- A. Extruded Polystyrene Board Insulation, Type IV: ASTM C578, Type IV, 25-psi (173-kPa) minimum compressive strength; unfaced.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dow Chemical Company (The).
 - b. DuPont.

- c. Kingspan Insulation Limited.
 - d. Owens Corning.
 - 2. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 - 3. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
 - 4. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
 - 5. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.
 - 6. Application: Vertical foundation insulation.
- B. Extruded Polystyrene Board Insulation, Type VI: ASTM C578, Type VI, 40-psi minimum compressive strength; unfaced.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dow Chemical Company (The).
 - b. DuPont.
 - c. Kingspan Insulation Limited.
 - d. Owens Corning.
 - 2. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 - 3. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
 - 4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width.
 - 5. Application: Horizontal under-slab insulation.

2.03 GLASS-FIBER BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Certainteed; SAINT-GOBAIN.
 - 2. Johns Manville; a Berkshire Hathaway company.

3. Knauf Insulation.

4. Owens Corning.

B. Glass-Fiber Blanket Insulation, Unfaced: ASTM C665, Type I; passing ASTM E136 for combustion characteristics.

2.04 MINERAL-WOOL BLANKET INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Johns Manville; a Berkshire Hathaway company.

2. Owens Corning.

3. ROCKWOOL.

B. Mineral-Wool Blanket Insulation, Unfaced: ASTM C665, Type I (blankets without membrane facing); consisting of fibers; passing ASTM E136 for combustion characteristics.

2.05 SOUND ATTENUATION FIRE BATTS (SAFB)

A. Sound attenuation batts shall be mineral wool made from inorganic fibers. SAFBs shall meet the requirements of ASTM C 665, Type I, unfaced and shall have a maximum flame spread index of zero (0) and a maximum smoke developed index of zero (0) per ASTM E 84.

B. Minimum Density shall be 2.4 pcf. R-value shall be as shown on the Contract Drawings.

C. Manufacturers:

1. Rockwool – Safe'n'Sound

2. Owens Corning – Thermafiber SAFB

3. Johns Manville – MinWool SAFB

2.06 MINERAL-WOOL BOARD INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Johns Manville; a Berkshire Hathaway company.

2. Owens Corning.

3. ROCKWOOL.

- B. Mineral-Wool Board Insulation, Type IVB: ASTM C612, Type IVB; unfaced.

1. Nominal Density: 8 lb/cu. ft. (128 kg/cu. m).

2.07 INSULATION FASTENERS

- A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.

1. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.762 mm) thick by 2 inches (50 mm) square.
2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation.

- B. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.

1. Angle: Formed from 0.030-inch- (0.762-mm-) thick, perforated, galvanized carbon-steel sheet with each leg 2 inches (50 mm) square.
2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation.

- C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches (38 mm) square or in diameter.

- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space as dimensioned on the Drawings between face of insulation and substrate to which anchor is attached.

- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates without damaging insulation, fasteners, or substrates.

2.08 ACCESSORIES

- A. Insulation for Miscellaneous Voids:

1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.02 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Install insulation with manufacturer's R-value label exposed after insulation is installed.
- D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.03 INSTALLATION OF SLAB INSULATION

- A. On vertical slab edge and foundation surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.
 - 1. If not otherwise indicated, extend insulation a minimum of 36 inches (915 mm) below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.
 - 1. If not otherwise indicated, extend insulation a minimum of 24 inches (610 mm) in from exterior walls.

3.04 INSTALLATION OF FOUNDATION WALL INSULATION

- A. Butt panels together for tight fit.
- B. Anchor Installation: Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
 - 1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions.

2. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application.
 3. Apply insulation standoffs to each spindle to create cavity width indicated on Drawings between concrete substrate and insulation.
 4. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation.
 5. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.
- C. Adhesive Installation: Install with adhesive or press into tacky waterproofing or damp proofing according to manufacturer's written instructions.

3.05 INSTALLATION OF CAVITY-WALL INSULATION

- A. Mineral-Wool Board Insulation: Install insulation fasteners 4 inches (100 mm) from each corner of board insulation, at center of board, and as recommended by manufacturer.
1. Fit courses of insulation between obstructions, with edges butted tightly in both directions, and with faces flush.
 2. Press units firmly against inside substrates.

3.06 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

- A. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 3. Maintain 3-inch (76-mm) clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. For metal-framed wall cavities where cavity heights exceed 96 inches (2438 mm), support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
- B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:

1. Glass-Fiber Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft. (40 kg/cu. m).

3.07 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 07 27 26

FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Air barriers, vapor permeable.

1.02 DEFINITIONS

- A. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- B. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.
- C. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.04 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; dry film thickness; and tested physical and performance properties of products.
- B. Shop Drawings: For air-barrier assemblies.
 1. Show locations and extent of air-barrier materials, accessories, and assemblies specific to Project conditions.
 2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 3. Include details of interfaces with other materials that form part of air barrier.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by Installer, who work on Project.
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.
- D. Field quality-control reports.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. Installer to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and to employ ABAA-certified installers and supervisors on Project.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.
 - 1. Protect substrates from environmental conditions that affect air-barrier performance.
 - 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain primary air-barrier materials and air-barrier accessories from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction to be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-

barrier assemblies to be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

- B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa), when tested in accordance with ASTM E2357.
- C. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75 Pa) pressure difference; ASTM E2178.
- D. Ultimate Elongation: Minimum 200 percent; ASTM D412, Die C.
- E. Adhesion to Substrate: Minimum 16 lbf/sq. in. (110 kPa) when tested in accordance with ASTM D4541.
- F. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
- G. UV Resistance: Can be exposed to sunlight for 180 days in accordance with manufacturer's written instructions.

2.03 AIR BARRIERS, VAPOR PERMEABLE

- A. Vapor-Permeable Air Barrier, Synthetic Polymer Type: Synthetic polymer membrane with an installed dry film thickness, according to manufacturer's written instructions.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. GCP Applied Technologies Inc.
 - b. Henry Company; a Carlisle company.
 - c. Tremco Incorporated.
 - d. Carlisle Coatings & Waterproofing Inc.
 - e. GE Construction Sealants; Momenite Performance Materials Inc.
 - f. Sto Corp.
 - g. Master Builders Solutions.
 - h. PROSOCO, Inc.
 - i. Soprema, Inc.

- j. The Dow Chemical Company.
- 2. Vapor Permeance: Minimum 5 perms (290 ng/Pa x s x sq. m); ASTM E96/E96M, Procedure A, Desiccant Method.

2.04 ACCESSORY MATERIALS

- A. Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- B. Primer: Liquid waterborne primer recommended for substrate by air-barrier material manufacturer.
- C. Stainless Steel Sheet: ASTM A240/A240M, Type 304, 0.0187 inch (0.5 mm) thick, and Series 300 stainless steel fasteners.
- D. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.
 - 3. Verify that substrates are visibly dry and free of moisture. Test concrete substrates for capillary moisture by plastic sheet method in accordance with ASTM D4263.
 - 4. Verify that masonry joints are flush and completely filled with mortar.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION

- A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate in accordance with manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.
- H. Bridge isolation joints, expansion joints, and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement in accordance with manufacturer's written instructions and details.

3.03 INSTALLATION OF ACCESSORIES

- A. Install accessory materials in accordance with air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches (75 mm) of coverage is achieved over each substrate.
 - 3. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
 - 4. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.

3.04 INSTALLATION OF PRIMARY AIR-BARRIER MATERIAL

- A. Apply air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier in accordance with air-barrier manufacturer's written instructions and details. Apply air-barrier material within manufacturer's recommended application temperature ranges.
 - 1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
 - 2. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 3. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.
- B. Do not cover air barrier until it has been tested and inspected by testing agency.
- C. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.05 FIELD QUALITY CONTROL

- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
- B. Testing Agency: Owner may engage a qualified testing agency to perform tests and inspections.
- C. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 - 2. Air-barrier dry film thickness.
 - 3. Continuous structural support of air-barrier system has been provided.
 - 4. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 - 5. Site conditions for application temperature and dryness of substrates have been maintained.
 - 6. Maximum exposure time of materials to UV deterioration has not been exceeded.
 - 7. Surfaces have been primed, if applicable.

8. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 9. Termination mastic has been applied on cut edges.
 10. Strips and transition strips have been firmly adhered to substrate.
 11. Compatible materials have been used.
 12. Transitions at changes in direction and structural support at gaps have been provided.
 13. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 14. All penetrations have been sealed.
- D. Tests: As determined by testing agency from among the following tests:
1. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with ASTM E783 or ASTM E2357.
 2. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate in accordance with ASTM D4541 for each 600 sq. ft. (56 sq. m) of installed air barrier or part thereof.
- E. Air barriers will be considered defective if they do not pass tests and inspections.
1. Apply additional air-barrier material, in accordance with manufacturer's written instructions, where inspection results indicate insufficient thickness.
 2. Remove and replace deficient air-barrier components for retesting as specified above.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Prepare test and inspection reports.

3.06 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, in accordance with manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-

thickness, air-barrier application after repairing and preparing the overexposed materials in accordance with air-barrier manufacturer's written instructions.

2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.
 - C. Remove masking materials after installation.

END OF SECTION

SECTION 07 42 10.11

COMPOSITE FRAMING SUPPORT SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

- A. Composite framing support system as full girts to be used with in-fill insulation integrated with metal wall panel cladding
 - 1. Substrates include: Cold-Formed Metal Framing.
- B. Related Requirements:
 - 1. Section 07 21 00 "Thermal Insulation"
 - 2. Section 07 27 26 "Fluid-Applied Membrane Air Barriers"
 - 3. Section 07 92 00 "Joint Sealants": Perimeter sealant

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate construction of wall cladding support system over substrate indicated for proper drainage, flashing, trim, back-up support, soffits, and other related Work.
 - 1. Review and finalize construction schedule.
 - 2. Verify availability of materials, installer's personnel, equipment, and facilities needed to maintain schedule.
 - 3. Review means and methods related to installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment and attachment to structural support system.
 - 5. Review flashings, wall cladding details, wall penetrations, openings, and condition of other construction that affects this Work.
 - 6. Review temporary protection requirements for during and after installation of this Work.

1.03 SUBMITTALS

- A. Product Data: Submit for each type of product indicated; include construction details, material descriptions, dimensions of individual components and profiles, and accessories as necessary for complete fully functioning and assembled system.
 - 1. Continuous insulation support system attachment methods and required fasteners
 - 2. Wall-mounted items including doors, windows, louvers, and lighting fixtures
 - 3. Wall penetrations including pipes, electrical fixtures, and any other utilities
- B. Test and Inspection Reports: Submit test and inspection reports on each type of wall cladding/veneer system based on evaluation of comprehensive tests performed by nationally recognized testing agency.
- C. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with at least three years of documented experience.
- B. Installer: Company specializing in performing work of this section and the following:
 - 1. Install system in strict compliance with manufacturer's installation instructions.
 - 2. Have not less than three years of documented experience.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build integrated mockups of exterior wall assembly as described in Section 01 43 39 "Mockups."
 - a. Include typical components, corner, supports, accessories, and methods of installation.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to site in manufacturer's original unopened containers and packaging with labels clearly identifying product name and manufacturer.

- B. Deliver components and other manufactured items or accessories without damage or deformation.
- C. Storage: Store materials in clean, dry, and level interior areas or outdoor areas for limited duration in accordance with manufacturer's written instructions.
- D. Protect components and auxiliary accessories during transportation, handling, and installation from moisture, excessive temperatures and other construction operations in accordance with manufacturer's written instructions.
- E. Handle components in strict compliance with manufacturer's written instructions and recommendations, and in a manner to prevent bending, warping, twisting, and surface, edge or corner damage.

1.06 SITE CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of this Work in accordance with manufacturer's written installation instructions and warranty requirements.

1.07 WARRANTY

- A. System Warranty: Provide written warranty by manufacturer agreeing to correct defects in manufacturing within five year period after date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURER

- A. Basis-of-Design: Subject to compliance with the requirements provide Advanced Architectural Products (A2P): SMARTci GreenGirt Composite Metal Hybrid Framing Support (CMH) System or comparable composite material products by:
 - 1. Armatherm Thermal Bridging Solutions.
 - 2. Strongwell Strongirt.

2.02 DESCRIPTION

- A. Attach CMH sub-framing system components to exterior sheathing over metal stud framing.
- B. Install CMH sub-framing system components horizontally on framed sheathing substrate system as indicated on drawings in compliance with specified requirements.

2.03 PERFORMANCE REQUIREMENTS

- A. Structural: Provide system tested in accordance with ASTM E330/E330M and certified to be without permanent deformation or failure of structural members in accordance with design wind velocities for project geographic location and probability of occurrence based on data from wind velocity maps provided in ASCE 7 and as approved by authorities having jurisdiction (AHJ).
1. Provide finite element analysis (FEA) to model and evaluate areas of the longest composite girt cantilever span possible between intermediate framing members/attachment.
 - a. FEA shall include max dead load and wind load conditions
 - b. FEA shall include point loads representative of fastener locations
 - c. Maximum directional stresses in model shall have a safety factor of 4 or greater.
 - d. Stresses shall be indicated and analyzed in 3 directions.
 - e. FEA shall accurately replicate the wall system and physical loading dynamics.
 - f. Report shall be furnished with the submittal.
 - g. FEA shall be approved by a licensed PE.
 2. Butt joints (non-interlocking joints) of adjacent girts shall be installed on a minimum surface width of 3-inches or double stud condition to accommodate proper fastener margins to composite.
- B. System Thermal Design: Ensure installed insulation and CMH sub-framing system, rough opening trim, and cladding attachment does not have thermal bridging of fasteners or framing that creates a continuous metal path from exterior surface of insulation to interior face of insulation.
1. System thermal design shall meet or exceed thermal design requirements in compliance with IECC or IgCC energy code.
 2. Thermal Performance Test: Provide thermal resistance (R-value) indicated, in compliance with ASTM C1363, corrected to 15 mph outside and still air inside, with installed condition including fastening and joints.
 - a. Provide efficiency of no less than 93 to 98 percent, with a maximum temperature differential of 18 degrees F from interior wall surface to interior wall cavity and node locations with a 70 degrees F exterior to interior wall temperature delta.

- b. Provide test unit with at least one insulation panel horizontal and vertical joint length and height of test chamber area.
 - c. Provide finite element analysis of three dimensional simulation of described wall assembly sealed by professional engineer in compliance with performance requirements and exceeding it by at least 3 percent.
- C. Temperature: Comply with structural loading requirements within temperature range of minus 55 degrees F to 180 degrees F.
- D. Fire-Test-Response Characteristics: Provide composite framing support system with fire-test results indicated as determined by test standard indicated and applied by UL or other testing and inspection agency acceptable to authorities having jurisdiction.
 - 1. Surface Burning Characteristics: In compliance with ASTM E84, for foam insulation, fiber reinforced polymer (FRP) and interior surfaces as follows:
 - a. Flame Spread Index (FSI): 25 or less.
 - b. Smoke Developed Index (SDI): 450 or less.
 - 2. Intermediate Scale Multistory Fire Test: Comply with NFPA 285 and/or IBC acceptance criteria for wall height above grade and fire separation distances, when wall type and other noted conditions require such testing or compliance with requirements as indicated.

2.04 COMPOSITE METAL HYBRID (CMH) SUB-FRAMING SYSTEM

- A. CMH System: Provide CMH system consisting of polyester resin matrix with recycled materials, fire retardant additives and reinforced with integral continuous metal inserts the length of profile at all fastening locations. Reinforce CMH sub-framing systems with glass strand rovings used internally for longitudinal (lengthwise) strength and continuous strand glass mats or stitched reinforcements used internally for transverse (crosswise) strength.
 - 1. Depth of Girt: Refer to Drawings.
 - 2. On Center Spacing: Refer to Drawings.
 - 3. Provide continuous non-corrosive steel insert for engagement of fasteners, at least 16 gauge thick with G90 galvanized coating designation in compliance with ASTM A653/A653M.
 - a. Fully engage and secure steel insert with adjacent CMH at ends, allowing for thermal expansion.
 - b. Anchor sub-girts and other wall cladding support accessories to steel insert set into and part of CMH.

4. Provide integral compression seal in CMH sections to ensure insulation panel will not dislodge.
5. Provide integral anti-siphon grooves on exterior and interior flanges of CMH.
6. Provide force distribution zones integrally designed into profile of CMH.
7. Surface Burning Characteristics:
 - a. Flame Spread Index (FSI): 25 or less, when tested in accordance with ASTM E84.
 - b. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
8. Self-Extinguishing: Comply with ASTM D635.
9. Profile Visual Requirements: Per ASTM D4385.

2.05 ACCESSORIES

- A. Provide accessories necessary for complete sub-framing system including closure trim, transition angles, tie-in brackets, and similar items.
- B. Composite Trim: Provide nonstructural composite trim at rough openings to properly transition CI system.
 1. Use trim angles and accessories sized to enclose CI system to provide thermally broken transition from opaque wall assemblies.
 2. Use sealant and tapes as required to transition vapor barrier from substrate onto trim.
 3. Trim to provide 90 degree transition of continuous insulated substrate for vapor barrier and exterior flashings.
 4. Trim to be covered by exterior panel construction and flashings.
- C. Horizontal Hat Channels: 16 gauge or 18 gauge minimum thickness, hot dipped galvanized with standard G90 coating designation in compliance with ASTM A653/A653M.
- D. Fasteners: Corrosion-resistant, self-tapping and self-drilling screws, bolts, nuts, and other fasteners as recommended by sub-framing manufacturer for project application.
 1. Cladding to CMH: Use standard self-tapping metal screws.
 2. CMH to Metal Stud Wall Framing: Use standard self-tapping metal screws.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas of this work, and project conditions with installer present for compliance with requirements for installation tolerances, substrates, sub-framing system conditions, and other conditions affecting performance of this Work.
- B. Examine structural wall framing to ensure that angles, channels, studs, and other structural support members have been installed within alignment tolerances required by sub-framing system manufacturer.
- C. Examine rough-in for components and systems penetrating sub-framing system to coordinate actual locations of penetrations relative to sub-framing systems joint locations prior to installation.
- D. Verify that mechanical and electrical services for exterior walls have been installed and tested and, if appropriate, verify that adjacent materials and finishes are dry and ready to receive insulation.
- E. Proceed with installation only after wall substrate surfaces have been properly prepared and unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using methods recommended by sub-framing system manufacturer for achieving best result for substrate under project conditions.
- C. Prepare sub-framing, base angles, sills, furring, and other sub-framing system members and provide anchorage in accordance with ASTM C754 for substrate type and wall cladding type in accordance with manufacturer's installation instructions.

3.03 INSTALLATION

- A. Install sub-framing system in accordance with manufacturer's installation instructions.
- B. Install sub-framing system in compliance with system orientation, sizes, and locations as indicated on drawings.

3.04 TOLERANCES

- A. Shim and align sub-framing system within installed tolerances of 1/4 inch in 20 feet, non-cumulative, level, plumb, and on location lines as indicated.

3.05 PROTECTION

- A. Protect installed products from damage until Date of Substantial Completion.

B. Replace damaged insulation prior to Date of Substantial Completion.

END OF SECTION

SECTION 07 42 13.16

MODULAR METAL WALL PANELS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes concealed fastener, coil coated, rainscreen wall panel as part of the wall assemblies, including matching copings and roof-edge drainage systems.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Meet with Owner, Engineer, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
 - 6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
 - 7. Review temporary protection requirements for metal panel assembly during and after installation.
 - 8. Review procedures for repair of metal panels damaged after installation.
 - 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment assembly, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage, at a scale of not less than 1-1/2 inches per 12 inches (1:10).

C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Manufacturer and Installer.

B. Product Test Reports: For each product, tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Approved manufacturer listed in this Section with minimum 10 years' experience in manufacture of similar products in successful use in similar applications.

1. Approval of Comparable Products: Submit the following in accordance with project substitution requirements, within time allowed for substitution review:
 - a. Product data, including certified independent test data indicating compliance with requirements.
 - b. Samples of each component.

- c. Sample submittal from similar project.
 - d. Project references: Minimum of 5 installations not less than 5 years old, with Owner and Engineer contact information.
 - e. Sample warranty.
 - 2. Substitutions following award of contract are not allowed except as stipulated in Division 01 General Requirements.
 - 3. Approved manufacturers must meet separate requirements of Submittals Article.
 - B. Wall Systems Installer Qualifications: Experienced Installer with minimum of 5 years' experience with successfully completed projects of a similar nature and scope.
 - C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical metal panel assembly as shown on Drawings, including supports, attachments, and accessories. Refer to Section 01 43 39 "Mockups."
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.
- 1.07 DELIVERY, STORAGE, AND HANDLING
- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
 - B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
 - C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
 - D. Retain strippable protective covering on metal panels during installation.
- 1.08 FIELD CONDITIONS
- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.09 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

- 1. Failures include, but are not limited to, the following:

- a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.

- 2. Warranty Period: Ten years from date of Substantial Completion.

- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

- 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Hunter units when tested according to ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

- 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E330:

- 1. Wind Loads: As indicated on Drawings.
 - 2. Other Design Loads: As indicated on Drawings.

- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of

components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 METAL PANEL WALL SYSTEM ASSEMBLY

- A. Modular metal wall panel system consisting of aluminum panels in a rainscreen application as part of the assembly described below.
- B. Modular Metal Wall Panels over Multi-Component Framed Wall Systems:
 1. Modular metal wall panels applied as exterior rainscreen cladding over wall framing specified in Division 05 Section "Cold-Formed Metal Framing" with exterior sheathing specified in Division 06 Section "Sheathing", an applied membrane that provides air, moisture, and water vapor control specified in Division 07 Section "Air Barriers," insulation within the framing specified in Division 07 Section "Thermal Insulation," and composite framing support system specified in Division 07 section "Composite Framing Support System." Metal wall panel installation specified in this Section includes mounting clips for panel attachment.
 2. Modular metal wall panels applied as exterior rainscreen cladding over CMU specified in Division 04 Section "Concrete Unit Masonry" with an applied membrane that provides air, moisture, and water vapor control specified in Division 07 Section "Air Barriers." Metal wall panel installation specified in this Section includes secondary metal subgirt framing and mounting clips for panel attachment.

2.03 METAL WALL PANELS

- A. Metal Wall Panels: Provide factory-formed, metal wall panels fabricated from single sheets of metal formed into profile for installation method indicated. Include attachment assembly components, and accessories required for a complete system.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide East Coast Metal Systems EC-300 System or comparable product by one of the following:
 - a. ATAS Omawall.
 - b. Pac-Clad Modular AL
- B. Modular Metal Panels: Factory-formed, aluminum-faced panels fabricated from 0.63" thick aluminum coil coated sheet.
 1. Panel Depth: 1-3/8"(35mm).

2. Panel Flatness: Maximum allowable distortion: 1/32 inch in 24 inches (0.813 mm in 610 mm) in any direction. Panel lines, breaks, and angles shall be sharp and true, and surfaces shall be free from warp or buckle.
 3. Clips: Manufacturer's standard clips as required to meet performance requirements.
 4. Panel Joints: 3/4"(19mm) or as indicated on drawings.
 5. Panel Sizes: As indicated on drawings.
 6. Sheet Surface: Smooth.
- C. Aluminum Sheet: Smooth surface coil-coated sheet, ASTM B209, 3105-H14 Alloy.
1. Aluminum Material: Tension-leveled
 2. Thickness: 0.063" nominal
 3. Weight: Approximately 1.5 lb. per square foot
- D. Aluminum Face Sheet Finish: Refer to Drawings for all finish locations and colors.
1. Unexposed Finish: Manufacturer's standard nominal 0.5 mil nominal DFT backer coating.

2.04 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed, metallic-coated steel sheet, ASTM A653/A653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A792/A792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide manufacturer's factory-formed clips, shims, flashings, sealants, and tapes for a complete installation. Match material and finish of metal panels unless otherwise indicated.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
1. Provide all metal copings: Manufactured coping system consisting of metal coping cap in section lengths not exceeding 12 feet (3.6 m), concealed anchorage; with corner units, end cap units, and concealed splice plates with finish matching coping caps. Finish to match metal panels.

2.05 FABRICATION

- A. General: Fabricate modular metal panels and accessories at factory identical to tested units using manufacturer's standard procedures and processes necessary to meet performance requirements.
 - 1. Provide components of modular metal panel system that are products of one manufacturer, including modular metal panels, head and sill trim, bottom weep, starter flash, and metal copings.
- B. Modular Metal Panels: Fabricate modular metal panels requiring no further fabrication or modification in field.
 - 1. Horizontal Joints: Dry seal, drained and back ventilated.
 - 2. Vertical Joints: Pre-formed returns
 - 3. Reveals: 3/4 inches (19mm)
 - 4. Standard System Depth: 1-3/8 inches (35mm)

2.06 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Aluminum Panels and Accessories:
 - 1. Fluoropolymer Two-Coat System: 0.2-mil primer with 0.8-mil 70 percent PVDF fluoropolymer color coat, AAMA 620.
 - 2. Fluoropolymer Two-Coat Mica System: 0.2-mil primer with 0.8-mil 70 percent PVDF fluoropolymer color coat providing a pearlescent appearance, AAMA 620.
 - 3. Fluoropolymer Three Coat System: 0.65 mil color base coat and Primer with a 0.05 mil PVDF ink coat and a 0.45 nominal PVDF fluoropolymer clear coat.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 - 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754 and metal panel manufacturer's written recommendations.

3.03 INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Shim or otherwise plumb substrates receiving metal panels.
 - 2. Attach panels to metal sub-framing using manufacturer's recommended clips, screws, fasteners, sealants, and adhesives.
 - 3. Horizontal Joinery: Working from base of installation to top, connect upper panel to lower panel at joinery.
 - 4. Vertical Joinery: Provide reveal between vertical ends of panels as shown on shop drawings.

5. Galvanic Action: Where elements of modular metal wall system will come into contact with dissimilar materials, treat faces and edges in contact with dissimilar materials as recommended by manufacturer.
 6. Install flashing and trim as metal panel work proceeds.
- B. Rainscreen Installation: Proceed with installation of manufacturer's dry seal horizontal joinery. Keep open spaces in horizontal joinery intended to ventilate cavity behind system.
- 3.04 FIELD QUALITY CONTROL
- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect completed metal wall panel installation, including accessories.
 - B. Remove and replace metal wall panels where inspections indicate that they do not comply with specified requirements.
 - C. Additional inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
 - D. Prepare inspection reports.
- 3.05 CLEANING AND PROTECTION
- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
 - B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
 - C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 53 23

ETHYLENE-PROPYLENE-DIENE-MONOMER (EPDM) ROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Ethylene-propylene-diene-monomer (EPDM) roofing.
2. Accessory roofing materials.
3. Roof insulation.
4. Insulation accessories and cover board.
5. Walkways.
6. Expansion Joints.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry for wood nailers, curbs, and blocking.
2. Section 07 21 00 "Thermal Insulation" for insulation beneath the roof deck.
3. Section 07 62 00 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
4. Section 07 92 00 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 22 14 23 "Storm Drainage Piping Specialties" for roof drains.

1.02 DEFINITIONS

- ###### A. Roofing Terminology: Definitions in ASTM D1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to work of this Section.

1.03 PREINSTALLATION MEETINGS

- ###### A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at Project site.
1. Meet with Owner, Engineer, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's

- representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
 3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.
 5. Review structural loading limitations of roof deck during and after roofing.
 6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
 7. Review governing regulations and requirements for insurance and certificates if applicable.
 8. Review temporary protection requirements for roofing system during and after installation.
 9. Review roof observation and repair procedures after roofing installation.

B. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Engineer, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.

7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.04 ACTION SUBMITTALS

A. Product Data:

1. Ethylene-propylene-diene-monomer (EPDM) roofing.
2. Accessory roofing materials.
3. Roof insulation.
4. Insulation accessories and cover board.
5. Walkways.

B. Product Data Submittals:

1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing.

C. Shop Drawings: Include roof plans, sections, details, and attachments to other work, including the following:

1. Layout and thickness of insulation.
2. Base flashings and membrane terminations.
3. Flashing details at penetrations.
4. Tapered insulation, thickness, and slopes.
5. Roof plan showing orientation of steel roof deck and orientation of roof membrane and fastening spacings and patterns for mechanically fastened roofing system.
6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
7. Tie-in with air barrier.

D. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.

- E. FM Global Review: Submit product data sheets, shop drawings, details, fastening information, and RoofNav Assembly Contractor's package to FM Global for review and acceptance before ordering materials and starting installation.
 - 1. Determine recommended FM Approvals wind uplift ratings for roof assemblies per RoofNav Ratings Calculator application at www.roofnav.com. Do not use any system beyond its FM Approval rating. Select assemblies based on the required wind rating for the specific roof area.
 - 2. Use assemblies listed in the online database RoofNav with an FM Global windstorm classification of 1A-90.
 - 3. Install additional securement in Zone 2 and Zone 3 per Data Sheet 1-29, Roof Deck Securement for Above-Deck Roof Components, and the roof system's Approval listing.
 - 4. Submit shop drawings and details, product data sheets, fastening specifications and a RoofNav Contractor Package to FM Global for review prior to ordering materials.
 - 5. Complete and submit the attached "Checklist for Roofing System"

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Manufacturer Certificates:
 - 1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - a. Submit evidence of complying with performance requirements.
 - 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- C. Product Test Reports: For components of roof membrane and insulation, for tests performed by a qualified testing agency, indicating compliance with specified requirements.
- D. Evaluation Reports: For components of roofing system, from ICC-ES.
 - 1. Field Test Reports:
 - 2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.
- E. Field quality-control reports.

- F. Sample Warranties: For manufacturer's special warranties.
- 1.06 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For roofing system to include in maintenance manuals.
- 1.07 QUALITY ASSURANCE
- A. Manufacturer Qualifications: A qualified manufacturer that is listed in FM Approvals' RoofNav for roofing system identical to that used for this Project.
 - B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
- 1.08 DELIVERY, STORAGE, AND HANDLING
- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
 - B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
 - C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
 - D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.
- 1.09 FIELD CONDITIONS
- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed in accordance with manufacturer's written instructions and warranty requirements.
- 1.10 WARRANTY
- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, and other components of roofing system.
 2. Warranty Period: 30 years from Date of Substantial Completion.
- B. Special Project Warranty: Submit roofing Installer's warranty, signed by Installer, covering the Work of this Section, including all components of roofing system such as roof membrane, base flashing, roof insulation, fasteners, cover boards, and walkway products, for the following warranty period:
1. Warranty Period: Two years from Date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and base flashings to withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and flashings to remain watertight.
1. Accelerated Weathering: Roof membrane to withstand 2000 hours of exposure when tested in accordance with ASTM G152, ASTM G154, or ASTM G155.
 2. Impact Resistance: Roof membrane to resist impact damage when tested in accordance with ASTM D3746, ASTM D4272, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.
- B. Material Compatibility: Roofing materials to be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.
- C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested in accordance with FM Approvals 4474, UL 580, or UL 1897:
1. Water Treatment Facility (Upper Roof):
 - a. Zone 1 (Roof Area Field): 43 lbf/sq. ft. (2.1 kPa).
 - b. Zone 2 (Roof Area Perimeter): 57 lbf/sq. ft. (2.7 kPa).
 - c. Zone 3 (Roof Area Corners): 57 lbf/sq. ft. (2.7 kPa).
 2. Water Treatment Facility (Lower Roof):
 - a. Zone 1 (Roof Area Field): 40 lbf/sq. ft. (1.9 kPa).
 - b. Zone 2 (Roof Area Perimeter): 53 lbf/sq. ft. (2.5 kPa).

- c. Zone 3 (Roof Area Corners): 53 lbf/sq. ft. (2.5 kPa).
 - 3. Pump Station:
 - a. Zone 1 (Roof Area Field): 37 lbf/sq. ft. (1.8 kPa).
 - b. Zone 2 (Roof Area Perimeter): 48 lbf/sq. ft. (2.3 kPa).
 - c. Zone 3 (Roof Area Corners): 66 lbf/sq. ft. (3.2 kPa).
 - 4. Install additional securement in Zone 2 and Zone 3 per FM Global Data Sheet 1-2, Roof Deck Securement for Above-Deck Roof Components, and the roof system's Approval Listing.
 - D. FM Approvals' RoofNav Listing: Roof membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in FM Approvals' RoofNav for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals Certification markings.
 - 1. Fire/Windstorm Classification:
 - a. Water Treatment Facility: Class 1A-90.
 - b. Pump Station: Class 1A-75.
 - 2. Hail-Resistance Rating: FM Global Property Loss Prevention Data Sheet 1-34 MH.
 - E. Exterior Fire-Test Exposure: ASTM E108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- 2.02 ETHYLENE-PROPYLENE-DIENE-MONOMER (EPDM) ROOFING
- A. EPDM Sheet: ASTM D4637/D4637M, Type I, nonreinforced, EPDM sheet.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Johns Manville; a Berkshire Hathaway company; EPDM NR or a comparable product by one of the following:
 - a. Carlisle Syntec Systems.
 - b. Firestone Building Products.
 - c. GenFlex Roofing Systems.
 - 2. Thickness: 90 mils (2.2 mm), nominal.
 - 3. Exposed Face Color: Black.

4. Source Limitations: Obtain components for roofing system from roof membrane manufacturer or manufacturers approved by roof membrane manufacturer.

2.03 ACCESSORY ROOFING MATERIALS

- A. General: Accessory materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.
 1. Adhesive and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: 60-mil- (1.5-mm-) thick EPDM, partially cured or cured, according to application.
- C. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.
- D. Roof Vents: As recommended by roof membrane manufacturer.
 1. Size: Not less than 4-inch (100-mm) diameter.
- E. Bonding Adhesive: Manufacturer's standard, water based.
- F. Seaming Material: Manufacturer's standard.
- G. Lap Sealant: Manufacturer's standard, single-component sealant, colored to match membrane roofing.
- H. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
- I. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
- J. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening components to substrate, and acceptable to roofing system manufacturer.
- K. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, molded pipe boot flashings, preformed inside and outside corner sheet flashings, reinforced EPDM securement strips, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.
 1. Provide white flashing accessories for white EPDM membrane roofing.

2.04 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by EPDM roof membrane manufacturer, approved for use in FM Approvals' RoofNav-listed roof assemblies.

- B. Polyisocyanurate Board Insulation: ASTM C1289, Type II, Class 1 felt facer on both major surfaces.
 - 1. Compressive Strength: 20 psi (138 kPa).
 - 2. Size: 48 by 48 inches (1219 by 1219 mm).
 - 3. Thickness: As required to meet indicated R-value, minimum 2-inches.
- C. Tapered Insulation: Provide factory-tapered insulation boards.
 - 1. Material: Match roof insulation.
 - 2. Minimum Thickness: 1/4 inch (6.35 mm).
 - 3. Slope:
 - a. Roof Field: 1/4 inch per foot (1:48) unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: 1/2 inch per foot (1:24) unless otherwise indicated on Drawings.

2.05 INSULATION ACCESSORIES AND COVER BOARD

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
- C. Glass-Mat Gypsum Cover Board: ASTM C1177/C1177M, water-resistant gypsum substrate.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Certainteed; SAINT-GOBAIN.
 - b. Gold Bond Building Products, LLC provided by National Gypsum Company.
 - c. USG Corporation.
 - 2. Thickness: 1/2 inch (13 mm), unless otherwise indicated.
 - 3. Surface Finish: Factory primed.

2.06 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.
 - 1. Size: Approximately 36 by 60 inches (914 by 1524 mm).
 - 2. Color: Contrasting with roof membrane.

2.07 EDGE METAL COMPONENTS

- A. Expansion Joints: Provide factory fabricated weatherproof, exterior covers for expansion joint openings consisting of flexible rubber membrane, supported by a closed cell foam to form flexible bellows, with two metal flanges, adhesively and mechanically combined to the bellows by a bifurcation process. Provide product from EPDM Roofing membrane manufacturer.
 - 1. Basis of design: Johns Manville Expand-O-Flash
 - 2. Fill the space between nailers in roof expansion joints with noncombustible, compressible insulation such as glass, mineral, or ceramic fiber type.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 - 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 05 31 00 "Steel Decking."
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation in accordance with roofing system manufacturer's written instructions. Remove sharp projections.

- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Perform fastener-pullout tests in accordance with roof system manufacturer's written instructions.
 - 1. Submit test result within 24 hours of performing tests.
 - a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.

3.03 INSTALLATION OF ROOFING, GENERAL

- A. Install roofing system in accordance with roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Coordinate installation and transition of roofing system component serving as an air barrier with air barrier specified under Section 07 27 26 "Fluid-Applied Membrane Air Barriers."

3.04 INSTALLATION OF INSULATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at end of workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Installation Over Metal Decking:
 - 1. Install base layer of insulation with joints staggered not less than 24 inches (610 mm) in adjacent rows.
 - a. Locate end joints over crests of decking.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.

- d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - (1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Mechanically attach base layer of insulation using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - (1) Fasten insulation in accordance with requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - (2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - e. Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Attach each layer of insulation to substrate in accordance with FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification and FM Global Property Loss Prevention Data Sheet 1-29.

3.05 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction.
 - 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
 - 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 - 4. Loosely lay cover board over substrate.
 - 5. Adhere cover board to substrate using adhesive in accordance with FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification, FM Global Property Loss Prevention Data Sheet 1-29, and manufacturer's written requirements.
- B. Install slip sheet over cover board and immediately beneath roofing.

3.06 INSTALLATION OF ADHERED ROOF MEMBRANE

- A. Adhere roof membrane over area to receive roofing in accordance with roofing system manufacturer's written instructions.
- B. Unroll membrane roof membrane and allow to relax before installing.
- C. Start installation of roofing in presence of roofing system manufacturer's technical personnel.
- D. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- E. In addition to adhering, mechanically fasten roof membrane securely at terminations, penetrations, and perimeters.
- F. Apply roof membrane with side laps shingled with slope of roof deck where possible.
- G. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.

3.07 INSTALLATION OF BASE FLASHING

- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates in accordance with roofing system manufacturer's written instructions.

- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.08 INSTALLATION OF WALKWAYS

- A. Flexible Walkways: Install walkway products in accordance with manufacturer's written instructions.
 - 1. Install flexible walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.
 - 2. Provide 6-inch (76-mm) clearance between adjoining pads.
 - 3. Adhere walkway products to substrate with compatible adhesive in accordance with roofing system manufacturer's written instructions.

3.09 FIELD QUALITY CONTROL

- A. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Engineer, and to prepare inspection report.

- B. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- C. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.10 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing system, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Engineer and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and in accordance with warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

CHECKLIST FOR ROOFING SYSTEM

FM Global Clients: submit completed form and completed RoofNav Contractor Package to local FM Global field office for review.

SECTION 07 62 00

SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Low-slope roof sheet metal fabrications.
2. Wall sheet metal fabrications.
3. Miscellaneous sheet metal fabrications.

B. Related Requirements:

1. Section 04 22 00 "Concrete Unit Masonry" for materials and installation of manufactured sheet metal through-wall flashing and trim integral with masonry.
2. Section 07 53 23 "EPDM Roofing" for materials and installation of sheet metal flashing and trim integral with roofing.
3. Section 07 42 13.16 "Modular Metal Wall Panels" for sheet metal flashing and trim integral with metal wall panels and manufactured copings.
4. Section 07 71 00 "Roof Specialties" for roof-edge drainage systems.
5. Section 07 72 00 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, and other manufactured roof accessory units.
6. Section 07 95 13.13 "Interior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for interior floors, walls, and ceilings.
7. Section 07 95 13.16 "Exterior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for exterior building walls, soffits, and parapets.

1.02 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.03 ACTION SUBMITTALS

- A. Product Data Submittals: For each type of product specified.
- B. Shop Drawings: For sheet metal flashing and trim.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
 - 3. Include identification of material, thickness, weight, and finish for each item and location in Project.
 - 4. Include details for forming, including profiles, shapes, seams, and dimensions.
 - 5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
 - 6. Include details of termination points and assemblies.
 - 7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
 - 8. Include details of roof-penetration flashing.
 - 9. Include details of special conditions.
 - 10. Include details of connections to adjoining work.
 - 11. Detail formed flashing and trim at scale of not less than 3 inches per 12 inches (1:5).

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.
- B. Special warranty.

1.06 QUALITY ASSURANCE

- A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of as shown on Drawings, including metal flashing and trim. Refer to Section 01 43 39 "Mockups."
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
 - 1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
 - 2. Protect stored sheet metal flashing and trim from contact with water.
- B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, are to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim are not to rattle, leak, or loosen, and are to remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstraining of components,

failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 SHEET METALS

- A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.
- B. Stainless Steel Sheet: ASTM A240/A240M, Type 304, dead soft, fully annealed; with smooth, flat surface.
 1. Finish: ASTM A480/A480M, No. 2D (dull, cold rolled).
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - (1) Run grain of directional finishes with long dimension of each piece.
 - (2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.03 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.
 1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 - b. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.

- c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
- 2. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
- C. Solder:
 - 1. For Stainless Steel: ASTM B32, Grade Sn60, with acid flux of type recommended by stainless steel sheet manufacturer.
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
- E. Elastomeric Sealant: ASTM C920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

2.04 FABRICATION, GENERAL

- A. Custom fabricate sheet metal flashing and trim to comply with details indicated and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required.
 - 1. Fabricate sheet metal flashing and trim in shop to greatest extent possible.
 - 2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 - 3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
 - 4. Form sheet metal flashing and trim to fit substrates without excessive oil-canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
 - 5. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.
- B. Fabrication Tolerances:
 - 1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

2. Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified.
- C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
 1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with butyl sealant concealed within joints.
- D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal in accordance with cited sheet metal standard to provide for proper installation of elastomeric sealant.
- E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- F. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard and by FM Global Property Loss Prevention Data Sheet 1-49 for application, but not less than thickness of metal being secured.
- G. Seams:
 1. Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
- H. Do not use graphite pencils to mark metal surfaces.

2.05 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
- B. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
- C. Flashing Receivers: Fabricate from the following materials:
 1. Stainless Steel: 0.0156 inch (0.396 mm) thick.
- D. Roof-Penetration Flashing: Fabricate from the following materials:
 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
- E. Roof-Drain Flashing: Fabricate from the following materials:
 1. Stainless Steel: 0.0156 inch (0.396 mm) thick.

2.06 WALL SHEET METAL FABRICATIONS

- A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch- (2400-mm) long, but not exceeding 12-foot- (3.6-m-) long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches (150 mm) beyond each side of wall openings; and form with 2-inch- (50-mm-) high, end dams. Fabricate from the following materials:
 - 1. Stainless Steel: 0.0156 inch (0.396 mm) thick.
- B. Opening Flashings in Frame Construction: Fabricate head, sill, and similar flashings to extend 4 inches (100 mm) beyond wall openings. Form head and sill flashing with 2-inch- (50-mm-) high, end dams. Fabricate from the following materials:

- 1. Stainless Steel: 0.0156 inch (0.396 mm) thick.

2.07 MISCELLANEOUS SHEET METAL FABRICATIONS

- A. Equipment Support Flashing: Fabricate from the following materials:
 - 1. Stainless Steel: 0.0188 inch (0.477 mm) thick.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
 - 1. Verify compliance with requirements for installation tolerances of substrates.
 - 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
 - 3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
 - 1. Install fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder.
 3. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
 4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
 5. Install continuous cleats with fasteners spaced not more than 12 inches (300 mm) o.c.
 6. Space individual cleats not more than 12 inches (300 mm) apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
 7. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
 8. Do not field cut sheet metal flashing and trim by torch.
 9. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
1. Coat concealed side of stainless steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
1. Space movement joints at maximum of 10 feet (3 m) with no joints within 24 inches (600 mm) of corner or intersection.
 2. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with sealant concealed within joints.
 3. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.

- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter.

3.03 INSTALLATION OF WALL FLASHINGS

- A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

3.04 INSTALLATION OF MISCELLANEOUS FLASHING

- A. Equipment Support Flashing:
 - 1. Coordinate installation of equipment support flashing with installation of roofing and equipment.
 - 2. Weld or seal flashing with elastomeric sealant to equipment support member.

3.05 INSTALLATION TOLERANCES

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.06 CLEANING

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder.
- C. Clean off excess sealants.

3.07 PROTECTION

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
- C. Maintain sheet metal flashing and trim in clean condition during construction.

- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Engineer.

END OF SECTION

SECTION 07 71 00
ROOF SPECIALTIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Roof-edge drainage systems.

B. Related Requirements:

1. Section 07 42 13.16 "Modular Metal Wall Panels" for manufactured copings.
2. Section 07 62 00 "Sheet Metal Flashing and Trim" for custom- and site-fabricated sheet metal flashing and trim.
3. Section 07 72 00 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
4. Section 07 92 00 "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.

1.02 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For roof specialties.

1. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work.
2. Include details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
3. Indicate profile and pattern of seams and layout of fasteners, cleats, clips, and other attachments.
4. Detail termination points and assemblies, including fixed points.
5. Include details of special conditions.

C. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.

D. Samples for Verification:

1. Include Samples of each type of roof specialty to verify finish and color selection, in manufacturer's standard sizes.

1.03 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of roof specialty.

B. Sample Warranty: For manufacturer's special warranty.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing specialties to include in maintenance manuals.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.

B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.

1.06 FIELD CONDITIONS

A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.

B. Coordination: Coordinate roof specialties with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.07 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
- b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.

- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof specialties to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 ROOF-EDGE DRAINAGE SYSTEMS

- A. Downspouts: Plain square complete with mitered elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.
 - 1. Extruded Aluminum: 0.125 inch (3.18 mm) thick.
- B. Parapet Scuppers: Manufactured with closure flange trim to exterior, 4-inch- (100-mm-) wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof.
 - 1. Formed Aluminum: 0.032 inch (0.81 mm) thick.
- C. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge, and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout, exterior flange trim, and built-in overflow.
 - 1. Formed Aluminum: 0.032 inch (0.81 mm) thick.

2.03 MATERIALS

- A. Aluminum Sheet: ASTM B209 (ASTM B209M), alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.

- B. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:

2.04 MISCELLANEOUS MATERIALS

- A. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:
 - 1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
 - 2. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.

2.05 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Coil-Coated Aluminum Sheet Finishes:
 - 1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Mica Fluoropolymer: AAMA 2605. Fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Concealed Surface Finish: Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
- E. Aluminum Extrusion Finishes:
 - 1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Mica Fluoropolymer: AAMA 2605. Fluoropolymer finish with suspended mica flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply

coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

- b. Concealed Surface Finish: Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.
- C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage where applicable, and securely anchored.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Install roof specialties in accordance with manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.
 - 1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 - 2. Provide uniform, neat seams with minimum exposure of solder and sealant.
 - 3. Install roof specialties to fit substrates and to result in weathertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
 - 4. Torch cutting of roof specialties is not permitted.
 - 5. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
- C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
- D. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F (4 deg C).

3.03 INSTALLATION OF ROOF-EDGE DRAINAGE SYSTEMS

- A. Install components to produce a complete roof-edge drainage system in accordance with manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.
- B. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1500 mm) o.c.
 - 1. Provide elbows at base of downspouts at grade to direct water away from building.
 - 2. Connect downspouts to underground drainage system indicated.
- C. Parapet Scuppers: Install scuppers through parapet where indicated. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
 - 1. Anchor scupper closure trim flange to exterior wall and seal or solder to scupper.
 - 2. Loosely lock front edge of scupper with conductor head.
 - 3. Seal or solder exterior wall scupper flanges into back of conductor head.
- D. Conductor Heads: Anchor securely to wall with elevation of conductor top edge 1 inch (25 mm) below scupper discharge.

3.04 CLEANING AND PROTECTION

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.
- D. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 72 00
ROOF ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Roof curbs.
2. Equipment supports.
3. Roof hatches.

B. Related Requirements:

1. Division 05 sections for floor access hatches, and metal vertical ladders and stairs for access to roof hatches.
2. Section 07 62 00 "Sheet Metal Flashing and Trim" for shop- and field-formed metal flashing, and miscellaneous sheet metal trim and accessories.
3. Section 07 71 00 "Roof Specialties" for manufactured gutters and downspouts, and counterflashing.
4. Section 11 24 29 "Facility Fall Protection" for ladder fall arrest systems including ladder extension posts.

1.02 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of roof accessory.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For roof accessories.

1. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
- C. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.
- D. Delegated Design Submittals: For roof curbs and equipment supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 1. Detail mounting, securing, and flashing of roof-mounted items to roof structure. Indicate coordinating requirements with roof membrane system.
 2. Wind-Restraint Details: Detail fabrication and attachment of wind restraints. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.

1.04 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 1. Size and location of roof accessories specified in this Section.
 2. Method of attaching roof accessories to roof or building structure.
 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
 4. Required clearances.
- B. Sample Warranties: For manufacturer's special warranties.

1.05 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

1.06 WARRANTY

- A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested according to ASTM D2244.

- b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof accessories to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer to design roof curbs and equipment supports to comply with wind performance requirements, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

2.02 ROOF CURBS

- A. Roof Curbs: Internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing continuously on roof structure, and capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, straight sides, integral metal cant, and integrally formed deck-mounting flange at perimeter bottom.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AES Industries, Inc.
 - b. Air Balance; a division of MESTEK, Inc.
 - c. Greenheck Fan Corporation.
 - d. Pate Company (The).
 - e. Thybar Corporation.
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- C. Supported Load Capacity: Coordinate load capacity with information on Shop Drawings of equipment to be supported.
- D. Steel: Zinc-coated (galvanized) steel sheet, 0.052 inch (1.32 mm) thick.

1. Finish: Two-coat fluoropolymer.
2. Color: As selected by Engineer from manufacturer's full range.

E. Construction:

1. Curb Profile: Manufacturer's standard compatible with roofing system.
2. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
3. Fabricate curbs to minimum height of 12 inches (305 mm) above roofing surface unless otherwise indicated.
4. Top Surface: Level top of curb, with roof slope accommodated by sloping deck-mounting flange or by use of leveler frame.
5. Insulation: Factory insulated with 1-1/2-inch- (38-mm-) thick glass-fiber board insulation.
6. Liner: Same material as curb, of manufacturer's standard thickness and finish.
7. Nailer: Factory-installed wood nailer along top flange of curb, continuous around curb perimeter.
8. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb, of size and spacing required to meet wind uplift requirements.
9. Platform Cap: Where portion of roof curb is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- (19-mm-) thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
10. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as curb.

2.03 EQUIPMENT SUPPORTS

- A. Equipment Supports: Rail-type metal equipment supports capable of supporting superimposed live and dead loads between structural supports, including equipment loads and other construction indicated on Drawings, spanning between structural supports; capable of meeting performance requirements; with welded corner joints, integral metal cant, and integrally formed structure-mounting flange at bottom.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Activar Construction Products Group, Inc. - JL Industries.

- b. Air Balance; a division of MESTEK, Inc.
 - c. Greenheck Fan Corporation.
 - d. Pate Company (The).
 - e. Thybar Corporation.
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- C. Supported Load Capacity: Coordinate load capacity with information on Shop Drawings of equipment to be supported.
- D. Steel: Zinc-coated (galvanized) steel sheet, 0.052 inch (1.32 mm) thick.
 - 1. Finish: Two-coat fluoropolymer.
 - 2. Color: As selected by Engineer from manufacturer's full range.
- E. Construction:
 - 1. Curb Profile: Manufacturer's standard compatible with roofing system.
 - 2. Insulation: Factory insulated with 1-1/2-inch- (38-mm-) thick glass-fiber board insulation.
 - 3. Liner: Same material as equipment support, of manufacturer's standard thickness and finish.
 - 4. Nailer: Factory-installed continuous wood nailers 3-1/2 inches (90 mm) wide on top flange of equipment supports, continuous around support perimeter.
 - 5. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb of size and spacing required to meet wind uplift requirements.
 - 6. Platform Cap: Where portion of equipment support is not covered by equipment, provide weathertight platform cap formed from 3/4-inch- (19-mm-) thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
 - 7. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
 - 8. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
 - 9. Fabricate equipment supports to minimum height of 12 inches (305 mm) above roofing surface unless otherwise indicated.

2.04 ROOF HATCHES (RH-1, RH-2)

- A. Roof Hatches: Metal roof-hatch units with lids and insulated single-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, straight sides, and integrally formed deck-mounting flange at perimeter bottom.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Babcock-Davis Personnel Roof Hatch or comparable product by one of the following:
 - a. ACUDOR Products, Inc.
 - b. BILCO Company (The).
 - c. Milcor; a division of Hart & Cooley, Inc.
- B. Type and Size:
 - 1. Single-leaf lid, size as indicated on Drawings.
- C. Loads: Minimum 40-lbf/sq. ft. (1.9-kPa) external live load and 20-lbf/sq. ft. (0.95-kPa) internal uplift load.
- D. Hatch Material, Aluminum:
 - 1. Thickness: Manufacturer's standard thickness for hatch size indicated.
 - 2. Finish: Baked enamel or powder coat.
 - 3. Color: As selected by Engineer from manufacturer's full range.
- E. Construction:
 - 1. Insulation: 1-inch- (25-mm-) thick, polyisocyanurate board.
 - a. R-Value: 6 according to ASTM C1363.
 - 2. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
 - 3. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
 - 4. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
 - 5. Fabricate curbs to minimum height of 12 inches (305 mm) above roofing surface unless otherwise indicated.

- F. Hardware: Spring operators, hold-open arm, stainless steel spring latch with turn handles, stainless steel butt- or pintle-type hinge system, and padlock hasps inside and outside.
- G. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.
 - 1. Height: 42 inches (1060 mm) above finished roof deck.
 - 2. Posts and Rails: Galvanized-steel pipe, 1-1/4 inches (31 mm) in diameter or galvanized-steel tube, 1-5/8 inches (41 mm) in diameter.
 - 3. Flat Bar: Galvanized steel, 2 inches (50 mm) high by 3/8 inch (9 mm) thick.
 - 4. Maximum Opening Size: System constructed to prevent passage of a sphere 21 inches (533 mm) in diameter.
 - 5. Provide where shown:
 - a. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
 - b. Self-Latching Gate: Fabricated of same materials and rail spacing as safety railing system. Provide manufacturer's standard hinges and self-latching mechanism.
 - 6. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
 - 7. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
 - 8. Fabricate joints exposed to weather to be watertight.
 - 9. Fasteners: Manufacturer's standard, finished to match railing system.
 - 10. Finish: Manufacturer's standard.
 - a. Color: As selected by Engineer from manufacturer's full range.

2.05 ROOF HATCHES (RH-3, RH-4)

- A. Roof Hatches: Metal roof-hatch units with lids, welded or mechanically fastened and sealed corner joints, continuous counterflashing and weathertight perimeter gasketing, straight sides, and integrally formed deck-mounting flange at perimeter bottom.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Babcock-Davis Equipment Roof Hatch or comparable product by one of the following:
 - a. ACUDOR Products, Inc.
 - b. BILCO Company (The).
 - c. Milcor; a division of Hart & Cooley, Inc.
- B. Type and Size:
 1. Double-leaf lid, custom size as indicated on Drawings.
- C. Loads: Minimum 40-lbf/sq. ft. external live load and 20-lbf/sq. ft. internal uplift load.
- D. Hatch Material, Aluminum:
 1. Thickness: Manufacturer's standard thickness for hatch size indicated.
 2. Finish: Mill.
- E. Construction:
 1. Insulation: 1-inch fiberglass in cover.
 2. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
 3. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
- F. Hardware: Spring operators, hold-open arm, stainless steel spring latch with turn handles, stainless steel butt- or pintle-type hinge system, and padlock hasps inside and outside.
 1. Provide two-point latch on lids larger than 84 inches.
- G. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.
 1. Height: 42 inches (1060 mm) above finished roof deck.
 2. Posts and Rails: Galvanized-steel pipe, 1-1/4 inches (31 mm) in diameter or galvanized-steel tube, 1-5/8 inches (41 mm) in diameter.
 3. Flat Bar: Galvanized steel, 2 inches (50 mm) high by 3/8 inch (9 mm) thick.

4. Maximum Opening Size: System constructed to prevent passage of a sphere 21 inches (533 mm) in diameter.
5. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
6. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
7. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
8. Fabricate joints exposed to weather to be watertight.
9. Fasteners: Manufacturer's standard, finished to match railing system.
10. Finish: Manufacturer's standard.

2.06 ROOF HATCHES (RH-5, RH-6)

- A. Roof Hatches: Metal roof-hatch units with lids, welded or mechanically fastened and sealed corner joints, continuous counterflashing and weathertight perimeter gasketing, straight sides, and integrally formed deck-mounting flange at perimeter bottom.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide Babcock-Davis Equipment Roof Hatch or comparable product by one of the following:
 - a. ACUDOR Products, Inc.
 - b. BILCO Company (The).
 - c. Milcor; a division of Hart & Cooley, Inc.
- B. Type and Size:
 1. Double-leaf lid, custom size as indicated on Drawings.
- C. Loads: Minimum 40-lbf/sq. ft. external live load and 20-lbf/sq. ft. internal uplift load.
- D. Hatch Material, Aluminum:
 1. Thickness: Manufacturer's standard thickness for hatch size indicated.
 2. Finish: Mill.
- E. Construction:
 1. Insulation: 1-inch fiberglass in cover.

2. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
 3. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
- F. Hardware: Spring operators, hold-open arm, stainless steel spring latch with turn handles, stainless steel butt- or pintle-type hinge system, and padlock hasps inside and outside.
1. Provide two-point latch on lids larger than 84 inches.

2.07 METAL MATERIALS

- A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 (Z275) coating designation.
1. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A755/A755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil (0.013 mm).
- B. Aluminum Sheet: ASTM B209 (ASTM B209M), manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.
1. Mill Finish: As manufactured.
 2. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil (0.013 mm).
- C. Aluminum Extrusions and Tubes: ASTM B221 (ASTM B221M), manufacturer's standard alloy and temper for type of use, finished to match assembly where used; otherwise mill finished.
- D. Stainless Steel Sheet and Shapes: ASTM A240/A240M or ASTM A666, Type 304.
- E. Steel Shapes: ASTM A36/A36M, hot-dip galvanized according to ASTM A123/A123M unless otherwise indicated.

- F. Steel Tube: ASTM A500/A500M, round tube.
- G. Galvanized-Steel Tube: ASTM A500/A500M, round tube, hot-dip galvanized according to ASTM A123/A123M.
- H. Steel Pipe: ASTM A53/A53M, galvanized.

2.08 MISCELLANEOUS MATERIALS

- A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Glass-Fiber Board Insulation: ASTM C726, nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C), thickness as indicated.
- C. Polyisocyanurate Board Insulation: ASTM C1289, thickness and thermal resistivity as indicated.
- D. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPAC2; not less than 1-1/2 inches (38 mm) thick.
- E. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- F. Underlayment:
 - 1. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils (0.76 to 1.0 mm) thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
- G. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
 - 1. Fasteners for Zinc-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A153/A153M or ASTM F2329.
 - 2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 - 3. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
- H. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.

- I. Elastomeric Sealant: ASTM C920, elastomeric polyurethane polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.
- J. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.

2.09 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install roof accessories according to manufacturer's written instructions.
 - 1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
 - 2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
 - 3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
 - 4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 - 1. Coat concealed side of uncoated aluminum and stainless steel roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 - 2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of underlayment and cover with manufacturer's recommended slip sheet.
 - 3. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.
 - C. Roof Curb Installation: Install each roof curb so top surface is level.
 - D. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.
 - E. Roof-Hatch Installation:
 - 1. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
 - 2. Attach safety railing system to roof-hatch curb.
 - 3. Attach ladder-assist post according to manufacturer's written instructions.
 - F. Seal joints with elastomeric or butyl sealant as required by roof accessory manufacturer.
- 3.03 REPAIR AND CLEANING
- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A780/A780M.
 - B. Clean exposed surfaces according to manufacturer's written instructions.
 - C. Clean off excess sealants.
 - D. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 84 13

PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes: Penetration firestopping systems.
- B. Related Requirements:
 - 1. Section 07 84 43 "Joint Firestopping" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.

1.02 ACTION SUBMITTALS

- A. Product Data: Penetration firestopping systems.
- B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly developed in accordance with current International Firestop Council (IFC) guidelines. Obtain approval of authorities having jurisdiction prior to submittal.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Listed System Designs: For each penetration firestopping system, for tests performed by a qualified testing agency.

1.04 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval Standard for Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

1.06 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install penetration firestopping system when ambient or substrate temperatures are outside limits permitted by penetration firestopping system manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.
- B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.07 COORDINATION

- A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain penetration firestop systems for each type of opening indicated from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics:
 - 1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Test in accordance with testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Penetration firestop systems installed with products bearing the classification marking of a qualified product certification agency in accordance with listed system designs published by a qualified testing agency.
 - (1) UL in its online directory "Product iQ."
 - (2) Intertek Group in its "Directory of Building Products."
 - (3) FM Approvals in its "Approval Guide."

2.03 PENETRATION FIRESTOPPING SYSTEMS

- A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems are to be compatible with one another, with the substrates forming openings, and with penetrating items if any.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. 3M Building and Construction.
 - b. A/D Fire Protection Systems Inc.
 - c. Balco; a CSW Industrials Company.
 - d. Grabber Construction Products, Inc.
 - e. Hilti, Inc.
 - f. Passive Fire Protection Partners.
 - g. Specified Technologies, Inc.
 - h. Tremco Incorporated.
- B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined in accordance with ASTM E814 or UL 1479.
 - 1. F-Rating: Not less than the fire-resistance rating of the wall penetrated.
 - 2. Membrane Penetrations: Install recessed fixtures such that the required fire resistance will not be reduced.
- C. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479.
 - 1. F-Rating: At least one hour, but not less than the fire-resistance rating of the floor penetrated.
 - 2. T-Rating: At least one hour, but not less than the fire-resistance rating of the floor. The following floor penetrations do not require a T-rating:
 - a. Those within the cavity of a wall.
 - b. 4-inch (200-mm) or smaller metal conduit penetrating directly into metal-enclosed electrical switchgear.

- 3. W-Rating: Provide penetration firestopping systems with a Class 1 W-rating in accordance with UL 1479.
- D. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, in accordance with ASTM E84.
- E. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.
 - 1. Permanent forming/damming/backing materials.
 - 2. Substrate primers.
 - 3. Collars.
 - 4. Steel sleeves.

2.04 FILL MATERIALS

- A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.
- C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced intumescent elastomeric sheet bonded to galvanized-steel sheet.
- E. Intumescent Putties: Nonhardening, water-resistant, intumescent putties containing no solvents or inorganic fibers.
- F. Intumescent Wrap Strips: Single-component intumescent elastomeric strips for use around combustible penetrants.
- G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- H. Pillows/Bags: Compressible, removable, and reusable intumescent pillows encased in fire-retardant polyester or glass-fiber cloth. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

- I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.
- K. Fire-Rated Cable Sleeve Kits: Complete kits designed for new or existing cable penetrations through walls to accept standard accessories.
- L. Thermal Wrap: Flexible protective wrap tested and listed for up to 2-hour fire ratings in accordance with ASTM E814 or UL 1479 for membrane penetrations or ASTM E1725 or UL 1724 for thermal barrier and circuit integrity protection.
- M. Fire-Rated Cable Pathways: Single or gangable device modules composed of a steel raceway with integral intumescent material and requiring no additional action in the form of plugs, twisting closure, putty, pillows, sealant, or otherwise to achieve fire and air-leakage ratings.
- N. Retrofit Device for Cable Bundles: Factory-made, intumescent, collar-like device for firestopping existing over-filled cable sleeves and capable of being installed around projecting sleeves and cable bundles.
- O. Wall-Opening Protective Materials: Intumescent, non-curing putty pads or self-adhesive inserts for protection of electrical switch and receptacle boxes.
- P. Fire-Rated HVAC Retaining Angles: Steel angle system with integral intumescent firestop gasket for use around rectangular steel HVAC ducts without fire dampers.
- Q. Firestop Plugs: Flexible, re-enterable, intumescent, foam-rubber plug for use in blank round openings and cable sleeves.
- R. Fire-Rated Cable Grommet: Molded two-piece grommet made of plenum-grade polymer and foam inner core for sealing small cable penetrations in gypsum walls up to 1/2 inch (13 mm) in diameter.
- S. Closet Flange Gasket: Molded, single-component, flexible, intumescent gasket for use beneath a water closet (toilet) flange in floor applications.
- T. Endothermic Wrap: Flexible, insulating, fire-resistant, endothermic wrap for protecting membrane penetrations of utility boxes, critical electrical circuits, communications lines, and fuel lines.

2.05 MIXING

- A. Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or

procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.03 INSTALLATION OF PENETRATION FIRESTOPPING SYSTEMS

- A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.
- C. Install fill materials by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

- A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches (76 mm) high and with minimum 0.375-inch (9.5-mm) strokes.

1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet (4.57 m) from end of wall and at intervals not exceeding 30 feet (9.14 m).

- B. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing and inspecting agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.05 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections according to ASTM E2174.
- B. Where deficiencies are found or penetration firestopping system is damaged or removed because of testing, repair or replace penetration firestopping system to comply with requirements.

- C. Proceed with enclosing penetration firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.06 CLEANING AND PROTECTION

- A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping material and install new materials to produce systems complying with specified requirements.

END OF SECTION

SECTION 07 84 43
JOINT FIRESTOPPING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Joints in or between fire-resistance-rated construction.

B. Related Requirements:

1. Section 07 84 13 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers and for wall identification.
2. Section 07 95 13.13 "Interior Expansion Joint Cover Assemblies" for fire-resistive manufactured expansion-joint cover assemblies for interior floors, walls, and ceilings.
3. Section 07 95 13.16 "Exterior Expansion Joint Cover Assemblies" for fire-resistive manufactured expansion-joint cover assemblies for exterior building walls, soffits, and parapets.
4. Section 09 22 16 "Non-Structural Metal Framing" for firestop tracks for metal-framed partition heads.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Joints in or between fire-resistance-rated construction.

B. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.

1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly developed in accordance with current International Firestop Council (IFC) guidelines.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

- B. Listed System Designs: For each joint firestopping system, for tests performed by a qualified testing agency.

1.04 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."

1.06 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure joint firestopping systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.07 COORDINATION

- A. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.
- B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain joint firestop systems for each type of joint opening indicated from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics:
 - 1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:

- a. Joint firestop systems installed with products bearing the classification marking of a qualified product certification agency in accordance with Listed System Designs published by a qualified testing agency.

- (1) UL in its online directory "Product iQ."

- (2) Intertek Group in its "Directory of Building Products."

2.03 JOINT FIRESTOPPING SYSTEMS

- A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems must accommodate building movements without impairing their ability to resist the passage of fire and hot gases.

- 1. Joint firestopping systems that are compatible with one another, with the substrates forming openings, and with penetrating items, if any.
 - 2. Provide products that, upon curing, do not re-emulsify, dissolve, leach, breakdown, or otherwise deteriorate over time from exposure to atmospheric moisture, sweating pipes, ponding water or other forms of moisture.
 - 3. Provide firestop products that do not contain ethylene glycol.

- B. Intumescent Gypsum Wall Framing Gaskets (Applied to Steel Tracks, Runners, and Studs prior to Framing Installation): Provide products with fire, smoke, and acoustical ratings that allow movement up to 100 percent compression and/or extension in accordance with UL 2079 or ASTM E1966; have an L Rating less than 1 cfm/ft. (0.00115 cu. m/s x m) in accordance with UL 2079; and a minimum Sound Transmission Class (STC) rating of 56 in accordance with ASTM E90 or ASTM C919.

- C. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E1966 or UL 2079.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. A/D Fire Protection Systems Inc.
 - b. Balco; a CSW Industrials Company.
 - c. Grabber Construction Products, Inc.
 - d. Hilti, Inc.
 - e. Owens Corning.
 - f. Passive Fire Protection Partners.

- g. ROCKWOOL.
- h. Specified Technologies, Inc.
- 2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.
- D. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E84.

2.04 ACCESSORIES

- A. Provide components of joint firestopping systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Before installing joint firestopping systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
 - 1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
 - 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Prime substrates where recommended in writing by joint firestopping system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

- C. Apply a suitable bond-breaker to prevent three-sided adhesion in applications where this condition occurs, such as the intersection of a gypsum wall to floor or roof assembly where the joint is backed by a steel ceiling runner or track.

3.03 INSTALLATION

- A. General: Install joint firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install elastomeric fill materials for joint firestopping systems by proven techniques to produce the following results:
 - 1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
 - 3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections in accordance with ASTM E2393.
- B. Where deficiencies are found or joint firestopping systems are damaged or removed due to testing, repair or replace joint firestopping systems so they comply with requirements.
- C. Proceed with enclosing joint firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.05 CLEANING AND PROTECTION

- A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial

Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated joint firestopping systems immediately and install new materials to produce joint firestopping systems complying with specified requirements.

END OF SECTION

SECTION 07 92 00

JOINT SEALANTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Nonstaining silicone joint sealants.
2. Urethane joint sealants.
3. Mildew-resistant joint sealants.
4. Butyl joint sealants.
5. Latex joint sealants.

B. Related Requirements:

1. Division 03 Concrete specifications for sealants used in concrete fabrications.
2. Section 07 92 19 "Acoustical Joint Sealants" for sealing joints in sound-rated construction.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Nonstaining silicone joint sealants.
2. Urethane joint sealants.
3. Mildew-resistant joint sealants.
4. Butyl joint sealants.
5. Latex joint sealants.

B. Samples for Initial Selection: Manufacturer's standard color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

C. Samples for Verification: For each type and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.03 INFORMATIONAL SUBMITTALS

A. Preconstruction Laboratory Test Schedule: Include the following information for each joint sealant and substrate material to be tested:

1. Joint-sealant location and designation.
2. Manufacturer and product name.
3. Type of substrate material.
4. Proposed test.
5. Number of samples required.

B. Preconstruction Laboratory Test Reports: For each joint sealant and substrate material to be tested from sealant manufacturer, indicating the following:

1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
2. Interpretation of test results and written recommendations for primers and substrate preparation are needed for adhesion.

C. Preconstruction Field-Adhesion-Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

D. Field Quality-Control Reports: For field-adhesion-test reports, for each sealant application tested.

E. Sample warranties.

1.04 CLOSEOUT SUBMITTALS

A. Manufacturers' special warranties.

B. Installer's special warranties.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Authorized representative who is trained and approved by manufacturer.
- B. Testing Agency Qualifications: Qualified in accordance with ASTM C1021 to conduct the testing indicated.

1.06 MOCKUPS

- A. Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Laboratory Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
 - 1. Adhesion Testing: Use ASTM C794 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 - 2. Compatibility Testing: Use ASTM C1087 to determine sealant compatibility when in contact with glazing and gasket materials.
 - 3. Stain Testing: Use ASTM C1248 to determine stain potential of sealant when in contact with masonry substrates.
 - 4. Submit manufacturer's recommended number of pieces of each type of material, including joint substrates, joint-sealant backings, and miscellaneous materials.
 - 5. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 - 6. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures, including use of specially formulated primers.
 - 7. Testing will not be required if joint-sealant manufacturers submit data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, staining of, and compatibility with joint substrates and other materials matching those submitted.
- B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
 - 1. Locate test joints where indicated on Project or, if not indicated, as directed by Engineer.

2. Conduct field tests for each kind of sealant and joint substrate.
3. Notify Engineer seven days in advance of dates and times when test joints will be erected.
4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
5. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
6. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
7. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.08 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (5 deg C).
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.09 WARRANTY

- A. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: Two years from date of Substantial Completion.

- B. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
 - 1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 - 2. Disintegration of joint substrates from causes exceeding design specifications.
 - 3. Mechanical damage caused by individuals, tools, or other outside agents.
 - 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain joint sealants from single manufacturer for each sealant type.

2.02 JOINT SEALANTS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. Colors of Exposed Joint Sealants: As selected by Engineer from manufacturer's full range.

2.03 NONSTAINING SILICONE JOINT SEALANTS

- A. Nonstaining Joint Sealants: No staining of substrates when tested in accordance with ASTM C1248.
- B. Silicone, Nonstaining, S, NS, 50, NT: Nonstaining, single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. GE Construction Sealants; Momentive Performance Materials Inc.

- b. Pecora Corporation.
- c. Sika Corporation; Joint Sealants.
- d. The Dow Chemical Company.
- e. Tremco Incorporated.

2.04 URETHANE JOINT SEALANTS

A. Urethane, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. BASF Corporation.
- b. Bostik, Inc.
- c. Pecora Corporation.
- d. Sherwin-Williams Company (The).
- e. Sika Corporation; Joint Sealants.
- f. Tremco Incorporated.

B. Urethane, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T and NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. BASF Corporation.
- b. Pecora Corporation.
- c. Sherwin-Williams Company (The).

C. Urethane, M, P, 25, T, NT: Multicomponent, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade P, Class 25, Uses T and NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. BASF Corporation.
- b. Bostik, Inc.
- c. Pecora Corporation.
- d. Sherwin-Williams Company (The).
- e. Sika Corporation; Joint Sealants.
- f. Tremco Incorporated.

2.05 MILDEW-RESISTANT JOINT SEALANTS

- A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.
- B. Silicone, Mildew Resistant, S, NS, 25, NT: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. GE Construction Sealants; Momentive Performance Materials Inc.
 - b. Sika Corporation - Building Components.
 - c. The Dow Chemical Company.
 - d. Tremco Incorporated.

2.06 BUTYL JOINT SEALANTS

- A. Butyl-Rubber-Based Joint Sealants: ASTM C1311.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bostik, Inc.
 - b. Pecora Corporation.

2.07 LATEX JOINT SEALANTS

- A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Pecora Corporation.
 - b. Sherwin-Williams Company (The).
 - c. Tremco Incorporated.

2.08 JOINT-SEALANT BACKING

- A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C1330, Type C (closed-cell material with a surface skin) or type, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.09 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. **Surface Cleaning of Joints:** Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
- B. **Joint Priming:** Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. **Masking Tape:** Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install sealant backings of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of sealant backings.
 - 2. Do not stretch, twist, puncture, or tear sealant backings.
 - 3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.
- D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses in each joint configuration.
 - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants in accordance with requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 - 1. Remove excess sealant from surfaces adjacent to joints.
 - 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 - 3. Provide concave joint profile in accordance with Figure 8A in ASTM C1193 unless otherwise indicated.

3.04 FIELD QUALITY CONTROL

- A. Testing Agency: Owner may engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
 - a. Extent of Testing: Test completed and cured sealant joints as follows:
 - (1) Perform 10 tests for the first 1000 ft. (300 m) of joint length for each kind of sealant and joint substrate.
 - (2) Perform one test for each 1000 ft. (300 m) of joint length thereafter or one test per each floor per elevation.
 - b. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
 - (1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 - c. Inspect tested joints and report on the following:
 - (1) Whether sealants filled joint cavities and are free of voids.
 - (2) Whether sealant dimensions and configurations comply with specified requirements.
 - (3) Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
 - d. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
 - e. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
2. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

- C. Prepare test and inspection reports.

3.05 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.06 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.07 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces.

- 1. Joint Locations:

- a. Isolation and contraction joints in cast-in-place concrete slabs, unless otherwise specified in Division 03.

- 2. Joint Sealant: Urethane, M, P, 25, T, NT.

- B. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces.

- 1. Joint Locations:

- a. Control and expansion joints in unit masonry.
 - b. Joints between metal panels.
 - c. Joints between different materials listed above.
 - d. Perimeter joints between materials listed above and frames of doors and windows.

- 2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT.

- C. Joint-Sealant Application: Interior joints in horizontal traffic surfaces.

- 1. Joint Locations:

- a. Isolation joints in cast-in-place concrete slabs, unless otherwise specified in Division 03.
 - b. Control and expansion joints in tile flooring.
- 2. Joint Sealant: Urethane, S, P, 25, T, NT.
- D. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces.
 - 1. Joint Locations:
 - a. Control and expansion joints on exposed interior surfaces of exterior walls.
 - b. Vertical joints on exposed surfaces of unit masonry walls.
 - 2. Joint Sealant: Urethane, S, NS, 25, NT.
- E. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces not subject to significant movement.
 - 1. Joint Locations:
 - a. Control joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints between interior wall surfaces and frames of interior doors and windows.
 - 2. Joint Sealant: Acrylic latex.
- F. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.
 - 1. Joint Locations:
 - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
 - 2. Joint Sealant: Silicone, mildew resistant, S, NS, 25, NT.
- G. Joint-Sealant Application: Concealed mastics.
 - 1. Joint Locations:
 - a. Aluminum thresholds.
 - 2. Joint Sealant: Butyl-rubber based.

END OF SECTION

SECTION 07 92 19

ACOUSTICAL JOINT SEALANTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Acoustical joint sealants.

B. Related Requirements:

1. Section 07 92 00 "Joint Sealants" for elastomeric, latex, and butyl-rubber-based joint sealants for nonacoustical applications.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Acoustical joint sealants.

B. Acoustical Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.03 INFORMATIONAL SUBMITTALS

A. Test and Evaluation Reports:

1. Product Test Reports: For each type of acoustical joint sealant, for tests performed by qualified testing agency.

B. Sample warranties.

1.04 CLOSEOUT SUBMITTALS

A. Warranty Documentation:

1. Installer's special warranties.

1.05 WARRANTY

- A. Installer's Special Warranty: Installer agrees to repair or replace acoustical joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

- 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 ACOUSTICAL JOINT SEALANT

- A. Acoustical joint-sealant products that effectively reduce airborne sound transmission through perimeter joints and openings in building construction, as demonstrated by testing representative assemblies in accordance with ASTM E90.
- B. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex acoustical sealant complying with ASTM C834.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. GE Construction Sealants; Momentive Performance Materials Inc.
 - b. Grabber Construction Products, Inc.
 - c. Hilti, Inc.
 - d. Pecora Corporation.
 - e. Specified Technologies, Inc.
 - 2. Colors of Exposed Acoustical Joint Sealants: White; provide paintable sealant where exposed.

2.02 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by acoustical joint-sealant manufacturer where required for adhesion of sealant to joint substrates.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine joints indicated to receive acoustical joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.
- B. Joint Priming: Prime joint substrates where recommended by acoustical joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF ACOUSTICAL JOINT SEALANTS

- A. Comply with acoustical joint-sealant manufacturer's written installation instructions unless more stringent requirements apply.
- B. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical joint sealant. Install acoustical joint sealants at both faces of partitions, at perimeters, and through penetrations. Comply with ASTM C919, ASTM C1193, and manufacturer's written instructions for closing off sound-flanking paths around or through assemblies, including sealing partitions to underside of floor slabs above acoustical ceilings.
- C. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge moldings of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

3.04 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of acoustical joint sealants and of products in which joints occur.

3.05 PROTECTION

- A. Protect acoustical joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated acoustical joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 07 95 13.13

INTERIOR EXPANSION JOINT COVER ASSEMBLIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Wall expansion joint covers.
2. Ceiling expansion joint covers.

1.02 ACTION SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.

1. Wall expansion joint covers.
2. Ceiling expansion joint covers.

B. Shop Drawings: For each expansion joint cover assembly.

1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how components interconnect.

C. Samples: For each expansion joint cover assembly and for each color and texture specified, full width by 6 inches (150 mm) long in size.

D. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:

1. Manufacturer and model number for each expansion joint cover assembly.
2. Expansion joint cover assembly location cross-referenced to Drawings.
3. Nominal, minimum, and maximum joint width.
4. Movement direction.
5. Materials, colors, and finishes.

6. Product options.
7. Fire-resistance ratings.

1.03 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each fire-resistance-rated expansion joint cover assembly, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.01 ASSEMBLY DESCRIPTION

- A. Furnish units in longest practicable lengths to minimize field splicing.
- B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.02 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Expansion joint cover assemblies to withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Expansion Joint Design Criteria:
 1. Type of Movement: Thermal.
 - a. Nominal Joint Width: As indicated on Drawings.
 2. Seismic Movement:
 - a. Joint Movement: As indicated on Drawings.

2.03 WALL AND CEILING EXPANSION JOINT COVERS

- A. Elastomeric-Seal Wall Joint Cover: Assembly consisting of elastomeric seal anchored to frames fixed to sides of joint gap.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide inpro Corporation; 113 Series. or a comparable product by one of the following:
 - a. Balco; a CSW Industrials Company.
 - b. Construction Specialties, Inc.
 - c. MM Systems Corporation.

- d. Nystrom, Inc.
- 2. Application: Wall to wall and Ceiling to Ceiling.
- 3. Exposed Metal:
 - a. Aluminum: Clear anodic, Class I.
- 4. Seal: Flat Santoprene Seal.
 - a. Dual durometer extruded Santoprene with Shore Hardness of 60 Shore A and 40 Shore D to ensure longevity of installation. Single durometer seals shall not be allowed.
 - b. Flat seal must maintain inherent dimensional stability and include structural spine inserts (where applicable) allowing for additional load resistance.
 - c. Color: As selected by Engineer from manufacturer's full range.

2.04 MATERIALS

- A. Aluminum: ASTM B221 (ASTM B221M), Alloy 6063-T5 for extrusions; ASTM B209 (ASTM B209M), Alloy 6061-T6 for sheet and plate.
 - 1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.

2.05 ALUMINUM FINISHES

- A. Mill finish.
- B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

2.06 ACCESSORIES

- A. Manufacturer's stainless steel attachment devices. Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.

- B. Notify Engineer where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.
- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.

3.03 INSTALLATION

- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.
- B. Metal Frames: Perform cutting, drilling, and fitting required to install expansion joint cover assemblies.
 - 1. Repair or grout block out as required for continuous frame support using nonmetallic, shrinkage-resistant grout.
 - 2. Install frames in continuous contact with adjacent surfaces.
 - a. Shimming is not permitted.
 - 3. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 - 4. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation.
 - 5. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
 - 6. Locate anchors at interval recommended by manufacturer, but not less than 3 inches (75 mm) from each end and not more than 24 inches (600 mm) o.c.
- C. Seals: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
 - 1. Provide in continuous lengths for straight sections.

2. Seal transitions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
 3. Installation: Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
- D. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.
 - E. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.
- 3.04 PROTECTION
- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
 - B. Protect the installation from damage by work of other Sections. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion joint cover assemblies. Reinstall cover plates or seals prior to Substantial Completion.

END OF SECTION

SECTION 07 95 13.16

EXTERIOR EXPANSION JOINT COVER ASSEMBLIES

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Exterior expansion joint covers.

1.02 ACTION SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.
 - 1. Exterior expansion joint covers.
- B. Samples for Initial Selection: For each type of exposed finish.
 - 1. Include manufacturer's color charts showing the full range of colors and finishes available for each exposed metal and elastomeric seal material.
- C. Samples for Verification: For each type of expansion joint cover assembly, full width by 6 inches (150 mm) long in size.

1.03 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each fire-resistance-rated expansion joint cover assembly, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.01 ASSEMBLY DESCRIPTION

- A. Furnish units in longest practicable lengths to minimize field splicing.
- B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.02 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Expansion joint cover assemblies shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Expansion Joint Design Criteria:

1. Type of Movement: Thermal.
 - a. Nominal Joint Width: As indicated on Drawings.
2. Seismic Movement:
 - a. Joint Movement: As indicated on Drawings.

2.03 EXTERIOR EXPANSION JOINT COVERS

- A. Preformed Foam Joint Seals: Manufacturer's standard joint seal manufactured from urethane or EVA (ethylene vinyl acetate) foam with minimum density of 10 lb/cu. ft. (160 kg/cu. m) and impregnated with a nondrying, water-repellent agent. Factory produce in precompressed sizes in roll or stick form to fit joint widths based on design criteria indicated, with factory- or field-applied adhesive for bonding to substrates and a silicone cover membrane.
1. Basis-of-Design Product: Subject to compliance with requirements, provide EMSEAL Joint Systems, Ltd; Seismic Colorseal or a comparable product by one of the following:
 - a. Balco; a CSW Industrials Company.
 - b. MM Systems Corporation.
 - c. Nystrom, Inc.
 2. Design Criteria:
 - a. Movement Capability: 100 percent.
 3. Joint Seal Color: As selected by Engineer from full range of industry colors.

2.04 MATERIALS

- A. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.

- B. Notify Engineer where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.

3.03 INSTALLATION

- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.
- B. Preformed Foam Joint Seals: Install in compliance with manufacturer's written instructions. Install with minimum number of end joints.
 - 1. Install each length of seal immediately after removing protective wrapping.
 - 2. Firmly secure compressed joint seals to joint gap side to obtain full bond using exposed pressure-sensitive adhesive or field-applied adhesive as recommended by manufacturer.
 - 3. Do not pull or stretch material. Produce seal continuity at splices, ends, turns, and intersections of joints.
 - 4. For applications at low ambient temperatures, heat foam joint seal material in compliance with manufacturer's written instructions.
- C. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.

3.04 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Protect the installation from damage by work of other Sections.

END OF SECTION

SECTION 08 11 16

ALUMINUM DOORS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Interior and exterior aluminum doors, door frames, and glazing frames. (ALUM-1)

B. Related Requirements:

1. Section 08 14 16 "Flush Wood Doors" for wood doors installed in aluminum frames.
2. Section 08 41 13 "Aluminum-Framed Entrances and Storefronts" for glazed interior and exterior aluminum doors and frames (ALUM-2)

1.02 COORDINATION

- ###### A.
- Coordinate anchorage installation for aluminum frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- ###### B.
- Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.03 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

1. Include construction details, material descriptions, core descriptions, and finishes.

B. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.

6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
 7. Details of anchorages, joints, field splices, and connections.
 8. Details of accessories.
 9. Details of moldings, removable stops, and glazing.
- C. Product Schedule: For aluminum doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Deliver aluminum doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Store aluminum doors and frames under cover at Project site with head up. Place units on minimum 4-inch- (100-mm-) high wood blocking.
- C. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.01 ALUMINUM DOORS AND FRAMES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Special-Lite SL-16 Door and Aluminum Tube Framing or comparable product by one of the following:
 1. Capitol Aluminum and Glass Corp.
 2. Cline Doors
 3. CMI Architectural
 4. Cross Aluminum
 5. Kawneer
- B. Source Limitations: Obtain aluminum doors and frames from single source from single manufacturer.

2.02 ALUMINUM DOORS

- A. Door Thickness: 1-3/4 inches.

B. Stiles and Rails:

1. Aluminum extrusions made from 6063 aluminum alloys with a minimum temper of T5.
2. Minimum 2-5/16 inches deep one-piece extrusion with have integral reglets to accept face sheet on both interior and exterior side of door which secure face sheet into place and permit flush appearance.
3. Screw or snap in place applied caps are not acceptable.
4. Top rails must have integral legs for interlocking continuous extruded aluminum flush cap.
5. Bottom rails must have integral legs for interlocking continuous weather bar with single nylon brush weather stripping or manually adjustable SL-301 door bottom with two nylon brush weather stripping.
6. Meeting stiles to include integral pocket to accept pile brush weather seal.

C. Corners:

1. Mitered.
2. Secured with 3/8-inch diameter full-width steel tie rod through extruded splines top and bottom which are integral to standard tubular shaped rails.
3. 1-1/4 inches x 1-1/4 inches x 3/16-inch 6061 aluminum angle reinforcement at corner to give strong, flat surface for locking hex nut to bear on.
4. Weld, glue, or other methods of corner joinery are not acceptable.

D. Core:

1. Poured-in-place polyurethane foam.
2. Laid in foam cores are not acceptable.
3. Foam Plastic Insulated Doors: IBC 2603.4.
 - a. Foam plastic shall be separated from the interior of a building by an approved thermal barrier.
 - b. Approved thermal barrier must meet the acceptance criteria of the Temperature Transmission Fire Test and Integrity Fire Test as stated in NFPA 275.

- c. IBC 2603.4.1.7 foam plastic insulation, having a flame spread index less than 75 and a smoke developed index of not more than 450 shall be permitted as a door core when the face is metal minimum 0.032" aluminum or 0.016" steel.
- d. Standard door assembly can be tested to show it meets these requirements without the use of thermal barrier. If no independent testing conducted all doors with foam plastic core must have a thermal barrier.

E. Face Sheet:

- 1. Interior and exterior 0.125-inch thick smooth aluminum sheet.
- 2. Attachment of face sheet.
 - a. Extruded stiles and rails to have integral reglets to accept face sheet on both interior and exterior side of door which secure face sheet into place and permit flush appearance.
 - b. Use of glue to bond face sheet to core or extrusions is not acceptable.

F. Hardware:

- 1. Pre-machine doors in accordance with templates from specified hardware manufacturers.
- 2. Surface mounted closures will be reinforced for but not prepped or installed at factory.
- 3. Factory install door hardware.

G. Reinforcements:

- 1. Aluminum extrusions made from 6061 or 6063 aluminum alloys.
- 2. Sheet and plate to conform to ASTM-B209.
- 3. Alloy and temper to be selected by manufacturer for strength, corrosion resistance, and application of required finish, and control of color.
- 4. Bars and tubes to meet ASTM-B221.

2.03 ALUMINUM FRAMES

A. Aluminum Tube Framing with Applied Stops at Interior Doors:

- 1. Materials:
 - a. Aluminum extrusions made 6061 or 6063 aluminum alloys.

- b. Sheet and plate to conform to ASTM-B209.
 - c. Alloy and temper to be selected by manufacturer for strength, corrosion resistance, and application of required finish, and control of color.
- 2. Perimeter Frame Members:
 - a. Box type with 4 enclosed sides.
 - b. Factory fabricated.
 - c. Open-back framing is not acceptable.
- 3. Applied Door Stops:
 - a. 0.125-inch wall thickness, with screws and weather-stripping.
 - b. Provide solid 1/2-inch aluminum bar behind door stop for closer shoe attachment.
 - c. Pressure gasketing for weathering seal.
 - d. Counterpunch fastener holes in door stop to preserve full-metal thickness under fastener head.
- 4. Caulking: Caulk joints before assembling frame members.
- 5. Secure joints with fasteners and provide hairline butt joint appearance.
- 6. Pre-machine and reinforce frame members for hardware in accordance with manufacturer's standards and door hardware schedule. Factory install door hardware.
- 7. Anchors:
 - a. Anchors appropriate for wall conditions to anchor framing to wall materials.
 - b. Door Jamb and Header Mounting Holes: Maximum of 24-inch centers.
 - c. Secure head and sill members of transom, side lites, and similar conditions.
- B. Thermally Broken Aluminum Framing at Exterior Doors:
 - 1. Perimeter Frame Members:
 - a. Storefront frame with thermally broken pocket filler.
 - b. Factory fabricated.

- c. Open-back framing is not acceptable.
- 2. Thermal Strut: Fiber reinforced plastic, no other materials will be accepted.
- 3. Applied Door Stops:
 - a. 0.125-inch wall thickness, with screws and weather-stripping.
 - b. Provide solid 1/2-inch aluminum bar behind door stop for closer shoe attachment.
 - c. Pressure gasketing for weathering seal.
 - d. Counterpunch fastener holes in door stop to preserve full-metal thickness under fastener head.
 - e. Minimum 1/2-inch aluminum bar reinforcement under doorstep for required hardware attachments, aluminum to meet ASTM-B221.
- 4. Caulk joints before assembling frame members.
- 5. Frame Member to Member Connections.
 - a. Secure joints with fasteners.
 - b. Provide hairline butt joint appearance.
 - c. Shear block construction only, no screw spline allowed.
- 6. Pre-machine and reinforce frame members for hardware in accordance with manufacturer's standards and door hardware schedule. Factory install door hardware.
- 7. Anchors:
 - a. Anchors appropriate for wall conditions to anchor framing to wall materials.
 - b. Door Jamb and Header Mounting Holes: Maximum of 24-inch centers.
 - c. Secure head and sill members of transom, side lites, and similar conditions.

2.04 ACCESSORIES

- A. Fasteners: Aluminum, nonmagnetic, stainless steel or other noncorrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.
- B. Glazing Gaskets: Manufacturer's standard extruded or molded rubber or plastic, to accommodate glazing thickness indicated; in black.

- C. Glass: As specified in Section 08 80 00 "Glazing."
- D. Door Hardware: As specified in Section 08 71 00 "Door Hardware."

2.05 FABRICATION

- A. Provide concealed corner reinforcements and alignment clips for accurately fitted hairline joints at butted and mitered connections.
- B. Factory prepare aluminum doors and frames to receive templated mortised hardware; include cutouts, reinforcements, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in Section 08 71 00 "Door Hardware."
 - 1. Locate hardware cutouts and reinforcements as required by fire-rated label for assembly.
- C. Fabricate frames for glazing with removable stops to allow glazing replacement without dismantling frame.
 - 1. Locate removable stops on the inside of spaces accessed by keyed doors.
- D. Fabricate components to allow secure installation without exposed fasteners.

2.06 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.07 ALUMINUM FINISHES

- A. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1. Color: Medium Gray to match ALUM-2

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Verify that wall thickness does not exceed standard tolerances allowed by throat size of indicated aluminum frame.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install aluminum doors and frames plumb, rigid, properly aligned, and securely fastened in place; according to manufacturer's written instructions.
- B. Install frame components in the longest possible lengths with no piece less than 48 inches (1220 mm); components 72 inches (1830 mm) or shorter must be one piece.
 - 1. Use concealed installation clips to produce tightly fitted and aligned splices and connections.
 - 2. Secure clips to extruded main-frame components and not to snap-in or trim members.
 - 3. Do not leave screws or other fasteners exposed to view when installation is complete.
- C. Glass: Install glass according to Section 08 80 00 "Glazing" and aluminum-frame manufacturer's written instructions.
- D. Doors: Install doors aligned with frames and fitted with required hardware.
- E. Door Hardware: Install according to Section 08 71 00 "Door Hardware" and aluminum-frame manufacturer's written instructions.

3.03 ADJUSTING

- A. Inspect installation, correct misalignments, and tighten loose connections.
- B. Doors: Adjust doors to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly, and lubricate as recommended by manufacturer.
- C. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended in writing by frame manufacturer and according to AAMA 609 and AAMA 610.
- D. Touch Up: Repair marred frame surfaces to blend inconspicuously with adjacent unrepaired surface as viewed by Engineer. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

END OF SECTION

SECTION 08 11 19

STAINLESS STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Stainless steel doors and frames.

B. Related Requirements:

1. Section 08 71 00 "Door Hardware" for door hardware for stainless steel doors.

1.02 COORDINATION

- A. Coordinate anchorage installation for stainless steel frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.03 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, and finishes.

B. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.

6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
 7. Details of anchorages, joints, field splices, and connections.
 8. Details of accessories.
 9. Details of moldings, removable stops, and glazing.
- C. Product Schedule: For stainless steel doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For door inspector.
1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
 2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Product Test Reports: For each type of fire-rated stainless steel door and frame assembly and fire-rated borrowed-lite assembly for tests performed by a qualified testing agency indicating compliance with performance requirements.
- C. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

- A. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.06 QUALITY ASSURANCE

- A. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies must meet the qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver stainless steel doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

- C. Store stainless steel doors and frames under cover at Project site with head up. Place units on minimum 4-inch- (100-mm-) high wood blocking.
- D. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, acceptable to authorities having jurisdiction for fire-protection ratings indicated on Drawings, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
- B. Fire-Rated, Borrowed-Lite Frame Assemblies: Assemblies complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing in accordance with NFPA 257 or UL 9.

2.02 STAINLESS STEEL DOORS AND FRAMES

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - 1. AMBICO Limited.
 - 2. Ceco Door; AADG, Inc.; ASSA ABLOY.
 - 3. Curries, AADG, Inc.; ASSA ABLOY Group.
 - 4. DE LA FONTAINE.
 - 5. Steelcraft; Allegion plc.
 - 6. Titan Metal Products.
- B. Construct stainless steel door and frame assemblies to comply with NAAMM-HMMA 866 for the application indicated, including materials, fabrication methods, hardware reinforcement, tolerances, and clearances, and as specified. Comply with SDI ANSI/A250.4, for Physical Performance Level A.

C. Doors and Frames for Highly Corrosive Environments:

1. Stainless Steel Doors:

- a. Type: As indicated in the Door and Frame Schedule on Drawings.
- b. Thickness: 1-3/4 inches (44.5 mm).
- c. Face Sheets: Type 316 stainless steel sheet, minimum thickness 0.050 inch (1.27 mm).
- d. Edge Construction: Continuously welded with no visible seam.
- e. Top and Bottom Edges: Closed with continuous stainless steel channels with minimum thickness of 0.062 inch (1.27 mm), welded to face sheets.
 - (1) Provide flush top and bottom closures for exterior doors, with weep holes at bottom edge.
- f. Fire-Rated Core: Manufacturer's standard vertical steel stiffener or laminated mineral board core for fire-rated doors.

2. Stainless Steel Frames:

- a. Materials: Type 316 stainless steel sheet.
- b. Door Frames for Openings 48 Inches (1219 mm) Wide or Less: Fabricate from stainless steel sheet, minimum thickness 0.062 inch (1.59 mm).
- c. Construction: Full profile welded.

3. Hardware Reinforcement: Stainless steel sheet.

4. Finish: ASTM A480/A480M No. 2B, Bright, Cold-Rolled, Unpolished.

2.03 MATERIALS

- A. Stainless Steel Sheet: ASTM A240/A240M, austenitic stainless steel, Type 316.
- B. Mineral-Fiber Insulation: Insulation made of rock-wool fibers, slag-wool fibers, or glass fibers.
- C. Inserts, Bolts, and Anchor Fasteners:
 - 1. Stainless steel components complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2 for bolts and nuts.

2.04 FRAME ANCHORS

- A. Provide anchors of minimum size and type required by applicable door and frame standard, and suitable for performance level indicated.
- B. Postinstalled Expansion Anchor: Minimum 3/8-inch- (9.5-mm-) diameter bolts with expansion shields or inserts, with manufacturer's standard pipe spacer.
- C. Number and Spacing:
 - 1. Masonry Type: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c.
 - 2. Compression Type: Not less than two anchors in each jamb.
 - 3. Postinstalled Expansion Type: Locate anchors not more than 6 inches (152 mm) from top and bottom of frame. Space anchors not more than 26 inches (660 mm) o.c.
- D. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor.
- E. Material:
 - 1. Stainless steel sheet. Same type as door face.

2.05 FABRICATION

- A. Stainless Steel Door Fabrication: Provide doors rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
 - 1. Tolerances: Fabricate doors to tolerances indicated in NAAMM-HMMA 866.
- B. Stainless Steel Frame Fabrication: Provide stainless steel frames rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
 - 1. Tolerances: Fabricate frames to tolerances indicated in NAAMM-HMMA 866.
 - 2. Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
 - 3. Borrowed-Lite Frames: Fabricate from minimum 0.062-inch- (1.59-mm-) thick, stainless steel sheet.

4. Provide countersunk, flat-, or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 5. Door Silencers: Except on weather-stripped and gasketed frames, drill stops to receive door silencers as follows. Provide plastic plugs to keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 6. Stops and Moldings: Provide stops and moldings formed integrally with stainless steel frames around glazed lites, minimum 5/8 inch (16 mm) high unless otherwise indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 - a. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of door or frame.
 - b. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (51 mm) o.c. from each corner.
 7. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (51 mm) o.c. from each corner.
- C. Hardware Preparation: Factory prepare stainless steel doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping, in accordance with the Door Hardware Schedule on Drawings, and templates.
1. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
 2. Comply with ANSI/BHMA A156.115 for preparing hollow-metal doors and frames for hardware.

2.06 FINISHES

- A. Stainless Steel Finishes: Remove tool and die marks and stretch lines, or blend into finish. Grind and polish surfaces to produce uniform finish, free of cross scratches. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- B. Grain Direction: For finishes exhibiting grain, run grain vertically on door faces and frame jambs.

2.07 ACCESSORIES

- A. Glazing: Comply with requirements in Section 08 80 00 "Glazing."

- B. Mineral-Fiber Insulation: Insulation made of rock-wool fibers, slag-wool fibers, or glass fibers.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation and with installation spreaders in place, adjust and securely brace stainless steel door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - 1. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb, and perpendicular to frame head.
 - 2. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - 3. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - 4. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.02 INSTALLATION

- A. Install stainless steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with approved Shop Drawings and with manufacturer's written instructions.
- B. Stainless Steel Frames:
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, without damage to completed Work.
 - a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - b. Install frames with removable glazing stops located on secure side of opening.

2. Fire-Rated Openings: Install frames in accordance with NFPA 80.
3. Floor Anchors: Secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
4. Solidly pack mineral-fiber insulation inside frames.
5. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors.
6. 6. Installation Tolerances: Adjust stainless steel frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb, and perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs at floor.

C. Stainless Steel Doors: Fit and adjust stainless steel doors accurately in frames within clearances specified below:

1. Fire-Rated Doors: Install doors with clearances in accordance with NFPA 80.

D. Glazing: Install glazing in borrowed lites to comply with installation requirements in Section 08 80 00 "Glazing."

3.03 FIELD QUALITY CONTROL

- A. Inspection Agency: Engage a qualified inspector to perform inspections and to furnish reports to Engineer.
- B. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.

- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80.

3.04 ADJUSTING AND CLEANING

- A. Clean grout and other bonding material off stainless steel doors and frames immediately after installation.
- B. Stainless Steel Touchup: Immediately after erection, smooth any scratched or damaged areas of stainless steel; polish to match undamaged finish.

END OF SECTION

SECTION 08 14 16
FLUSH WOOD DOORS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Solid-core five-ply flush wood veneer-faced doors for transparent finish.

B. Related Requirements:

1. Section 08 11 16 "Aluminum Doors and Frames" for aluminum door frame systems.

1.02 ACTION SUBMITTALS

A. Product Data Submittals: For each product, including the following:

1. Door core materials and construction.
2. Door edge construction
3. Door face type and characteristics.
4. Factory- finishing specifications.

B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each type of door; construction details not covered in Product Data; and the following:

1. Door schedule indicating door location, type, size, fire protection rating, and swing.
2. Door elevations, dimension and locations of hardware, lite and louver cutouts, and glazing thicknesses.
3. Details of frame for each frame type, including dimensions and profile.
4. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
5. Dimensions and locations of blocking for hardware attachment.
6. Dimensions and locations of mortises and holes for hardware.
7. Clearances and undercuts.
8. Doors to be factory finished and application requirements.

- C. Samples for Initial Selection: For factory-finished doors.
- D. Samples for Verification:
 - 1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches (200 by 250 mm), for each material and finish. For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For door inspector.
 - 1. Egress Door Inspector: Submit documentation of compliance with NFPA 101, Section 7.2.1.15.4.
 - 2. Submit copy of DHI's Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Field quality-control reports.
- C. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

- A. Special warranties.

1.05 QUALITY ASSURANCE

- A. Egress Door Inspector Qualifications: Inspector for field quality-control inspections of egress door assemblies complies with qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
 - 1. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in plastic bags or cardboard cartons.
- C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.07 FIELD CONDITIONS

- A. Environmental Limitations:
 - 1. Do not deliver or install doors until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and HVAC system is operating and maintaining

temperature and relative humidity at levels designed for building occupants for the remainder of construction period.

1.08 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Delamination of veneer.
 - b. Warping (bow, cup, or twist) more than 1/4 inch (6.4 mm) in a 42-by-84-inch (1067-by-2134-mm) section.
 - c. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch (0.25 mm in a 76.2-mm) span.
2. Warranty also includes installation and finishing that may be required due to repair or replacement of defective doors.
3. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain flush wood doors from single manufacturer.

2.02 SOLID-CORE FIVE-PLY FLUSH WOOD VENEER-FACED DOORS AND TRANSOM PANELS FOR TRANSPARENT FINISH

A. Interior Doors, Solid-Core Five-Ply Veneer-Faced:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Lambton Doors.
 - b. Lynden Door, Inc.
 - c. Masonite Architectural.
 - d. VT Industries, Inc.
2. Performance Grade: ANSI/WDMA I.S. 1A Extra Heavy Duty.

3. Architectural Woodwork Standards Quality Grade: Premium.
4. Faces: Single-ply wood veneer not less than 1/50 inch (0.508 mm) thick.
 - a. Species: White oak or Walnut.
 - b. Cut: Plain sliced (flat sliced).
 - c. Match between Veneer Leaves: Slip match.
5. Exposed Vertical and Top Edges: Same species as faces or a compatible species - Architectural Woodwork Standards edge Type A.
6. Core for Non-Fire-Rated Doors:
 - a. Either glued wood stave or WDMA I.S. 10 structural composite lumber.
7. Construction: Five plies, hot-pressed bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.

2.03 FABRICATION

- A. Factory fit doors to suit frame-opening sizes indicated.
 1. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
- B. Factory machine doors for hardware that is not surface applied.
 1. Locate hardware to comply with DHI-WDHS-3.
 2. Comply with final hardware schedules, door frame Shop Drawings, ANSI/BHMA-156.115-W, and hardware templates.
 3. Coordinate with hardware mortises in metal frames, to verify dimensions and alignment before factory machining.

2.04 FACTORY FINISHING

- A. Comply with referenced quality standard for factory finishing.
 1. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 2. Finish faces, all four edges, edges of cutouts, and mortises.
 3. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.

- B. Factory finish doors.
- C. Transparent Finish:
 - 1. Architectural Woodwork Standards Grade: Premium.
 - a. System-5, Varnish, Conversion.
 - 2. Staining: Match plastic laminate finish on cabinets.
 - 3. Sheen: Satin.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine doors and installed door frames, with Installer present, before hanging doors.
 - 1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Hardware: For installation, see Section 08 71 00 "Door Hardware."
- B. Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
- C. Job-Fitted Doors:
 - 1. Align and fit doors in frames with uniform clearances and bevels as indicated below.
 - a. Do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors.
 - 2. Machine doors for hardware.
 - 3. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
 - 4. Clearances:
 - a. Provide 1/8 inch (3.2 mm) at heads, jambs, and between pairs of doors.

- b. Provide 1/8 inch (3.2 mm) from bottom of door to top of decorative floor finish or covering unless otherwise indicated on Drawings.
 - c. Where threshold is shown or scheduled, provide 1/4 inch (6.4 mm) from bottom of door to top of threshold unless otherwise indicated.
 - d. Comply with NFPA 80 for fire-rated doors.
5. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock and hinge edges.

3.03 FIELD QUALITY CONTROL

- A. Inspection Agency: Engage a qualified inspector to perform inspections and to furnish reports to Engineer.
- B. Inspections:
 - 1. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements in accordance with NFPA 101, Section 7.2.1.15.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.

3.04 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 08 16 13
FIBERGLASS DOORS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:

1. Fiberglass Reinforced Polyester (FRP) doors and frames.

B. Related Requirements:

1. Section 08 71 00 "Door Hardware" for door hardware for FRP doors.

1.02 COORDINATION

- A. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.03 ACTION SUBMITTALS

- A. Product Data: Provide catalog cut of FRP door detailing internal construction and reinforcements, materials used and description of molding process.

B. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical- and horizontal-edge details and material thicknesses.
3. Frame details for each frame type, including dimensioned profiles and material thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
7. Details of anchorages, joints, field splices, and connections.
8. Details of accessories.

- C. Samples for Initial Selection: Provide a complete set of available finish colors from the manufacturer for color selection upon request.
- D. Samples for Verification:
 - 1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches (75 by 127 mm).

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Deliver FRP doors and frames to jobsite in adequate crating with foam sheet separations between all components.
- B. Store FRP doors and frames indoors in a vertical position, clear of the floor, with blocking between the doors to permit air circulation between the doors and prevent damage to the door faces. Rain/water or condensation must not be allowed to collect or lay between stored doors. Do not wrap in plastic sheeting as it will promote condensation formation within. Permanent discoloration can result.
- C. Handle FRP doors and frames with care, to prevent damage to factory finishes. Wear protective gloves and do not slide or drag doors or frames against one another.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. Chem-Pruf.
 - 2. Cline Doors.
 - 3. CORRIM Company.
 - 4. Edgewater FRP Doors.
 - 5. Special-Lite.
 - 6. Tiger Door.

2.02 FRP DOORS AND FRAMES

- A. Heavy Duty FRP Doors:
 - 1. Design: FRP doors shall be of seamless press-molded construction. Laminated FRP face sheets shall be applied while wet and uncured to an internal door stile and rail subframe/core assembly and then press-molded under heat and pressure. The

composite door panel must be integrally fused over its entire surface area, not just adhesive-bonded at perimeter stiles and rails. Doors shall remain under pressure during curing for flat, warp-free surfaces.

2. Stiles & Rails: A high-modulus pultruded FRP square or rectangular tube subframe is to be provided within the door.
 - a. Tubes are to be mitered and joined internally at the corners with solid polymer blocks to yield a one-piece unit that does not require any secondary external sealing.
 - b. Provide a tubular midrail across width of door at lock height, and additional horizontal rails where specific design conditions dictate.
 - c. Doors shall incorporate molded-in FRP edge strips, chemically bonded to the subframe stiles, for machining of hardware mortises so as not to cut or otherwise compromise the integrity of the pultruded stiles, nor allow moisture to penetrate into the core of the door.
 - d. All connections shall be chemically welded. No mechanical fasteners will be allowed.
 - e. The use or inclusion of aluminum, steel, gypsum or wood into stile and rail construction is not permitted.
3. Core: Triangular shaped 3/8-inch cell phenolic resin impregnated kraft paper honeycomb core shall be used. Molding pressure and resin gel time shall be sufficient to allow for penetration of resin into the cellular structure of the core to maximize shear and peel strengths at the skin/core interface and eliminate the possibility of delamination. Enclose honeycomb core completely within the stile and rail subframe.
 - a. Polypropylene plastic honeycomb core with a non-woven polyester veil and 2 lb. Polyisocyanurate Foam can be used. Use of balsa wood is not permitted.
4. Internal Reinforcement: High-modulus pultruded tubular FRP, high-density polymer compression blocks, or plastic compression blocking at all hardware locations, and corner locations. No wood blocking, steel or aluminum reinforcing plates, ribs or fittings shall be used. A minimum of 900 lbs of pullout strength is required for each factory supplied hinge screw.
5. Faces: Door facings shall utilize a chemical resistant thermosetting polyester resin system with fiber reinforcing layers. Supplier shall furnish door faces as shown on the drawings and in the door elevations. Chopped strand mat layers shall be used to provide bond integrity between gelcoat, laminated facings and the internal door structure. Structural reinforcement shall be in the form of a knitted multi-layer material with layers of uni-directional glass fiber oriented in both the vertical and horizontal directions for high stiffness, impact resistance and resistance to warping.

Gelcoat surface integrally molded to be 25/30 mils thick (wet) ultra-violet light stabilized marine grade NPG-isophthalic polyester gelcoat.

6. Finish: The exposed FRP door faces shall have a 3-4 mils (wet) factory applied two-part aliphatic polyurethane fully cured coating of industrial urethane. Coating shall have a minimum hardness of H to 2H. Finish shall be a slightly textured semi-gloss to minimize the visual effects of wear and tear.

- a. Color: To be selected by Engineer from manufacturer's full range.

B. FRP Frames:

1. Design: High-modulus pultruded structural FRP shape. The frame section shall be standard double rabbeted with integral doorstop, to match typical hollow metal configurations.
2. Corner Joints: Frame jambs and header shall be joined at corners via miter connections with hidden FRP angle clips and associated fasteners. Post and beam corners will not be acceptable.
3. Hardware Reinforcements: FRP reinforcing shall be chemically welded to door frame material at required locations. Minimum screw pullout strength of 1100 lb per #12 x 1-1/4" sheet metal screw is required. Mechanically fastened reinforcements are not permitted.
4. Anchors:
 - a. Bolt-In: Provide manufacturer's required number size, and type of stainless steel sleeve anchors for openings. Include extra anchors for additional frame height in two foot increments above 8'-0". Provide single bolt anchor at center of all headers over four feet in nominal width.
 - b. Grout-In: Provide manufacturer's required number of wire or strap type masonry anchors for installation into block wall. Fill frame cavity with grout.
5. Finish: Frames shall have a 3-4 mils (wet) factory applied two-part aliphatic polyurethane fully cured coating of industrial urethane. Industrial urethane chemical coating color topcoat, to match the color and sheen of the doors, for superior weatherability. Gelcoat may not be sprayed onto the frame as a secondary coating.
 - a. Color: To be selected by Engineer from manufacturer's full range.

2.03 FASTENERS

- A. All fasteners for all hardware shall be type 304 CRSS (18-8 series corrosion resistant stainless steel) with no exception. No carbon steel or aluminum components shall be used.

2.04 FABRICATION

- A. Hardware Preparation: Factory prepare FRP doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping in accordance with manufacturer, the Door Hardware Schedule, and templates.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Frames: Install in strict accordance with manufacturer's printed instructions. Set plumb and square, using shims for bolt-in of existing openings, or wood bracing prior to grouting of jambs. Use at least two 2x6 wood spreaders inside frame to maintain critical opening dimensions during grouting.
- B. Doors: Hang per manufacturer's printed instructions using special screws provided for hinge attachment. Install doors to swing freely and to stand open at any angle. After installation make final adjustments to hardware to allow for proper door operation and latching. All surface applied hardware shall be thru bolted.

END OF SECTION

SECTION 08 31 13

ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Access doors and frames in walls.

B. Related Requirements:

1. Section 07 72 00 "Roof Accessories" for roof hatches.
2. Section 05 53 00 "Metal Grating, Cover Plates, and Access Hatches" for doors installed in floors.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches (150 by 150 mm) in size.

PART 2 - PRODUCTS

2.01 ACCESS DOORS AND FRAMES

A. Flush Access Doors with Exposed Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACUDOR Products, Inc.
 - b. Babcock-Davis.
 - c. J. L. Industries, Inc.; Activar Construction Products Group, Inc.
 - d. Karp Associates, Inc.
 - e. Larsen's Manufacturing Company.

- f. Milcor; Hart & Cooley, Inc.
 - g. Nystrom, Inc.
- 2. Description: Face of door flush with frame, with exposed flange and concealed hinge.
- 3. Optional Features: Masonry anchors.
- 4. Locations: Wall.
- 5. Door Size: Refer to Door Schedule on Drawings.
- 6. Metallic-Coated Steel Sheet for Door: Nominal 0.064 inch (1.63 mm), 16 gage, factory finished.
- 7. Frame Material: Same material, thickness, and finish as door.
- 8. Latch and Lock: Cam latch, screwdriver operated with interior release.

2.02 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.
- C. Frame Anchors: Same material as door face.
- D. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A153/A153M or ASTM F2329.

2.03 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.

2.04 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Factory Finished: Apply manufacturer's standard baked-enamel or powder-coat finish immediately after cleaning and pretreating, with minimum dry-film thickness of 1 mil (0.025 mm) for topcoat.
 - a. Color: As selected by Engineer from full range of industry colors.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.

3.03 ADJUSTING

- A. Adjust doors and hardware, after installation, for proper operation.
- B. Frames: Install in strict accordance with manufacturer's printed instructions. Set plumb and square, using shims for bolt-in of existing openings, or wood bracing prior to grouting of jambs. Use at least two 2x6 wood spreaders inside frame to maintain critical opening dimensions during grouting.
- C. Doors: Hang per manufacturer's printed instructions using special screws provided for hinge attachment. Install doors to swing freely and to stand open at any angle. After installation make final adjustments to hardware to allow for proper door operation and latching. All surface applied hardware shall be thru bolted.

END OF SECTION

SECTION 08 33 13
COILING COUNTER DOORS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fire-rated counter door assemblies.

1.02 ACTION SUBMITTALS

A. Product Data: For each type and size of coiling counter door and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, and furnished accessories.
3. Include description of automatic closing device and testing and resetting instructions.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. Show locations of controls, locking devices, detectors or replaceable fusible links, and other accessories.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, section 5.2.3.1.
2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For coiling counter doors to include in maintenance manuals.
- B. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
- B. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies is to meet the qualifications set forth in NFPA 80, section 5.2.3.1 and the following:
 - 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain coiling counter doors from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Complying with NFPA 80; listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.

2.03 FIRE-RATED COUNTER DOOR ASSEMBLY

- A. Fire-Rated Counter Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C.H.I. Overhead Doors, Inc.
 - b. Clopay Building Products.
 - c. Cookson; a CornellCookson company.
 - d. Cornell; a CornellCookson company.

- e. McKeon Door Company.
 - B. Operation Cycles: Door components and operators capable of operating for not less than 20,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
 - 1. Include tamperproof cycle counter.
 - C. Fire Rating: 3 hours.
 - D. Door Curtain Material: Stainless steel.
 - E. Door Curtain Slats: Flat profile slats of 1-1/2-inch (38-mm) center-to-center height.
 - F. Curtain Jamb Guides: Stainless steel with exposed finish matching curtain slats.
 - G. Hood: Stainless steel.
 - 1. Shape: As indicated on Drawings.
 - 2. Mounting: Face of wall.
 - H. Sill Configuration: No sill.
 - I. Manual Door Operator: Push-up operation.
 - J. Door Finish:
 - 1. Stainless Steel Finish: ASTM A480/A480M No. 4 (polished directional satin).
- 2.04 MATERIALS, GENERAL
- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 2.05 DOOR CURTAIN MATERIALS AND FABRICATION
- A. Door Curtains: Fabricate coiling counter door curtain of interlocking metal slats in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
 - 1. Stainless Steel Door Curtain Slats: ASTM A240/A240M or ASTM A666, Type 304; sheet thickness of 0.025 inch (0.64 mm); and as required.
 - B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading.

Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.

2.06 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
 - 1. Stainless Steel: 0.025-inch- (0.64-mm-) thick, stainless steel sheet, Type 304, complying with ASTM A240/A240M or ASTM A666.
 - 2. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.

2.07 CURTAIN ACCESSORIES

- A. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
- B. Automatic-Closing Device: Equip each fire-rated door with an automatic-closing device or holder-release mechanism and governor unit complying with NFPA 80 and an easily tested and reset release mechanism. Testing for manually operated doors allows resetting by opening the door without retensioning the counterbalance mechanism. Automatic-closing device is to be designed for activation by the following:
 - 1. Replaceable fusible links with temperature rise and melting point of 165 deg F (74 deg C) interconnected and mounted on both sides of door opening.

2.08 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.

1. Fire-Rated Doors: Equip with auxiliary counterbalance spring and prevent tension release from main counterbalance spring when automatic closing device operates.
 - D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
 - E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.
- 2.09 MANUAL DOOR OPERATORS
- A. General: Equip door with manual door operator by door manufacturer.
 - B. Push-up Door Operation: Design counterbalance mechanism so that required lift or pull for door operation does not exceed 25 lbf (111 N).
- 2.10 GENERAL FINISH REQUIREMENTS
- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
 - B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- 2.11 STAINLESS STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 3. Directional Satin Finish: ASTM A480/A480M No. 4.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Install coiling counter doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install coiling counter doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Fire-Rated Doors: Install according to NFPA 80.

3.03 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, section 5.2.
- B. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- C. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- D. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80.

3.04 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.05 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain coiling counter doors.

END OF SECTION

SECTION 08 33 23
OVERHEAD COILING DOORS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Insulated service doors.
2. Fire-rated service doors.

B. Related Requirements:

1. Section 05 50 00 "Metal Fabrications" for miscellaneous steel supports, door-opening framing, corner guards, and bollards.

1.02 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
3. Include description of automatic-closing device and testing and resetting instructions.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.

5. Show locations of controls, locking devices, detectors or replaceable fusible links, and other accessories.
 6. Include diagrams for power, signal, and control wiring.
- C. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
1. Curtain slats.
 2. Locking device(s).
 3. Include similar Samples of accessories involving color selection.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and testing and inspecting agency.
1. Fire-Rated Door Inspector: Submit documentation of compliance with NFPA 80, Section 5.2.3.1.
 2. Submit copy of DHI Fire and Egress Door Assembly Inspector (FDAI) certificate.
- B. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.
- C. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

- A. Special warranty.
- B. Maintenance Data: For overhead coiling doors to include in maintenance manuals.
- C. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
- B. Fire-Rated Door Inspector Qualifications: Inspector for field quality control inspections of fire-rated door assemblies is to meet the qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.

- 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.

- 1. Obtain operators and controls from overhead coiling-door manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Complying with NFPA 80; listed and labeled by qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.

- 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

- B. Structural Performance, Exterior Doors: Capable of withstanding the following design wind loads:

- 1. Design Wind Load: As indicated on Drawings.
 - 2. Testing: According to ASTM E330/E330M.
 - 3. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
 - 4. Operability under Wind Load: Design overhead coiling doors to remain operable under uniform pressure (velocity pressure) of 20-lbf/sq. ft. (960-Pa) wind load, acting inward and outward.

- C. Seismic Performance: Overhead coiling doors are to withstand the effects of earthquake motions determined according to ASCE/SEI 7.

- 1. Component Importance Factor: 1.0.

2.03 DOOR ASSEMBLY

- A. Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Overhead Door Corporation; RapidSlat Model 626 Stormtite or a comparable product by one of the following:
 - a. C.H.I. Overhead Doors, Inc.
 - b. Clopay Building Products.
 - c. Cookson; a CornellCookson company.
- B. Operation Cycles: Door components and operators capable of operating for not less than 20,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
- C. Air Infiltration: Maximum rate of 1.0 cfm/sq. ft. (5.1 L/s per sq. m) at 15 and 25 mph (24.1 and 40.2 km/h) when tested according to ASTM E283.
- D. Insulated Door Curtain R-Value: 7.7 deg F x h x sq. ft./Btu.
- E. Insulated Door Assembly U-Factor: 0.13 Btu/deg F x h x sq. ft.
- F. Door Curtain Material: Galvanized steel.
- G. Door Curtain Slats: Flat profile slats of 2-5/8-inch (67-mm) center-to-center height.
 - 1. Insulated-Slat Interior Facing: Metal.
 - 2. Gasket Seal. Manufacturer's standard continuous gaskets between slats.
- H. Bottom Bar: Two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch (38 by 38 by 3 mm) thick; fabricated from stainless steel.
- I. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats.
- J. Hood: Galvanized steel.
 - 1. Shape: As indicated on Drawings.
 - 2. Mounting: Face of wall.
- K. Locking Devices: Equip door with locking device assembly and chain lock keeper.
 - 1. Locking Device Assembly: Single-jamb side locking bars, operable from.

L. Electric Door Operator:

1. Usage Classification: Light duty, up to 10 cycles per hour.
2. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; moving parts of operator enclosed or guarded if exposed and mounted at 8 ft. (2.44 m) or lower.
3. Motor Exposure: Exterior, wet, and humid.
4. Motor Electrical Characteristics:
 - a. Horsepower: As required by manufacturer based on door size.
 - b. Voltage: 480V AC, 3-phase.
5. Emergency Manual Operation: Chain type.
6. Obstruction-Detection Device: Automatic photoelectric sensor.
7. Control Station(s): Interior mounted.

M. Curtain Accessories: Equip door with weatherseals.

N. Door Finish:

1. Baked-Enamel or Powder-Coated Finish: Color as selected by Engineer from manufacturer's full range.

2.04 FIRE-RATED DOOR ASSEMBLY

A. Fire-Rated Service Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Overhead Door Corporation; Model 630 or a comparable product by one of the following:
 - a. C.H.I. Overhead Doors, Inc.
 - b. Clopay Building Products.
 - c. Cornell; a CornellCookson company.

B. Operation Cycles: Door components and operators capable of operating for not less than 20,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

C. Fire Rating: 3 hours.

- D. Door Curtain Material: Galvanized steel.
- E. Door Curtain Slats: Flat profile slats of 2-5/8-inch (67-mm) center-to-center height.
- F. Bottom Bar: Two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch (38 by 38 by 3 mm) thick; fabricated from stainless steel.
- G. Curtain Jamb Guides: Stainless steel with exposed finish matching curtain slats.
- H. Hood: Match curtain material and finish.
 - 1. Mounting: Face of wall.
- I. Locking Devices: Equip door with locking device assembly.
 - 1. Locking Device Assembly: Single-jamb side locking bars, operable from inside with thumbturn.
- J. Manual Door Operator: Chain-hoist operator.
- K. Curtain Accessories: Equip door with smoke seals, automatic-closing device and push/pull handles.
- L. Door Finish:
 - 1. Baked-Enamel or Powder-Coated Finish: Color as selected by Engineer from manufacturer's full range.

2.05 MATERIALS, GENERAL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.06 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
 - 1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural-steel sheet; complying with ASTM A653/A653M, with G90 (Z275) zinc coating; nominal sheet thickness (coated) of 0.028 inch (0.71 mm); and as required.
 - 2. Stainless Steel Door Curtain Slats: ASTM A240/A240M or ASTM A666, Type 304; sheet thickness of 0.025 inch (0.64 mm); and as required.

3. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723. Enclose insulation completely within slat faces.
 4. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face, with minimum steel thickness of 0.010 inch (0.25 mm).
- B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.

2.07 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
1. Galvanized Steel: Nominal 0.028-inch- (0.71-mm-) thick, hot-dip galvanized-steel sheet with G90 (Z275) zinc coating, complying with ASTM A653/A653M.
 2. Stainless Steel: 0.025-inch- (0.64-mm-) thick, stainless steel sheet, Type 304, complying with ASTM A240/A240M or ASTM A666.
 3. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
 4. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.
- B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.08 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
- C. Chain Lock Keeper: Suitable for padlock.

- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.09 CURTAIN ACCESSORIES

- A. Smoke Seals: Equip each fire-rated door with replaceable smoke-seal perimeter gaskets or brushes for smoke and draft control as required for door listing and labeling by a qualified testing agency.
- B. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.
 - 1. At door head, use 1/8-inch- (3-mm-) thick, replaceable, continuous-sheet baffle secured to inside of hood or field-installed on the header.
 - 2. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8-inch- (3-mm-) thick seals of flexible rubber or neoprene.
- C. Automatic-Closing Device: Equip each fire-rated door with an automatic-closing device or holder-release mechanism and governor unit complying with NFPA 80 and an easily tested and reset release mechanism. Testing for manually operated doors allows resetting by opening the door without retensioning the counterbalance mechanism. Automatic-closing device is to be designed for activation by the following:
 - 1. Replaceable fusible links with temperature rise and melting point of 165 deg F (74 deg C) interconnected and mounted on both sides of door opening.

2.10 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
 - 1. Fire-Rated Doors: Equip with auxiliary counterbalance spring and prevent tension release from main counterbalance spring when automatic-closing device operates.

- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.11 MANUAL DOOR OPERATORS

- A. General: Equip door with manual door operator by door manufacturer.
- B. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum 25-lbf (111-N) force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.

2.12 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
 - 1. Comply with NFPA 70.
 - 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door Operator Location(s): Operator location indicated for each door.
 - 1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
- D. Motors: Reversible-type motor for motor exposure indicated for each door assembly.
 - 1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. (203 mm/s) and not more than 12 in./sec. (305 mm/s), without exceeding nameplate ratings or service factor.
 - 2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 - 3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel. For fire-rated doors, activation delays closing.
 - 1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
 - 1. Exterior-Rated Units: Full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf (111 N).
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

2.13 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.14 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.15 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M No. 2B.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with the accessibility standard.
- D. Fire-Rated Doors: Install according to NFPA 80.
- E. Power-Operated Doors: Install according to UL 325.

3.03 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and to furnish reports to Engineer.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.
 2. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80.

3.04 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.05 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
1. Adjust exterior doors and components to be weather resistant.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.06 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION

SECTION 08 34 19
INDUSTRIAL SWING DOORS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section include paired, monorail, industrial swing doors.

1.02 ACTION SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
 - 1. Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
 - 3. Installation instructions.
- B. Shop Drawings: Provide shop drawings showing layout, profiles, and product components, including anchorage, hardware, and finishes. Include dimensional plans, applicable material specifications, elevations and sections detailing mounting and connections.
- C. Calculations: Upon signed finalization and approval of dimensions, mounting location material and configuration, and load requirements;
 - 1. Submit stamped calculations by a registered professional engineer from within the state or territory where the project will be constructed or substantially improved, to verify the door's ability to withstand the design loading.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer and welder.
- B. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

1.04 CLOSEOUT SUBMITTALS

- A. Provide Operation and Maintenance data to include methods for maintaining installed products, precautions against cleaning materials and methods detrimental to finishes and performance.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Manufacturer must demonstrate a minimum of five years successful experience in design and manufacture of similar related closures. Upon request,

provide supporting evidence including list of installations, descriptions, name, and method of contact.

- B. Welder Qualifications: Welders Certified in accordance with American Welding Society Procedures: AWS-1-GMAW-S, WPS No. B2.004.90 for applicable material used in production of specified product.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging container with identification labels intact until ready for installation.
- B. Protect materials from exposure to moisture.
- C. Store materials in a dry, warm, ventilated, weather-tight location. If outdoor storage is required, block materials to store at an incline, to prevent pooling of any moisture and promote runoff. Tarp materials in a tent-like arrangement, elevated above the product with open sides to allow airflow. Store all other hardware in a dry controlled environment.
- D. Use caution when unloading and handling product to avoid bending, denting, crushing, or other damage to the product.
- E. When using forklifts, use forks of proper length to fully support product being moved. Consult shop drawings or consult with factory for proper lift points.

1.07 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 COORDINATION

- A. Coordinate work with other operations and installation of adjacent materials to avoid damage.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with the requirements, provide Monorail Door by PS Access Solutions or comparable product from one of the following:
 - 1. HMF Express.
 - 2. Fleming Steel Door Company.

2.02 DOORS AND FRAMES

- A. Door Sections: Sections shall be, at a minimum, nominal 1-5/8 inch thick, fabricated with a welded internal frame, 16 gauge sheeting on the interior and exterior, welded in place. Insulate voids between internal door framing and door sheeting, full depth of cavity.
- B. Frame: Frames shall be fabricated from formed steel shapes and sized as shown on the drawings. Provide anchor preps as indicated on the drawings, or embedment ties where the frames will be integral to the wall. Threshold to be of custom design, fabricated from 12 gauge 304-2B stainless steel, and factory welded to frame. Prepare threshold for countersunk anchors at 14 inch centers maximum.
- C. Hinges: Sized to the requirements of the door, but at a minimum: Pintles of 3/8" diameter, 3/16" thick mounting flanges and barrel. Provide a minimum of three (3) hinges per jamb on doors up to 8 ft. high, four (4) hinges up to 12 ft. high, five (5) hinges up to 16 ft. high. Hinges shall be furnished with thrust bearings and grease fittings. Hinges to be prepped for jamb mounting by bolting or welding.
- D. Latching: Latch to be single point, gravity type bar latch. Latch to be lever operated from both sides of door. Provide beveled strike and keeper for automatic latching. Finish on latch to be gray enamel. See Options for additional latching information.
- E. Weatherseals: Seals at head, jambs, and sill to be nylon filament brush in a mill finish aluminum retainer.
- F. Include Monorail Notches, sized to requirements, with weatherseals to match.

2.03 MATERIALS

- A. Industrial Swing Door Panel:
 - 1. Steel: Structural or formed steel shapes conforming to ASTM A 36; tubing conforming to ASTM A 500 Grade B, ASTM A 513; bars conforming to ASTM A 36, M1020; of appropriate size and strength with welded construction.
- B. Door Panel Sheeting: Panel to be sheeted with galvanealed steel sheeting or plate, Commercial Quality-Low Carbon ASTM-A-569, ASTM-A-366, ASTM-A-36 welded in place. Optional materials include Stainless Steel (304 or 316).
 - 1. Steel: Commercial Quality-Low Carbon steel conforming to ASTM A 569, ASTM A 366, ASTM A 36; of appropriate size and strength with welded construction.
- C. Weatherseals to be compressible rubber type or brush, typically EPDM and Nylon Brush Seal unless otherwise noted, and to be field replaceable.
- D. Frame: To include jamb and head members for field locating and installation on structure. Jamb members to be designed and fabricated with appropriate material as required for the loading.

1. Steel: Structural or formed steel shapes conforming to ASTM A 36 of appropriate size and strength.
- E. Frame Mounting Hardware: Provide anchors, as required.
- F. Operating Hardware: Provide hardware sized for the size and weight of the industrial sliding door. Hardware to be factory located as practical. Latching hardware to be as indicated on Drawings. Doors to be factory prepared for applicable latching devices.
- G. Steel Shop Finish: Apply in accordance with manufacturer recommendations and instructions.
 1. Primer: One shop coat of manufacturer's standard shop primer (S-W Kemflash Primer E61-R-26).
 2. Topcoat: One shop coat of Standard Industrial Enamel (S-W Industrial Coatings B54 Series)
 3. Color: As selected by the Engineer from the full range.

2.04 FABRICATION

- A. Fit and shop assemble items in largest practical sections, for delivery to site.
- B. Fabricate items with joints tightly fitted and secured.
- C. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Engineer of unsatisfactory preparation before proceeding.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

- A. Install in accordance with manufacturer's installations instructions, approved shop drawings, shipping, handling, and storage instructions, and product carton instructions for installation.

END OF SECTION

SECTION 08 34 73.13

METAL SOUND CONTROL DOOR ASSEMBLIES

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes metal sound control door assemblies.

1.02 COORDINATION

- A. Coordinate installation of anchorages for sound control door assemblies. Furnish setting drawings, templates, and directions for installing anchorages. Deliver sleeves, inserts, anchor bolts, and items with integral anchors to Project site in time for installation.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include sound ratings, construction details, material descriptions, core descriptions, and finishes.
- B. Shop Drawings: For sound control door assemblies.
 - 1. Include elevations of each door design.
 - 2. Include details of sound control seals, door bottoms, and thresholds.
 - 3. Include details of doors, including vertical- and horizontal-edge details and metal thicknesses.
 - 4. Include frame details for each frame type, including dimensioned profiles and metal thicknesses.
 - 5. Include locations of reinforcements and preparations for hardware.
 - 6. Include details of each different wall opening condition.
 - 7. Include details of anchorages, joints, field splices, and connections.
 - 8. Include details of accessories.
 - 9. Include details of conduits and preparations for power, signal, and control systems.
- C. Schedule: Provide a schedule of sound control door assemblies prepared using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Product Certificates: For each type of sound control door assembly.
- C. Product Test Reports: For each sound control door assembly, for tests performed by a qualified testing agency.
- D. Sample Warranty: For manufacturer's special warranties.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sound control door assemblies to include in maintenance manuals.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Avoid the use of nonvented plastic.
 - 1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store doors and frames vertically under cover at Project site with head up. Place on minimum 4-inch- (102-mm-) high wood blocking. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

1.08 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of sound control door assemblies that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure to meet sound rating requirements.
 - b. Faulty operation of sound seals.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use or weathering.
 - 2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Sound Rating: Provide sound control door assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum rating:
 - 1. STC Rating: 52 as calculated by ASTM E413 when tested in an operable condition according to ASTM E90.
- B. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

2.02 STEEL SOUND CONTROL DOORS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - 1. AMBICO Limited.
 - 2. IAC Acoustics.
 - 3. Krieger Specialty Products Company.
 - 4. Noise Barriers, LLC.
 - 5. Overly Door Company.
- B. Source Limitations: Obtain steel sound control door assemblies, including doors, frames, sound control seals, hinges, thresholds, and other items essential for sound control, from single source from single manufacturer.
- C. Doors: Flush-design sound control doors, 1.875 inches (48 mm) thick, of seamless construction; with manufacturer's standard sound-retardant core as required to provide STC and fire rating indicated. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces or stile edges. Fabricate according to NAAMM-HMMA 865.
 - 1. Exterior Doors: Fabricate from metallic-coated steel sheet 0.052-inch (1.32-mm) nominal thickness or thicker as required to provide STC rating indicated.
 - 2. Interior Doors: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.048-inch (1.21-mm) nominal thickness or thicker as required to achieve STC rating indicated.
 - 3. Core: Manufacturer's standard sound control core.

4. Top and Bottom Channels: Closed with continuous channels of same material as face sheets, spot welded to face sheets not more than 6 inches (152 mm) o.c.
5. Hardware Reinforcement: Same material as face sheets.

D. Materials:

1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B, with G60 (Z180) zinc (galvanized) or A40 (ZF120) zinc-iron-alloy (galvannealed) coating designation.

E. Finishes:

1. Factory-Applied Paint Finish: Manufacturer's standard primer and finish coats, complying with SDI A250.3 for performance and acceptance criteria.
2. Color and Gloss: For exterior doors, match finish color and gloss specified in Section 08 41 13 "Aluminum-Framed Entrances and Storefronts." For interior doors, color as selected by Architect.

2.03 SOUND CONTROL FRAMES

A. Frames: Fabricate sound control door frames with corners mitered, reinforced, and continuously welded the full depth and width of frame. Fabricate according to NAAMM-HMMA 865.

1. Weld frames according to NAAMM-HMMA 820.
2. Exterior Frames: Fabricate from metallic-coated steel sheet 0.079-inch (2.01-mm) nominal thickness or thicker as required to provide STC rating indicated.
3. Interior Frames: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.075-inch (1.90-mm) nominal thickness or thicker as required to provide STC rating indicated.
4. Hardware Reinforcement: Fabricate according to NAAMM-HMMA 865 of same material as face sheets.
5. Head Reinforcement: Metallic-coated steel channel or angle stiffener, 0.108-inch (2.74-mm) nominal thickness.
6. Jamb Anchors:
 - a. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.064-inch (1.63-mm) nominal-thickness metallic-coated steel with corrugated or perforated straps not less than 2 inches (51 mm) wide

by 10 inches (254 mm) long; or wire anchors not less than 0.156 inch (3.9 mm) thick.

- b. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch- (9.5-mm-) diameter, metallic-coated steel bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
- 7. Floor Anchors: Not less than 0.079-inch (2.01-mm) nominal-thickness metallic-coated steel, and as follows:
 - a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
 - 8. Ceiling Struts: Minimum 3/8-inch-thick by 2-inch- (9.5-mm-thick by 51-mm-) wide uncoated steel unless otherwise indicated.

B. Materials:

- 1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
- 2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B, with G60 (Z180) zinc (galvanized) or A40 (ZF120) zinc-iron-alloy (galvannealed) coating designation.
- 3. Supports and Anchors: After fabricating, galvanize units to be built into exterior walls according to ASTM A153/A153M, Class B.
- 4. Inserts, Bolts, and Fasteners: Provide items to be built into exterior walls, hot-dip galvanized according to ASTM A153/A153M or ASTM F2329.
- 5. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching sound control door frames of type indicated.
- 6. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

C. Finishes:

- 1. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.
 - a. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

2.04 HARDWARE

- A. Sound Control Door Hardware: Manufacturer's standard sound control system, including head and jamb seals, door bottoms, cam-lift hinges, and thresholds, as required by testing to achieve STC and fire rating indicated.
 - 1. Head and Jamb Seals:
 - a. Magnetic Seals: One-piece units consisting of closed-cell sponge neoprene seal and resiliently mounted magnet held in place by metal retainer, with retainer cover of same material as door frame; attached to door frame with concealed screws.
 - 2. Automatic Door Bottoms: Neoprene or silicone gasket, held in place by metal housing, that automatically drops to form seal when door is closed; mounted to bottom edge of door with screws.
 - a. Mounting: Mortised or semimortised into bottom of door as required by testing to achieve STC rating indicated.
 - 3. Cam-Lift Hinges: Full-mortise template type that raises door 1/2 inch (13 mm) when door is fully open; with hardened pin; fabricated from stainless steel.
 - 4. Thresholds: Flat, smooth, unfluted type as recommended by manufacturer; fabricated from stainless steel.
- B. Other Hardware: Comply with requirements in Section 08 71 00 "Door Hardware."

2.05 FABRICATION

- A. Steel Sound Control Door Fabrication: Sound control doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
 - 1. Comply with requirements in NFPA 80 for fire-rated doors.
 - 2. Seamless Edge Construction: Fabricate doors with faces joined at vertical edges by welding; welds shall be ground, filled, and dressed to make them invisible and to provide a smooth, flush surface.
 - 3. Exterior Doors: Close top edges flush and seal joints against water penetration. Provide weep-hole openings in bottom of exterior doors to permit moisture to escape.
 - 4. Hardware Preparation: Factory prepare sound control doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping.

- a. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate door hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
- 5. Tolerances: Fabricate doors to tolerances indicated in NAAMM-HMMA 865.
- B. Sound Control Frame Fabrication: Fabricate sound control frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
 - 1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
 - 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 3. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 - 4. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c. and as follows:
 - (1) Two anchors per jamb up to 60 inches (1524 mm) in height.
 - (2) Three anchors per jamb from 60 to 90 inches (1524 to 2286 mm) in height.
 - (3) Four anchors per jamb from 90 to 96 inches (2286 to 2438 mm) in height.
 - (4) Four anchors per jamb plus one additional anchor per jamb for each 24 inches (610 mm), or fraction thereof, more than 96 inches (2438 mm) in height.
 - b. Postinstalled Expansion Type: Locate anchors not more than 6 inches (152 mm) from top and bottom of frame. Space anchors not more than 26 inches (660 mm) o.c.

5. Head Reinforcement: For grouted frames more than 48 inches (1219 mm) wide, weld continuous head reinforcement to back of frame at head full width of opening.
6. Hardware Preparation: Factory prepare sound control frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping.
 - a. Reinforce frames to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
7. Tolerances: Fabricate frames to tolerances indicated in NAAMM-HMMA 865.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of sound control door frame connections before frame installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation, adjust and securely brace sound control door frames to the following tolerances:
 1. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 2. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 3. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 4. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a perpendicular line from head to floor.

- C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.03 INSTALLATION

- A. General: Install sound control door assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.
- B. Frames: Install sound control door frames in sizes and profiles indicated.
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-rated openings, install frames according to NFPA 80.
 - b. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, and dress; make splice smooth, flush, and invisible on exposed faces.
 - c. Remove temporary braces only after frames or bucks have been properly set and secured.
 - d. Check squareness, twist, and plumbness of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 - 3. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 - 4. Solidly pack mineral-fiber insulation inside frames.
 - 5. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.
 - 6. Installation Tolerances: Adjust sound control door frames for squareness, alignment, twist, and plumbness to the following tolerances:

- a. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a perpendicular line from head to floor.
- C. Doors: Fit sound control doors accurately in frames, within clearances indicated below. Shim as necessary.
 - 1. Non-Fire-Rated Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
 - a. Jambs: 1/8 inch (3 mm).
 - b. Head with Cam-Lift Hinges: As required by manufacturer, but not more than 3/8 inch (9.5 mm).
 - c. Sill: Manufacturer's standard.
 - d. Between Edges of Pairs of Doors: 1/8 inch (3 mm).
 - 2. Fire-Rated Doors: Install fire-rated doors with clearances according to NFPA 80.
- D. Sound Control Seals: Where seals have been factory prefit and preinstalled and subsequently removed for shipping, reinstall seals and adjust according to manufacturer's written instructions.
- E. Cam-Lift Hinges: Install hinges according to manufacturer's written instructions.
- F. Thresholds: Set thresholds in full bed of sealant complying with requirements in Section 07 92 00 "Joint Sealants."

3.04 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and adjust seals, door bottoms, and other sound control hardware items right before final inspection. Leave work in complete and proper operating condition.
- B. Remove and replace defective work, including defective or damaged sound seals and doors and frames that are warped, bowed, or otherwise unacceptable.
 - 1. Adjust gaskets, gasket retainers, and retainer covers to provide contact required to achieve STC rating.

- C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible, rust-inhibitive, air-drying primer.
- D. Metallic-Coated Surfaces: Clean abraded areas of doors and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION

SECTION 08 41 13

ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Aluminum-framed storefront systems.
2. Aluminum-framed entrance door systems. (ALUM-2)

1.02 PREINSTALLATION MEETINGS

- ###### A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.

1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
4. Include point-to-point wiring diagrams showing the following:

- a. Power requirements for each electrically operated door hardware.
 - b. Location and types of switches, signal device, conduit sizes, and number and size of wires.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.04 INFORMATIONAL SUBMITTALS

- A. Certificates:
 - 1. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.
 - a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.
- B. Test and Evaluation Reports:
 - 1. Product Test Reports: For aluminum-framed entrances and storefronts, for tests performed by qualified testing agency.
- C. Source Quality-Control Submittals:
 - 1. Source quality-control reports.
- D. Field Quality-Control Submittals:
 - 1. Field quality-control reports.
- E. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C1401. Include periodic quality-control reports.
- F. Qualification Statements:
 - 1. For Installer and field testing agency.
- G. Sample warranties.

1.05 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For aluminum-framed entrances and storefronts.
- B. Maintenance Data for Structural Sealant: For structural-sealant-glazed storefront. Include ASTM C1401 recommendations for post-installation-phase quality-control program.

1.06 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Installers: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors.
 - 2. Testing Agency: Qualified in accordance with ASTM E699 for testing indicated and acceptable to Owner and Engineer.
- B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Engineer, except with Engineer's approval. If changes are proposed, submit comprehensive explanatory data to Engineer for review.
- C. Structural-Sealant Glazing: Comply with ASTM C1401 for design and installation of storefront systems that include structural glazing.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup as shown on Drawings, including supports, attachments, and accessories. Refer to Section 01 43 39 "Mockups."
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Submit to structural glazing sealant manufacturer, for testing indicated below, Samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that is in close proximity to or is touching the structural or nonstructural sealants of a structural glazed system.

1. Compatibility: Test materials or components using ASTM C1087.
2. Adhesion: Test for adhesion or lack of adhesion of a structural sealant to the surface of another material or component using ASTM C1135.
3. Submit no fewer than eight pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
6. Testing will not be required if data based on previous testing of current sealant products match those submitted.

1.08 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures, including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
2. Warranty Period: 10 years from date of Substantial Completion.

- B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.

- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- 2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

- 1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 - 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.

- B. Structural Loads:

- 1. Wind Loads: As indicated on Drawings.

- C. Deflection of Framing Members Supporting Glass: At design wind load, as follows:

- 1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m).
 - 2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm).

- a. Operable Units: Provide a minimum 1/16-inch (1.6-mm) clearance between framing members and operable units.
- 3. Cantilever Deflection: Limited to $2L/175$ at unsupported cantilevers.
- D. Structural: Test in accordance with ASTM E330/E330M as follows:
 - 1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.
 - 2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
 - 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- E. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
 - 1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft. (480 Pa).
- F. Seismic Performance: Aluminum-framed entrances and storefronts shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
- G. Energy Performance: Certified and labeled by manufacturer for energy performance as follows:
 - 1. Thermal Transmittance (U-factor):
 - a. Fixed Glazing and Framing Areas: U-factor for the system of not more than 0.43 Btu/sq. ft. x h x deg F as determined in accordance with NFRC 100.
 - b. Entrance Doors: U-factor of not more than 0.45 Btu/sq. ft. x h x deg F as determined in accordance with NFRC 100.
 - 2. Solar Heat-Gain Coefficient (SHGC):
 - a. Fixed Glazing and Framing Areas: SHGC for the system of not more than 0.47 as determined in accordance with NFRC 200.
 - b. Entrance Doors: SHGC of not more than 0.47 as determined in accordance with NFRC 200.
 - 3. Air Leakage:

- a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than 0.06 cfm/sq. ft. (0.30 L/s per sq. m) at a static-air-pressure differential of 6.24 lbf/sq. ft. (300 Pa) when tested in accordance with ASTM E283.
 - b. Entrance Doors: Air leakage of not more than 1.0 cfm/sq. ft. (5.08 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
 - 4. Condensation Resistance Factor (CRF):
 - a. Fixed Glazing and Framing Areas: CRF for the system of not less than 70 as determined in accordance with AAMA 1503.
 - b. Entrance Doors: CRF of not less than 70 as determined in accordance with AAMA 1503.
 - H. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 - I. Structural-Sealant Joints:
 - 1. Designed to carry gravity loads of glazing.
 - J. Structural Sealant: ASTM C1184. Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed, aluminum-framed entrances and storefronts without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
 - 1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
 - 2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate, because sealant-to-substrate bond strength exceeds sealant's internal strength.
- 2.03 STOREFRONT SYSTEMS
- A. Basis-of-Design Product: Subject to compliance with requirements, provide OldCastle BuildingEnvelope (OBE); Series 6000 Thermal MultiPlane or a comparable product by one of the following:
 - 1. Arcadia, Inc.
 - 2. EFCO Corporation.
 - 3. Kawneer Company, Inc.; Arconic Corporation.

4. YKK AP America Inc.

B. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Exterior Framing Construction: Thermally broken.

2. Glazing System: Retained mechanically with gaskets on two sides and structural sealant on two sides.

3. Glazing Plane: Front.

4. Finish: High-performance organic finish.

5. Fabrication Method: Field-fabricated stick system.

6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

7. Steel Reinforcement: As required by manufacturer.

C. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

D. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

2.04 ENTRANCE DOOR SYSTEMS

A. Basis-of-Design Product: Subject to compliance with requirements, provide OldCastle BuildingEnvelope (OBE); Thermal Composite Entrances. or a comparable product by one of the following:

1. Arcadia, Inc.

2. EFCO Corporation.

3. Kawneer Company, Inc.; Arconic Corporation.

4. YKK AP America Inc.

B. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.

1. Door Construction: 2- to 2-1/4-inch (50.8- to 57.2-mm) overall thickness, with minimum 0.125-inch- (3.2-mm-) thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.

- a. Thermal Construction: High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
- 2. Door Design: Medium stile; 3-1/2-inch (88.9-mm) nominal width.
- 3. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.
 - a. Provide nonremovable glazing stops on outside of door.
- 4. Finish: Match adjacent storefront framing finish.

2.05 ENTRANCE DOOR HARDWARE

- A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 08 71 00 "Door Hardware."
- B. General: Provide entrance door hardware and entrance door hardware sets indicated in door and frame schedule for each entrance door, to comply with requirements in this Section.
 - 1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and products complying with BHMA standard referenced.
 - 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
 - 3. Opening-Force Requirements:
 - a. Egress Doors: Not more than 15 lbf (67 N) to release the latch and not more than 30 lbf (133 N) to set the door in motion and not more than 15 lbf (67 N) to open the door to its minimum required width.
- C. Designations: Requirements for design, grade, function, finish, quantity, size, and other distinctive qualities of each type of entrance door hardware are indicated in "Entrance Door Hardware Sets" Article. Products are identified by using entrance door hardware designations as follows:
 - 1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in "Entrance Door Hardware Sets" Article.
 - 2. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.
- D. Pivot Hinges: BHMA A156.4, Grade 1.

1. Offset-Pivot Hinges: Provide top, bottom, and intermediate offset pivots at each door leaf.

E. Butt Hinges: BHMA A156.1, Grade 1, radius corner.

1. Nonremovable Pins: Provide setscrew in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while entrance door is closed.
2. Exterior Hinges: Stainless steel, with stainless steel pin.
3. Quantities:
 - a. For doors up to 87 inches (2210 mm) high, provide three hinges per leaf.

F. Mortise Auxiliary Locks: BHMA A156.5, Grade 1.

G. Panic Exit Devices: BHMA A156.3, Grade 1, listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing in accordance with UL 305.

H. Cylinders:

1. As specified in Section 08 71 00 "Door Hardware."

I. Weather Stripping: Manufacturer's standard replaceable components.

1. Compression Type: Made of ASTM D2000 molded neoprene or ASTM D2287 molded PVC.
2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

J. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.

K. Finger Guards: Manufacturer's standard collapsible neoprene or PVC gasket anchored to frame hinge-jamb at center-pivoted doors.

2.06 GLAZING

A. Glazing: Comply with Section 08 80 00 "Glazing."

B. Glazing Sealants: Comply with Section 08 80 00 "Glazing."

C. Structural Glazing Sealants: ASTM C1184 chemically curing silicone formulation that is compatible with system components with which it comes in contact; specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in storefront system indicated.

1. Color: As selected by Engineer from manufacturer's full range of colors.
- D. Weatherseal Sealants: ASTM C920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed storefront manufacturers for this use.

1. Color: Match structural sealant.

2.07 MATERIALS

- A. Sheet and Plate: ASTM B209 (ASTM B209M).
- B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221 (ASTM B221M).
- C. Structural Profiles: ASTM B308/B308M.
- D. Steel Reinforcement:
1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
 2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
 3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.
- E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.

2.08 ACCESSORIES

- A. Automatic Door Operators: Section 08 71 13 "Power Door Operators."
- B. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.

- C. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch (25.4 mm) that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
- D. Concealed Flashing: Dead-soft, 0.018-inch- (0.457-mm-) thick stainless steel, complying with ASTM A240/A240M, of type recommended by manufacturer.
- E. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.
- F. Rigid PVC filler.

2.09 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Physical and thermal isolation of glazing from framing members.
 - 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 - 5. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.
- F. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
 - 1. At interior and exterior doors, provide compression weather stripping at fixed stops.

- G. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
 - 1. At exterior doors, provide weather sweeps applied to door bottoms.
- H. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
- I. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.10 ALUMINUM FINISHES

- A. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat.
 - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2. Color and Gloss: Medium Gray.

2.11 SOURCE QUALITY CONTROL

- A. Structural Sealant: Perform quality-control procedures complying with ASTM C1401 recommendations, including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.

- E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- F. Seal perimeter and other joints watertight unless otherwise indicated.
- G. Metal Protection:
 - 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
 - 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- H. Set continuous sill members and flashing in full sealant bed, as specified in Section 07 92 00 "Joint Sealants," to produce weathertight installation.
- I. Install joint filler behind sealant as recommended by sealant manufacturer.
- J. Install components plumb and true in alignment with established lines and grades.

3.03 INSTALLATION OF GLAZING

- A. Install glazing as specified in Section 08 80 00 "Glazing."

3.04 INSTALLATION OF STRUCTURAL GLAZING

- A. Prepare surfaces that will contact structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
- B. Set glazing into framing in accordance with sealant manufacturer and framing manufacturer's written instructions and standard practice. Use a spacer or backer as recommended by manufacturer.
- C. Set glazing with proper orientation so that coatings face exterior or interior as specified.
- D. Hold glazing in place using temporary retainers of type and spacing recommended by manufacturer, until structural sealant joint has cured.
- E. Apply structural sealant to completely fill cavity, in accordance with sealant manufacturer and framing manufacturer's written instructions and in compliance with local codes.
- F. Apply structural sealant at temperatures indicated by sealant manufacturer for type of sealant.
- G. Allow structural sealant to cure in accordance with manufacturer's written instructions.
- H. Clean and protect glass as indicated in Section 08 80 00 "Glazing."

3.05 INSTALLATION OF WEATHERSEAL SEALANT

- A. After structural sealant has completely cured, remove temporary retainers and insert backer rod between lites of glass as recommended by sealant manufacturer.
- B. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.06 INSTALLATION OF ALUMINUM-FRAMED ENTRANCE DOORS

- A. Install entrance doors to produce smooth operation and tight fit at contact points.
 - 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 - 2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware in accordance with entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.07 ERECTION TOLERANCES

- A. Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
 - 1. Plumb: 1/8 inch in 10 feet (3.2 mm in 3 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
 - 2. Level: 1/8 inch in 20 feet (3.2 mm in 6 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
 - 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch (12.7 mm) wide, limit offset from true alignment to 1/16 inch (1.6 mm).
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch (12.7 to 25.4 mm) wide, limit offset from true alignment to 1/8 inch (3.2 mm).
 - c. Where surfaces are separated by reveal or protruding element of 1 inch (25.4 mm) wide or more, limit offset from true alignment to 1/4 inch (6 mm).
 - 4. Location: Limit variation from plane to 1/8 inch in 12 feet (3.2 mm in 3.6 m); 1/2 inch (12.7 mm) over total length.

3.08 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

- B. Tests and Inspections: Perform the following tests on representative areas of aluminum-framed entrances and storefronts.
1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Engineer shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
 - a. Perform a minimum of two tests in areas as directed by Engineer.
 - b. Perform tests in each test area as directed by Engineer. Perform at least three tests, prior to 10, 35, and 70 percent completion.
 2. Air Leakage: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. (0.45 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
 - a. Perform a minimum of two tests in areas as directed by Engineer.
 - b. Perform tests in each test area as directed by Engineer. Perform at least three tests, prior to 10, 35, and 70 percent completion.
 3. Water Penetration: ASTM E1105 at a minimum uniform static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft. (300 Pa), and shall not evidence water penetration.
 4. Structural-Sealant Adhesion: Test structural sealant in accordance with recommendations in ASTM C1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 - a. Test a minimum of four areas on each building facade.
 - b. Repair installation areas damaged by testing.
 5. Egress Door Inspections: Inspect each aluminum-framed entrance door equipped with panic hardware, each aluminum-framed entrance door located in an exit enclosure, each electrically controlled aluminum-framed egress door, and each aluminum-framed entrance door equipped with special locking arrangements, in accordance with NFPA 101, Section 7.2.1.15.
- C. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION

SECTION 08 56 72

SOUND CONTROL WINDOWS

PART 1 - GENERAL

1.01 SUMMARY

- A. Provide acoustically rated window assemblies in the High Service Pump Station.

1.02 PERFORMANCE REQUIREMENTS

- A. Sound Rating: Provide window assemblies identical to those of assemblies tested by an acoustical testing agency, and have the following minimum ratings:
 - 1. STC Rating: Conforming to tests performed in accordance with ASTM E90 and classified in accordance with ASTM E413-90.
 - 2. NIC Rating: The windows shall provide a Noise Isolation Class (NIC) which is no less than 5 points below the scheduled STC performance. Test shall be measured in accordance with ASTM E-336-97 and classified in accordance with ASTM E413-90.

1.03 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Not less than five years documented successful experience in installation of work similar to Work of this Project.
- B. Acceptance Testing
 - 1. The installations shall be deemed acceptable if they meet or exceed the NIC-rating, as indicated herein, conforming to tests performed in accordance with ASTM E-336-97 and classified in accordance with ASTM E413-90.

1.04 SUBMITTALS

- A. Laboratory Test Results - At the time of bidding, submit to the Engineer the results of acoustical laboratory tests showing that a full installation of the entire window assembly which is proposed for installation has been measured in accordance with ASTM E90 and classified in accordance with ASTM E413-90 and has met or exceeded the STC (Sound Transmission Class) rating as scheduled.
- B. Field Tests Results - At the time of bidding, submit to the Engineer and the Acoustical Consultant the results of at least two field tests performed by an Independent Acoustical Consultant showing comparable installations that have been measured in accordance with ASTM E-336-97 and classified in accordance with ASTM E413-90.

- C. Shop Drawings - Submit drawings showing complete details including all dimensions, materials, finishes, mounting hardware and other pertinent information as may be requested.
- D. Samples: Submit sample of metal frame, in finish selected by Engineer from manufacturer's standards.

PART 2 - PRODUCTS

2.01 ACOUSTICALLY RATED WINDOW ASSEMBLY

- A. Basis-of-Design Product: Subject to compliance with the requirements, provide Overly Model No. 5592278 or comparable product from one of the following:
 - 1. Krieger Specialty Products Company.
 - 2. Industrial Acoustics Company.
 - 3. Noise Barriers, LLC.
- B. Window Assembly: Fabricate to achieve the scheduled STC rating of 55, with minimum requirements as shown on the Drawings and as described below:
 - 1. First lite: Laminated glass consisting of 1/4 inch thick optically clear glass ply, 0.030-inch interlayer, and 1/4 inch thick optically clear glass ply.
 - 2. Second lite: Laminated glass consisting of 1/4 inch optically clear glass ply, 0.030-inch interlayer, 1/4 inch optically clear glass ply, 0.030 inch interlayer. and 1/4 inch optically clear glass ply.
- C. Acoustically Rated Window Assemblies shall be complete, window and frame assemblies that will meet or exceed the scheduled performance and be fabricated as detailed on the Contract Drawings.
- D. Window assemblies shall be fixed, with metal frame, finish as selected by Engineer from manufacturer's standard finishes.
 - 1. Constructed from Galvannealed material conforming to ASTM A653 (A60) with a coating weight of not less than 0.60 ounces per square foot. Steel shapes shall comply with ASTM A36 and steel bars with ASTM A108, Grade 1018.
 - 2. Frames shall be 14-gauge minimum welded units with integral trim and shipped with temporary spreader. Knock-down frames are not acceptable unless sizes of frames exceed shipping limitations. After installation, field splices required because of shipping limitations must be field welded by certified welders per manufacturer's instructions and in accordance with AWS D1.1/D1.3.

3. Provide suitable anchors to properly install frames in partition types shown Drawings.
- E. The glazing shall be as necessary to achieve the specified transmission loss performance.
- F. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer, to comply with system performance requirements.
- G. Finish: Refer to Drawings for finish colors.
 1. Factory-Applied Paint Finish: Manufacturer's standard primer and finish coats, complying with SDI A250.3 for performance and acceptance criteria.
 2. Color and Gloss: Match finish color and gloss specified in Section 08 41 13 "Aluminum-Framed Entrances and Storefronts."

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine surrounding construction for compliance with requirements for installation. Notify Engineer of any discrepancies. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ADJUSTMENT OF ASSEMBLY

- A. For factory fabricated window assemblies, adjustment of frame and acoustic gaskets shall take place at the factory to ensure proper fit, and performance. The entire unit (frame, glazing and gaskets) shall be shipped to the project site as one unit.
- B. For site-built assemblies an authorized representative of the window manufacturer shall personally supervise adjusting of acoustical seals until any and all acoustical leaks have been resolved. All costs associated with this supervision shall be borne by the window manufacturer.

3.03 INSTALLATION

- A. Prior to installation, secure the services of a qualified representative of the manufacturer to visit the job site and instruct the contractor's personnel in proper installation and adjustment of the assemblies or secure services of manufacturer's factory trained and authorized installer to perform installation of assemblies.
- B. Install work of this Section in strict accordance with approved shop drawings and manufacturer's recommended installation instructions. Where installations require field welding, all work must be performed by certified welders in accordance with AWS D1.1/D1.3.

- C. Upon installation, secure the services of a qualified representative of the manufacturer to visit the jobsite and inspect the complete installation of the fixed window assemblies, and direct installer in correcting any non-conforming items found.
- D. Install assemblies plumb, straight, square, level and in their proper elevation, plane and location. All work shall be complete in every detail, and the finished work shall be clean and adjusted for the Engineer prior to final acceptance.

3.04 DEMONSTRATION

- A. Demonstrate the maintenance of the windows to the Owner's designated representative.

END OF SECTION

SECTION 08 71 00
DOOR HARDWARE

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes door hardware.
- B. Related Requirements:
 - 1. Section 08 11 19 "Stainless-Steel Doors and Frames" for door silencers provided as part of stainless steel frames.
 - 2. Section 08 11 16 "Aluminum Doors and Frames" for door silencers provided as part of aluminum frames.
 - 3. Section 08 14 16 "Flush Wood Doors."
 - 4. Section 08 33 23 "Overhead Coiling Doors" for door hardware provided as part of overhead coiling door assemblies.
 - 5. Section 08 34 73.13 "Metal Sound Control Door Assemblies" for hinges and gasketing provided as part of sound-rated door assemblies.
 - 6. Section 08 41 13 "Aluminum-Framed Entrances and Storefronts" for entrance door hardware.
 - 7. Section 08 91 19 "Fixed Louvers" for hardware associated with exterior louver screen walls.
 - 8. Division 28 sections for coordination of access control system components.

1.02 SUBMITTALS, GENERAL

- A. General: Submit all action submittals (except Samples for Verification) and informational submittals required by this Section concurrently.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction and installation details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 1. Hinges.
 - 2. Continuous hinges.

3. Cylindrical locks.
4. Exit devices and auxiliary items.
5. Lock cylinders.
6. Construction cores.
7. Keying system/keys.
8. Surface closers.
9. Wall stops.
10. Door gasketing.
11. Metal protective trim units.
12. Auxiliary hardware.

B. Shop Drawings: Details of electrified door hardware, indicating the following:

1. Wiring Diagrams: For power, signal, and control wiring and including the following:
 - a. Details of interface of electrified door hardware and building safety and security systems.
2. Operation Narrative: Describe the operation of doors controlled by electrified door hardware.

C. Samples for Verification: For exposed door hardware of each type required, in each finish specified, prepared on Samples of size indicated below. Tag Samples with full description for coordination with the door hardware schedule.

1. Sample Size: Full-size units or minimum 2-by-4-inch Samples for sheet and 4-inch long Samples for other products.

D. Door Hardware Schedule: Prepared by or under the supervision of Installer, detailing fabrication and assembly of door hardware, as well as installation procedures and diagrams. Coordinate final door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Use same scheduling sequence and format and use same door numbers as in the Contract Documents.
2. Content: Include the following information:

- a. Identification number, location, hand, fire rating, size, and material of each door and frame.
 - b. Locations of each door hardware set, cross-referenced to Drawings on floor plans and to door and frame schedule.
 - c. Complete designations, including name and manufacturer, type, style, function, size, quantity, function, and finish of each door hardware product.
 - d. Description of electrified door hardware sequences of operation and interfaces with other building control systems.
 - e. Fastenings and other pertinent information.
 - f. Explanation of abbreviations, symbols, and codes contained in schedule.
 - g. Mounting locations for door hardware.
- E. Keying Schedule: Prepared by or under the supervision of Installer, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations that are coordinated with the Contract Documents.
- F. Warranty: Sample of special warranty specified in this Section.
- 1.04 INFORMATIONAL SUBMITTALS
 - A. Product Certificates: For electrified door hardware, from the manufacturer.
 - 1. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.
- 1.05 CLOSEOUT SUBMITTALS
 - A. Maintenance Data: For each type of door hardware to include in maintenance manuals. Include final hardware and keying schedule.
 - B. Warranty: Executed special warranty specified in this Section.
- 1.06 QUALITY ASSURANCE
 - A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and an Architectural Hardware Consultant who is available during the course of the Work to consult with Contractor, Engineer, and Owner about door hardware and keying.
 - 1. Scheduling Responsibility: Preparation of door hardware and keying schedules.
 - 2. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of

manufacturer's standard units in assemblies similar to those indicated for this Project.

- B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently or has been certified by DHI as an AHC.
- C. Source Limitations: Obtain each type of door hardware from a single manufacturer.
- D. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C, unless otherwise indicated.
- E. Smoke, Draft-Control & STC Door Assemblies: Where assemblies are required, provide door hardware that meet requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105 and other STC door testing data.
 - 1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. at the tested pressure differential of 0.3-inch wg of water.
- F. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- G. Means of Egress Doors: Latches do not require more than 15 lbf to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.
- H. Accessibility Requirements: For door hardware on doors in an accessible route, comply with the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines, ICC/ANSI A117.1 and building code in effect for Project.
- I. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
 - 1. Comply with the following maximum opening-force requirements:
 - a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.
 - b. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.
 - 2. Bevel raised thresholds with a slope of not more than 1:2. Provide thresholds not more than 1/2 inch high.
 - 3. Adjust door closer sweep periods so that, from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 inches from the latch, measured to the leading edge of the door.

- J. Preinstallation Conference: Conduct conference at Project site.
 - 1. Inspect and discuss preparatory work performed by other trades.
 - 2. Inspect and discuss electrical roughing-in for electrified door hardware.
 - 3. Review sequence of operation for each type of electrified door hardware.
- 1.07 DELIVERY, STORAGE, AND HANDLING
 - A. Inventory door hardware on receipt and provide secure lock-up for door hardware delivered to Project site.
 - B. Tag each item or package separately with identification coordinated with the final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.
- 1.08 COORDINATION
 - A. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
 - B. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.
- 1.09 WARRANTY
 - A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including excessive deflection, cracking, or breakage.
 - b. Faulty operation of doors and door hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 - 2. Warranty Period: Three years from date of Substantial Completion, unless otherwise indicated.
 - a. Exit Devices: 2 years
 - b. Manual Closers: 15 years
 - c. Locksets: 2 years

- d. Hinges: Lifetime

1.10 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.01 SCHEDULED DOOR HARDWARE

- A. Provide door hardware for each door as scheduled in Part 3 "Door Hardware Schedule" Article to comply with requirements in this Section.
 - 1. Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers' products or products equivalent in function and comparable in quality to named products.
 - 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
 - 3. Electric Locking Hardware: Exit hardware shall always remain fully operational manually regardless of the status of electric latch.
- B. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of door hardware are indicated in Part 3 "Door Hardware Schedule" Article. Products are identified by using door hardware designations, as follows:
 - 1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in Part 3 "Door Hardware Schedule" Article.
 - 2. References to BHMA Designations: Provide products complying with these designations and requirements for description, quality, and function.

2.02 HINGES

- A. Hinges: BHMA A156.1. Provide template-produced hinges for hinges installed on hollow-metal doors and hollow-metal frames.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Best

- b. Hager
- c. Stanley

2.03 CONTINUOUS HINGES

- A. Continuous Hinges: BHMA A156.26; minimum 0.120-inch-thick, hinge leaves with minimum overall width of 4 inches; fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.
- B. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABH
 - b. Best
 - c. Select

2.04 MECHANICAL LOCKS AND LATCHES

- A. Locks: Provide Provo product standard Corbin CL3300 series lockset with lever trim and functions as indicated in door hardware schedule.
- B. Lock Backset: 2-3/4 inches except where STC gasketing requires 3-3/4"
- C. Levers shall be capable of receiving Medeco X4 small format interchangeable core and construction core.
- D. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.

2.05 EXIT DEVICES AND AUXILIARY ITEMS

- A. Exit Devices and Auxiliary Items: BHMA A156.3.
 - 1. Exits: Provide Provo product standard Corbin 5000 series exit devices. Where lever trim is specified, lever to match lockset design. Provide all necessary options and features to meet intended function.

2.06 LOCK CYLINDERS

- A. Lock Cylinders: Provide Provo product standard Medeco X4 SFIC system.
- B. Construction Cores: Provide construction cores that are replaceable by permanent cores. Provide 10 construction master keys.

2.07 KEYING

- A. Keying System: Factory registered, complying with guidelines in BHMA A156.28, Appendix A. Incorporate decisions made in keying conference.
 - 1. Master Key System: Change keys and a master key operate cylinders.
 - 2. Grand Master Key System: Change keys, a master key, and a grand master key operate cylinders.
- B. Keys: Nickel silver.
 - 1. Stamping: Permanently inscribe each key with a visual key control number and include the following notation:
 - a. Notation: "DO NOT DUPLICATE."
 - 2. Quantity: In addition to one extra key blank for each lock, provide the following:
 - a. Cylinder Change Keys: Three.
 - b. Master Keys: Five.
 - c. Grand Master Keys: Five.

2.08 ELECTRIC STRIKES

- A. Provide dual acting release strikes similar to Adams Rite 7440 series. Coordinate electric strikes with frame profiles and STC gasketing requirements.

2.09 SURFACE CLOSERS

- A. Surface Closers: BHMA A156.4; Cast iron with 1-1/2" minimum bore piston, rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves and forged-steel main arm. Comply with manufacturer's written recommendations for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Best.
- b. LCN.

2.10 MECHANICAL STOPS AND HOLDERS

A. Wall Stops: BHMA A156.16; brushed chrome plated.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABH
 - b. Rockwood
 - c. Trimco

2.11 DOOR GASKETING

A. Door Gasketing: BHMA A156.22; air leakage not to exceed 0.50 cfm per foot of crack length for gasketing other than for smoke control, as tested according to ASTM E 283; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. National Guard Products.
 - b. Pemko.
 - c. Reese.
 - d. Zero.

2.12 METAL PROTECTIVE TRIM UNITS

A. Metal Protective Trim Units: BHMA A156.6; fabricated from 0.050-inch-thick stainless steel with manufacturer's standard machine or self-tapping screw fasteners.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABH
 - b. Rockwood

- c. Trimco.

2.13 AUXILIARY DOOR HARDWARE

A. Auxiliary Hardware: BHMA A156.16.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABH
 - b. Best
 - c. Trimco

2.14 FABRICATION

A. Manufacturer's Nameplate: Do not provide products that have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire-rated labels and as otherwise approved by Engineer.

1. Manufacturer's identification is permitted on rim of lock cylinders only.

B. Base Metals: Produce door hardware units of base metal indicated, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18.

C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.

1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching the door hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.

2. Fire-Rated Applications:

- a. Wood or Machine Screws: For the following:
 - (1) Hinges mortised to doors or frames; use threaded-to-the-head wood screws for wood doors.
 - (2) Strike plates to frames.

- (3) Closers to doors and frames.
- b. Steel Through Bolts: For the following unless door blocking is provided:
 - (1) Surface hinges to doors.
 - (2) Closers to doors and frames.
 - (3) Surface-mounted exit devices.
- 3. Spacers or Sex Bolts: For through bolting of hollow-metal doors.
- 4. Fasteners for Wood Doors: Comply with requirements in DHI WDHS.2, "Recommended Fasteners for Wood Doors."
- 5. Gasketing Fasteners: Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.

2.15 FINISHES

- A. Provide finishes complying with BHMA A156.18 as indicated in door hardware schedule.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Beginning installation constitutes Contractor's acceptance of substrates and conditions.

3.02 PREPARATION

- A. Steel Doors and Frames: For surface-applied door hardware, drill and tap doors and frames in accordance with ANSI/SDI A250.6.
- B. Wood Doors: Comply with DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."

3.03 INSTALLATION

- A. Mounting Heights: Mount door hardware units at heights to comply with the following unless otherwise indicated or required to comply with governing regulations.
 - 1. Custom Steel Doors and Frames: HMMA 831.
 - 2. Wood Doors: DHI's "Recommended Locations for Architectural Hardware for Wood Flush Doors."
- B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 09 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
 - 1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
 - 2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
- C. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than the number recommended by manufacturer for application indicated or one hinge for every 30 inches of door height, whichever is more stringent.
- D. Lock Cylinders: Install construction cores to secure building and areas during construction period.
 - 1. Replace construction cores with permanent cores as indicated in keying schedule.
- E. Key Control: Tag keys as determined by final keying schedule.
- F. Stops: Provide wall stops for doors unless other type stops are indicated in door hardware schedule.
- G. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.
- H. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

- I. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.04 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
 - 1. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.
 - 2. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
- B. Occupancy Adjustment: Approximately six months after date of Substantial Completion, Installer's Architectural Hardware Consultant is to examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors, door hardware, and electrified door hardware.

3.05 3.5 CLEANING AND PROTECTION

- A. Clean adjacent surfaces soiled by door hardware installation.
- B. Clean operating items as necessary to restore proper function and finish.
- C. Provide final protection and maintain conditions that ensure that door hardware is without damage or deterioration at time of Substantial Completion.

3.06 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes.

3.07 DOOR HARDWARE SCHEDULE

Set #1 - Overhead, Monitored

Doors: 125A, 126A, EXT.101C, EXT.120C, EXT.120D, EXT.127

1	Padlock	41B-722T M1	606	BE
1	Door Position Switch	2707		SE

NOTE: Provide Medeco X4 SFIC core keyed into Owner's system as required, typical at all lockable devices.

Set #2 - Exterior, Card Reader

Doors: EXT.004, EXT.101A, EXT.101B, EXT.102B, EXT.120A, EXT.120B, EXT.123A, EXT.123B, EXT.125, EXT.126

1	Continuous Hinge	662HD	628	BE
1	Exit Device	ED5200 NIGHT LATCH (03)	630	CR
1	Electric Strike	AS REQUIRED	630	HS
1	Flush Pull	1111C	630	TR
1	Closer	4040XP HCUSH DA	689	LC
1	Kick Plate	K0050 8"	630	TR
1	Door Position Switch	1078C		SE
1	Door Sweep	C627 A		NA
1	Weatherstrip	700 ES		NA
1	Threshold	896 SS		NA

Set #3 - Card Reader
Doors: 101

1	Continuous Hinge	662HD	628	BE
1	Door Position Switch	1078C		SE
1	Cylindrical Lockset	CL3357 NZD	626	CR
1	Electric Strike	AS REQUIRED	630	HS
1	Closer	4040XP CUSH DA	689	LC
1	Kick Plate	K0050 8"	630	TR
1	Gasketing	2525 C		NA
1	Auto Door Bottom	320 S		NA

NOTE: At all STC rated doors, furnish complete STC package as required to meet ratings and certifications. Typical.

Set #4 - Card Reader
Doors: EXT.102A, EXT.123

2	Continuous Hinge	662HD	628	BE
2	Semi-Auto Flushbolt	3820 X 3810	630	TR
2	Dust Proof Strike	3911	630	TR
2	Deadbolt	8T3-7K	626	BE
1	Door Position Switch	1078C		SE
2	Flush Pull	1111C	630	TR
2	Closer	4040XP HCUSH DA	689	LC
2	Kick Plate	K0050 8"	630	TR
2	Door Sweep	C627 A		NA
2	Weatherstrip	700 ES		NA
2	Astragal	158 SA		NA
1	Threshold	896 SS		NA

Set #5
Doors: 001A, 001B

1	Continuous Hinge	662HD	628	BE
1	Exit Device	ED5200 X LEVER (08)	630	CR
1	Closer	4040XP CUSH	689	LC
1	Kick Plate	K0050 8"	630	TR
1	Gasketing	2525 C		NA

Set #6 - Card Reader
Doors: EXT.117, EXT.124

1	Continuous Hinge	662HD	628	BE
---	------------------	-------	-----	----

1	Semi-Auto Flushbolt	3820 X 3810	630	TR
1	Dust Proof Strike	3911	630	TR
1	Exit Device	ED5600 NIGHT LATCH (03)	630	CR
1	Flush Pull	1111C	630	TR
1	Closer	4040XP HCUSH	689	LC
1	Kick Plate	K0050 8" x 34"	630	TR
1	Door Position Switch	1078C		SE
1	Door Sweep	C627 A		NA
1	Weatherstrip	700 ES		NA
1	Astragal	158 SA		NA
1	Auto Door Bottom	320 S		NA
1	Threshold	896 SS	630	NA

Set #7

Doors: 110, 117

3	Butt Hinge	CB1900R 4.5" x 4.5"	652	BE
1	Cylindrical Lockset	CL3355 NZD	626	CR
1	Closer	4040XP CUSH DA	AL	LC
1	Kick Plate	K0050 8"	630	TR
1	Gasketing	2525 C		NA
1	Auto Door Bottom	320 S		NA

Set #8 - Privacy

Doors: 115, 116

3	Butt Hinge	CB1900R 4.5" x 4.5"	652	BE
1	Privacy Set	CL3320 NZD	626	CR
1	Closer	4040XP H	689	LC
1	Kick Plate	K0050 8"	630	TR
1	Mop Plate	KM050 4"	630	TR
1	Wall Bumper	1270CVSV	626	TR
1	Gasketing	2525 C		NA

Set #9

Doors: 118

3	Butt Hinge	CB1900R 4.5" x 4.5"	652	BE
1	Cylindrical Lockset	CL3355 NZD	626	CR
1	Wall Bumper	1270CVSV	626	TR
3	Silencer	1229A	GREY	

Set #10

Doors: 119, 210

3	Butt Hinge	CB1900R 4.5" x 4.5"	652	BE
1	Cylindrical Lockset	CL3357 NZD	626	CR
1	Closer	4040XP H x ST	689	LC
1	Overhead Stop	N 4020	630	AB
1	Kick Plate	K0050 8"	630	TR
1	Gasketing	2525 C		NA

Set #11

Doors: 111, 112

3	Butt Hinge	CB1900R 4.5" x 4.5"	652	BE
1	Cylindrical Lockset	CL3357 NZD	626	CR
1	Closer	4040XP H	689	LC
1	Kick Plate	K0050 8"	630	TR

1	Wall Bumper	1270CVSV	626	TR
1	Gasketing	2525 C		NA

Set #12

Doors: 113

3	Butt Hinge	CB1900R 4.5" x 4.5"	652	ST
1	Cylindrical Lockset	CL3361 NZD	626	CR
1	Wall Bumper	1270CVSV	626	TR
1	Coat Hook	AM801	630	AB
1	Gasketing	2525 C		NA
1	Auto Door Bottom	320 S		NA

Set #13 - Auto Operator, Entry Vestibule, Card Reader

Doors: 101 DUPLICATE

1	Continuous Hinge	662HD	628	ST
1	Exit Device	ED4200 X LEVER	630	CR
1	Electric Strike	AS REQUIRED	630	HS
1	Low Energy Operator	D-4990		BE
2	Actuators	AS REQUIRED		
1	Overhead Stop	N 4020	630	AB
1	Auto Door Bottom	220NA		NA

Set #14 - Card Reader, Auto Operator

Doors: EXT.101 (CW-001)

1	Continuous Hinge	662HD	628	BE
1	Exit Device	ED4200 x LEVER	630	CR
1	Electric Strike	AS REQUIRED	630	HS
1	Low Energy Operator	D-4990		BE

1	Gasketing	2525 C		NA
1	Auto Door Bottom	320 S		NA

END OF SECTION

SECTION 08 80 00

GLAZING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Glass products.
2. Insulating glass.
3. Glazing sealants.
4. Glazing tapes.
5. Miscellaneous glazing materials.

B. Related Requirements:

1. Section 08 41 13 "Aluminum-Framed Entrances and Storefronts" for glazing sealants used in structural-sealant-glazed storefronts.
2. Section 08 56 72 "Sound Control Windows" for glazing used in acoustically-rated window assemblies.

1.02 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C1036.
- C. IBC: International Building Code.
- D. Interspace: Space between lites of an insulating-glass unit.

1.03 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances to achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Glass Samples: For each type of the following products; 12 inches (300 mm) square.
 - 1. Insulating glass.
 - 2. Spandrel glass.
- C. Glazing Accessory Samples: For sealants and colored spacers, in 12-inch (300-mm) lengths.
- D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer, manufacturers of fabricated glass units, glass testing agency, and sealant testing agency.
- B. Product Certificates: For glass.
- C. Product Test Reports: For fabricated glass and glazing sealants, for tests performed by a qualified testing agency.
 - 1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
- D. Preconstruction adhesion and compatibility test report.
- E. Sample Warranties: For special warranties.

1.06 QUALITY ASSURANCE

- A. Fabricated-Glass Manufacturer Qualifications: A qualified manufacturer of fabricated glass units who is approved and certified by primary glass manufacturer.
- B. Installer Qualifications: A qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors.
- C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.
- D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.
- E. Mockups: Install glazing in mockups of assemblies as shown on Drawings and as specified in Section 01 43 39 "Mockups." Use materials and installation methods specified in this Section.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
 - 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 - 2. Use ASTM C1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 - 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 - 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
 - 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.09 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F (4.4 deg C).

1.10 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's

written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

- B. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations for Glass: Obtain glass from single source from single manufacturer.
- B. Source Limitations for Glazing Accessories: For each product and installation method, obtain from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300:
1. Design Wind Pressures: As indicated on Drawings.
2. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.
3. Thermal Loads: Design glazing to resist thermal stress breakage induced by differential temperature conditions and limited air circulation within individual glass lites and insulated glazing units.
- C. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

- D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
1. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 2. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
 3. SHGC and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on most current non-beta version of LBL's WINDOW computer program.
 4. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

2.03 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. NGA Publications: "Glazing Manual."
 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the IGCC.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than thickness indicated.
1. Minimum Glass Thickness for Exterior Lites: 6 mm.
- E. Strength: Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.04 GLASS PRODUCTS

- A. Low-Iron Annealed Float Glass: ASTM C1036, Type I, Class I (clear), Quality-Q3.
- B. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
 - 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
- C. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
 - 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

2.05 INSULATING GLASS

- A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E2190.
 - 1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
 - 2. Perimeter Spacer: Aluminum with powdered metal paint finish in color selected by Engineer.
 - 3. Desiccant: Molecular sieve or silica gel, or a blend of both.

2.06 GLAZING SEALANTS

- A. General:
 - 1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 - 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 - 3. Colors of Exposed Glazing Sealants: As selected by Engineer from manufacturer's full range of industry colors.
- B. Neutral-Curing Silicone Glazing Sealant, Class 50: Complying with ASTM C920, Type S, Grade NS, Use NT.

2.07 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
 - 1. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

2.08 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant manufacturer.
- C. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.09 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
 - 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep systems.

3. Minimum required face and edge clearances.
4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.03 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).
 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 2. Provide 1/8-inch- (3-mm-) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.
- H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

3.04 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.05 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.06 CLEANING AND PROTECTION

- A. Immediately after installation, remove nonpermanent labels and clean surfaces.

- B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- C. Remove and replace glass that is damaged during construction period.
- D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.07 INSULATING GLASS SCHEDULE

- A. Low-E-Coated, Ultra Clear Insulating Glass, Type GL-1:
 - 1. Basis-of-Design Product: Vitro Glazing, Solarban 72 Starphire+Starphire.
 - 2. Overall Unit Thickness: 1 inch (25 mm).
 - 3. Minimum Thickness of Each Glass Lite: 6 mm.
 - 4. Outdoor Lite: Low-iron, fully tempered float glass.
 - 5. Interspace Content: 90% argon.
 - 6. Indoor Lite: Low-iron, fully tempered float glass.
 - 7. Low-E Coating: On second surface.
 - 8. Winter Nighttime U-Factor: 0.28 maximum.
 - 9. Summer Daytime U-Factor: 0.24 maximum.
 - 10. Visible Light Transmittance: 68 percent minimum.
 - 11. SHGC: 0.28 maximum.
 - 12. Safety glazing required.
- B. Low-E-Coated, Tinted Insulating Glass, Type GL-1A:
 - 1. Basis-of-Design Product: Vitro Glazing, Solarban 60 Clear+Clear Optigray.
 - 2. Overall Unit Thickness: 1 inch (25 mm).

3. Minimum Thickness of Each Glass Lite: 6 mm.
4. Outdoor Lite: Heat-strengthened tinted float glass.
5. Interspace Content: 90% argon.
6. Indoor Lite: Heat-strengthened float glass.
7. Low-E Coating: On second surface.
8. Winter Nighttime U-Factor: 0.29 maximum.
9. Summer Daytime U-Factor: 0.24 maximum.
10. Visible Light Transmittance: 50 percent minimum.
11. SHGC: 0.30 maximum.

C. Silicone-Coated, Low-E, Insulating Spandrel Glass, Type GL-2:

1. Basis-of-Design Product: Vitro Glazing, Solarban 72 Clear+Clear with Opti-Coat
2. Coating Color: RAL 7045 TeleGrey
3. Overall Unit Thickness: 1 inch (25 mm).
4. Minimum Thickness of Each Glass Lite: 6 mm.
5. Outdoor Lite: Low-iron, heat-strengthened float glass.
6. Interspace Content: 90% argon.
7. Indoor Lite: Low-iron heat-strengthened float glass.
8. Low-E Coating: On second surface.
9. Opaque Coating Location: Fourth surface.
10. Winter Nighttime U-Factor: 0.28 maximum.
11. Summer Daytime U-Factor: 0.24 maximum.

D. Low-E-Coated, Acid-Etched Obscured Insulating Glass, Type GL-3:

1. Basis-of-Design Product: Vitro Glazing, Solarban 72 Clear+Clear with Walker Textures Satin Acid Etched.
2. Overall Unit Thickness: 1 inch (25 mm).
3. Minimum Thickness of Each Glass Lite: 6 mm.

4. Outdoor Lite: Heat-strengthened acid-etched float glass.
5. Interspace Content: 90% argon.
6. Indoor Lite: Heat-strengthened float glass.
7. Low-E Coating: On third surface.
8. Acid Etch: On second surface
9. Winter Nighttime U-Factor: 0.28 maximum.
10. Summer Daytime U-Factor: 0.24 maximum.

E. Low-E-Coated, Acid-Etched Opaque Insulating Glass, Type GL-4:

1. Basis-of-Design Product: Vitro Glazing, Solarban 72 Clear+Clear with Walker Textures Opaque Acid Etched.
2. Overall Unit Thickness: 1 inch (25 mm).
3. Minimum Thickness of Each Glass Lite: 6 mm.
4. Outdoor Lite: Heat-strengthened acid-etched float glass.
5. Interspace Content: 90% argon.
6. Indoor Lite: Heat-strengthened float glass.
7. Low-E Coating: On third surface.
8. Acid Etch: On second surface
9. Winter Nighttime U-Factor: 0.28 maximum.
10. Summer Daytime U-Factor: 0.24 maximum.

3.08 MONOLITHIC GLASS SCHEDULE

A. Clear Glass, Type GL-5: Fully tempered float glass.

1. Minimum Thickness: 6 mm.
2. Safety glazing required.

END OF SECTION

SECTION 08 91 19

FIXED LOUVERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fixed extruded-aluminum louvers for in-wall louvers and louver screen walls.
2. Fixed acoustical louvers.

1.02 DEFINITIONS

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades (i.e., the axis of the blades are horizontal).
- C. Vertical Louver: Louver with vertical blades (i.e., the axis of the blades are vertical).
- D. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- E. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven-rain performance, as determined by testing in accordance with AMCA 500-L.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.

1. Show weep paths, gaskets, flashings, sealants, and other means of preventing water intrusion.
2. Show mullion profiles and locations.
3. Show locations and attachments of insect screens and blank-off panels.

- 4. Show locations and attachments of gate hardware.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Delegated Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed in accordance with AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.
- B. Sample Warranties: For manufacturer's special warranties.

1.05 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of louver assembly as shown on Drawings, including supports, attachments, and accessories. Refer to Section 01 43 39 "Mockups."
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.06 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.07 WARRANTY

- A. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
 - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: 20 years from date of Substantial Completion

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain fixed louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural and seismic performance requirements and design criteria indicated.
- B. Structural Performance: Louvers withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures are considered to act normal to the face of the building.
 - 1. Wind Loads:
 - a. Determine loads based on pressures as indicated on Drawings.
- C. Seismic Performance:
 - 1. As indicated on Drawings.
 - 2. Louvers, including attachments to other construction, withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
- D. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width in accordance with AMCA 500-L.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

F. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

2.03 FIXED EXTRUDED-ALUMINUM LOUVERS

A. Horizontal, Wind-Driven-Rain-Resistant Louver, Extruded Aluminum:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Construction Specialties RSH-5700 or comparable product by one of the following:
 - a. Airolite Company, LLC (The).
 - b. Greenheck Fan Corporation.
 - c. Reliable Products, Inc.
 - d. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
2. Louver Depth: 5 inches (127 mm).
3. Frame and Blade Nominal Thickness: Not less than 0.080 inch (2.03 mm).
4. Louver Performance Ratings:
 - a. Free Area: Not less than 7.32 sq. ft. (0.68 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Air Performance: Not more than 0.10-inch wg (25-Pa) static pressure drop at 700-fpm (3.6-m/s) free-area exhaust velocity.
 - c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of 3 inches (75 mm) per hour and a wind speed of 29 mph (13 m/s) at a core-area intake velocity of 500 fpm (2.5 m/s).
5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.04 FIXED ACOUSTICAL LOUVERS

- A. Acoustic Performance: Provide acoustical louvers complying with ratings specified, as demonstrated by testing manufacturer's stock units identical to those specified.
- B. Fixed, Acoustical Louver, Formed Metal: Louver with formed-metal blades filled on interior with mineral-fiber, rigid-board, acoustical insulation retained by perforated metal sheet of same material and finish as blade.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.; ACL845 or a comparable product by one of the following:
 - a. Airolite Company, LLC (The).
 - b. Construction Specialties, Inc.
 - c. Greenheck Fan Corporation.
2. Louver Depth: 8 inches (200 mm).
3. Frame Material: Extruded aluminum or aluminum sheet, not less than 0.080-inch (2.03-mm) nominal thickness.
4. Blade Material: Aluminum sheet, not less than 0.080-inch (2.03-mm) nominal thickness.
5. Blade Shape: Straight.
6. Blade Angle: 45 degrees unless otherwise indicated.
7. Blade Spacing: 8 inches (200 mm) o.c. for 8-inch- (200-mm-) deep louvers.
8. Free Area: Not less than 4 sq. ft. (0.37 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
9. Airborne Sound-Transmission Loss: STC 10 in accordance with ASTM E413, determined by testing in accordance with ASTM E90.
10. Outdoor-Indoor, Sound-Transmission Loss: OITC 10 in accordance with ASTM E1332, determined by testing in accordance with ASTM E966.

2.05 LOUVER SCREENS

- A. General: Provide screen at each exterior louver.
 1. Screen Location for Fixed Louvers: Interior face.
 2. Screening Type: Bird screening.
- B. Secure screen frames to louver frames with stainless steel machine screws, spaced a maximum of 6 inches (150 mm) from each corner and at 12 inches (300 mm) o.c.
- C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.
 1. Metal: Same type and form of metal as indicated for louver to which screens are attached.

2. Finish: Same finish as louver frames to which louver screens are attached.

D. Louver Screening for Aluminum Louvers:

1. Bird Screening, Stainless Steel: 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.

2.06 BLANK-OFF PANELS

A. Insulated Blank-Off Panels: Laminated panels consisting of an insulating core surfaced on back and front with metal sheets and attached to back of louver.

1. Thickness: 2 inches (50 mm).
2. Metal Facing Sheets, Aluminum: Not less than 0.032-inch (0.81-mm) nominal thickness.
3. Insulating Core: Rigid, glass-fiber-board insulation or extruded-polystyrene foam.
4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard extruded-aluminum-channel frames, not less than 0.080-inch (2.03-mm) nominal thickness, with corners mitered and with same finish as panels.
5. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
6. Panel Finish: Same finish applied to adjacent louvers.

2.07 LOUVER SCREEN WALL GATE HARDWARE

A. Hardware:

1. Provide exterior grade hardware including levers and latches permitting operation from both sides of gate, hinges, and locks for each gate shown.
2. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
 - a. Function: Full surface, triple weight, antifriction bearing.
 - b. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.
3. Rim Locks: BHMA A156.5, Grade 1, suitable for exterior use.
 - a. Function: Latchbolt by key from outside and by turn from inside. Latchbolt is held retracted by device from inside.
 - b. Material: Cast, forged, or extruded brass or bronze.

- c. Mounting Plate: Configuration necessary for mounting locks. Fabricate from 1/8-inch- (3.2-mm-) thick, aluminum plate.
- d. Coordinate keying with section 08 71 00 "Door Hardware"

2.08 MATERIALS

- A. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B209 (ASTM B209M), Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Fasteners: Use types and sizes to suit unit installation conditions.
 - 1. Use hex-head or Phillips pan-head screws for exposed fasteners unless otherwise indicated.
 - 2. For fastening aluminum, use aluminum or 300 series stainless steel fasteners.
 - 3. For fastening stainless steel, use 300 series stainless steel fasteners.
 - 4. For color-finished louvers, use fasteners with heads that match color of louvers.
- D. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, fabricated from stainless steel components, with allowable load or strength design capacities calculated in accordance with ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing in accordance with ASTM E488/E488M conducted by a qualified testing agency.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.09 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
- C. Maintain equal louver blade spacing to produce uniform appearance.
- D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
- E. Include supports, anchorages, and accessories required for complete assembly.

- F. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches (1830 mm) o.c., whichever is less.
 - 1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
 - 2. Exterior Corners: Prefabricated corner units with mitered and welded blades and with fully recessed mullions at corners.
- G. Join frame members to each other and to fixed louver blades with fillet welds concealed from view unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.10 ALUMINUM FINISHES

- A. Finish louvers after assembly.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Finish Systems: Refer to Drawings for finish locations and colors.
 - 1. Fluoropolymer Two-Coat System: 0.2-mil primer with 0.8-mil 70 percent PVDF fluoropolymer color coat, AAMA 620.
 - 2. Fluoropolymer Three Coat System: 0.65 mil color base coat and Primer with a 0.05 mil PVDF ink coat and a 0.45 nominal PVDF fluoropolymer clear coat.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.03 INSTALLATION

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- C. Form closely fitted joints with exposed connections accurately located and secured.
- D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- E. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- F. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 07 92 00 "Joint Sealants" for sealants applied during louver installation.
- G. Install gates level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.04 ADJUSTING AND CLEANING

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
- C. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- D. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Engineer, remove damaged units and replace with new units.

1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION

SECTION 09 21 16.23

GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Gypsum board shaft wall assemblies.

1.02 ACTION SUBMITTALS

- ###### A. Product Data:
- For each component of gypsum board shaft wall assembly.

1.03 DELIVERY, STORAGE, AND HANDLING

- ###### A.
- Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and support them on risers on a flat platform to prevent sagging.

1.04 FIELD CONDITIONS

- ###### A. Environmental Limitations:
- Comply with gypsum-shaftliner-board manufacturer's written instructions.
- ###### B.
- Do not install finish panels until installation areas are enclosed and conditioned.
- ###### C.
- Do not install panels that are wet, moisture damaged, or mold damaged.
1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- ###### A. Fire-Resistance-Rated Assemblies:
- For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

2.02 GYPSUM BOARD SHAFT WALL ASSEMBLIES

- A. Fire-Resistance Rating: As indicated on Drawings.
- B. Gypsum Shaftliner Board:
 - 1. Type X: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with paper faces, 1 inch (25.4 mm) thick, with double beveled long edges.
 - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - (1) American Gypsum.
 - (2) CertainTeed; SAINT-GOBAIN.
 - (3) Continental Building Products Inc.
 - (4) USG Corporation.
- C. Non-Load-Bearing Steel Framing, General: Complying with ASTM C645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.
 - 1. Protective Coating: Coating with equivalent corrosion resistance of ASTM A653/A653M, G40 (Z120) unless otherwise indicated.
- D. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:
 - 1. Depth: As indicated.
 - 2. Minimum Base-Metal Thickness: 0.018 inch (0.45 mm).
- E. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches (51 mm) long and matching studs in depth.
 - 1. Minimum Base-Metal Thickness: Matching steel studs.
- F. Finish Panels: Gypsum board as specified in Section 09 29 00 "Gypsum Board."
- G. Sound Attenuation Blankets: As specified in Section 09 29 00 "Gypsum Board."

2.03 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.

- B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 09 29 00 "Gypsum Board" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.
- C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
- D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
 - 1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E488/E488M conducted by a qualified testing agency.
 - 2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E1190 conducted by a qualified testing agency.
- E. Acoustical Sealant: Section 07 92 19 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.
- B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.
- C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.

- D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.
- E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.
- F. Control Joints: Install control joints according to ASTM C840 and in specific locations approved by Engineer while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
- G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

3.03 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 09 22 16

NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Framing systems.
2. Suspension systems.
3. Acoustic isolation materials
4. Partition closures.

B. Related Requirements:

1. Section 05 40 00 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs; floor joists; and roof rafters and ceiling joists.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Framing systems.
2. Suspension systems.
3. Partition closures.
4. Acoustic isolation materials.
 - a. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 - b. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device type required.

1.03 INFORMATIONAL SUBMITTALS

- ###### A. Product Certificates:
- For each type of code-compliance certification for studs and tracks.

- B. Evaluation Reports: For high-strength steel studs and tracks, firestop tracks, post-installed anchors, and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.04 QUALITY ASSURANCE

- A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association, the Steel Framing Industry Association, the Steel Stud Manufacturers Association, or the Supreme Steel Framing System Association.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Notify manufacturer of damaged materials received prior to installation.
- B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, in accordance with ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.
- C. Horizontal Deflection: For wall assemblies, limited to 1/360 of the wall height based on horizontal loading of 5 lbf/sq. ft. (239 Pa).
- D. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members," unless otherwise indicated.

2.02 FRAMING SYSTEMS

- A. Framing Members, General: Comply with ASTM C645 for conditions indicated.
 - 1. Steel Sheet Components: Comply with ASTM C645 requirements for metal unless otherwise indicated

2. Protective Coating: Comply with ASTM C645; ASTM A653/A653M, G40 (Z120); or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
 - a. Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.
- B. Studs and Track: ASTM C645.
 1. Minimum Base-Steel Thickness: As required by performance requirements for horizontal deflection, but no less than 20 gauge.
 2. Depth: As indicated on Drawings.
- C. High-Strength Steel Studs and Tracks: Roll-formed with surface deformations to stiffen the framing members.
 1. Minimum Base-Steel Thickness: As required by horizontal deflection performance requirements.
 2. Depth: As indicated on Drawings.
- D. Slip-Type Head Joints: Where indicated, provide one of the following:
 1. Single Long-Leg Track System: Top track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
 2. Double-Track System: Top outer tracks, inside track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
 3. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
- E. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
 1. Minimum Base-Steel Thickness: 0.0179 inch (0.455 mm).

G. Cold-Rolled Channel Bridging: Steel, 0.0538-inch (1.367-mm) minimum base-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.

1. Depth: 1-1/2 inches (38 mm).
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (38 by 38 mm), 0.068-inch- (1.72-mm-) thick, galvanized steel.

H. Hat-Shaped, Rigid Furring Channels:

1. Minimum Base-Steel Thickness: 0.0179 inch (0.455 mm).
2. Depth: As indicated on Drawings.

2.03 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.59-mm) diameter wire, or double strand of 0.048-inch- (1.21-mm-) diameter wire.

B. Hanger Attachments to Concrete:

1. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01 or AC193 as appropriate for the substrate.
 - a. Uses: Securing hangers to structure.
 - b. Type: Torque-controlled, expansion anchor.
 - c. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941 (ASTM F1941M), Class Fe/Zn 5, unless otherwise indicated.
 - d. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) stainless steel bolts, ASTM F593 (ASTM F738M), and nuts, ASTM F594 (ASTM F836M).
2. Power-Actuated Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

C. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.16 inch (4.12 mm) in diameter.

D. Carrying Channels (Main Runners): Cold-rolled, commercial-steel sheet with a base-steel thickness of 0.0538 inch (1.367 mm) and minimum 1/2-inch- (13-mm-) wide flanges.

1. Depth: As indicated on Drawings.

E. Furring Channels (Furring Members):

1. Cold-Rolled Channels: 0.0538-inch (1.367-mm) uncoated-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges, 3/4 inch (19 mm) deep.
2. Steel Studs and Tracks:
 - a. Minimum Base-Steel Thickness: 0.0179 inch (0.455 mm).
 - b. Depth: As indicated on Drawings.
3. High-Strength Steel Studs and Tracks:
 - a. Minimum Base-Steel Thickness: 0.0147 inch (0.373 mm).
 - b. Depth: As indicated on Drawings.
4. Hat-Shaped, Rigid Furring Channels: 7/8 inch (22 mm) deep.
 - a. Minimum Base-Steel Thickness: 0.0179 inch (0.455 mm).
5. Resilient Furring Channels: 1/2-inch- (13-mm-) deep members designed to reduce sound transmission.
 - a. Configuration: Asymmetrical or hat shaped.

2.04 ACOUSTIC ISOLATION MATERIALS

- A. Resilient Sway Brace: Fail-safe double acting neoprene elements incorporated into an 11 ga. galvanized steel bracket.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Mason Industries, Inc., Type DNSB; www.mason-industries.com
 - b. Kinetics Noise Control, Inc., Type PSB; www.kineticsnoise.com
 - c. PAC International, RSIC-CWB; www.pac-intl.com
 - d. Equal as approved by Engineer.
2. Neoprene shall be 60 durometer, and meet the following physical requirements:

a. Hardness (ASTM D-676)	60 ± 5
b. Tensile strength, minimum psi (ASTM D-412)	2,500
c. Elongation at break, minimum percent	350

3. Isolator shall be selected upon ability to satisfy a maximum response frequency of 10 Hz for the composite wall/isolator construction. Manufacturer shall submit calculations of loads, isolator spacing, and connection details for approval.
- B. Resilient Low-Profile Sway Brace: Galvanized steel brackets interlocked with a neoprene noise and vibration insert. Shall contain two 1/4" diameter thru-holes to permit use of fasteners to attach braces to studs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Mason Industries, Inc., Type WIC; www.mason-industries.com
 - b. Kinetics Noise Control, Inc., Type KWSB; www.kineticsnoise.com
 - c. Equal as approved by Engineer.
 2. Isolator shall be selected upon ability to satisfy a maximum response frequency of 10 Hz for the composite wall/isolator construction. Manufacturer shall submit calculations of loads, isolator spacing, and connection details for approval.
- C. Top and Bottom Track Isolators: Resilient partition isolation pad used along entire length of track or at connection locations. Shall resiliently decouple sound-rated partition from non-isolated structure.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Mason Industries, Inc., Type NPS; www.mason-industries.com
 - b. Kinetics Noise Control, Inc., Wallmat and KAI; www.kineticsnoise.com
 - c. Equal as approved by Engineer.
 2. For bottom track, provide unit engineered for project's studwall load.
- D. Suspended Acoustical Ceiling Spring Hanger
1. The sound isolation materials specified herein shall be designed and manufactured by Kinetics Noise Control, Inc.
 2. Resilient hangers shall have sufficient capacity to sustain continuously applied ceiling weight without settling after initial deflection. The isolation hanger shall be a combination high-deflection steel spring in series with a resilient, molded neoprene noise and vibration isolation pad. The steel spring and neoprene pad shall be incorporated into a stamped steel hanger assembly that resiliently supports the isolated ceiling.
 3. The hanger assembly bracket shall be designed to allow fifteen (15) degrees of vertical alignment of the suspension member without making metal-to-metal contact between the suspension and hanger assembly members. The hanger bracket shall be

designed with an integral spring pre-load bracket selected to minimize change in elevation once a load is applied to the hanger and to hold the isolator assembly steady during attachment of gypsum board. The hanger assembly bracket shall consist of a leveling rod with an attached channel carrier designed to accept 1-1/2" x 1/2", 16-gauge cold-rolled steel. The isolation hanger deflection shall be selected by the manufacturer to provide a maximum natural frequency of 4.4 Hz. The steel spring element shall have a minimum Kx to Ky of 1 at its 1" rated deflection.

2.05 PARTITION CLOSURES

- A. Extruded Aluminum Partition Closures: Pre-assembled, spring loaded to provide a tight fit for vertical junctures of partitions and window walls.
 - 1. Aluminum Extrusions: 6063-T5 temper, tensile strength 31 KSI.
 - 2. Size: As shown on Drawings.
 - 3. Finish: Acrylic-Polyester hybrid powder coat paint finish.
 - a. Color: As selected by Engineer.
 - 4. Sound tested to a composite STC of 35 with acoustical batts for sound attenuation.
 - 5. Provide end caps where shown.
 - 6. Equal to Gordon Industries, Mullion Mate Series 30.

2.06 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
 - 1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide the following:
 - 1. Asphalt-Saturated Organic Felt: ASTM D226/D226M, Type I (No. 15 asphalt felt), nonperforated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 COORDINATION

- A. For spaces where acoustic isolators have been included there shall be no direct or indirect rigid connections between the isolated wall assembly/framing and the adjacent construction.

3.03 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

3.04 INSTALLATION, GENERAL

- A. Installation Standard: ASTM C754.
 - 1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.
- B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
- C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
- D. Install bracing at terminations in assemblies.
- E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.05 INSTALLATION OF FRAMING SYSTEMS

- A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
 - 1. As required by horizontal deflection performance requirements unless otherwise indicated.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.
- D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to

terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.

1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
 - a. Install two studs at each jamb unless otherwise indicated.
 - b. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.

E. Direct Furring:

1. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.

F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

3.06 INSTALLATION OF SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

1. Hangers: 48 inches (1219 mm) o.c.
2. Carrying Channels (Main Runners): 48 inches (1219 mm) o.c.
3. Furring Channels (Furring Members): 16 inches (406 mm) o.c.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.

a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.

3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.

4. Do not attach hangers to steel roof deck.

5. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.

6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.

7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

E. Seismic Bracing: Sway-brace suspension systems with hangers used for support.

3.07 INSTALLING ACOUSTIC ISOLATION MATERIALS

A. Ensure that installation complies with the Manufacturer's written instructions and all applicable Code Requirements.

3.08 FIELD QUALITY CONTROL

A. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

SECTION 09 29 00

GYPSUM BOARD

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Interior gypsum board.
2. Tile backing panels.

B. Related Requirements:

1. Section 06 16 00 "Sheathing" for gypsum sheathing for exterior walls.
2. Section 07 92 19 "Acoustical Joint Sealants" for acoustical joint sealants installed in gypsum board assemblies.
3. Section 09 22 16 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.

1.02 ACTION SUBMITTALS

A. Product Data: For each product specified.

B. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.

1.03 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.04 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain each type of gypsum panel and joint finishing material from single source with resources to provide products of consistent quality in appearance and physical properties.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated in accordance with ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.

2.03 GYPSUM BOARD, GENERAL

- A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.04 INTERIOR GYPSUM BOARD

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 1. American Gypsum.
 2. CertainTeed; SAINT-GOBAIN.
 3. Continental Building Products Inc.
 4. Gold Bond Building Products, LLC provided by National Gypsum Company.
 5. PABCO Gypsum.
- B. Gypsum Wallboard: ASTM C1396/C1396M.
 1. Thickness: As indicated on Drawings

2. Long Edges: Tapered.
- C. Gypsum Board, Type X: ASTM C1396/C1396M.
 1. Thickness: 5/8 inch (15.9 mm).
 2. Long Edges: Tapered.
- D. Gypsum Ceiling Board: ASTM C1396/C1396M.
 1. Thickness: 1/2 inch (12.7 mm).
 2. Long Edges: Tapered.

2.05 SPECIALTY GYPSUM BOARD

- A. Acoustically Enhanced Gypsum Board: ASTM C1766. Multilayer products constructed of two layers of gypsum boards sandwiching a viscoelastic sound-absorbing polymer core.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. CertainTeed; SAINT-GOBAIN.
 - b. Gold Bond Building Products, LLC provided by National Gypsum Company.
 - c. PABCO Gypsum.
 - d. Panel Rey.
 2. Core: 1/2 inch (12.7 mm), regular type.
 3. Long Edges: Tapered.
 4. Mold Resistance: ASTM D3273, score of 10 (no mold growth) as rated in accordance with ASTM D3274.
 5. Surface Abrasion: ASTM C1629/C1629M, complies with or exceeds Level 1 requirements.
 6. Indentation: ASTM C1629/C1629M, complies with or exceeds Level 1 requirements.
 7. Soft-Body Impact: ASTM C1629/C1629M, complies with or exceeds Level 1 requirements.

2.06 TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. CertainTeed; SAINT-GOBAIN.
 - b. Custom Building Products.
 - c. PermaBASE Building Products, LLC provided by National Gypsum Company.
 - d. USG Corporation.
 - 2. Thickness: 1/2 inch (12.7 mm).
 - 3. Mold Resistance: ASTM D3273, score of 10 as rated in accordance with ASTM D3274.

2.07 TRIM ACCESSORIES

- A. Interior Trim: ASTM C1047.
 - 1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.

2.08 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C475/C475M.
- B. Joint Tape:
 - 1. Interior Gypsum Board: Paper.
 - 2. Tile Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
 - 1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
 - 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use drying-type, all-purpose compound.
 - a. Use setting-type compound for installing paper-faced metal trim accessories.

3. Fill Coat: For second coat, use drying-type, all-purpose compound.
 4. Finish Coat: For third coat, use drying-type, all-purpose compound.
- D. Joint Compound for Tile Backing Panels:
1. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.09 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
- B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- C. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
- D. Acoustical Sealant: As specified in Section 07 92 19 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION AND FINISHING OF PANELS, GENERAL

- A. Comply with ASTM C840.

- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- J. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.03 INSTALLATION OF INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:

1. Wallboard Type: As indicated on Drawings.
2. Type X: Vertical surfaces unless otherwise indicated.
3. Ceiling Type: Ceiling surfaces, unless otherwise indicated.
4. Acoustically Enhanced Type: As indicated on Drawings.

B. Single-Layer Application:

1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
2. On partitions/walls, apply gypsum panels vertically (parallel to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
 - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
 - b. At high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

C. Multilayer Application:

1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches (400 mm) minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
3. Fastening Methods: Fasten base layers and face layers separately to supports with screws.

3.04 INSTALLATION OF TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A108.11, at locations indicated to receive tile.
- B. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.05 INSTALLATION OF TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Install control joints in accordance with ASTM C840 and in specific locations approved by Engineer for visual effect.
- C. Interior Trim: Install in the following locations:
 - 1. Cornerbead: Use at outside corners.
 - 2. LC-Bead: Use at exposed panel edges.

3.06 FINISHING OF GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints, rounded or beveled edges, and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- D. Gypsum Board Finish Levels: Finish panels to levels indicated below and in accordance with ASTM C840:
 - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
 - 2. Level 2: Panels that are substrate for tile.
 - 3. Level 3: Not used.
 - 4. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
- E. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.07 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 09 30 13

CERAMIC TILING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Porcelain floor tile and base.
2. Glazed ceramic wall tile.
3. Metal transition strips.
4. Waterproof membranes.
5. Crack isolation membranes.

B. Related Requirements:

1. Section 07 92 00 "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
2. Section 09 29 00 "Gypsum Board" for cementitious backer units.

1.02 DEFINITIONS

- A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Face Size: Actual tile size, excluding spacer lugs.
- C. Module Size: Actual tile size plus joint width indicated.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- C. Samples for Initial Selection: For tile, grout, and accessories involving color selection.
- D. Samples for Verification:

1. Full-size units of each type and composition of tile and for each color and finish required.
2. Metal transition strips in 6-inch (150-mm) lengths.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- C. Product Certificates: For each type of product.
- D. Product Test Reports: For tile-setting and -grouting products.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications:
 1. Installer is a Five-Star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.

1.07 FIELD CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations for Tile: Obtain tile of each type and color or finish from single source or producer.
 - 1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.
 - 1. Obtain setting and grouting materials, except for unmodified Portland cement and aggregate, from single manufacturer.
 - 2. Obtain waterproof and crack isolation membrane, except for sheet products, from manufacturer of setting and grouting materials.

2.02 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 - 1. Provide tile complying with Standard grade requirements unless otherwise indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.
- C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.

2.03 TILE PRODUCTS

- A. Porcelain Tile Type (T1 and B3): Unglazed.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. American Olean.

- b. Crossville, Inc.
 - c. Daltile Corporation.
- 2. Certification: Tile certified by the Porcelain Tile Certification Agency.
- 3. Face Size: Refer to Drawings.
- 4. Thickness: 5/16 inch.
- 5. Face: Plain with square edges.
- 6. Dynamic Coefficient of Friction: Not less than 0.42.
- 7. Tile Color: As selected by Engineer from manufacturer's full range.
- 8. Grout Color: As selected by Engineer from manufacturer's full range.
- 9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Cove Base: 6 inches x 12 inches
 - b. External Corners: Cove base corner, 1 inch x 6 inches.
 - c. Internal Corners: Field-buttet square corners.

B. Glazed Wall Tile Type (T2 and T3):

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. American Olean; a brand of Dal-Tile Corporation.
 - b. Crossville, Inc.
 - c. Daltile; a brand of Dal-Tile Corporation.
- 2. Module Size: Refer to Drawings.
- 3. Face Size Variation: Rectified.
- 4. Thickness: 5/16 inch (8 mm).
- 5. Face: Pattern of design indicated, with manufacturer's standard edges.
- 6. Finish: Bright, opaque glaze.

7. Tile Color and Pattern: As selected by Engineer from manufacturer's full range.
8. Grout Color: As selected by Engineer from manufacturer's full range.
9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Bullnose Cap: Manufacturer's standard size.

2.04 WATERPROOF AND CRACK ISOLATION MEMBRANES

- A. General: Manufacturer's standard product that complies with ANSI A118.10/A118.12 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Hydroment GoldPlus.
 - b. C-Cure; Pro-Red Waterproofing Membrane 963.
 - c. Custom Building Products; RedGard Waterproofing and Crack Prevention Membrane.
 - d. Laticrete International, Inc.; Laticrete Hydro Ban.
 - e. MAPEI Corporation; Mapelastic AquaDefense.
 - f. TEC, H. B. Fuller Construction Products Inc.; HydraFlex – Waterproofing Crack Isolation Membrane.

2.05 SETTING MATERIALS

- A. Modified Dry-Set Mortar (Thinset): ANSI A118.4.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Ardex Americas.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.

- e. Laticrete International, Inc.
 - f. MAPEI Corporation.
2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site, or prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
 3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.

2.06 GROUT MATERIALS

- A. General: Product that is recommended by the manufacturer for the application indicated.
- B. High-Performance Tile Grout: ANSI A118.7.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Bostik, Inc.
 - b. C-Cure.
 - c. Custom Building Products.
 - d. Laticrete International, Inc.
 - e. MAPEI Corporation.
 2. Polymer Type: Dry, redispersible form, prepackaged with other dry ingredients or liquid-latex form for addition to prepackaged dry-grout mix.

2.07 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Metal Transition Strips: profile with sloped exposed surface, 5/32" (4 mm) tall leading edge, integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide Schluter Systems L.P.; RENO-U or a comparable product by one of the following:
 - a. Custom Building Products.
 - b. Dural USA, Inc.

2. Material and Finish: Stainless Steel Type 304
 3. Height as required for transition from ceramic tile flooring to resilient tile flooring.
- C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
 - D. Floor Sealer: Manufacturer's standard product for sealing grout joints and that does not change color or appearance of grout.
- 2.08 MIXING MORTARS AND GROUT
- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
 - B. Add materials, water, and additives in accurate proportions.
 - C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 2. Verify that concrete substrates for tile floors installed with thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.

4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Engineer.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with thinset mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- B. Where indicated, prepare substrates to receive waterproof membrane by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot (1:50) toward drains.
- C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.03 INSTALLATION OF CERAMIC TILE

- A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
 1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:
 - a. Tile floors in wet areas.
 - b. Tile floors consisting of tiles 8 by 8 inches (200 by 200 mm) or larger.
- B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
- D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

- E. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
 - F. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
 - G. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:
 - 1. Glazed Wall Tile: 1/8 inch (3.2 mm).
 - 2. Porcelain Tile: 1/8 inch (3.2 mm).
 - H. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
 - 1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
 - I. Metal Transition Strips: Install at locations indicated.
 - J. Floor Sealer: Apply floor sealer to grout joints in tile floors according to floor-sealer manufacturer's written instructions. As soon as floor sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.
- 3.04 INSTALLATION OF WATERPROOF AND CRACK ISOLATION MEMBRANES
- A. Install waterproof membrane to comply with ANSI A108.13/A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.
 - B. Allow membrane to cure and verify by testing that it is watertight before installing tile or setting materials over it.
- 3.05 ADJUSTING AND CLEANING
- A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
 - B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 - 1. Remove grout residue from tile as soon as possible.
 - 2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners

recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.06 PROTECTION

- A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

END OF SECTION

SECTION 09 51 13

ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Acoustical panels.
2. Metal suspension system.
3. Metal edge moldings and trim.

1.02 ACTION SUBMITTALS

A. Product Data:

1. Acoustical panels.
2. Metal suspension system.
3. Metal edge moldings and trim.

B. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of sizes indicated below:

1. Acoustical Panels: Set of 6-inch- (150-mm-) square Samples of each type, color, pattern, and texture.

C. Delegated Design Submittals: For seismic restraints for ceiling systems.

1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.03 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension-system members.
2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.

- a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Size and location of initial access modules for acoustical panels.
6. Items penetrating finished ceiling and ceiling-mounted items including the following:
 - a. Lighting fixtures.
 - b. Diffusers.
 - c. Grilles.
 - d. Speakers.
 - e. Sprinklers.
 - f. Access panels.
 - g. Perimeter moldings.
7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
8. Minimum Drawing Scale: 1/4 inch = 1 foot (1:48).

B. Qualification Data: For testing agency.

C. Product Test Reports: For each acoustical panel ceiling, for tests performed by a qualified testing agency.

D. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor and fastener type, from ICC-ES.

E. Field quality-control reports.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.05 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.
2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.07 FIELD CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Source Limitations for Ceiling System: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer licensed in the project's State, to design seismic restraints for ceiling systems.
- B. Seismic Performance: Suspended ceilings to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
- C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Flame-Spread Index: Class A in accordance with ASTM E1264.
 2. Smoke-Developed Index: 50 or less.

2.03 ACOUSTICAL PANELS (CL1)

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

1. Armstrong Ceiling & Wall Solutions.
2. CertainTeed; SAINT-GOBAIN.
3. Rockfon; ROCKWOOL International.
4. USG Corporation.

B. Acoustical Panel Standard: Provide manufacturer's standard panels in accordance with ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.

C. Classification: Provide panels as follows:

1. Type and Form, Type IV Form 2: Mineral base with membrane-faced overlay; Form 2, water felted.
2. Pattern: E (lightly textured).

D. Light Reflectance (LR): Not less than 0.88.

E. Ceiling Attenuation Class (CAC): Not less than 35.

F. Noise Reduction Coefficient (NRC): Not less than 0.60.

G. Thickness: 3/4 inch (19 mm).

2.04 ACOUSTICAL PANELS (CL2, CL3)

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

1. Armstrong Ceiling & Wall Solutions.
2. CertainTeed; SAINT-GOBAIN.
3. Rockfon; ROCKWOOL International.
4. USG Corporation.

B. Acoustical Panel Standard: Provide manufacturer's standard panels in accordance with ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.

C. Classification: Provide panels as follows:

1. Type and Form, Type XX: High-density, ceramic- and mineral-base panels with scrubbable finish, resistant to heat, moisture, and corrosive fumes.

- 2. Pattern: CE (perforated, small holes and lightly textured).
- D. Light Reflectance (LR): Not less than 0.79.
- E. Ceiling Attenuation Class (CAC): Not less than 38.
- F. Noise Reduction Coefficient (NRC): Not less than 0.55.
- G. Edge/Joint Detail: Square.
- H. Thickness: 5/8 inch (15 mm).

2.05 METAL SUSPENSION SYSTEM

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Armstrong Ceiling & Wall Solutions; Prelude System or a comparable product by one of the following:
 - 1. CertainTeed; SAINT-GOBAIN.
 - 2. Rockfon; ROCKWOOL International.
 - 3. USG Corporation.
- B. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, metal suspension system and accessories in accordance with ASTM C635/C635M and designated by type, structural classification, and finish indicated.
- C. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 (Z90) coating designation; with prefinished 15/16-inch- (24-mm-) wide metal caps on flanges.
 - 1. Structural Classification: Heavy-duty system.
 - 2. Face Design: Flat, flush.
 - 3. Cap Material: aluminum.
 - 4. Cap Finish: Painted white.

2.06 ACCESSORIES

- A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
 - 1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without

failure, a load equal to five times that imposed by ceiling construction, as determined by testing in accordance with ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.

- a. Type: Cast-in-place or Post-installed expansion anchors.
 - b. Corrosion Protection, Stainless Steel: Components complying with ASTM F593 and ASTM F594, Group 1 Alloy 304 or 316.
 - c. Corrosion Protection, Nickel-Copper Alloy: Components fabricated from nickel-copper-alloy rods complying with ASTM B164 for UNS No. N04400 alloy.
2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing in accordance with ASTM E1190, conducted by a qualified testing and inspecting agency.
- B. Wire Hangers, Braces, and Ties: Provide wires as follows:
1. Stainless Steel Wire: ASTM A580/A580M, Type 304, nonmagnetic.
 2. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C635/C635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 0.106-inch- (2.69-mm-) diameter wire.
- C. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
- D. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical panels in place during a seismic event.
- E. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
- F. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

2.07 METAL EDGE MOLDINGS AND TRIM

- A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
1. Edge moldings to fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.

2. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.

2.08 ACOUSTICAL SEALANT

- A. Acoustical Sealant: As specified in Section 07 92 19 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
- B. Layout openings for penetrations centered on the penetrating items.

3.03 INSTALLATION OF ACOUSTICAL PANEL CEILINGS

- A. Install acoustical panel ceilings in accordance with ASTM C636/C636M, seismic design requirements, and manufacturer's written instructions.
- B. Suspend ceiling hangers from building's structural members and as follows:
 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support

standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.

4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 7. Do not attach hangers to steel deck tabs.
 8. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 9. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
 10. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends. Miter corners accurately and connect securely.
 2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.

1. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
2. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
3. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
4. Install seismic clips in areas indicated; space in accordance with panel manufacturer's written instructions unless otherwise indicated.

3.04 ERECTION TOLERANCES

- A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.
- B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.

3.05 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 1. Periodic inspection during the installation of suspended ceiling grids in accordance with ASCE/SEI 7.
- B. Acoustical panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.06 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
- B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 09 65 13

RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Thermoplastic-rubber base.
 - 2. Rubber molding accessories

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples for Initial Selection: For each type of product indicated.
- C. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches (300 mm) long.

1.03 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C).

1.04 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 95 deg F (35 deg C), in spaces to receive resilient products during the following periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C).
- C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.01 THERMOPLASTIC-RUBBER BASE

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. Armstrong Flooring, Inc.
 - 2. Flexco Corporation.
 - 3. Johnsonite; a Tarkett company.
 - 4. Roppe Corporation; Roppe Holding Company.
- B. Product Standard: ASTM F1861, Type TP (rubber, thermoplastic).
 - 1. Group: I (solid, homogeneous).
- C. Thickness: 0.25 inch (6.35 mm).
- D. Height: 6 inches (152 mm).
- E. Lengths: Cut lengths 48 inches (1219 mm) long or coils in manufacturer's standard length.
- F. Outside Corners: Preformed.
- G. Inside Corners: Job formed.
- H. Colors: Refer to Drawings.

2.02 RUBBER MOLDING ACCESSORY

- A. Manufacturer: Subject to compliance with requirements, provide product by one of the following:
 - 1. Armstrong Flooring, Inc.
 - 2. Flexco Corporation.
 - 3. Johnsonite; a Tarkett company.
 - 4. Roppe Corporation; Roppe Holding Company.
- B. Description:
 - 1. Rubber reducer strip for resilient floor covering transitions at concrete or epoxy flooring.

- 2. Rubber transition strips where carpet and resilient flooring meet.
 - C. Colors and Patterns: As selected by Engineer from Manufacturer's full range.
- 2.03 INSTALLATION MATERIALS
- A. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- C. Do not install resilient products until materials are the same temperature as space where they are to be installed.
 - 1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
- D. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.03 RESILIENT BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient base.
- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

- C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Preformed Corners: Install preformed corners before installing straight pieces.
- H. Job-Formed Corners:
 - 1. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.
 - a. Miter corners to minimize open joints.

3.04 RESILIENT ACCESSORY INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient accessories.
- B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.05 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
- B. Perform the following operations immediately after completing resilient-product installation:
 - 1. Remove adhesive and other blemishes from surfaces.
- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION

SECTION 09 65 19

RESILIENT TILE FLOORING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Solid vinyl floor tile.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For each type of resilient floor tile.

1. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
2. Show details of special patterns.

C. Samples for Initial Selection: For each type of floor tile indicated.

D. Samples for Verification: Full-size units of each color and pattern of floor tile required.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for floor tile installation and seaming method indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by floor tile manufacturer for installation techniques required.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not

less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C). Store floor tiles on flat surfaces.

1.07 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 95 deg F (35 deg C), in spaces to receive floor tile during the following periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C).
- C. Close spaces to traffic during floor tile installation.
- D. Close spaces to traffic for 48 hours after floor tile installation.
- E. Install floor tile after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.02 SOLID VINYL FLOOR TILE

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. Armstrong Flooring, Inc.
 - 2. Flexco Corporation.
 - 3. Mannington Mills, Inc.
 - 4. Patcraft; a division of Shaw Industries, Inc.
 - 5. Roppe Corporation; Roppe Holding Company.

- 6. Shaw Industries Group, Inc.; Berkshire Hathaway Company.
- B. Tile Standard: ASTM F1700.
 - 1. Class: Class III, Printed Film Vinyl Tile.
 - 2. Type: B, Embossed Surface.
- C. Thickness: 0.120 inch (3.0 mm).
- D. Size: 18 by 18 inches (457 by 457 mm).
- E. Colors and Patterns: Refer to Drawings.

2.03 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates: Prepare according to ASTM F710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.

3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 8 lb of water/1000 sq. ft. in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 95 percent relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install floor tiles until materials are the same temperature as space where they are to be installed.
 1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

3.03 FLOOR TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
- C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
- D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.04 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.
- B. Perform the following operations immediately after completing floor tile installation:
 - 1. Remove adhesive and other blemishes from surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
- C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Cover floor tile until Substantial Completion.

END OF SECTION

SECTION 09 67 23
RESINOUS FLOORING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Resinous flooring at Lab (EF1).
2. Integral cove base accessories (B2).

B. Related Requirements:

1. Section 09 96 73 "Coating Systems for Chemical Feed Areas" for resinous flooring (CHEM) used in other locations.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review manufacturer's written instructions for substrate preparation and environmental conditions affecting resinous flooring installation.
2. Review details of integral cove bases.
3. Review manufacturer's written instructions for installing resinous flooring systems.
4. Review protection measures for adjacent construction and installed flooring, floor drainage requirements, curbs, base details, and so forth.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's technical data, installation instructions, and recommendations for each resinous flooring component required.

B. Samples for Initial Selection: For each type of exposed finish required.

C. Samples for Verification: For each resinous flooring system required and for each color and texture specified, 6 inches (150 mm) square, applied to a rigid backing by Installer for this Project.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Material Certificates: For each resinous flooring component.
- C. Material Test Reports: For each resinous flooring system, by a qualified testing agency.
- D. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For resinous flooring to include in maintenance manuals.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
 - 1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring installation.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring installation.
- C. Close spaces to traffic during resinous flooring installation and for 24 hours after installation unless manufacturer recommends a longer period.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Flammability: Self-extinguishing in accordance with ASTM D635.

2.02 RESINOUS FLOORING (EF1)

- A. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Dudick Inc.
 - b. Duraflex, Inc.
 - c. Sherwin-Williams High Performance Flooring.
 - d. Sika Corporation; Flooring.
 - e. Stonhard, Inc.
- B. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.
- C. System Characteristics:
 - 1. Color and Pattern: As selected by Engineer from manufacturer's full range.
 - 2. Wearing Surface: Smooth, matte finish.
 - 3. Overall System Thickness: 3/16 inch (4.8 mm).
- D. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested in accordance with test methods indicated:
 - 1. Compressive Strength: 6000 psi minimum in accordance with ASTM C579.
 - 2. Tensile Strength: 1500 psi minimum in accordance with ASTM C307.
 - 3. Flexural Modulus of Elasticity: 5.0 x 10⁵ psi minimum in accordance with ASTM C580.
 - 4. Impact Resistance: No chipping, cracking, or delamination and not more than 1/16-inch (1.6-mm) permanent indentation in accordance with MIL-D-3134J.
 - 5. Resistance to Elevated Temperature: No slip or flow of more than 1/16 inch (1.6 mm) in accordance with MIL-D-3134J.

6. Abrasion Resistance: 0.06 gm maximum weight loss in accordance with ASTM D4060.
 7. Hardness: 85 to 90, Shore D in accordance with ASTM D2240.
- E. Primer: Type recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated.
1. Material Basis: Stonblend Primer
 2. Resin: Epoxy.
 3. Formulation Description: 2 component, 100% solids.
 4. Type: non pigmented.
 5. Finish: standard.
 6. Number of Coats: one.
- F. Mortar Base:
1. Material Basis: Stonblend Mortar
 2. Resin: Epoxy.
 3. Formulation Description: 3 component, 100% solids.
 4. Application Method: Flat Metal or plastic blade trowel.
 - a. Thickness of Coats: 3/16 inch (5 mm).
 - b. Number of Coats: One.
 5. Aggregates: Pigmented quartz Blended aggregate.
- G. Grout Coat:
1. Material Basis: Stonblend Groutcoat
 2. Resin: Epoxy.
 3. Formulation Description: 2 component, 100% high solids.
 4. Type: Clear.
 5. Finish: standard.
 6. Number of Coats: one.

H. Sealer:

1. Material Basis: Stonkote CE4.
2. Resin: Epoxy
3. Formulation Description: 2 component, 100% solids.
4. Type: Clear.
5. Finish: Matte.
6. Number of Coats: one.

I. Topcoats: Sealing or finish coats.

1. Material Basis: Stonseal CF7.
2. Resin: VOC EPA Compliant, Waterborne, Aliphatic Polyurethane.
3. Formulation Description: 2 component 100% high solids.
4. Type: Clear.
5. Finish: Matte.
6. Number of Coats: Two.

J. Waterproofing Membrane: Type recommended by manufacturer for substrate and primer and body coats indicated.

K. Patching, Leveling and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.

L. Joint Sealant: Type recommended or produced by resinous flooring manufacturer for type of service and joint condition indicated.

2.03 INTEGRAL COVE BASE ACCESSORIES

A. Precast, Integral Cove Base: Impact-resistant, polymer-resin, cove base moldings with a grit profile to promote adhesion of resinous flooring and recommended in writing by resinous flooring manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resinous flooring systems.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare and clean substrates in accordance with resinous flooring manufacturer's written instructions for substrate indicated to ensure adhesion.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
 - 1. Roughen concrete substrates as follows:
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Comply with requirements in SSPC-SP 13/NACE No. 6, with a Concrete Surface Profile of 3 or greater in accordance with ICRI Technical Guideline No. 310.2R, unless manufacturer's written instructions are more stringent.
 - 2. Repair damaged and deteriorated concrete in accordance with resinous flooring manufacturer's written instructions.
 - 3. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 6 lb of water/1000 sq. ft. in 24 hours.
 - b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 85 percent relative humidity level measurement.

- C. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates in accordance with manufacturer's written instructions.
 - 1. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring in accordance with manufacturer's written instructions.
- D. Resinous Materials: Mix components and prepare materials in accordance with resinous flooring manufacturer's written instructions.

3.03 INSTALLATION

- A. Apply components of resinous flooring system in accordance with manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness specified.
 - 1. Coordinate installation of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
 - 2. Cure resinous flooring components in accordance with manufacturer's written instructions. Prevent contamination during installation and curing processes.
 - 3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.

3.04 FIELD QUALITY CONTROL

- A. Material Sampling: Owner may, at any time and any number of times during resinous flooring installation, require material samples for testing for compliance with requirements.
 - 1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
 - 2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
 - 3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reinstall flooring materials to comply with requirements.
- B. Core Sampling: At Owner's direction and at locations designated by Owner, take one core sample per 1000 sq. ft. (92.9 sq. m) of resinous flooring, or portion of, to verify thickness. For each sample that fails to comply with requirements, take two additional samples. Repair damage caused by coring. Correct deficiencies in installed flooring as indicated by testing.

3.05 PROTECTION

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

END OF SECTION

SECTION 09 68 13

TILE CARPETING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Modular carpet tile used for Walk Off Carpet (WK1).

B. Related Requirements:

1. Section 09 65 13 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
2. Include manufacturer's written installation recommendations for each type of substrate.

B. Shop Drawings: For carpet tile installation, plans showing the following:

1. Columns, doorways, enclosing walls or partitions, and locations where cutouts are required in carpet tiles.
2. Carpet tile type, color, and dye lot.
3. Type of subfloor.
4. Type of installation.
5. Pattern of installation.
6. Pattern type, location, and direction.
7. Pile direction.
8. Transition details to other flooring materials.

C. Samples for Initial Selection: For each type of carpet tile.

1. Include Samples of exposed edge, transition, and other accessory stripping involving color or finish selection.
- D. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
 1. Carpet Tile: Full-size Sample.
 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- (300-mm-) long Samples.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.
- C. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the Commercial II certification level.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Comply with the Carpet and Rug Institute's CRI 104.

1.07 FIELD CONDITIONS

- A. Comply with the Carpet and Rug Institute's CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.

- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

1.08 WARRANTY

- A. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
 - 1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
 - 2. Failures include, but are not limited to, the following:
 - a. More than 10 percent edge raveling, snags, and runs.
 - b. Dimensional instability.
 - c. Excess static discharge.
 - d. Loss of tuft-bind strength.
 - e. Loss of face fiber.
 - f. Delamination.
 - 3. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 CARPET TILE

- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. Bentley Mills, Inc.
 - 2. J&J Flooring Group LLC.
 - 3. Patcraft; a division of Shaw Industries, Inc.
 - 4. Shaw Industries Group, Inc.; Berkshire Hathaway Company.
- C. Color: As selected by Engineer from manufacturer's full range.
- D. Fiber Content: 100 percent polypropylene.

- E. Total Weight: 36 oz./sq. yd. for finished carpet tile.
- F. Backing System: 100 percent SBR rubber.
- G. Size: 18 by 18 inches (457 by 457 mm).
- H. Thickness: 7/16-inch.
- I. Performance Characteristics:
 - 1. Appearance Retention Rating: Severe traffic, 3.5 minimum according to ASTM D7330.
 - 2. Dry Breaking Strength: Not less than 100 lbf (445 N) according to ASTM D2646.
 - 3. Dimensional Tolerance: Within 1/32 inch (0.8 mm) of specified size dimensions, as determined by physical measurement.
 - 4. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
 - 5. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
 - 6. Electrostatic Propensity: Less than 1.6 kV according to AATCC 134.

2.02 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.
- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance.
- B. Examine carpet tile for type, color, pattern, and potential defects.
- C. Concrete Slabs: Verify that finishes comply with requirements specified in Section 03 30 00 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.

1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 - c. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. General: Comply with the Carpet and Rug Institute's CRI 104 and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider, and protrusions more than 1/32 inch (0.8 mm) unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.03 INSTALLATION

- A. General: Comply with the Carpet and Rug Institute's CRI 104, Section 10, "Carpet Tile," and with carpet tile manufacturer's written installation instructions.
- B. Installation Method: As recommended in writing by carpet tile manufacturer.
- C. Maintain dye-lot integrity. Do not mix dye lots in same area.

- D. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- E. Extend carpet tile into toe spaces, door reveals, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

3.04 CLEANING AND PROTECTION

- A. Perform the following operations immediately after installing carpet tile:
 - 1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
 - 2. Remove yarns that protrude from carpet tile surface.
 - 3. Vacuum carpet tile using commercial machine with face-beater element.
- B. Protect installed carpet tile to comply with the Carpet and Rug Institute's CRI 104, Section 13.7.
- C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 09 84 33

SOUND-ABSORBING WALL AND CEILING UNITS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following:
 - 1. Sound-absorbing wall panels.
 - 2. Sound-absorbing ceiling panels.

1.02 DEFINITIONS

- A. NRC: Noise Reduction Coefficient.
- B. SAA: Sound Absorption Average.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include technical data for panel and mounting indicated.
- B. Shop Drawings: For unit assembly and installation.
 - 1. Include plans, elevations, sections, and mounting devices and details.
 - 2. Include details at cutouts and penetrations for other work.
- C. Samples: Approximately 6 x 6 inches, including mounting methods.

1.04 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of unit.
- B. Sample Warranty: For manufacturer's special warranty.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of unit to include in maintenance manuals. Include manufacturers' written cleaning and stain-removal instructions.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical ceiling units to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical ceiling units, permit them to reach room temperature and a stabilized moisture content.
- C. Handle acoustical ceiling units carefully to avoid chipping edges or damaged units in any way.
- D. Provide labels indicating brand name, style, size, and thickness

1.07 FIELD CONDITIONS

- A. Environmental Requirements:
 - 1. Do not install ceiling panels until building is closed in and HVAC system is operational.
 - 2. Locate materials onsite at least 72 hours before beginning installation to allow materials to reach temperature and moisture content equilibrium.
- B. Maintain the following conditions in areas where acoustical materials are to be installed 72 hours before, during, and after installation:
 - 1. Relative Humidity: 25 – 85%
 - 2. Uniform Temperature: 32 – 120 degrees F (0 – 49 degrees C)

1.08 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace units and components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Thirty years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain wall and ceiling units specified in this Section from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.

2.03 SOUND-ABSORBING WALL AND CEILING UNITS

- A. Sound-Absorbing Wall Panel:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Armstrong Ceiling & Wall Solutions; TECTUM FINALE Wall Panels and TECTUM FINALE Ceiling Panels or a comparable product by one of the following:
 - a. Acoustical Surfaces, Inc.
 - b. Cardinal Acoustics.
 2. Surface Texture: Coarse
 3. Composition: Aspen wood fibers bonded with inorganic hydraulic cement
 4. Finish: Surface appearance shall be consistent from panel to panel. Factory-applied latex paint with Sodium Silicate surface coating for abuse resistance.
 5. Color: Custom color as selected by Engineer.
 6. Size: As required and as shown on the Contract Drawings.
 7. Thickness: Standard 1-inch facing material plus 1-inch integral furring
 8. Edge Profile: Bevel on long edges, square on short sides
 9. Noise Reduction Coefficient (NRC) ASTM C 423: D-20 Mounting – 0.95
 10. Dimensional Stability / Mold Resistance: HumiGuard Plus and no significant mold growth when tested by ASTM D 3273.

- B. Mounting Devices: Concealed on back of unit, manufacturer's standard concealed devices to support weight of unit, and to achieve specified NRC value. Ceiling units may be direct mounted via furring strips to roof deck.

2.04 FABRICATION

- A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; dimensionally stable panels and with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch (1.6 mm) for the following:
 - 1. Thickness.
 - 2. Edge straightness.
 - 3. Overall length and width.
 - 4. Squareness from corner to corner.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.
- B. Do not proceed with installation until all wet work such as concrete and painting has been completed and thoroughly dried out, unless expressly permitted by manufacturer's printed recommendations.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Measure each wall and ceiling area and establish layout of acoustical units. Coordinate panel layout with mechanical and electrical fixtures.
- B. Coordination: Furnish layouts for preset inserts, clips, and other ceiling anchors whose installation is specified in other sections.
 - 1. Furnish concrete inserts and similar devices to other trades for installation well in advance of time needed for coordination of other work.

3.03 INSTALLATION

- A. Install units in locations indicated.

- B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.

3.04 ADJUSTING AND CLEANING

- A. Replace damaged and broken panels.
- B. Clean exposed surfaces of acoustical ceilings including trim, edge moldings, and suspension members. Comply with manufacturer's instructions for cleaning and touch up of minor finish damage. Remove any panels that cannot be successfully cleaned and/or repaired. Replace with attic stock or new product to eliminate evidence of damage.
- C. Cleaning and Disinfecting Guidelines
 1. It is recommended that only clear cleaners be used, as dyed liquids can permanently discolor the finish of the ceiling tiles.
 2. Cleaning is only recommended for the finished face of the board.
 3. Panels should never be soaked in water or other liquids, as this can have an adverse effect on board integrity. Use the safety recommendations for gloves and eye protection that are given by the manufacturer of the cleaner and cleaning equipment.

3.05 INSTALLATION TOLERANCES

- A. Variation from Plumb and Level: Plus or minus 1/16 inch (1.6 mm) in 48 inches (1200 mm), noncumulative.

3.06 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION

SECTION 09 91 23
INTERIOR PAINTING

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes interior paint systems at the Administration Building.
- B. Related Requirements:
 - 1. Section 09 96 00 "High-Performance Coatings" for tile-like coatings and paints used in the process and pump station buildings.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Include preparation requirements and application instructions.
 - 2. Indicate VOC content.
- B. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
 - 1. Submit Samples on rigid backing, 8 inches (200 mm) square.
 - 2. Apply coats on Samples in steps to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- C. Product Schedule: Use same designations indicated on Drawings and in the Interior Painting Schedule to cross-reference paint systems specified in this Section. Include color designations.

1.03 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint Products: 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials to the job site in the manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:
 - 1. Product name or title of material.
 - 2. Product description (generic classification or binder type).
 - 3. Manufacturer's stock number and date of manufacturer.
 - 4. Contents by volume, for pigment and vehicle constituents.
 - 5. Thinning instructions.
 - 6. Application instructions.
 - 7. Color name and number.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.05 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures of less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - 1. Sherwin-Williams Company (The).
 - 2. Manufacturer as approved by Owner.
- B. Source Limitations: Obtain each paint product from single source from single manufacturer.

2.02 PAINT PRODUCTS, GENERAL

A. General:

1. Use only one manufacturer's products within a paint system. Do not intermix or thin one product line with another.
2. Provide pure, nonfading color pigments of the type and quality to suit substrates and service indicated.

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

C. Paint Coordination:

1. Provide finish coats compatible with prime coats used. Review other Sections of these Specifications for compatibility of total coatings system.
2. Upon request from other trades, furnish information on characteristics of proposed finish materials to ensure compatible prime coats.
3. Provide barrier coats over incompatible primers or remove and re-prime as required to provide a proper paint system.
4. Notify Engineer in writing of any anticipated problems using specified coating systems with surfaces shop-primed by others.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 1. Masonry (Clay and CMUs): 12 percent.
 2. Gypsum Board: 12 percent.

- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- E. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer.
- F. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- G. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

3.03 INSTALLATION

- A. Apply paints according to manufacturer's written instructions.
 - 1. Use applicators and techniques suited for paint and substrate indicated.

2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- 3.04 FIELD QUALITY CONTROL
- A. Dry-Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry-film thickness.
1. Contractor shall touch up and restore painted surfaces damaged by testing.
 2. If test results show that dry-film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry-film thickness that complies with paint manufacturer's written recommendations.
- 3.05 CLEANING AND PROTECTION
- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
1. Do not clean equipment with free-draining water and prevent solvents, thinners, cleaners, and other contaminants from entering into waterways, sanitary and storm drain systems, and ground.
 2. Dispose of contaminants in accordance with requirements of authorities having jurisdiction.

3. Allow empty paint cans to dry before disposal.
 4. Collect waste paint by type and deliver to recycling or collection facility.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Engineer, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.06 INTERIOR PAINTING SCHEDULE

- A. Gypsum Board Walls – Low-Odor/Low VOC:
1. Primer: 1 coat ProMar 200 Zero VOC Latex Primer
 2. Finish: 2 coats S-W Pre-Catalyzed Epoxy Eg-Shel
- B. Exposed Construction at Ceilings and Gypsum Board Ceilings - Low-Odor/Low VOC:
1. Surface Preparation: All surfaces must be smooth and clean.
 2. Finish: 2 coats S-W ProIndustrial Acrylic Dryfall
- C. Hollow Metal Doors and Frames – Semi-Gloss, Low-Odor/ Low VOC:
1. Primer: 1 coat S-W Pro Industrial Pro-Cryl Primer
 2. Finish: 2 coats S-W Pre-Catalyzed Epoxy Semi-Gloss
- D. Concrete Masonry Units at interior partitions - Low-Odor/Low VOC:
1. Primer: 1 coat S-W Loxon Block Surfacer.
 2. Finish: 2 coats S-W Pre-Catalyzed Epoxy Eg-Shel.

END OF SECTION

SECTION 09 96 00

HIGH PERFORMANCE COATINGS

PART 1 - GENERAL

1.01 DESCRIPTION OF WORK

- A. Section includes coating systems for water and wastewater facilities. Section includes surface preparation, shop coating and field coating of exterior and interior items and surfaces. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
- B. Except as otherwise specified, coat all new substrates for which coating systems are listed in Part 2.
- C. Refer to Section 09 91 23 "Interior Painting" for paints used in the interior of the Administration building.

1.02 REFERENCES

- A. Abbreviations and Acronyms
- 1. Dry Film Thickness (DFT): Thickness of a coat of paint in fully cured state measured in mils (1/1000 inch).
- B. Definitions: ASTM D 16, unless otherwise specified.
- C. Reference Standards
 - 1. ASTM D16 Standard Terminology for Paint, Related Coatings, Materials and Applications
 - 2. ASTM D4263 Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - 3. ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
 - 4. AWWA C652 Disinfection of Water-Storage Facilities.
 - 5. NSF/ANSI/CAN Standard 61 Drinking Water Systems Components
 - 6. NSF/ANSI/CAN Standard 600 Health Effects Evaluation and Criteria for Chemicals in Drinking Water
 - 7. ICRI Guideline No. 310.2 Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays

8. NAPF 500-03 Surface Preparation Standard For Ductile Iron Pipe and Fittings in Exposed Locations Receiving Special External Coatings and/or Special Internal Linings
9. SSPC-PA 2 Measurement of Dry Coating Thickness with Magnetic Gages
10. SSPC-PA 11 Protecting Edges, Crevices, and Irregular Steel Surfaces by Stripe Coating
11. SSPC-SP1 Solvent Cleaning
12. SSPC-SP 2 Hand Tool Cleaning
13. SSPC-SP 3 Power Tool Cleaning
14. SSPC-SP 5 White Metal Blast Cleaning
15. SSPC-SP 6 Commercial Blast Cleaning
16. SSPC-SP 10 Near-White Metal Blast Cleaning
17. SSPC-SP 11 Power Tool Cleaning to Bare Metal
18. SSPC-SP 12 Ultra-High-Pressure Water-Jetting
19. SSPC-SP 13 Surface Preparation of Concrete
20. SSPC-SP 16 Brush-off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals.

1.03 SUBMITTALS

- A. Comply with the requirements specified in Section 01 33 00.
- B. Scheduling: Provide the paint submittals within 60 days of the Notice to Proceed
- C. Action Submittals/Informational Submittals
 1. Product Data: Submit manufacturer's product data for each coating, including generic description, complete technical data, surface preparation, storage requirements and application instructions.
 2. Color Samples: Submit manufacturer's color samples showing full range of standard colors.
 3. Submit manufacturer's certification that coatings comply with specified requirements and are suitable for intended application.

4. Applicator's Quality Assurance: Submit list of a minimum of three completed projects of similar size and complexity to this Work. Include for each project:
 - a. Project name and location.
 - b. Name of owner.
 - c. Name of contractor.
 - d. Name of engineer.
 - e. Name of coating manufacturer.
 - f. Approximate area of coatings applied.
 - g. Date of completion.

D. Maintenance Material Submittals

1. Extra Stock Materials: Furnish one gallon of each coating and color used.

1.04 QUALITY ASSURANCE

- A. Comply with the requirements specified in Section 01 43 00
- B. Provide Regulatory Agency Sustainability Approvals for coating products.
- C. Qualifications
 1. Manufacturer
 - a. Specialize in manufacture of coatings with a minimum of 5 years of successful experience.
 - b. Demonstrate successful performance on comparable projects.
 - c. Single-Source Responsibility: Coatings and coating reducers shall be products of a single manufacturer.
 2. Applicator
 - a. Experienced in application of specified coatings for a minimum of 5 years on projects of similar size and complexity to this Work.
 - b. Applicator's Personnel: Employ persons trained for application of specified coatings.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging. Paint material containers which do not display manufacturer's product identification will not be acceptable. Container labels to clearly identify:
 - 1. Coating or material name.
 - 2. Manufacturer.
 - 3. Color name and number.
 - 4. Batch or lot number.
 - 5. Date of manufacture.
 - 6. Mixing and thinning instructions.
- B. Storage
 - 1. Store materials in a clean dry area and within temperature range shown on the manufacturer's written instructions.
 - 2. Keep containers sealed until ready for use.
 - 3. Do not use materials beyond manufacturer's shelf life limits.
- C. Handling: Protect materials during handling and application to prevent damage or contamination.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Tnemec, Inc.
- B. Sherwin Williams, Protective & Marine Coatings

2.02 COATING SYSTEMS, GENERAL

- A. The number of coats specified is the minimum required. If additional coats are required to achieve the specified dry film thickness or to provide complete coverage, provide additional coats at no additional cost to the Owner.
- B. Material Compatibility: Provide block fillers, primers, and finish coat materials that are compatible with one another and with the substrates indicated under conditions of service and application as recommended by manufacturer, based on testing and field experience.

- C. Material Quality: Provide manufacturer's best quality paint material of the various coating types specified that are factory-formulated and recommended by manufacturer for application indicated.
- D. Colors: As selected by OWNER from manufacturer's full range, and as scheduled in Part 3.

2.03 COATING SYSTEMS FOR FERROUS METALS

- A. Ferrous Metals, Interior, Non-Submerged: Includes steel roof joists and miscellaneous steel. Roof decking and galvanized steel such as structural framing is not to receive coatings. See Section 2.05 for steel piping coating systems.
 - 1. Surface Preparation and shop prime: SSPC-SP6 Commercial Blast. Roof joists shall be shop primed meeting SSPC-SP1 standards, clean and dry.
 - 2. Priming or Spot Prime as needed:
 - a. Tnemec Series 115 Uni-Bond DF @ 1.5-2.5 mils DFT
 - b. Sherwin Williams Pro Industrial Pro-Cryl Universal Primer @ 1.5-2.5 mils DFT
 - 3. Intermediate
 - a. Tnemec Series 115 Uni-Bond DF @ 3.0-4.0 mils DFT
 - b. Sherwin Williams Pro Industrial Acrylic Semi-Gloss @ 3.0-4.0 mils DFT
 - 4. Finish:
 - a. Tnemec Series 115 UniBond DF at 3.0-4.0 mils DFT
 - b. Sherwin Williams Pro Industrial Acrylic Semi-Gloss @ 3.0-4.0 mils DFT
 - 5. Total DFT: 7.5 - 10.5 mils
- B. Ferrous Metals, Interior or Exterior, Submerged or Intermittently Submerged in Water. Potable water submergence requires the coating system to be NSF 61/600 certification.
 - 1. Surface Preparation: SSPC-SP10 Near White Blast
 - 2. Shop Primer:
 - a. Tnemec Series 21 Epoxoline @ 3.0 – 5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 3.0-5.0 mils DFT

3. Field Preparation (as needed for spot repair): Mechanically abrade repair areas to de-gloss and profile the surface.
4. Field Spot Prime (as needed):
 - a. Tnemec Series Epoxoline @ 3.0-5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 3.0-5.0 mils DFT
5. Stripe Coat:
 - a. Tnemec Series 21 Epoxoline
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product
6. Intermediate:
 - a. Tnemec Series 21 Epoxoline @ 4.0 - 6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 4.0-6.0 mils DFT
7. Finish:
 - a. Tnemec Series 21 Epoxoline @ 4.0 - 6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 4.0 - 6.0 mils DFT
8. Total DFT: 11.0 – 17.0 mils

C. Ferrous Metals, Encased in Concrete and Cementitious Substances:

1. Surface Preparation: SSPC-SP6 Commercial Blast
2. Primer:
 - a. Tnemec Series V69 High-Build Epoxoline II @4.0 - 6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 4.0 -6.0 mils DFT
3. Finish:
 - a. Tnemec Series V69 High-Build Epoxoline II @ 4.0 - 6.0 DFT
 - b. Sherwin Williams Macropoxy 646 @4.0 -6.0 DFT
4. Total DFT: 8.0 - 12.0 mils

- D. Ferrous Metals, Exterior, Non-Submerged including structural steel:
1. Surface Preparation: SSPC-SP6 Commercial Blast
 2. Shop Primer:
 - a. Tnemec Series 90-97 Tneme-Zinc @ 2.5 - 3.5 mils DFT
 - b. Sherwin Williams Corothane I Galvapak @ 2.5 – 3.5 mils DFT
 3. Field Preparation: SSPC-SP6 Commercial Blast or SSPC-SP11 Power Tool Cleaning
 4. Field Touch-Up:
 - a. Tnemec Series 394 PerimePrime @ 2.5 - 3.5 mils DFT
 - b. Sherwin Williams Corothane I Galvapak @ 2.5 – 3.5 mils DFT
 5. Field Intermediate:
 - a. Tnemec Series V69 High-Build Epoxoline II @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 3.0 – 5.0 mils DFT
 6. Finish:
 - a. Tnemec Series 1095 Endura-Shield @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Acrolon 218HS @ 3.0 – 5.0 mils DFT
 7. Total DFT: 6.0 - 10.0 mils
- E. Ferrous Metals, Buried, Exterior, as needed.
1. Surface Preparation: SSPC-SP10 Near White Blast
 2. Shop Primer:
 - a. Tnemec Series 46H-413 Tneme-Tar @ 8.0 - 10.0 mils DFT
 - b. Sherwin Williams Hi-Mil Sher-Tar Epoxy @ 8.0 – 10.0 mils DFT
 3. Finish:
 - a. Tnemec Series 46H-413 Tneme-Tar @ 8.0 - 10.0 mils DFT
 - b. Sherwin Williams Hi-Mil Sher-Tar Epoxy @ 8.0 – 10.0 mils DFT
 4. Total DFT: 16.0 - 20.0 mils

2.04 COATING SYSTEMS FOR HOLLOW METAL WORK

A. Hollow Metal Work – Interior and Exterior:

1. Surface Preparation: SSPC-SP2/SP3 Hand and Power Tool Cleaning, feather all rough edges, remove loose rust, dirt, and other surface contaminants with sandpaper, scotch brite, etc.
2. Provide with 2-3.5 mils DFT factory-applied primer.
3. Field Preparation: SSPC-SP2/SP3 Hand and Power Tool Cleaning, feather all rough edges, remove loose rust, dirt, and other surface contaminants with sandpaper, scotch brite, etc.
4. Field Intermediate:
 - a. Tnemec Series V69 High-Build Epoxoline II @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 3.0 – 5.0 mils DFT
5. Finish:
 - a. Tnemec Series 1095 Endura-Shield @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Acrolon 218HS or Hi-Solids Polyurethane @ 3.0 – 5.0 mils DFT
6. Total DFT: 6.0 - 10.0 mils

2.05 COATING SYSTEMS FOR STEEL, DUCTILE IRON, AND CAST IRON PIPE

A. Outside-diameter surface coating for Steel, Ductile and Cast-Iron Pipe - Interior Non-Submerged:

1. Surface preparation:
 - a. Steel Pipe: SSPC-SP 6 Commercial Blast Cleaning
 - b. Ductile Iron Pipe: NAPF 500-03-04 Abrasive Blast Cleaning
 - c. Cast Iron Pipe NAPF 500-03-05 Abrasive Blast Cleaning
2. Shop Primer:
 - a. Tnemec Series N140 Pota Pox Plus or Series V69 High-Build Epoxoline II @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 3.0 – 5.0 DFT

3. Intermediate
 - a. Tnemec Series V69 High-Build Epoxoline II @ 4.0-6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 4.0 – 6.0 mils DFT
 4. Finish:
 - a. Tnemec Series V69 High-Build Epoxoline II @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 3.0 – 5.0 mils DFT
 5. Total DFT: 10.0 - 16.0 mils
- B. Outside diameter surface coating for Steel, Ductile and Cast-Iron Pipe. Exterior Non-Submerged:
1. Surface preparation:
 - a. Steel Pipe: SSPC-SP 6 Commercial Blast Cleaning
 - b. Ductile Iron Pipe: NAPF 500-03-04 Abrasive Blast Cleaning
 - c. Cast Iron Pipe NAPF 500-03-05 Abrasive Blast Cleaning
 2. Shop Primer:
 - a. Tnemec Series N140 Pota Pox Plus or Series V69 High-Build Epoxoline II @ 3.0 - 5.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 3.0 – 5.0 DFT
 3. Intermediate:
 - a. Tnemec Series V69 High-Build Epoxoline II @ 4.0 - 6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646 @ 4.0 – 6.0 DFT
 4. Finish:
 - a. Tnemec EnduraShield Series 1095 @ 3.0 - 5.0 DFT
 - b. Sherwin Williams Acrolon 218HS @ 3.0 – 5.0 DFT
 5. Total DFT: 10.0 - 16.0 mils
- C. Outside diameter surface coating for Steel, Ductile and Cast Iron Pipe, Interior or Exterior, Submerged or Intermittently Submerged in Potable Water. Potable water submergence requires the coating system to be NSF 61/600 certification.

1. Surface Preparation:
 - a. Steel Pipe: SSPC-SP10 Near-White Metal Blast Cleaning
 - b. Ductile Iron Pipe: NAPF 500-03-04 Abrasive Blast Cleaning
 - c. Cast Iron Pipe NAPF 500-03-05 Abrasive Blast Cleaning
2. Shop Primer:
 - a. Tnemec N140 Pota Pox Plus @ 3.0 – 4.0 DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 3.0 – 4.0 mils DFT
3. Field Preparation: Scarify the prime coat surface by brush-blasting with a fine abrasive before top-coating if it has been exposed to the exterior for 30 days or longer.
4. Stripe Coat:
 - a. Tnemec Series 21 Epoxyline
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product
5. Intermediate:
 - a. Tnemec Series 21 Epoxoline @ 4.0 - 6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 4.0 – 6.0 mils DFT
6. Finish:
 - a. Tnemec Series 21 Epoxoline @ 4.0 - 6.0 mils DFT
 - b. Sherwin Williams Macropoxy 646PW or equivalent NSF61 product @ 4.0 – 6.0 mils DFT
7. Total DFT: 11.0 – 16.0 mils

D. Outside diameter surface of Buried Steel, Ductile and Cast Iron Pipe:

1. Pipe surface shall receive surface preparation and bitumastic shop coating suitable for buried steel, ductile, or cast iron piping. Bitumastic coating shall be 16-20 mils DFT and be Tnemec series 46H-413 Tneme-Tar, Sherwin Williams Hi-Mil Sher-Tar Epoxy, or equivalent product. Additional field coatings are not required unless necessary for field-touch up application.

- E. Inside diameter lining of Steel and Ductile Iron Pipe, 10" and Greater. Products shall be NSF 61/600 certified.
1. Provide only where indicated on plans or piping schedules.
 2. Design basis is Tnemec. Equivalent NSF61 product(s) by Sherwin Williams are considered acceptable upon review.
 3. Surface Preparation
 - a. Steel Pipe: SSPC-SP10 Near White Blast with a minimum angular profile of 3.0.
 - b. Ductile Iron Pipe: NAPF 500-03-04 Abrasive Blast Cleaning for Ductile Iron Pipe
 4. Finish:
 - a. Tnemec Series 22 Epoxoline @ 30.0 - 40.0 mils DFT
 5. Total DFT: 30.0 – 40.0 mils
 6. Colors: 1255 Beige, 1218 Blue, or WH11 Off-White.
 7. Certification: Epoxy shall be sourced certified. Maximum thinner of 5% Thinner #2, recoat cure time and temperature shall be 16 hours at 75°F, and final cure time and temperature shall be 5 days at 75°F. Mix ratio shall be Part A to Part B of 1:1 by volume.
- F. Inside diameter lining of Steel and Ductile Iron Pipe, 6" and 8". Products shall be NSF 61/600 certified.
1. Provide only where indicated on plans or piping schedule.
 2. Design basis is Tnemec. Equivalent NSF61 product(s) by Sherwin Williams are considered acceptable upon review.
 3. Surface Preparation
 - a. Steel Pipe: SSPC-SP10 Near White Blast with a minimum angular profile of 1.5.
 - b. Ductile Iron Pipe: NAPF 500-03-04 Abrasive Blast Cleaning for Ductile Iron Pipe
 4. Shop Primer:
 - a. Tnemec Series 1220 @ 5.0-7.5 mils DFT

5. Finish:
 - a. Tnemec Series 1220 @ 5.0-7.5 mils DFT
6. Total DFT: 10.0 – 15.0 mils
7. Colors: White
8. Certification: Epoxy shall be sourced certified. Maximum thinner of 15% water. Recoat cure time and temperature shall be 6 hours at 75°F, and final cure time and temperature shall be 7 days at 75°F. Mix ratio shall be Part A to Part B of 2:1 by volume. Series 44-700 Accelerator may be added up to 1 fl. oz./gal.

2.06 COATING SYSTEMS FOR NON-FERROUS METALS

- A. Galvanized, Aluminum and other Non-Ferrous Metals such as stainless steel, copper, and brass shall not receive coatings.

2.07 COATING SYSTEMS FOR CONCRETE AND CONCRETE BLOCK

- A. Concrete Walls and Ceilings, Cast-in-Place or Precast, Non-Submerged (Interior):
 1. Provide only where indicated on the coating schedules.
 2. Surface Preparation: ICRI, International Concrete Repair Institute Guideline No. 310.2 and SSPC-SP13.
 3. Primer (Sprayed and backrolled):
 - a. Tnemec Series V69 High-Build Epoxoline II with coverage of 100 to 150 square feet per gallon.
 - b. Sherwin Williams Macropoxy 646 with coverage of 100 to 150 square feet per gallon.
 4. Finish:
 - a. Tnemec Series V69 High-Build Epoxoline II with coverage of 100 to 150 square feet per gallon.
 - b. Sherwin Williams Macropoxy 646 with coverage of 100 to 150 square feet per gallon.
 5. Total DFT: Approximately 8.0 – 12.0 mils
- B. Concrete Block Walls, Interior:
 1. Provide only where indicated on the coating schedules.

2. Surface Preparation: Allow mortar to cure no less than 14 days, remove all spatter and nibs. Level protrusions. Clean and dry.
 3. Primer:
 - a. Tnemec 130 - Envirofill @ coverage of 60 to 115 square feet per gallon.
 - b. Sherwin Williams Cement-Plex 875 @ coverage of 60 to 115 square feet per gallon.
 4. Intermediate:
 - a. Tnemec Series V69 High-Build Epoxoline II @ coverage of 100 to 125 square feet per gallon.
 - b. Sherwin Williams Macropoxy 646 @ coverage of 100 to 125 square feet per gallon.
 5. Finish:
 - a. Tnemec Series V69 High-Build Epoxoline II @ coverage of 100 to 125 square feet per gallon.
 - b. Sherwin Williams Macropoxy 646 @ coverage of 100 to 125 square feet per gallon.
 6. Total DFT: Approximately 18.0 - 24.0 mils
- C. Concrete, precast, stucco and block walls - Exterior - Coated:
1. Provide only where indicated on the coating schedule.
 2. Surface Preparation: Prepare concrete surfaces in accordance with SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Pressure wash to remove all loose coating and contaminants. All surfaces must be clean and dry.
 3. Surfacer/Filler (as needed for large bugholes and voids in the concrete): Tnemec Series 218 MortarClad or Envirofill Series 130, or equivalent Sherwin Williams Product.
 4. Cracks: Fill hairline cracks less than 1/64" wide by brushing Tnemec Series 156 or equivalent Sherwin Williams product into them prior to application of primer coat.
 5. Primer:
 - a. Tnemec Series 156 Enviro-Crete at 4.0 – 8.0 mils DFT
 - b. Sherwin Williams Loxon Acrylic Primer @ 4.0 – 8.0 DFT

6. Finish:

- a. Tnemec Series 156 Enviro-Crete at 4.0 – 8.0 mils DFT
- b. Sherwin Williams UltraCrete WB Textured Coating @ 4.0 – 8.0 DFT

7. Total DFT: 8.0 - 16.0 mils

D. Concrete, precast, stucco and block walls - Exterior - Clear:

1. Surface Preparation: Allow to cure 14 days.

2. Finish:

- a. Tnemec Prima- A Pell H20. Coverage dependent on substrate. Apply per product data sheet.
- b. Sherwin-Williams LOXON 7% Siloxane Water Repellant. Coverage dependent on substrate. Apply per product data sheet.

E. Concrete Walls and Other Concrete Surfaces (buried and below-grade):

1. Surface Preparation: ICRI, International Concrete Repair Institute Guideline No. 03732

2. Finish (2 coats):

- a. Tnemec 46-413 HB Tnemec-Tar @ 8.0 - 12.0 DFT each coat
- b. Sherwin Williams Hi-Mil Sher Tar Epoxy @ 8.0 – 12.0 DFT

3. Total DFT: 16.0 - 24.0 mils

F. Concrete Floor Sealant:

1. Surface Preparation: Per sealer manufacturer recommendations.

2. Finish Coat: Ashford Formula per product installation recommendations or equivalent sealant system.

2.08 COATING SYSTEMS FOR PVC

- A. PVC piping shall not receive a coating system. Provide decal labels for appropriate labeling of process piping applications (process water designation, chemicals, etc.).

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas where and conditions under which coating systems are to be applied. Notify Engineer of areas or conditions not acceptable. Do not begin surface preparation or application until unacceptable areas or conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-place Conditions: Protect areas surrounding surfaces to be coated and surfaces not scheduled to be coated from damage during surface preparation and application of coatings.
- B. Surface Preparation: Prepare surfaces in accordance with this paragraph and the requirements listed in Part 2.

1. General

- a. Dislodge dirt, rust, plaster nibs, mortar spatter and other dry material by scraping or brushing. Remove dust and loose material by brushing, sweeping, vacuuming or blowing with compressed air.
- b. Remove oil, wax and grease by scraping off heavy deposits and cleaning with mineral spirits or a hot trisodium phosphate solution followed by a water rinse.
- c. Verify surfaces to be coated are dry, clean and free of dust, dirt, oil, wax, grease or other contaminants.

2. Non-Submerged Concrete, Masonry and Cement Stucco

- a. Allow new concrete and masonry to cure 28 days. Test for moisture in accordance with ASTM D 4263 and, if necessary, F 1869.
- b. Scrape and grind fins and protrusions flush with surface.
- c. Patch holes and cracks flush with surface.
- d. Rake mortar joints clean.

3. Non-Ferrous Metal: SSPC-SP1 to remove all contaminants or detergent wash/rinse with "Add H2O" Hyperconcentrate.

4. Lightly abrade or brush blast submerged steel shop-primed with epoxy.

5. Galvanized Metal: Remove contaminants by SSPC-SP1 Solvent Cleaning. Detergent clean with Oakite 747LTS. Abrade all galvanized metal in accordance with SSPC-SP16 Brush-off Blast Cleaning of Nonferrous Metals

6. Concrete Floors and Submerged Concrete: Prepare in accordance with ICRI, International Concrete Repair Institute Guideline No. 03732 and SSPC-SP13 Surface Preparation of Concrete using the appropriate degree of preparation for the intended surface.
7. Cast-in-Place and Precast Concrete to Receive Epoxy Finishes: Prepare in accordance with ICRI, International Concrete Repair Institute Guideline No. 03732 and SSPC-SP13 Surface Preparation of Concrete using the appropriate degree of preparation for the intended surface

3.03 APPLICATION

A. Weather

1. Air and Surface Temperatures: Prepare surfaces and apply and cure coatings within air and surface temperature range in accordance with manufacturer's written instructions.
2. Surface Temperature: Minimum of 5 degrees F (3 degrees C) above dew point.
3. Relative Humidity: Prepare surfaces and apply and cure coatings within relative humidity range in accordance with manufacturer's instructions.
4. Precipitation: Do not prepare surfaces or apply coatings in rain, snow, fog, or mist.

B. Ventilation: Provide ventilation during coating evaporation stage in confined or enclosed areas in accordance with AWWA D102.

C. Dust and Contaminants

1. Schedule coating work to avoid excessive dust and airborne contaminants.
2. Protect work areas from excessive dust and airborne contaminants during coating application and curing.

D. Protect all surfaces not to be coated

E. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels, unless specifically noted otherwise.

F. Apply coatings in accordance with manufacturer's instructions.

1. For porous masonry surfaces and concrete, apply first coat to completely fill voids and surface irregularities and to eliminate all pinholes.
2. Allow each coat to dry thoroughly before recoating. Follow manufacturer's recommended recoat time.

- G. Mix and thin coatings, including multi-component materials, in accordance with manufacturer's instructions.
- H. Keep containers closed when not in use to avoid contamination.
- I. Do not use mixed coatings beyond pot life limits.
- J. Use application equipment, tools, pressure settings, and techniques in accordance with manufacturer's instructions.
- K. Uniformly apply coatings at spreading rate required to achieve specified DFT.
- L. Apply coatings to be free of film characteristics or defects that would adversely affect performance or appearance of coating systems.
- M. Stripe-paint with brush critical locations on steel such as welds, corners, and edges using specified primer.
- N. Immediately remove coatings that fall on surrounding areas and surfaces not scheduled to be coated.
- O. Protect surfaces of coating systems from damage during construction.

3.04 REPAIR

- A. Materials and Surfaces Not Scheduled to Be Coated: Repair or replace damaged materials and surfaces.
- B. Damaged Coatings: Touch up or repair damaged coatings. Touch-up of minor damage will be acceptable where result is not visibly different from adjacent surfaces. Recoat entire surface where touch-up result is visibly different, either in sheen, texture, or color.
- C. Coating Defects: Repair in accordance with manufacturer's instructions coatings that exhibit film characteristics or defects that would adversely affect performance or appearance of coating systems.

3.05 CLEANING

- A. Remove temporary coverings and protection of surrounding areas and surfaces.
- B. Remove paint spatters from glass, plumbing fixtures, and adjoining surfaces.
- C. Remove debris from job site and leave storage areas clean.

3.06 SCHEDULES

- A. Pipe Color-Coding Schedule

Process flow (P&ID Abbreviation)	Pipe color	Lettering color	Background color
PROCESS FLOWS			
Raw Water (RW)	Olive green	Blue	White
UF Feed (UFI)	Olive green	Green	White
Strainer Backwash Waste (BWW)	Light Brown	White	Black
UF Filtrate (UFF)	Aqua	Blue	White
Ozonated Water (OZW)	Aqua	Blue	White
UF Backwash Waste (BWW)	Light brown	Black	White
UF Backwash Supply (BWS)	Dark Blue	Blue	White
All UF Air Purge Lines (PRG)	No coating – label only	Black	White
All UF CIP Lines (CSR)	No coating – label only	Red	White
Interior Tank Vents	Yellow	None	None
Backwash Recycle (BWR)	Olive green	White	Black
CIP Waste (Tank Outlet Piping) (DR)	Red	White	Black
Backwash Sludge (SLG)	Dark Brown	White	Black
Finished water (FW)	Dark blue	Blue	White
Clearwell Vents	Dark blue	None	None
OZONE SYSTEM		Orange	White
Liquid / gaseous oxygen	No coating – label only	Orange	White
Ozone solution	No coating – label only	Orange	White
Cooling water piping	No coating – label only	White	Black
Off-gas / destruct piping	No coating – label only	White	Black
Sample Piping	No coating – label only	Black	White
Low Pressure Air	Light green	White	Black
High Pressure Air	-	White	Black
CHLORINE GAS SYSTEM			
Rigid gas piping	Yellow	Black	White
Gas solution piping	No coating – label only	Black	Yellow
Scrubber Inlet and Outlet Piping (CLG, TEA)	No coating – label only	Black	Yellow
Chlorine Motive Water (UFF)	No coating – label only	Blue	White
OTHER CHEMICAL FEED			
Sodium bisulfite	No coating – label only	Brown	Light Yellow
Aluminum Chlorohydrate	No coating – label only	Black	Orange
Citric Acid	No coating – label only	Red	White
Sodium Hypochlorite	No coating – label only	Black	Yellow
Motive Water Supply	No coating – label only	Blue	White
MISCELLANEOUS PIPING			

Process flow (P&ID Abbreviation)	Pipe color	Lettering color	Background color
High Pressure Air (HPA)	No coating – label only	Green	White
Natural Gas	Red	Black	White
Local Sample Lines / Taps	Match Connecting Piping	-	-
Sample Lines Routed to Lab	No coating – label only	Match Process	Match Process

END OF SECTION

SECTION 09 96 73

COATING SYSTEMS FOR CHEMICAL FEED AREAS

PART 1 - GENERAL

1.01 DESCRIPTION OF WORK

- A. Section includes coating systems for secondary containment of liquid chemical feed storage areas in water treatment facilities, including concrete chemical containment trenches, sumps, and containment walls.

1.02 REFERENCES

- A. This Section contains references to the governing standards and documents listed below. They are a part of this Section as specified and modified; the current version shall apply unless otherwise noted. In case of conflict between the requirements of this section and those of the listed documents, the more stringent of the requirements shall prevail.
- B. American Concrete Institute, (ACI)
 - 1. ACI 301-10 – Specifications for Structural Concrete
 - 2. ACI 308 – Guide to Curing Concrete
- C. ASTM International (ASTM)
 - 1. ASTM C307 – Standard Test method for Tensile Strength of Chemical Resistant Mortars, Grouts, and Monolithic Surfacing.
 - 2. ASTM C413 – Standard Test Method for Absorption of Chemical Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.
 - 3. ASTM C496 – Standard Test Method for Splitting Tensile Strength of Cylindrical Concrete Specimens
 - 4. ASTM C531 – Standard Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.
 - 5. ASTM C579 – Standard Test Methods for Compressive Strength of Chemical Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.
 - 6. ASTM C580 – Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.

7. ASTM C596 – Standard Test Method for Drying Shrinkage of Mortar Containing Hydraulic Cement.
8. ASTM C868 – Standard Test Method for Chemical Resistance of Protective Linings
9. ASTM C1583/1583M – Standard Test Method for Tensile Strength of Concrete Surfaces and the Bond Strength or Tensile Strength of Concrete Repair and Overlay Materials by Direct Tension (Pull-off Method).
10. ASTM D638 – Standard Test Method for Tensile Properties of Plastics
11. ASTM D695 – Standard Test Method for Compressive Properties of Rigid Plastics
12. ASTM D790 – Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
13. ASTM D1653 – Standard Test Methods for Water Vapor Transmission of Organic Coating Films.
14. ASTM D2370 – Standard Test Method for Tensile Properties of Organic Coatings
15. ASTM D2794 – Standard Test Method for Resistance of Organic Linings to the Effects of Rapid Deformation (Impact).
16. ASTM D4263 – Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
17. ASTM D4414 – Standard Practice for Measurement of Wet Film Thickness by Notch Gages.
18. ASTM D6944 – Standard Practice for Determining the Resistance of Cured Coatings to Thermal Cycling
19. ASTM D7234 – Standard Test Method for Pull-Off Adhesion Strength of Coatings on Concrete Using Portable Pull-Off Adhesion Testers
20. ASTM D7682 – Standard Test Method for Replication and Measurement of Concrete Surface Profiles Using Replica Putty.
21. ASTM E96 – Standard Test Methods for Water Vapor Transmission of Materials
22. ASTM F1869 – Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
23. ASTM F2170 – Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes

D. SSPC: The Society for Protective Coatings

1. SSPC-SP13/NACE No. 6 – Surface Preparation of Concrete

1.03 DELIVERY AND STORAGE

- A. Material shall be delivered to project site in manufacturer's original unopened containers.
- B. Clearly identify manufacturer's brand name, contents, color, batch number, and any personal safety hazards associated with the use of or exposure to the materials on each package.
- C. Packages showing indications of damage that may affect the condition of contents are not acceptable.
- D. Materials shall be stored in accordance with the manufacturer's recommendations in enclosed structures and shall be protected from weather and adverse temperature conditions. Flammable materials shall be stored in accordance with state and local codes. Materials exceeding storage life as defined by the manufacturer shall be removed promptly from the site. Store materials only in area or areas designated by the Engineer solely for this purpose.
- E. Store in original packaging under protective cover and protect from damage
- F. Stack containers in accordance with manufacturer's recommendations.

1.04 ENVIRONMENTAL CONDITIONS

- A. Surface and surrounding air temperatures must exceed 55 deg F but must be less than 90 deg F with materials at not less than 70 deg F during application. Do not apply if the relative humidity is more than 90% or the surface temperature is less than 5% above the dew point of the air in the working area.

1.05 QUALIFICATIONS OF APPLICATOR

- A. Installation shall be performed by an applicator having satisfactory experience in the application of these or similar materials or with on-site consultation by a qualified field service representative from the manufacturer.

1.06 SUBMITTALS

- A. Comply with Division 1 Requirements.
- B. Product Data Sheets: Copies of current technical data for each component specified and applied as outlined in this Section.
- C. Safety Data Sheets: Copies of current Safety Data Sheets (SDS) for any materials brought on-site, including clean-up solvents, repair or resurfacing mortars and lining materials.
- D. Installation Instructions: Manufacturer's written installation instructions for the materials specified in this Section.

- E. Owner, contractor, and manufacturer shall review and mutually agree upon color, grade, and final texture of coating system before starting installation. The acceptance of a sample will constitute the job standard by which installation will proceed.

1.07 WARRANTY

- A. The manufacturer shall warranty its products as free from material defects for a minimum period of three (3) years. Provide associated Warranty Certificate.
- B. The contractor shall warranty the installed protective lining system free from workmanship defects for a minimum period of three (3) years.

PART 2 - PRODUCTS

2.01 COMPATIBILITY

- A. Coatings shall be applied to the following containment areas. Manufacturer shall verify their proposed systems are compatible with the chemicals.
 - 1. Aluminum chlorohydrate coagulant, 35 to 40% concentration.
 - 2. Sodium Hypochlorite, 12 to 15% concentration
 - 3. Citric Acid, 50% concentration
 - 4. Sodium Bisulfite, 38% concentration

2.02 COATING PRODUCTS (OPTION #1)

- A. Basis of Design: Tnemec
 - 1. Surfacer / Filler as needed:
 - a. Tnemec Series 215 Surfacing Epoxy or Series 218 MortarClad
 - 2. Penetrating Epoxy Primer
 - a. Series 201 Epoxoprime
 - 3. Aggregate Filled Novolac Epoxy Basecoat and Saturant Coat
 - a. Series 239SC ChemBloc
 - 4. Fiberglass Reinforcement Mat
 - a. Series 211-215 Reinforcing Mat, ¾ ounce
 - 5. Novolac Epoxy Topcoat

- a. Series 282 Tnemec-Glaze
 - B. Coatings shall be applied in thicknesses as recommended by the Manufacturer or manufacturer data sheet.
- 2.03 MATERIALS (OPTION #2)
- A. Basis of Design: Dudick Inc.
 - 1. Primer:
 - a. Dudick Primer 67 high solids epoxy
 - 2. Resurfacer:
 - a. Dudick Scratch Coat 300 epoxy
 - 3. Reinforced Coating:
 - a. Protecto-Flex 100XT, Fiberglass mat reinforced with 100 mil crack protection guarantee.
 - 4. Coatings shall be applied in thicknesses as recommended by the Manufacturer or manufacturer data sheet.

PART 3 - EXECUTION

3.01 GENERAL

- A. The Applicator shall provide, erect, and maintain required hoists, scaffolding, staging, and planking, and perform access-related hoisting work required to complete the Work of this Section as specified.
- B. The Applicator shall cover or otherwise protect finish work or other surfaces not being coated within the scope of this Section. The Applicator shall erect and maintain protective tarps, enclosures and/or masking to contain debris, including dust or other airborne particles from surface preparation or application activities. This may include the use of dust or debris collection apparatus as required at no additional cost to Owner.

3.02 EXAMINATION

- A. The Applicator shall examine the areas and conditions under which the protective coating Work is to be performed in accordance with NACE SP0892 and SSPC-SP13/NACE No. 6, and notify ENGINEER in writing of conditions detrimental to the proper and timely completion of the Work.
- B. All concrete should be cured using the procedures described in ACI 308, allowing a minimum of 28 days at 75F.

- C. The Applicator shall confirm the presence of a vapor barrier or positive side waterproofing on the exterior of the concrete structure.
- D. Commencement of the Work of this Section shall indicate that the substrate and other conditions of installation are acceptable to the Contractor and his The Applicator, and will produce a finished product meeting the requirements of the Specifications. All defects resulting from accepted conditions shall be corrected by Applicator at his own expense

3.03 PREPARATION

- A. Concrete surfaces to receive protective coating shall be cast with a Smooth Form Finish in accordance with ACI 301. Surfaces shall not be rubbed, sacked, troweled, or otherwise finished in any manner that will obscure or cover the parent concrete surface with materials other than materials as specified in this Section.
- B. All surfaces must be clean, dry, and free of oil, grease, and other contaminants, prior to preparation in accordance with NACE No. 6/SSPC-SP13. Concrete surfaces must be sound and capable of supporting the protective coating system.
- C. Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers, existing coatings, and other contaminants and to provide an ICRI-CSP 5 surface profile.
- D. Level or grind concrete substrates to produce a uniform and smooth surface, including removal of sharp edges, ridges, form fins, and other concrete protrusions.
- E. Contractor shall follow any additional manufacturer recommendations for surface preparation.

3.04 APPLICATION

- A. Protective coating systems shall be installed when ambient air and surface temperature is above 55°F. The substrate temperature shall be at least 5°F above the dew point. Condition the material between 70-90°F for 48 hours prior to use. Application when temperatures outside of this range will require written instruction from the Manufacturer and approval of the Engineer.
- B. Application in direct sunlight and/or with rising surface temperatures is not allowed, as this may result in blistering of the materials due to expansion of entrapped air or moisture in the concrete. In such cases, it will be necessary to postpone the application until later in the day when the temperature of the substrate is falling. Concrete surfaces that have been in direct sunlight should be shaded for at least 24 hours prior to application. Consult the Manufacturer for application schedule guidelines specific to temperature conditions and possible sealer application recommendations to reduce outgassing.

- C. Large voids, cracks, and other surface defects shall be filled or patched utilizing mortar or grout products approved by the Coating System manufacturer as needed prior to the installation of the containment lining system.
- D. Cant cove bases shall be installed using a mixed trowelable version of lining system in accordance with the Manufacturer's written instructions and as indicated on the Standard Secondary Containment Lining Details
- E. Areas not to receive containment lining shall be masked or otherwise protected to prevent these surfaces from being coated.
- F. Application (Materials Option #1)
 - 1. Epoxy primer: Apply Series 201 Epoxoprime in accordance with Manufacturer's written instructions as outlined in the product data sheet. To horizontal and vertical surfaces, roller-apply penetrating primer of Series 201 Epoxoprime at 6.0–8.0 mils DFT.
 - 2. Aggregate Filled Novolac Epoxy Basecoat: Apply Series 239SC Chembloc in accordance with Manufacturer's written instructions as outlined in the product data sheet. To horizontal and vertical surfaces, trowel apply mortar base coat of Series 239SC ChemBloc at 60.0–80.0 mils DFT.
 - 3. Fiberglass Reinforcing Mat: Embed Series 211-215 ¾ ounce fiberglass reinforcing mat into the basecoat while still wet and smooth with ribbed roller to remove any voids or wrinkles.
 - 4. Novolac Epoxy Saturant Coat: Apply Series 239SC ChemBloc Resin in accordance with Manufacturer's written instructions as outlined in the product data sheet. Saturate top of fiberglass mat completely with Series 239SC ChemBloc resin at 8.0–12.0 mils until glass attains a translucent, even appearance. Once cured, sand to remove any imperfections or fiberglass fibers that may be sticking up through the cured film. Grind if required to remove.
 - 5. Novolac Epoxy Topcoat: Apply Series 282 Tnemec-Glaze in accordance with Manufacturer's written instructions as outlined in the product data sheet. To horizontal and vertical surfaces, roller apply topcoat of Series 282 Tnemec-Glaze at 6.0–8.0 mils DFT.
- G. Installation (Materials Option #2)
 - 1. Priming: Dudick Inc Primer 67 shall be mechanically mixed and applied in accordance with manufacturer's printed instructions and applied uniformly at a film thickness of no less than 5.0 dry mils DFT.
 - 2. Resurfacing: Mechanical preparation removes laitance, exposing honeycombs or voids beneath the surface which must be filled with Dudick Inc Scratch-Coat 300, thickness as needed for complete resurfacing.

3. Fiber Reinforced Coating: Protecto-Flex 100XT shall be an epoxy lining consisting of 1/16" trowel applied basecoat, one layer of fiberglass mat reinforcement, and a flake filled epoxy topcoat of no less than 20 mils DFT.
4. Joints: Active expansion, construction and control joints are to be honored unless determined otherwise by the owner or project engineer. Joints and epoxy floor terminations are to be keyed and shall be sawed through the Coating system and filled with an appropriate Polysulphide flexible Dudick Caulk 149 sealant.

3.05 FIELD QUALITY CONTROL, INSPECTION AND TESTING

- A. The Applicator shall perform the quality control procedures listed below in conjunction with the requirements of this Section.
- B. Inspect materials upon receipt to ensure that the materials are supplied by the approved Manufacturer.
- C. Surface Profile: Inspect and record substrate profile (anchor pattern). Surfaces shall be profiled equal to the CSP 5 amplitude as recommended by the coating manufacturer in accordance with ICRI Guideline 310.2 and SSPC-SP13/NACE No. 6.
 1. Compare the substrate profile once every 50 square feet with the Concrete Surface Profile (CSP) comparators in accordance with ICRI Guideline No. 310.2.
 2. Perform replication of the concrete surface profile every 500 square feet using replica putty in accordance with ASTM D7682. Submit replications to the Engineer as part of the Jobsite Reports.
- D. Surface Cleanliness: Prepared concrete surfaces shall be inspected for surface cleanliness after cleaning and drying, prior to resurfacing or coating application.
- E. Concrete Moisture Testing: After surface preparation verify concrete dryness in accordance with ICRI Guidelines 310.2 and SSPC-SP13/NACE No. 6 with one or more of the following test methods.
 1. ASTM F1869 – Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride. Moisture vapor transmission not to exceed three pounds per 1,000 square feet in a 24-hour period.
 2. ASTM F2170 – Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probe. Relative humidity not to exceed 80 percent.
 3. ASTM D4263 - Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method. No moisture present.
 4. Consult manufacturer regarding questions and or recommendations in reference to moisture problems or questions.

- F. Surface pH Testing – Existing Concrete: After surface preparation test the pH of cement particles collected from the concrete substrate. The particles shall be measured using pH indicating paper or pH meter. The pH testing is to be performed once every 50 square feet for the first 500 square feet and then once every 500 square feet thereafter. Acceptable pH values shall be a minimum of 9.0 as measured using color indicating pH paper with readable color calibrations and a scale at whole numbers or pH meter.
- G. Measure and record ambient air temperature, relative humidity, and dew point temperature once every two hours of each work shift.
- H. Measure and record substrate temperature once every two hours using an infrared or other surface thermometer.
- I. Film Thickness:
 - 1. Wet-Film Thickness shall be taken every 100 square feet in accordance with ASTM D4414 or other agreed-upon method.
 - 2. The Dry-Film Thickness can be determined using a surface area calculation for material consumption.
- J. The Applicator is responsible for keeping the Engineer informed of progress so that Engineer may provide additional quality control at his discretion.
- K. Inspection by the Engineer or others does not absolve the applicator from his responsibilities for quality control inspection and testing as specified herein or as required by the Manufacturer's instructions.

3.06 MANUFACTURER'S FIELD SERVICES:

- A. The manufacturer's technical representative shall provide technical assistance and guidance for surface preparation and application of coating systems.

3.07 ACCEPTANCE CRITERIA

- A. Surfaces shall be prepared, applied, and tested in accordance with the specification and referenced standards herein.

3.08 PROTECTION AND CLEANING

- A. Protect the completed Work from traffic, physical abuse, immersion, and chemical exposure until the complete system has thoroughly cured for 24 hours.
- B. At the completion of the Work, Applicator shall remove materials and debris associated with the Work of this Section.

- C. Clean surfaces that are not designated to receive protective coating. Restore in a manner acceptable to Engineer.
- D. Protect the complete Work protected from damage until Final Acceptance. Protective coating damaged in any manner shall be repaired or replaced at the discretion of the Engineer, at no additional cost to Owner.

END OF SECTION

SECTION 10 14 19
EXTERIOR SIGNAGE

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Exterior Logo Sign
 - 2. Dimensional characters.

1.02 COORDINATION

- A. Signage anchor locations are shown on the Contract Drawings. Sleeves shall be provided through the exterior wall system by the signage suppliers for mounting of the sign.
- B. Sign design shall include tolerances in housing framing to accommodate mounting using the indicated sleeve locations.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include furnished specialties and accessories.
 - 2. Include data for paint, coatings, and other finish materials as required to show compliance with specified requirements.
- B. Shop Drawings:
 - 1. Include fabrication and installation details and attachments to other work.
 - 2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
 - 3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
- C. Delegated Design Engineering Drawings: Sealed and signed by Professional Structural Engineer, licensed in the State where the project is located, responsible for preparation of engineering analysis who thereby certifies preparing or supervising preparation of data to comply with specified requirements and recognized engineering principles and practices. Engineering Drawings include, but are not limited to:

1. Plans, elevations, sections, and details for fabrication and installation of sign structures indicating sizes, dimensions, and profiles; arrangement and provisions for jointing, supporting, anchoring, and fastening.
 2. Include details showing relationship with, attachment to, and reception of related Work.
 - a. Indicate details of adjoining Work, even though not included in Work of this Section, to ensure coordination of Work and Work of other Sections.
 - b. Schedule and describe anchorage assemblies and their related components.
 - c. Show location of inserts for anchors and supports, which are to be attached to structure. Note that the attachment points (sleeve locations) are indicated on the Contract Drawings.
 - d. Reference Drawing detail numbers where applicable.
- D. Engineering Analysis: Sealed and signed by Professional Structural Engineer, licensed in the State where the project is located, who thereby certifies preparing or supervising preparation of data to comply with specified requirements and recognized engineering principles and practices.
- E. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
1. Include representative Samples of available typestyles and graphic symbols.
- F. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
1. Dimensional Characters: Full-size Sample of each type of dimensional character.
 2. Full-size Samples, if approved, will be returned to Contractor for use in the Project.
- G. Product Schedule: Use same designations indicated on Drawings or specified.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Manufacturer, Installer, and engineer.
- B. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For signs to include in maintenance manuals.

1.06 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Firm regularly engaged in manufacture of exterior signage essentially identical to products specified for this Project that have been in satisfactory service for minimum of two years.
 - 1. Contractor must demonstrate previous experience with Branding and Wayfinding signage programs for Commercial clients.
 - 2. Contractor to provide a minimum of two analogous examples of previous Commercial projects, illustrating a case study which includes pictures and an outline of the program planning, implementation and completion phases.
 - 3. Contractor to provide examples of three Commercial programs successfully completed over the past 10 years.
 - 4. Contractor to provide three letters of reference from past Commercial projects.
 - 5. Contractor to develop a proposed project schedule for managing a location, and include key milestones and task responsibilities.
 - 6. Contractor to demonstrate the capability for online reporting, and for creating a project database with customer /client accessibility.
- B. Installer Qualifications: Manufacturer or an entity that employs installers and supervisors who are trained and approved by manufacturer.
- C. Welding Qualifications: Qualify procedures and personnel for both field and shop/production facility according to AWS D1.1/D1.1M, "Structural Welding Code – Steel" D1.2/D1.2M, "Structural Welding Code – Aluminum" D1.3, "Structural Welding Code - Sheet Steel" D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."
- D. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.

1.07 FIELD CONDITIONS

- A. Field Measurements: Inspect existing conditions and verify dimensions related to fabrication and installation of exterior signage.

1.08 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Separation or delamination of sheet materials and components.
2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, to design sign structure and anchorage of exterior sign type(s) as shown on Drawings according to structural performance requirements.
- B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.
 1. Uniform Wind Load: As indicated on Drawings.
 2. Concentrated Horizontal Load: As indicated on Drawings.
 3. Other Design Load: As indicated on Drawings
 4. Uniform and concentrated loads need not be assumed to act concurrently.
- C. Thermal Movements: For exterior signage, allow for thermal movements from ambient and surface temperature changes.
 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 SIGN SYSTEMS

- A. Logo Sign: Provide logo sign as shown on Drawings and as approved by Owner.
- B. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
 1. Character Material: Cast aluminum.
 2. Character Height: As indicated on Drawings.
 3. Thickness: Manufacturer's standard for size of character.

4. Finishes:

- a. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as selected by Engineer from manufacturer's full range.

5. Mounting: As indicated on Drawings.

2.03 SIGN MATERIALS

- A. Aluminum Castings: ASTM B26/B26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.
- B. Aluminum Sheet and Plate: ASTM B209 (ASTM B209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- D. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.04 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:
 - 1. Use concealed fasteners and anchors unless indicated to be exposed.
 - 2. For exterior exposure, furnish nonferrous-metal or stainless steel devices unless otherwise indicated.
 - 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - 4. Sign Mounting Fasteners:
 - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.

2.05 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
 - 1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 - 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 - 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 - 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 - 5. Internally brace dimensional characters for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
 - 6. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
 - 7. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

2.06 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.07 ALUMINUM FINISHES

- A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF SIGNS

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 - 3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.03 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION

SECTION 10 14 23

PANEL SIGNAGE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Panel signs.

1.02 COORDINATION

- ###### A.
- Furnish templates for placement of sign-anchorage devices embedded in permanent construction by other installers.

1.03 ACTION SUBMITTALS

A. Product Data:

1. Panel signs.

B. Shop Drawings: For panel signs.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
4. Show locations of electrical service connections.
5. Include diagrams for power, signal, and control wiring.

C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.

1. Include representative Samples of available typestyles and graphic symbols.

D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:

1. Panel Signs: Full-size Sample.

2. Full-size Samples, if approved, will be returned to Contractor for use in Project.

E. Product Schedule: For panel signs. Use same designations indicated on Drawings or specified.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.

B. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer of products.

1.07 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering.

b. Deterioration of embedded graphic image.

c. Separation or delamination of sheet materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Thermal Movements: For exterior signs or signs in unconditioned spaces, allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

B. Accessibility Standard: Comply with applicable provisions in ICC A117.1.

2.02 PANEL SIGNS

- A. Panel Sign: Sign with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
 - 1. All materials shall be non-corrosive.
 - 2. Sign size, configuration, assembly, and mounting as shown on Drawings.
 - a. Confirm all signage language with Owner.
 - 3. Flatness Tolerance: Sign is to remain flat or uniformly curved under installed conditions as indicated on Drawings and within a tolerance of plus or minus 1/16 inch (1.5 mm) measured diagonally from corner to corner.

2.03 PANEL-SIGN MATERIALS

- A. Aluminum Sheet and Plate: ASTM B209 (ASTM B209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- B. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, stretcher-leveled standard of flatness.
- D. Acrylic Sheet: ASTM D4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).
- E. Fiberglass Sheet: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.
- F. Polycarbonate Sheet: ASTM C1349, Appendix X1, Type II (coated, mar-resistant, UV-stabilized polycarbonate), with coating on both sides.
- G. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.04 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following unless otherwise indicated:
 - 1. Use concealed fasteners and anchors unless indicated to be exposed.
 - 2. Furnish nonferrous-metal or stainless steel devices unless otherwise indicated.

- B. Adhesive: As recommended by sign manufacturer.
- C. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.
- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.05 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
 - 1. Preassemble signs in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 - 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 - 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 - 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 - 5. Internally brace signs for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
 - 6. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
- B. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.

2.06 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.

2.07 ALUMINUM FINISHES

- A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.08 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 2. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Verify that anchorage devices embedded in permanent construction are correctly sized and located to accommodate signs.
- D. Verify that electrical service is correctly sized and located to accommodate signs.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.

2. Install signs so they do not protrude or obstruct according to the accessibility standard.
 3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign and two-face tape.

3.03 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION

SECTION 10 28 00

TOILET, BATH, AND LAUNDRY ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Public-use washroom accessories.
 - 2. Custodial accessories.

1.02 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.03 ACTION SUBMITTALS

- A. Product Data Submittals: For each product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 - 3. Include electrical characteristics.
- B. Samples: For each exposed product and for each finish specified, full size.
 - 1. Approved full-size Samples will be returned and may be used in the Work.

1.04 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For manufacturer's special warranties.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For accessories to include in maintenance manuals.

1.06 WARRANTY

- A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, visible silver spoilage defects.
 - 2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Design accessories and fasteners to comply with the following requirements:
 - 1. Grab Bars: Installed units are able to resist 250 lbf (1112 N) concentrated load applied in any direction and at any point.

2.02 PUBLIC-USE WASHROOM ACCESSORIES

- A. Source Limitations: Obtain each type of public-use washroom accessory from single source from single manufacturer.
- B. Toilet Tissue (Roll) Dispenser:
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
 - 2. Description: Roll-in-reserve dispenser with hinged front secured with tumbler lockset.
 - 3. Mounting: Surface mounted.
 - 4. Operation: Noncontrol delivery with standard spindle.
 - 5. Capacity: Designed for 4-1/2- or 5-inch- (114- or 127-mm-) diameter tissue rolls.
 - 6. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

C. Automatic Paper Towel (Roll) Dispenser:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Description: Automatic motion-sensing mechanism with user-adjustable delay and paper towel length; battery powered.
3. Mounting: Surface mounted.
4. Minimum Capacity: 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
5. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
6. Lockset: Tumbler type.

D. Soap Dispenser:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Description: Designed for manual operation and dispensing soap in liquid or lotion form.
3. Mounting: Vertically oriented, surface mounted.
4. Capacity: 40-fl.oz. (1.2-L).
5. Exposed Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

6. Lockset: Tumbler type.
7. Refill Indicator: Window type.

E. Grab Bar:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch (1.3 mm) thick.
 - a. Finish: Smooth, ASTM A480/A480M No. 4 finish (satin).
4. OD: 1-1/2 inches (38 mm).
5. Configuration and Length: As indicated on Drawings.

F. Seat-Cover Dispenser:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Mounting: Surface mounted.
3. Minimum Capacity: 250 seat covers.
4. Exposed Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

5. Lockset: Tumbler type.

G. Mirror Unit:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Frame: Stainless steel angle, 0.05 inch (1.3 mm) thick.
 - a. Corners: Welded and ground smooth.
3. Size: As indicated on Drawings.
4. Hangers: Manufacturer's standard rigid, tamper and theft resistant.

H. Hook:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Description: Double-prong unit.
3. Mounting: Concealed.
4. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

2.03 CUSTODIAL ACCESSORIES

- A. Source Limitations: Obtain custodial accessories from single source from single manufacturer.

B. Custodial Mop and Broom Holder:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. ASI-American Specialties, Inc.
 - b. Bobrick Washroom Equipment, Inc.
 - c. Bradley Corporation.
 - d. Brey-Krause Manufacturing Co.
2. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
3. Length: 36 inches (914 mm).
4. Hooks: Four.
5. Mop/Broom Holders: Three, spring-loaded, rubber hat, cam type.
6. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
 - a. Shelf: Not less than nominal 0.05-inch- (1.3-mm-) thick stainless steel.
 - b. Rod: Approximately 1/4-inch- (6-mm-) diameter stainless steel.

2.04 MATERIALS

- A. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.031-inch- (0.8-mm-) minimum nominal thickness unless otherwise indicated.
- B. Fasteners: Screws, bolts, and other devices of same material as accessory unit, unless otherwise recommended by manufacturer or specified in this Section, and tamper and theft resistant where exposed, and of stainless or galvanized steel where concealed.
- C. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.05 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Install accessories in accordance with manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
 - 1. Remove temporary labels and protective coatings.
 - 2. Adhered installations are not allowed.
- B. Grab Bars: Install to comply with specified structural-performance requirements.

3.02 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Clean and polish exposed surfaces in accordance with manufacturer's written instructions.

END OF SECTION

SECTION 10 41 16

EMERGENCY KEY CABINETS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Emergency key cabinets.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product. Show cabinet type, and trim style. Include roughing-in dimensions and details showing recessed-mounting method and relationships of box and trim to surrounding construction.
- B. Samples: For each type of exposed finish required.

1.03 COORDINATION

- A. Coordinate size of emergency key cabinets to ensure that type and capacity of stored keys indicated are accommodated.
- B. Coordinate sizes and locations of emergency key cabinets with wall depths.

PART 2 - PRODUCTS

2.01 EMERGENCY KEY CABINET

A. Exterior Emergency Key Cabinets:

1. Basis-of-Design: Subject to compliance with the requirements, provide Rapid Entry System Hinged Door Series 3200 Knox-Box as manufactured by Knox Co., Phoenix, AZ, or comparable product by one of the following:
 - a. Manufacturer as approved by Engineer.
2. Locations: As shown on Drawings.
3. Exterior emergency key cabinets shall be approximately 4"H x 5" W x 3-3/4" D capable of holding up to 10 keys and access cards in interior compartment, fabricated of heavy-duty, drill-resistant, 1/4-inch solid steel housing, 100% welded construction.

4. High security UL listed double-action rotating tumblers and hardened steel pins accessed by a biased cut key. Lock shall have 1/8" thick stainless steel dust cover with tamper seal mounting capability.
5. Provide 4 keys to each cabinet master-keyed to the local Fire Department keying system.
6. Dead bar protected stainless steel hinge.
7. Door: 1/2-inch thick steel door with three-bolt latch and weather resistant door gasket.
8. Hinged door shall allow single hand operation.
9. Connect emergency key cabinet to building's alarm system

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine walls for suitable anchorage where cabinets will be installed.
- B. Examine roughing-in for alarm systems to verify actual locations of connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrate for emergency key cabinets as required by type and size of cabinet.
- B. Coordinate alarm system connections with Division 28 Sections.

3.03 INSTALLATION

- A. General: Install emergency key cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.
- B. Emergency Key Cabinets: Fasten cabinets to structure, square and plumb.

3.04 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as emergency key cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of emergency key cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

- C. Touch up marred finishes, or replace emergency key cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by emergency key cabinet manufacturer.
- D. Replace emergency key cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 10 44 13
FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fire-protection cabinets for the following:
 - a. Portable fire extinguisher.

B. Related Requirements:

1. Section 10 44 16 "Fire Extinguishers" for portable, hand-carried fire extinguishers accommodated by fire-protection cabinets

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.

B. Shop Drawings: For fire-protection cabinets.

1. Include plans, elevations, sections, details, and attachments to other work.

1.03 CLOSEOUT SUBMITTALS

A. Maintenance Data: For fire-protection cabinets to include in maintenance manuals.

1.04 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain fire-protection cabinets, accessories, and fire extinguishers from single source from single manufacturer.

2.02 FIRE-PROTECTION CABINET

- A. Cabinet Type: Suitable for fire extinguisher.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Guardian Fire Equipment, Inc.
 - b. J. L. Industries, Inc.; Activar Construction Products Group, Inc.
 - c. Larsen's Manufacturing Company.
 - d. Nystrom, Inc.
 - e. Potter Roemer LLC; a Division of Morris Group International.
 - f. Strike First Corporation of America.
- B. Cabinet Construction: Nonrated.
- C. Cabinet Material: Stainless steel sheet.
- D. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
 - 1. Square-Edge Trim: 1-1/4- to 1-1/2-inch (32- to 38-mm) backbend depth.
- E. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim.
- F. Cabinet Trim Material: Stainless steel sheet.
- G. Door Material: Stainless steel sheet.
- H. Door Style: Vertical duo panel with frame.
- I. Door Glazing: Acrylic sheet.
 - 1. Acrylic Sheet Color: Clear transparent acrylic sheet.

- J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
- K. Accessories:
 - 1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
- L. Materials:
 - 1. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304.
 - a. Finish: ASTM A480/A480M No. 4 directional satin finish.
 - 2. Transparent Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), 6 mm thick, with Finish 1 (smooth or polished).

2.03 FABRICATION

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
 - 1. Weld joints and grind smooth.
 - 2. Miter corners and grind smooth.
 - 3. Provide factory-drilled mounting holes.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles.
 - 1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch (13 mm) thick.
 - 2. Fabricate door frames of one-piece construction with edges flanged.
 - 3. Miter and weld perimeter door frames and grind smooth.
- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.04 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of fire-protection cabinets from damage by applying a strippable, temporary protective covering before shipping.

- C. Finish fire-protection cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where semirecessed cabinets will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare recesses for semirecessed fire-protection cabinets as required by type and size of cabinet and trim style.

3.03 INSTALLATION

- A. General: Install fire-protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.
- B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
 - 1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is inadequate for recessed cabinets, provide semirecessed fire-protection cabinets.
 - 2. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.

3.04 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

- D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.
- E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 10 44 16
FIRE EXTINGUISHERS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

1.03 INFORMATIONAL SUBMITTALS

- A. Warranty: Sample of special warranty.

1.04 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.05 COORDINATION

- A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.06 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10 when testing interval required by NFPA 10 is within the warranty period.
 - b. Faulty operation of valves or release levers.
 - 2. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 - 1. Provide fire extinguishers approved, listed, and labeled by FM Global.

2.02 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Babcock-Davis.
 - b. Badger Fire Protection; a Carrier company.
 - c. Buckeye Fire Equipment Company.
 - d. Fire-End & Croker Corporation.
 - e. Guardian Fire Equipment, Inc.
 - f. J. L. Industries, Inc.; Activar Construction Products Group, Inc.
 - g. Kidde; Carrier Global Corporation.
 - h. Larsen's Manufacturing Company.
 - i. Nystrom, Inc.
 - j. Potter Roemer LLC; a Division of Morris Group International.
 - 2. Source Limitations: Obtain fire extinguishers and accessories, from single source from single manufacturer.
 - 3. Valves: Nickel-plated, polished-brass body.
 - 4. Handles and Levers: Stainless steel.

5. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B.
 - B. Multipurpose Dry-Chemical Type in Aluminum Container: UL-rated 4-A:60-B:C, 10-lb (4.5-kg) nominal capacity, with monoammonium phosphate-based dry chemical in enameled-aluminum container.
- 2.03 MOUNTING BRACKETS
- A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or red baked-enamel finish.
 1. Source Limitations: Obtain mounting brackets and fire extinguishers from single source from single manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine fire extinguishers for proper charging and tagging.
 1. Remove and replace damaged, defective, or undercharged fire extinguishers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.
- B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.
 1. Mounting Height: Top of fire extinguisher to be at 42 inches (1067 mm) above finished floor.

END OF SECTION

SECTION 10 51 13

METAL LOCKERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Welded corridor lockers.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker.

B. Shop Drawings: For metal lockers.

1. Include plans, elevations, sections, and attachment details.

C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available.

D. Samples for Verification: For the following products, in manufacturer's standard size:

1. Lockers and equipment.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.

1.06 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

1.07 COORDINATION

- A. Coordinate sizes and locations of concrete or masonry bases for metal lockers.
- B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.08 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of latches and other door hardware.
 - 2. Damage from deliberate destruction and vandalism is excluded.
 - 3. Warranty Period for Welded Metal Lockers: Lifetime from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain metal lockers and accessories from single source from single locker manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions in the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

2.03 WELDED CORRIDOR LOCKERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. AJW Architectural Products.
 2. ASI Storage Solutions.
 3. Penco Products, Inc.
 4. Republic Storage Systems, LLC.
- B. Doors: One piece; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.
1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.
 2. Door Style: Vented panel as follows:
 - a. Louvered Vents: No fewer than six louver openings at top and bottom for single-tier lockers.
- C. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
1. Tops, Bottoms, and Sides: 0.060-inch (1.52-mm) nominal thickness.
 2. Backs: 0.048-inch (1.21-mm) nominal thickness.
 3. Shelves: 0.060-inch (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.
- D. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.
1. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
- E. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
1. Hinges: Manufacturer's standard, steel, continuous or knuckle type.
- F. Recessed Door Handle and Latch: Stainless steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.
1. Single-Point Latching: Nonmoving latch hook with steel padlock loop that projects through recessed cup and is finished to match metal locker body.

- a. Latch Hook: Equip each door with one latch hook, fabricated from 0.120-inch (3.04-mm) nominal-thickness steel sheet; welded midway up full-height door strike; with resilient silencer.
- G. Identification Plates: Manufacturer's standard, etched, embossed, or stamped aluminum plates, with numbers and letters at least 3/8 inch (9 mm) high.
- H. Hooks: Manufacturer's standard ball-pointed, aluminum or steel; zinc plated.
- I. Continuous Sloping Tops: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.
 - 1. Closures: Vertical-end type.
- J. Recess Trim: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.
- K. Filler Panels: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.
- L. Materials:
 - 1. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.
- M. Finish: Baked enamel or powder coat.
 - 1. Color: As selected by Engineer from manufacturer's full range.

2.04 FABRICATION

- A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
 - 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
 - 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.
- C. Equipment: Provide each locker with an identification plate and the following equipment:
 - 1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
- D. Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups.

Factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.

E. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.
2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.

F. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.

1. Sloping-top corner fillers, mitered.

G. Recess Trim: Fabricated with minimum 2-1/2-inch (64-mm) face width and in lengths as long as practical; finished to match lockers.

H. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.

2.05 ACCESSORIES

A. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.

B. Anchors: Material, type, and size required for secure anchorage to each substrate.

1. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine walls and floors or support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install lockers level, plumb, and true; shim as required, using concealed shims.

1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
- B. Welded Lockers: Connect groups together with manufacturer's standard fasteners, with no exposed fasteners on face frames.
- C. Equipment:
 1. Attach hooks with at least two fasteners.
 2. Attach door locks on doors using security-type fasteners.
 3. Identification Plates: Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
- D. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
 1. Attach recess trim to recessed metal lockers with concealed clips.
 2. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.
 3. Attach sloping-top units to metal lockers, with closures at exposed ends.

3.03 ADJUSTING

- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding.

3.04 PROTECTION

- A. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- B. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION

SECTION 11 11 36

VEHICLE CHARGING EQUIPMENT

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. AC Level 2 electric vehicle supply equipment.

B. Products Installed, but Not Furnished, under This Section:

1. Section 26 05 29
2. Section 26 05 53

C. Reference:

1. Section 28 10 00

1.02 DEFINITIONS

- A. CCS: Combined charging system; a means for using the same connector port for both AC Level 2 charging and DC Level 2 fast charging.
- B. EV: Electric vehicle.
- C. EVCE: Electric vehicle charging system equipment. This term refers to DC Level 2 charging equipment located off-board the vehicle.
- D. EVSE: Electric vehicle supply equipment. This term refers to AC Level 2 charging equipment that depends on the built-in charger located onboard the vehicle.
- E. Fastened in Place: Does not require tools to be removed and replaced.
- F. Fixed in Place: Requires tools to be removed and replaced.
- G. OCPP: Open Charge Point Protocol; an application protocol for communication between EVs and a central management system.

1.03 ACTION SUBMITTALS

A. Product Data:

1. AC Level 2 EVSE.

- B. Shop Drawings:
 - 1. Routing and attachment of permanent wiring for AC Level 2 EVSE.
- C. Field quality-control reports.
- D. Sustainable design submittals.

1.04 INFORMATIONAL SUBMITTALS

- A. Preconstruction test reports.
- B. Manufacturers' Published Instructions:
 - 1. AC Level 2 EVSE.
- C. Manufacturer's Field Reports:
 - 1. Manufacturer's field reports for field quality-control support.
 - 2. Manufacturer's field reports for system startup support.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Contracts:
 - 1. Software and firmware service agreement.
- B. Warranty documentation.

1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts:
 - 1. UL FFWA - AC Level 2 EV charging station and accessories.
 - 2. UL FFWA - A Level 2 EV supply equipment (EVSE).
- B. Special Tools:
 - 1. UL FFWA - AC Level 2 EV charging station and accessories.
 - 2. UL FFWA - AC Level 2 EV supply equipment (EVSE).

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Test Reports: Collect, assemble, and submit test reports prepared by qualified testing agency.

1.08 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed vehicle charging equipment performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.
 - 1. Extended-Warranty Period: Two years from date of Substantial Completion; full coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.01 AC LEVEL 2 ELECTRIC VEHICLE SUPPLY EQUIPMENT

- A. Description: EVSE with input rated up to 600 V(ac) for AC Level 2 charging of vehicle batteries using the EV's onboard charger.
- B. Performance Criteria:
 - 1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 - 2. Listing Criteria:
 - a. EV Supply Equipment: UL CCN FFWA; including UL 2594.
 - b. Personnel Protection: UL CCN FFUQ2; including UL 2231-1 and UL 2231-2.
 - 3. General Characteristics: Complying with Article 625 of NFPA 70.
- C. UL FFWA - AC Level 2 EV Charging Station and Accessories:
 - 1. Source Limitations: Obtain products from single manufacturer.
 - 2. West Side Units (Back of Building) Options:
 - a. Location Rating: Outdoor.
 - b. Input Feeder Rating: 208 to 240 V(ac), single phase, 60 Hz, dual 9.6 kW (50 A).
 - c. Output Quantity: 2.
 - d. Output Wiring: Flexible cord.
 - (1) Output Cable Nominal Length: 18 ft.

- (2) Cable management system.
 - (3) Output Attachment Plug: Type 1 (SAE J1772).
 - e. Mounting: Wall mount as indicated on Drawings.
 - f. Metering: Nonrevenue grade meter.
 - g. Networking:
 - (1) Protocol: Modbus TCP/IP.
 - (2) LAN Communications: Ethernet.
 - (3) Capable of remote configuration and reporting.
 - h. Authorization or Payment System:
 - (1) Proximity card reader in accordance with Section 28 10 00
 - (2) PCI compliant.
 - (3) Capable of remote control and authorization.
3. East Side Units (Front of the Building) Options:
- a. Location Rating: Outdoor.
 - b. Input Feeder Rating: 208 to 240 V(ac), single phase, 60 Hz, dual 9.6 kW (50 A).
 - c. Output Quantity: 2.
 - d. Output Wiring: Flexible cord.
 - (1) Output Cable Nominal Length: 18 ft.
 - (2) Cable management system.
 - (3) Output Attachment Plug: Type 1 (SAE J1772).
 - e. Mounting: Pedestal mount as indicated on Drawings.
 - f. Metering: Revenue grade meter.
 - g. Networking:
 - (1) Protocol: OCPP.
 - (2) LAN Communications: Ethernet.

- (3) Capable of remote configuration and reporting.
 - h. Authorization or Payment System:
 - (1) Credit card reader.
 - (2) PCI compliant.
 - (3) Capable of remote control and authorization.
- 4. Accessories:
 - a. Spare Parts: Furnish to Owner spare parts, for repairing vehicle charging equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.
 - b. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to vehicle charging equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine walls, floors, and bollards or posts for suitable conditions where vehicle charging equipment will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF VEHICLE CHARGING EQUIPMENT

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation:
 - 1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with Article 625 of NFPA 70 and with NECA NEIS 413.
 - 2. Consult Architect for resolution of conflicting requirements.
- C. Special Installation Techniques:
 - 1. Fastened in Place: Comply with manufacturer's published instructions for installing mounting hardware.

2. Fixed in Place: Comply with manufacturer's published instructions for installation and torquing of hardware fasteners.
3. Base Mounting: When indicated on Drawings or in manufacturer's published instructions, provide housekeeping pad for installing base for vehicle charging equipment.
4. Identification: Provide labels for vehicle charging equipment and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Provide warning signs.
 - c. Label each enclosure with engraved metal or laminated-plastic nameplate.

D. Cybersecurity:

1. Software:
 - a. Coordinate security requirements with IT department.
 - b. Ensure that latest stable software release is installed and properly operating.
 - c. Disable or change default passwords to password of at least eight characters in length, using a combination of uppercase and lower letters, numbers, and symbols. Record passwords and turn over to party responsible for system operation and administration.
2. Hardware:
 - a. Coordinate location and access requirements with IT department.
 - b. Enable highest level of wireless encryption that is compatible with Owner's information and communications technology network.
 - c. Disable dual network connections.

3.03 FIELD QUALITY CONTROL OF VEHICLE CHARGING EQUIPMENT

- A. Field tests and inspections must be witnessed by field Representative.
- B. Tests and Inspections:
 1. Perform manufacturer's recommended tests and inspections.
 2. For each unit of vehicle charging equipment, perform the following tests and inspections:

- a. Unit self-test.
 - b. Operation test with EV.
 - c. Network communications test.
- C. Nonconforming Work:
 - 1. Unit will be considered defective if it does not pass tests and inspections.
 - 2. Remove and replace defective units and retest.
- D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.
- E. Manufacturer Services: Engage factory-authorized service representative to supervise field tests and inspections.
 - 1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare report after each visit by factory-authorized service representative, documenting activities performed at Project site.
- 3.04 SYSTEM STARTUP
 - A. Perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's published instructions.
 - B. Manufacturer Services: Engage factory-authorized service representative to supervise system startup.
 - 1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.
- 3.05 PROTECTION
 - A. After installation, protect vehicle charging equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.
- 3.06 MAINTENANCE
 - A. Software and Firmware Service Agreement:
 - 1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for two years.

2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within two years from date of Substantial Completion.
 - a. Upgrade Notice: No fewer than 30 days to allow Owner to schedule and access the system.
3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION

SECTION 11 24 29

FACILITY FALL PROTECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Rooftop Fall Protection System equipment including:
 - a. System design
 - b. Tieback anchors
 - c. Davits
2. Ladder fall arrest systems.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review sequence of operation for each type of equipment.
2. Review required testing, inspecting, and certifying procedures.

1.03 ACTION SUBMITTALS

A. Product Data: Manufacturers' data and product information for manufactured materials and products:

1. Test report certified by a professional engineer
2. General product data
3. Detailed drawings of equipment proposed
4. Installation instructions

B. Shop Drawings: For fabrication and erection.

1. Submit scaled shop drawings showing location plan of all support equipment and sections detailing all parts and accessories.
2. Clearly specify equipment dimensions, materials, fabrication details, hardware, and installation instructions.

3. Include notes with guidelines of proper use of system.
4. Equipment location plan to include identification number next to each piece of equipment that are permanently affixed to a structure.
5. Shop drawings shall be prepared under supervision of a registered professional engineer and shall bear engineer's seal and signature. Professional engineer shall be licensed in jurisdiction where project is located. Include P.E. certified report of tested equipment.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: Provide documentation verifying company's amount of experience and successful performance in design, fabrication, and installation of permanent window washing fall protection equipment.
 1. Submit listing of company's installations representing similar scope and complexity to project requirements for previous 10 years. List shall include information as follows:
 - a. Project name and address.
 - b. Name of Owner.
 - c. Name of Contractor.
 - d. Name of Engineer.
 - e. Date of completion.
 2. Provide documentation verifying that installers have been trained by the manufacturer and are competent.
- B. Delegated Design Submittal: Design of the fall protection system shall be performed by an Engineer with experience in designing not less than 5 installations of similar size and scope.

1.05 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fall protection systems to include in operation and maintenance manuals.
 1. Submit operations & maintenance guidance in accordance with the requirements of Division 01.

1.06 QUALITY ASSURANCE

- A. Manufacturer/Installer Qualifications: Provide products from a company specializing in design, fabrication, and installation of permanent suspended access equipment with a

minimum of 5 years documented experience. Companies like miscellaneous metal fabricators not normally engaged in design and fabrications of suspended access equipment are not acceptable.

1. Manufacturer and installer shall have specific liability insurance (products and completed operations) in an amount not less than \$5,000,000.
 2. Installer(s) shall be trained or qualified by manufacturer in installation techniques and procedures of permanent suspended access equipment.
- B. In order to assure uniform quality, ease of maintenance and minimal parts storage, it is the intent of these Specifications that all equipment called for under this Section shall be supplied by a single source. The equipment supplier shall, in addition to the installer, assume the responsibility for proper and complete installation.
- 1.07 DELIVERY, STORAGE, AND HANDLING
- A. Deliver materials in manufacturer's original, unopened protective packaging.
 - B. Store materials in original protective packaging. Prevent soiling, physical damage or wetting.
- 1.08 FIELD CONDITIONS
- A. Field Measurements: Perform prior to preparation of Shop Drawings and fabrication drawings to ensure required fit and dimensions.

PART 2 - PRODUCTS

2.01 EXTERIOR ROOF-TOP SYSTEM DESCRIPTION

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Fall Protection System by Summit Anchor Company, www.summitanchor.com
 1. Substitutions: Engineer will consider products of comparable manufacturers as a substitution, pending the contractor's submission of adequate documentation of the substitution in accordance with procedures in Division 1 of the Project Manual.
- B. Anchorage Design Requirements:
 1. Safety anchor system design shall comply with current OSHA, ANSI, and local regulations pertaining to window cleaning and fall protection.
 2. Anchor system shall provide independent fall arrest anchorages as required by OSHA and ANSI requirements, and as shown on Drawings.

C. Davit Design Requirements:

1. Davits shall be capable of supporting an ultimate load of not less than 4 times the rated load. The rated load of the davit shall be based on the swing stage hoist and powered platform load capacity, which is frequently 1,000 lbs or more.
2. Manufacture shall provide engineer's calculations and test report to verify that davit will support load requirements.

2.02 STRUCTURAL COMPONENT MATERIALS

A. Exposed Structural Components Finish: Galvanized Mild Steel or Stainless Steel

1. Steel: ASTM A572 GR 50
2. Steel: ASTM A A36
3. Galvanizing: ASTM A123
4. Stainless Steel; 304 ASTM A 193 Grade B8, Class 2
5. Aluminum; 6061-T6 Alloy

B. Yield Strength

1. Base Plates and Bottom Plates, High Strength Steel: 50 ksi minimum
2. Other Sections: 36 ksi minimum

C. Non-Structural Components

1. Aluminum; 6061-T6 Alloy
2. Alloys shall conform to requirements published in AA Aluminum Standards.
3. Sheet and Plate: ASTM B209
4. Extruded Bars, Rods, Shapes, and Tubes: ASTM B221

D. Hollow Structural Sections (HSS)

1. ASTM A500, Grade C
2. Yield Strength: 46 ksi minimum (round shapes) and 50 ksi (square and rectangular shapes)
3. Tensile Strength: 62 ksi minimum

E. Round Pipe Sections

1. ASTM A53, Grade B
2. Yield Strength: 35 ksi minimum
3. Tensile Strength: 60 ksi minimum

F. Nuts, Bolts, Davit Pins, and Washers

1. Stainless Steel; 304 ASTM A 193 Grade B8 or F593C
2. Galvanized Flat Washers ASTM F-436 or 18 -8 Stainless Steel

G. Anchor Bolts, for securing base plate

1. Metal: Stainless Steel, 304 Stainless Steel; ASTM A 193 Grade 8, B8
2. Size: 5/8 in. diameter minimum

2.03 MANUFACTURED UNITS

A. Anchor:

1. Capable of withstanding 5000 lbs. (2268kg) in any direction without permanent deflection.
2. Anchor eye size: Not less than $\frac{3}{4}$ inch (20 mm) diameter material with 2 $\frac{1}{4}$ in (60 mm) eye opening.
3. Anchor eye metals:
 - a. Forged, 1030 quenched and tempered per ASTM 576-90-b, 72 ksi minimum.
 - b. Forged Stainless steel, type 304, solution annealed, 35 ksi minimum.
4. Anchor tube height: not less than 4 in. above the finished roof.

B. Davit Base:

1. Stanchion type complete with davit adapter and lock pin with stainless steel safety snap pin.
2. Davit socket; with two stainless steel hinge pins and self-locking ring-snap pins.
3. Pier Height: generally not less than 8 in. above finished roof surface to allow proper fit up with adaptor.

C. Flashing:

1. EPDM gasket seal top and base.
2. Seamless Spun Aluminum Flashing: ASTM B221; Type 6061-T6 alloy.
3. Stainless Steel: 304.

D. Cast-in-Place Equipment:

1. A minimum of two cast-in-place steel studs are required for concrete embedded anchors.

2.04 LADDER FALL ARREST SYSTEM

A. Manufacturers: Subject to compliance with requirements, products from the following:

1. MSA Latchways, www.latchways.com.
2. Fall Arrest Protection Systems by DBI-SALA, a 3M company
3. Substitutions: Engineer will consider products of comparable manufacturers as a substitution, pending the contractor's submission of adequate documentation of the substitution in accordance with procedures in Division 1 of the Project Manual.

B. Provide complete system including flexible cable system, ladder rung attachments, ladder extension post, where shown on drawings, and detachable cable sleeve.

C. Weight Capacity: 310 lbs maximum.

D. Loading Requirements for Structure: The climbing structure to which the ladder fall arrest system is installed must be capable of supporting the total loading imposed by the system.

2.05 FABRICATION

A. Fabricate work true to dimension, square, plumb, level, and free from distortion or defects detrimental to appearance and performance.

B. Grind off surplus welding material to ensure exposed surfaces are smooth so as not to abrade workers' ropes.

C. Welding shall be in accordance with the AWS Structural Welding Code D1.1/D1.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Report to general contractor any conditions that deviate from shop drawings or any defects in workmanship that would cause an unsafe installation. This report shall be verified in writing to the general contractor and any other responsible party.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install in accordance with approved shop drawings and manufacturer's instructions.
- B. Install anchorages and fasteners in accordance with manufacturer's recommendations and instructions to obtain the allowable working loads published in the product literature and instructions and in accordance with this specification. Do not load or stress fall protection system until all materials and fasteners are properly installed and ready for service.

3.03 FIELD QUALITY CONTROL

- A. Inspection and Site Visits:
 - 1. Inspections and site visits shall be performed while installation of equipment is in progress under the supervision of qualified professional engineer registered in the jurisdiction where the project is located.
 - 2. On site inspection of equipment welded to structure shall be performed by an AWS Certified Welding Inspector verifying, in writing, size and quality of welds. Such an inspection shall be performed on each piece of equipment before roofing material is installed.
 - 3. On site inspection shall be performed on all cast in place items while being tied in with the rebar with sufficient time before concrete is poured to allow to adjustments to embedded items as recommended by inspector.

3.04 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment.

END OF SECTION

SECTION 11 30 13

APPLIANCES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Cooking appliances.
2. Refrigeration appliances.
3. Cleaning appliances.
4. Lab appliances.

B. Related Requirements:

1. Refer to Division 01 section for equipment and appliances that are part of the Lab Equipment allowance.

1.02 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Product Schedule: For appliances.

1.03 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of appliance.

B. Field quality-control reports.

C. Sample Warranties: For manufacturers' special warranties.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.05 WARRANTY

- A. Special Warranties: Manufacturer agrees to repair or replace appliances or components that fail in materials or workmanship within specified warranty period.

- 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain each type of appliance from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.03 COOKING APPLIANCES

- A. Microwave Oven:

- 1. Type: Conventional.
 - 2. Dimensions: As indicated on Drawings.
 - 3. Oven Door: Door with observation window and pull handle.
 - 4. Exhaust Fan: Variable-speed fan, nonvented, recirculating type with charcoal filter and with manufacturer's standard capacity.
 - 5. Microwave Power Rating: 1000 W.
 - 6. Electric Power Supply: 120 V, 60 Hz, 1 phase, 15 A.
 - 7. Controls: Digital panel controls and timer display.
 - 8. Other Features: Turntable.
 - 9. Material: Porcelain-enameled steel or Stainless steel.

2.04 REFRIGERATION APPLIANCES

- A. Refrigerator/Freezer: Two-door refrigerator/freezer with freezer on top and complying with AHAM HRF-1.

- 1. Type: Freestanding.

2. Dimensions: As indicated on Drawings.
3. Storage Capacity:
 - a. Refrigeration Compartment Volume: 15.6 cu. ft. (0.44 cu. m).
 - b. Freezer Volume: 5.13 cu. ft. (0.15 cu. m).
4. Refrigerator Features:
 - a. Interior light in refrigeration compartment.
 - b. Door Storage: Modular compartments.
 - c. Temperature-controlled meat/deli bin.
5. Freezer Features: One freezer compartment with door.
 - a. Interior light in freezer compartment.
 - b. Automatic icemaker and storage bin.
6. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
7. Appliance Color/Finish: White or Stainless steel.

2.05 CLEANING APPLIANCES

A. Dishwasher: Complying with AHAM DW-1.

1. Type: Built-in undercounter.
2. Dimensions: As indicated on Drawings.
3. Capacity:
 - a. International Place Settings of China: Eight
 - b. Water Consumption for Full Load: 3.2 gal. (12 L) per cycle.
4. Sound Level: Maximum 42 dB.
5. Tub and Door Liner: Porcelain-enameled steel **or** Stainless steel with sealed detergent and automatic rinsing-aid dispensers.
6. Rack System: Nylon-coated sliding dish racks, with removable cutlery basket.

7. Controls: Touch-pad controls with four wash cycles and hot-air and heat-off drying cycle options.
8. Features:
 - a. Waste food disposer.
 - b. Self-cleaning food-filter system.
 - c. Half-load option.
 - d. Delay-wash option.
 - e. Digital display panel.
9. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
10. Appliance Color/Finish: White **or** Stainless steel.

2.06 LAB APPLIANCES

A. Dishwasher:

1. Basis-of-Design: Subject to compliance with the requirements, provide Fisher Scientific Undercounter Glassware Washer, or comparable product as approved by Engineer.
2. All models come with removable top and bottom stainless-steel open racks to accommodate a variety of glassware
3. Spindle rack ready models accommodate direct injection spindle racks (sold separately) for thorough cleaning inside narrow-neck glassware
4. Stainless steel baskets, insert racks and accessories sold separately to maximize space, improve efficiency, and protect specialty glassware
5. Temperature selection to 70°C (158°F); can effectively dissolve stubborn oils
6. DI rinse ensure a spotless finish; easily connect to fixed or portable DI water systems
 - a. Provide DI Booster Pump if incoming DI water source has a pressure of less than 18psi
7. Delayed start feature enables washer to operate unattended during off-peak hours to reduce energy costs
8. Designed for optimal quiet operation with noise buffering insulation

9. Three filters protect pumps from debris; conveniently located for easy access
10. Minimal, efficient water consumption
11. Enhanced dual fan drying system for spotless results
12. 304 stainless steel chamber ensures corrosion protection and long life
13. Adjustable leveling legs
14. UL 61010-1 & CSA 22.2 61010-1 certified by MET Labs
15. Microprocessor control system features 6 cycle selections including a customizable timed option to ensure minimum energy consumption. All wash cycles have pre-wash, wash, pre-rinse and rinse cycles to prevent contamination.
16. Appliance Color/Finish: Stainless steel.

2.07 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.

- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

3.03 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
 - 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After installation, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- B. An appliance will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.04 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION

SECTION 11 53 13

LABORATORY FUME HOODS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Bench-top High-Performance Laboratory Fume Hoods.
2. Service fixtures (i.e., water, gas, etc.) and electrical service fittings in fume hoods.
3. Piping and wiring within service fittings, light fixtures, switches, and other electrical devices.
4. Fume hood base support.
5. Work Surfaces within fume hoods.
6. Filler panels and ceiling enclosures for fume hoods.

1.02 COORDINATION

- ###### A.
- Coordinate installation of fume hoods with laboratory casework and other laboratory equipment.

1.03 ACTION SUBMITTALS

- ###### A.
- Product Data: For each type of product.

- ###### B.
- Shop Drawings: For laboratory fume hoods.

1. Include plans, elevations, sections, and attachment details.
2. Indicate details for anchoring fume hoods to permanent building construction including locations of blocking and other supports.
3. Indicate locations and types of service fittings together with associated service supply connection required.
4. Indicate duct connections, electrical connections, and locations of access panels.
5. Include roughing-in information for mechanical, plumbing, and electrical connections.

6. Show adjacent walls, doors, windows, other building components, laboratory casework, and other laboratory equipment. Indicate clearances from the above items.
7. Include layout of fume hoods in relation to lighting fixtures and air-conditioning registers and grilles.
8. Include coordinated dimensions for laboratory equipment specified in other Sections.

1.04 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Showing compliance with specified performance requirements for as-manufactured containment and static pressure loss, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency.
- B. Field quality-control reports.

1.05 QUALITY ASSURANCE

- A. Manufacturer's Qualifications:
 1. ISO 9001 Certified manufacturing plant and processes.
 2. Ten installations of equal or larger size and requirements. Provide contact at each.
- B. Fume hoods shall be Made in America
 1. 95% or more of raw material and component suppliers shall be United States based.
 2. Stainless and cold rolled steel used in manufacturing shall be sourced from United States steel mills.
 3. Final product must be fabricated and assembled within the United States of America.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect finished surfaces during handling and installation with protective covering of polyethylene film or another suitable material.

1.07 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install fume hoods until building is enclosed, wet work and utility roughing-in are complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

- B. Locate concealed framing, blocking, and reinforcements that support fume hoods by field measurements before being enclosed, and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain laboratory fume hoods from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. General Design Requirements:

1. Fume hoods shall function as ventilated, enclosed workspaces, designed to capture, contain and exhaust fumes, vapors and particulate matter produced or generated within the enclosure.
2. Fume hood shall be factory designed to function as a by-pass fume hood or as a variable air volume fume hood without modification.
3. Structure and Materials of construction
 - a. Hoods are of double-wall construction
 - b. Powder-coated, cold rolled steel exterior
 - c. Galvanized steel support members
 - d. Sheet molded composite panel internal liner
4. Baffles
 - a. Perforated primary baffle designed to pull air in horizontal streams to minimize the air roll pattern associated with traditional fume hoods.
 - b. Baffle slot pattern designed to optimize face velocity profile.
 - c. Secondary baffle is located behind the primary perforated baffle to counteract upward air streams that produce roll.
 - d. Moving or adjustable baffles are not acceptable
5. Sash
 - a. Maximum opening is 28-inches.
 - b. Unobstructed viewing height is 37.5-inches.

- c. Hood incorporates a perforated sash handle to bleed air into the hood chamber directing fume concentrations away from the user's breathing zone.
- 6. Airfoil: Hoods are provided with an airfoil across the bottom of the sash area that allows airflow into the hood regardless of user's position.
- 7. Hoods are provided with an upper dilution air supply for by-pass air to bathe the sash interior and upper interior and to provide 5-10% of the hood's air volume requirements.
- 8. Besides the exhaust blower, no additional blowers are required for specified containment.
- 9. Access for maintenance is from both the front, interior, and exterior sides of the hood.
- 10. Services:
 - a. Furnish and deliver all service outlets, accessory fittings, electrical receptacles and switches, as listed in these specifications, equipment schedules or as shown on drawings.
 - b. Plumbing fittings mounted on the fume hood superstructures shall be pre-plumbed.
 - c. All electrical services are pre-wired to a single point internal junction box at the top right of the hood.
- 11. Hoods without service fixtures must pass through a 38" opening without disassembly.
- B. Containment: Provide fume hoods that comply with the following when tested according to ASHRAE 110 as modified below:
 - 1. As-Manufactured (AM) Rating: AM 0.01 (0.01 ppm).
 - 2. Average Face Velocity: 100 fpm (0.51 m/s) plus or minus 10 percent with sashes fully open.
 - 3. Face-Velocity Variation: Not more than 10 percent of average face velocity across the face opening with sashes fully open.
 - 4. Sash Position: Fully open.
 - a. Test hoods with horizontal sashes with maximum opening on one side, with maximum opening in the center, and with one opening at each side equal to half of maximum opening.

- b. Test hoods with combination sashes fully raised, with maximum opening on one side, with maximum opening in the center, and with one opening at each side equal to half of maximum opening.
- 5. Release Rate: 4.0 L/min.
- 6. Test Setup Modifications: Conduct tests with a minimum of three and a maximum of five people in the test room and with two 1-gal. (3.8-L) round paint cans, one 12-by-12-by-12-inch (300-by-300-by-300-mm) cardboard box, and three 6-by-6-by-12-inch (150-by-150-by-300-mm) cardboard boxes in the fume hood during the test. Position items from 6 to 10 inches (150 to 250 mm) behind the sash, randomly distributed, and supported off the work surface by 2-by-2-inch (50-by-50-mm) blocks.
- 7. Walk-by Test: At the conclusion of containment test, execute three rapid walk-bys at 30-second intervals, 12 inches (300 mm) behind the mannequin. Test-gas concentration during each walk-by to not exceed 0.1 ppm and to return to specified containment value within 15 seconds.
- C. Static-Pressure Loss: Not more than 1/2-inch wg (124 Pa) at 100-fpm (0.51-m/s) face velocity with sash fully open when measured at four locations 90 degrees apart around the exhaust duct and at least three duct diameters downstream from duct collar.

2.03 FUME HOODS, GENERAL

- A. Product Standards: Comply with SEFA 1, "Laboratory Fume Hoods - Recommended Practices." Provide fume hoods UL listed and labeled for compliance with UL 1805.
- B. Fume Hoods:
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Labcono; Protector XStream or a comparable product by one of the following:
 - a. Keur Industries, LLC.
 - b. Kewaunee Scientific Corporation.
 - c. Sheldon Laboratory Systems.

2.04 MATERIALS

- A. Hood Interior Liner and Baffle:
 - 1. Liner material must comply with UL 1805, and be listed within NRTL test report as proof of compliance.
 - 2. General Material Properties:
 - a. Nonflammable, corrosion and chemical-resistant.

- b. Sheet molded homogenous polyester panels.
 - c. Minimum thickness is 3/16-inch.
 - d. Smooth, white finish.
3. Mechanical Properties:
- a. Tensile Strength: 7,500 PSI (51.7 Mpa)
 - b. Tensile Modulus: 1.7×10^6 PSI (11,700 Mpa)
 - c. Flexural Strength: 21,000 PSI (145 Mpa)
 - d. Flexural Strength at 130 degrees C: 12,900 PSI (89 Mpa)
 - e. Compressive Strength: 32,500 PSI (224 Mpa)
 - f. IZOD Impact Strength (Notched): 8.4 Ft Lb/in (4.5 J/cm)
4. Flame and Smoke Characteristics:
- a. Flame retardant, self-extinguishing, with a flame spread rating of 25 or less in accordance with ASTM-E84
 - b. Oxygen Index: 35%
 - c. Smoke Density: 115
5. Physical Properties:
- a. Water Absorption: 0.4%
 - b. Specific Gravity: 4.81
 - c. Coefficient of Thermal Expansion: $2 \text{ in/in/ degree C} \times 10^{-5}$
 - d. Thermal Conductivity: 1.9 BTU/Hr/sq.ft./In/degree F
6. Chemical Resistance:
- a. Required minimum results for each reagent (Reagent: Fume Resistance Rating, Splash and Spill Resistance Rating)
 - (1) Hydrochloric Acid (37%): 2,1
 - (2) Sulfuric Acid (33%): 2,1
 - (3) Sulfuric Acid (77%): 1,1

(4)	Sulfuric Acid (96%):	1,2
(5)	Formic Acid (90%):	2,1
(6)	Nitric Acid (20%):	2,2
(7)	Nitric Acid (30%):	1,2
(8)	Nitric Acid (70%):	3,2
(9)	Hydrofluoric Acid (48%):	2,2
(10)	Phosphoric Acid (85%):	1,1
(11)	Chromic Acid (60%):	1,4
(12)	Acetic Acid (98%):	1,1
(13)	Ammonium Hydroxide (20%):	1,1
(14)	Sodium Hydroxide (10%):	1,1
(15)	Sodium Hydroxide (20%):	1,3
(16)	Sodium Hydroxide (40%):	1,3
(17)	Sodium Hydroxide Flake:	1,-
(18)	Sodium Sulfide:	1,1
(19)	Zinc Chloride:	2,1
(20)	Tincture of Iodine:	3,3
(21)	Silver Nitrate:	2,1
(22)	Methyl Alcohol:	1,1
(23)	Ethyl Alcohol:	1,1
(24)	Butyl Alcohol:	1,1
(25)	Benzene:	1,1
(26)	Xylene:	1,1
(27)	Toluene:	1,1
(28)	Gasoline:	1,1

(29) Dichloro Acetic Acid:	2,2
(30) Dimethyl Formanide:	2,2
(31) Ethyl Acetate:	1,1
(32) Amyl Acetate:	1,1
(33) Acetone:	1,1
(34) Chloroform:	1,1
(35) Carbon Tetrachloride:	1,1
(36) Phenol:	2,2
(37) Cresol:	1,1
(38) Formaldehyde:	1,1
(39) Trichloroethylene:	1,1
(40) Ethyl Ether:	1,1
(41) Furfural:	1,3
(42) Methylene Chloride:	1,1
(43) Mono Chloro Benzene:	1,1
(44) Dioxane:	1,1
(45) Methyl Ethyl Ketone:	1,1
(46) Acid Dichromate:	1,2
(47) Hydrogen Peroxide:	1,1
(48) Napthalene:	1,1

B. Sheet Steel:

1. Side panels and access panels 20-gauge (or heavier) sheet steel.
2. Hood corner posts are 18-gauge sheet steel.
3. Ceiling enclosure panels are 18 gauge sheet steel.
4. Cold-rolled, commercial steel (CS) sheet, complying with ASTM A 1008/A 1008M.

C. Chemical Resistant Finish:

1. General: Prepare, treat, and finish welded assemblies after welding. Prepare, treat, and finish components that are to be assembled with mechanical fasteners before assembling.
2. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8. Third party validation required.
3. Powder-coat process required. Paint processes that release Volatile Organic Compounds (VOC) are not acceptable
4. Color for Fume Hood Finish: Glacier White

D. Glass: Tempered

1. Clarity and temper test to be as specified in latest edition of Glass Tempering Association, Engineering Standards Manual, Section 8.1.
2. Surface and interior visible quality to be as specified per ASTM C 1036, Standard Specification for Flat Glass, Table 4, Quality level Q3.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Fasteners: Provide stainless steel fasteners where exposed to fumes.

2.05 FABRICATION

A. General: Assemble fume hoods in factory to greatest extent possible. Disassemble fume hoods only as necessary for shipping and handling limitations. Fume hoods to be capable of being partly disassembled as necessary to permit movement through door opening.

B. Superstructure:

1. Self-supporting, rigid structural assembly, to support inner wall consisting of fume hood liner and outer wall of sheet metal exterior.
2. Fabricated from galvanized steel.
3. Space shall accommodate fume hood wiring and plumbing components for service fixtures.
4. Access to fixture valves concealed in wall provided by exterior removable access panels, gasket access panels on the inside liner walls, or through removable access panels on the front posts.

C. Exterior:

1. Fabricate from steel sheet with component parts screwed together.
2. Apply chemical-resistant finish to interior and exterior surfaces of component parts before assembly.
3. Interchangeable side panels shall lift off without the use of tools to allow access to plumbing lines, service fittings, electrical wiring, counterbalance sash weights, and light fixtures. Exposed fasteners or hardware, and Velcro type fasteners, are not acceptable.
4. Corner posts:
 - a. Pre-punched and plugged to accommodate up to 4 service fixtures per side.
 - b. All services are accessible from the front of the hood.
 - c. Accommodate two electrical duplexes per side.
 - d. Right hand corner post includes electrical switches and pre-cut for Airflow monitor installation.
 - e. Un-used penetrations shall be plugged.
5. Top and sides of face opening to provide an aerodynamic shape to ensure smooth, even flow of air into fume hood.
6. Panel above header shall be removable without the use of tools to allow access to mechanical connection, electrical wiring, counterbalance sash weights, and light fixtures. Exposed fasteners or hardware, and Velcro type fasteners, are not acceptable.

D. Dimensions:

1. Overall exterior dimensions are as follows:
 - a. 4-foot nominal width: 48-inches w x 59-inches h x 39.2-inches d
2. Overall interior dimensions are as follows:
 - a. 4-foot nominal width: 38.25-inches w x 48-inches h x 27.3-inches d

E. Hood Liner:

1. Adhere interior liner components to superstructure.
2. Stainless steel fasteners shall be used on the interior ceiling for structural integrity.

3. Fasteners exposed to chemical environment are not acceptable.
4. Punch fume hood lining side panels to receive four service fittings, for use with remote controls, per side. Provide removable plug buttons for holes not used for indicated fittings.
5. Each side wall shall include an oval interior access panel to provide access to the side wall of the fume hood for plumbing service access. Access panel material shall be that of the liner, and gasketed to form a vapor proof seal.

F. Hood Baffle:

1. Baffle system shall be designed to optimize the face velocity profile, and to capture a wide range of gaseous densities without adjustment or moving components.
2. Include a two-baffle system.
 - a. Primary baffle: Shall provide a continuous horizontal slot at the work surface. Baffle panels shall have multiple horizontal slots, with a chamfered entry. Slot pattern shall be proven to optimize face velocity profile, and direct air in a non-turbulent/laminar flow stream from the hood face into the baffle in a single pass.
 - b. Secondary baffle: located between the primary baffle and the back wall of the hood, neutralizes any upward air streams and reduce air stream roll.
3. Baffle system shall be constructed with the same material as the fume hood liner.
4. Baffles shall be removable for cleaning. Primary baffles shall be two pieces to allow removal without the use of tools.
5. Exposed components to be non-metallic. Metal components exposed to chemical environment are not acceptable.
6. Moving parts or adjustment of any kind is not acceptable.

G. Exhaust Connection:

1. 316 stainless steel with Chemical-Resistant Finish
2. 12.81-inches ID to accommodate any 12-inch nominal duct without the need for a transition adapter. 4, 5, and 6-foot hoods have one exhaust connection, and 8-foot hoods have two exhaust connections. Additional components required to accommodate 12-inch nominal mechanical system are not acceptable.
3. Ducting shall go inside the duct collar to ensure condensate travels into the hood and evaporates. Duct collars that allow duct connection over the collar are not acceptable.

H. Airfoil:

1. Cold Rolled Steel or 316 stainless steel with Chemical-Resistant Finish.
2. Airfoil shall have an aerodynamic radius to sweep the air into the hood with minimal turbulence. Airfoil directs airflow across work top to remove heavier-than-air gases.
3. Must have 5 rows of perforations to allow the air to bypass underneath and through the foil and sweep across the work surface to prevent any back flow of fumes escaping from the front of the hood opening. This airflow continues even if blocked by the presence of the operator.
4. Foil must extend back under the sash to prevent closure of the lower by-pass opening when the sash is in the fully closed position, directly on top of the airfoil.

I. Sash Assembly

1. Glass: Fully tempered safety glass with unobstructed, side-to-side view of fume hood interior and service fixture connections.
2. Dimensions: Full sash opening height is 28-inches, the total unobstructed viewing height is 37.5-inches measured from the work surface.
3. Sash Tracks: Steel with Chemical Resistant Finish. Shall include bump stops for opening and closing.
4. Sash Handle: extruded aluminum with Chemical Resistant Finish. Sash handle includes a perforated air passage directly atop the handle to bleed air into the hood chamber and direct chemical fumes away from the user's breathing zone. The handle is ergonomic in design and is easy to grasp when operating
5. Sash guides: Corrosion resistant extruded poly-vinyl chloride.
6. Sash System: Vertical Sash (Cable and Pulley)
 - a. Hoods have a single vertical sash counterbalanced by a single weight.
 - b. Sash and weight to be connected via aircraft cable meeting MIL-W-83420 Military Specification.
 - c. Rear pulleys shall be connected via timing shaft to prevent sash tilting and permit one finger operation at any point along full width sash handle. Maximum 7 pounds pull required to raise or lower sash throughout its full length of travel.
 - d. Design system to hold sash at any position without creep and to prevent sash drop in the event of cable failure.

- e. Include a defeatable, and automatically resetting sash stop positioned for an 18-inch sash height.

J. Electrical Components:

1. Lighting

- a. Provide UL Listed, high-efficiency, quick-start, LED lighting systems, including bulbs.

(1) 4 Foot Hoods - 2 each, 3-foot 11-watt LED lamps

- b. Vapor-Proof: all electrical components shall be outside of the contaminated air space. Lighting shall be located behind a laminated safety glass shield, sealed to the top of the hood liner.
- c. The LED light assemblies shall be serviceable from outside the fume hood cavity, without the use of tools.
- d. Light switch to be included on the lower right corner post, at heights compliant with the Americans with Disabilities Act (ADA).

2. Blower Switch: Hoods shall be provided with blower switch, on the lower right corner post, at heights compliant with the Americans with Disabilities Act (ADA).

3. Electrical Receptacles:

- a. The hoods shall accommodate up to four (two per corner post) electrical receptacles as indicted in schedule or drawings. Options to include:
- b. 115 volt, 60 Hz, three-wire polarized and grounded electrical duplex
- c. 115 volt, 60 Hz, three-wire polarized and grounded electrical duplex, with Ground Fault Circuit Interruption (GFCI)
- d. 230 volt, 60 Hz, three-wire polarized and grounded electrical duplex
- e. Receptacles shall be individually wired to field wiring box, and each rated at 20 Amperes.
- f. Cover plates shall be acid resistant thermoplastic.

4. Wiring:

- a. Every electrical component shall be individually wired to a single point internal field wiring box (including individual duplexes/receptacles).
- b. Field wiring box to be 7 x 4 x 2.5 inches, grounded, and have (12) 7/8-inch diameter knock out penetrations.

- c. Final wiring and circuit dedication is to be by others.
 - d. Each receptacle circuit shall accommodate being wired to a dedicated building circuit rated at 20A, or the receptacles wired to a single circuit with the total load not exceeding 20 Amperes.
- 5. Fume hood to have third party validation of compliance to UL 1805 and UL 61010-1 by a Nationally Recognized Testing Laboratory (NRTL)
- K. Upper Dilution Air Supply:
 - 1. Located behind and above the sash to introduce between 5 and 10% of the required hood air volume, and maintain sufficient exhaust air volume through hood to adequately dilute hazardous fumes regardless of sash position.
 - 2. This device bathes the sash interior above the work area to eliminate chemical fumes along the sash plane near the operator's critical breathing zone.
 - 3. Shall act as a by-pass opening controlled by sash position. If on a constant volume mechanical system, the hood shall not have a change in static pressure or exhaust volume across all sash positions.
 - 4. Shall offer a significant restriction to the by-pass opening to allow the use of a VAV mechanical system without modification to the by-pass opening.
- L. Hood Safety Practices Label: Corrosion resistant plate attached to the left corner post of the fume hood with the following Hood Safety Practices:
 - 1. For use with substances that produce hazardous levels of airborne chemicals: gas, fumes, vapors, dust
 - 2. Do not put your head in the hood.
 - 3. Minimize drafts and sudden movements in front of the hood.
 - 4. Work a minimum of six inches inside the hood.
 - 5. Elevate equipment above the work surface.
 - 6. Keep sill and baffle unobstructed.
 - 7. Do not use the hood for storage.
 - 8. Adjust the sash to smallest opening possible when in use.
 - 9. Close sash when unattended.
 - 10. Do not remove any of the hood components.

11. Do not place flammable solvents near heat, flame or sparks.
12. Do not evaporate large amounts of flammable liquids.
13. Wipe up spills immediately.
14. Routinely validate airflow.
15. If the ventilation system malfunctions, or airflow alarm indicates unsafe condition, close sash and discontinue hood operation immediately-call for help.
16. Do not use with Biohazards and Perchloric Acid

M. Fume Hood Accessories:

1. Tissue Screen: Provide epoxy-coated, stainless-steel screen at bottom baffle opening to prevent paper from being drawn into the exhaust plenum behind baffles.
2. Ceiling Enclosure Panels:
 - a. Provide filler panels matching fume hood exterior to enclose space above fume hoods at front and sides of fume hoods and extending from tops of fume hoods to ceiling.
 - b. Exposed fasteners are not acceptable.
 - c. Height adjustment to be within the following ranges as specified in the schedule.

(1) 14.0 – 18.6”
3. Distillation Grid: Include stainless steel rods, connectors, and factory drilled liner.

N. Work Surface:

1. 1.25-inches thick, molded from solid modified epoxy resin, with smooth, non-specular, black finish.
2. One inch radius front edge for optimal fume hood performance.
3. 3/8-inch dished area to match the fume hood interior work space and form a water tight pan for spill containment.
4. Include a 2.5-inch diameter hole on each side for service pass-through and piping. Hole to be covered by hood superstructure upon installation.
5. Include two 1.5” diameter penetrations to accommodate base cabinet venting. Holes to be located outside of dished area and under the fume hood baffles. Include plugs.

6. Physical Properties:

- a. Flexural Strength: Not less than 10,000 psi (70 MPa).
- b. Modulus of Elasticity: Not less than 2,000,000 psi (1400 MPa).
- c. Hardness (Rockwell M): Not less than 100.
- d. Water Absorption (24 Hours): Not more than 0.02 percent.
- e. Heat Distortion Point: Not less than 260 deg F (127 deg C).
- f. Flame-Spread Index: 25 or less per ASTM E 84.

O. Supporting Base Cabinets:

1. Construction requirements for cabinets:

- a. Exterior construction is minimum 18 gauge cold rolled sheet steel with Chemical Resistant Finish.
- b. Hinges are minimum 10 gauge plate with self-clinching pilot pin. Knuckle, bullet, or piano type hinges are not accepted.
- c. The rear panel will feature a 12-inches x 8-inches removable plumbing access panel.
- d. Units 24-inches wide or less have only one door.
- e. Each cabinet includes four leveling feet.
- f. Capable of supporting up to 800 pounds.

2. Acid Storage:

- a. Overall exterior dimensions: 48" w x 22" d x 35.5"-36.75"
- b. Completely lined with a polyethylene corrosion resistant liner. The liner is 3/16" thick, with a vacuum formed PVC liner pan at the bottom to contain spills. Each door has a 3/16" sheet polyethylene liner.
- c. The cabinet is labeled: "ACID".
- d. Flush pull handles are ABS, low gloss black.
- e. Each cabinet is vented into the fume hood with a 1 1/2" vent pipe. It should provide a positive airflow directly into the fume hood exhaust system.

- f. Supply an epoxy coated steel shelf with PVC liner pan if indicated in the schedule.
- g. Acid cabinets with louvers are not acceptable

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of fume hoods.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install fume hoods according to manufacturer's written instructions. Install level, plumb, and true; shim as required, using concealed shims, and securely anchor to building and adjacent laboratory casework. Securely attach access panels but provide for easy removal and secure reattachment. Where fume hoods abut other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.
- B. Comply with requirements for installing water and laboratory gas service fittings and electrical devices.
 - 1. Install fittings according to Shop Drawings, installation requirements in SEFA 2.3, and manufacturer's written instructions. Set bases and flanges of sink and work top-mounted fittings in sealant recommended by manufacturer of sink or work-top material. Securely anchor fittings to fume hoods unless otherwise indicated.

3.03 FIELD QUALITY CONTROL

- A. Field test installed fume hoods according to "Flow Visualization and Velocity Procedure" requirements in ASHRAE 110.
 - 1. Test installed fume hood, according to ASHRAE 110 as modified in "Performance Requirements" Article.
- B. Field test installed fume hood according to ASHRAE 110 as modified in "Performance Requirements" Article to verify compliance with performance requirements.
 - 1. Adjust fume hood, hood exhaust fans and building's HVAC system, or replace hood and make other corrections until tested hood performs as specified.
 - 2. After making corrections, retest fume hood.

3.04 ADJUSTING AND CLEANING

- A. Adjust moving parts for smooth, near silent, accurate sash operation with one hand. Adjust sashes for uniform contact of rubber bumpers. Verify that counterbalances operate without interference.
- B. Clean finished surfaces, including both sides of glass; touch up as required; and remove or refinish damaged or soiled areas to match original factory finish, as approved by Engineer.

END OF SECTION

SECTION 12 21 13
HORIZONTAL LOUVER BLINDS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Horizontal louver blinds, aluminum slats.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood blocking and grounds for mounting horizontal louver blinds and accessories.

1.02 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Rated capacities, operating characteristics, and furnished accessories.

B. Shop Drawings: For horizontal louver blinds.

1. Fabrication and installation details.

C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type and color of horizontal louver blind.

1. Include Samples of accessories involving color selection.

D. Samples for Verification: Actual sample of finished products for each type and color of horizontal louver blind.

1. Size: Manufacturers' standard size.

E. Product Schedule: For horizontal louver blinds. Use same designations indicated on Drawings.

1.03 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For horizontal louver blinds.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Deliver horizontal louver blinds in factory packages, marked with manufacturer, product name, and location of installation, using same designations indicated on Drawings.

1.05 FIELD CONDITIONS

- A. Environmental Limitations: Do not install horizontal louver blinds until construction and wet-work and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where horizontal louver blinds are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Engineer of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of motorized products that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty operation of motorized operating system components.
 - 2. Warranty Period: 5 year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain horizontal louver blinds from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Window Covering Safety Standard: Provide horizontal louver blinds that comply with WCMA A100.1.

2.03 HORIZONTAL LOUVER BLINDS, ALUMINUM SLATS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. Hunter Douglas Architectural Window Coverings.

2. Levolor Inc.
 3. Springs Window Fashions; SWF contract.
- B. Slats: Aluminum; alloy and temper recommended by producer for type of use and finish indicated; with crowned profile and radius corners.
1. Width: 1 inch (25 mm).
 2. Thickness: Not less than 0.008 inch (0.20 mm).
 3. Spacing: Manufacturer's standard.
 4. Finish: Ionized antistatic, dust-repellent, baked polyester finish.
- C. Ladders: Evenly spaced across headrail at spacing that prevents long-term slat sag.
1. Type: Braided cord.
- D. Headrail: Formed steel or extruded aluminum; long edges returned or rolled. Headrails fully enclose control mechanisms on three sides.
- E. Manual Corded Operation:
1. Lift Mechanism:
 - a. Lift-Cord Lock: Top locking; stops lift cord when blind is in fully opened or fully closed positions only; equipped with ring pull not more than 4 inches (100 mm) long.
 2. Lift Operator: Extension of inner lift cord(s) through lift-cord lock mechanism to form lift cord.
 3. Lift Cord: Manufacturer's standard braided cord.
 4. Lift-Cord Length: Short cord, not greater than 8 inches (203 mm) when blind is fully closed.
 5. Tilt Mechanism: Enclosed worm-gear mechanism and linkage rod that adjusts ladders.
 6. Tilt Operator: Corrosion-resistant steel rod.
 7. Tilt Over-Rotation Protection: Manufacturer's detachable operator or slip clutch to prevent over-rotation of gear.
 8. Tilt-Operator Length, Wand or Rod: Manufacturer's standard.

- F. Bottom Rail: Formed-steel or extruded-aluminum tube that secures and protects ends of ladders and inner lift cords and has plastic- or metal-capped ends.
- G. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
 - 1. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by horizontal louver blind manufacturer for weight and size of blind.
- H. Colors, Textures, Patterns, and Gloss:
 - 1. Slats: As indicated on Drawings, or as selected by Engineer from manufacturer's full range.
 - 2. Components: Provide rails, cords, ladders, and materials exposed to view matching or coordinating with slat color unless otherwise indicated.

2.04 FABRICATION OF HORIZONTAL LOUVER BLINDS

- A. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):
 - 1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which blind is installed less 1/4 inch (6 mm) per side or 1/2 inch (13 mm) total, plus or minus 1/8 inch (3.1 mm). Length equal to head-to-sill dimension of opening in which blind is installed less 1/4 inch (6 mm), plus or minus 1/8 inch (3.1 mm).
 - 2. Outside of Jamb Installation: Width and length as indicated, with terminations between blinds of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- B. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
 - 1. Lift-and-Tilt Mechanisms: With permanently lubricated moving parts.
- C. Mounting Brackets: Designed for removal and reinstallation of blind without damaging blind and adjacent surfaces, for supporting blind components, and for bracket positions and blind mounting method indicated.
- D. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to brackets and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.

E. Color-Coated Finish:

1. Metal: For components exposed to view, unless anodized or plated finish is indicated, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF HORIZONTAL LOUVER BLINDS

- A. Install horizontal louver blinds level and plumb, aligned and centered on openings, and aligned with adjacent units in accordance with manufacturer's written instructions.
 1. Locate so exterior slat edges are not closer than 1 inch (25 mm) from interior faces of glass and not closer than 1/2 inch (13 mm) from interior faces of glazing frames through full operating ranges of blinds.
 2. Install mounting brackets to prevent deflection of headrails.
 3. Install with clearances that prevent interference with adjacent blinds, adjacent construction, and operating hardware of glazed openings, other window treatments, and similar building components and furnishings.
- B. Electrical Connections: Connect motorized operators to building electrical system.

3.03 ADJUSTING

- A. Adjust horizontal louver blinds to operate free of binding or malfunction through full operating ranges.

3.04 CLEANING AND PROTECTION

- A. Clean horizontal louver blind surfaces after installation in accordance with manufacturer's written instructions.
- B. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer that ensures that horizontal louver blinds are without damage or deterioration at time of Substantial Completion.

- C. Replace damaged horizontal louver blinds that cannot be repaired in a manner approved by Engineer before time of Substantial Completion.

END OF SECTION

SECTION 12 35 53.13

METAL LABORATORY CASEWORK

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Metal laboratory casework.
2. Auxiliary cabinets.
3. Countertops.
4. Laboratory casework systems.
5. Laboratory accessories.
6. Water and laboratory gas service fittings.
7. Electrical and communication service fittings.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood blocking for anchoring laboratory casework.
2. Section 09 22 16 "Non-Structural Metal Framing" for reinforcements in metal-framed partitions for anchoring laboratory casework.
3. Section 09 65 13 "Resilient Base and Accessories" for resilient base applied to laboratory casework.
4. Section 11 53 13 "Laboratory Fume Hoods" for fume hoods, including base cabinets and countertops under fume hoods.

1.02 PREINSTALLATION MEETINGS

- ###### A. Preinstallation Conference: Conduct conference at Project site.

1.03 COORDINATION

- ###### A. Coordinate layout and installation of framing and reinforcements for support of laboratory casework.
- ###### B. Coordinate installation of laboratory casework with installation of laboratory equipment.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For laboratory casework.
 - 1. Include plans, elevations, sections, and attachments to other work including blocking and reinforcements required for installation.
 - 2. Indicate types and sizes of casework.
 - 3. Indicate manufacturer's catalog numbers for casework.
 - 4. Show fabrication details, including types and locations of hardware.
 - 5. Indicate locations and types of service fittings.
 - 6. Include details of utility spaces showing supports for conduits and piping.
 - 7. Include details of support framing system.
 - 8. Include details of exposed conduits, if required, for service fittings.
 - 9. Indicate locations of and clearances from adjacent walls, doors, windows, other building components, and laboratory equipment.
 - 10. Include coordinated dimensions for laboratory equipment specified in other Sections.
- C. Samples for Initial Selection: For casework finishes and materials requiring color selection.
- D. Samples for Verification: For each type of casework, exposed-hardware, and countertop-material finish, in manufacturer's standard sizes.
- E. Delegated Design Submittals: For laboratory casework indicated to comply with seismic performance requirements, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer.
- B. Product Test Reports:
 - 1. Casework: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory casework with requirements of specified product standard and system structural performance specified in "Performance Requirements" Article.

2. Countertop Surface Material: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory countertop surface material with requirements specified for chemical and physical resistance.

1.06 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish complete touchup kit for each type and color of casework finish provided. Include fillers, primers, paints, and other materials necessary to perform permanent repairs to damaged laboratory casework finish.

1.07 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that produces casework of types indicated for this Project that has been tested for compliance with SEFA 8 M.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Protect finished surfaces during handling and installation with protective covering of polyethylene film or other suitable material.

1.09 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install laboratory casework until building is enclosed, utility roughing-in and wet-work are complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Established Dimensions: Where laboratory casework is indicated to fit to other construction, establish dimensions for areas where casework is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.
- C. Field Measurements: Where laboratory casework is indicated to fit to existing construction, verify dimensions of existing construction by field measurements before fabrication and indicate measurements on Shop Drawings. Provide fillers and scribes to allow for trimming and fitting.
- D. Locate concealed framing, blocking, and reinforcements that support casework by field measurements before enclosing them, and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

- A. Obtain laboratory casework from single source from single manufacturer unless otherwise indicated.

- B. Product Designations: Drawings indicate sizes and configurations of laboratory casework by referencing designated manufacturer's catalog numbers. Other manufacturers' laboratory casework of similar sizes and similar door and drawer configurations and complying with Specifications may be considered. See Section 01 60 00 "Product Requirements."

2.02 PERFORMANCE REQUIREMENTS

- A. System Structural Performance: Laboratory casework and support framing system shall withstand the effects of the following gravity loads and stresses without permanent deformation, excessive deflection, or binding of drawers and doors:
 - 1. Support Framing System: 600 lb/ft. (900 kg/m).
 - 2. Suspended Base Cabinets (Internal Load): 160 lb/ft. (240 kg/m).
 - 3. Work Surfaces (Including Tops of Suspended Base Cabinets): 160 lb/ft. (240 kg/m).
 - 4. Wall Cabinets (Upper Cabinets): 160 lb/ft. (240 kg/m).
 - 5. Shelves: 40 lb/sq. ft. (200 kg/sq. m).
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design laboratory casework installation.
- C. Seismic Performance: Laboratory casework installation shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - 1. Design earthquake spectral response acceleration, short period (Sds) for Project is indicated on Drawings.
 - 2. Component Importance Factor: 1.0.
 - 3. Base Cabinet Load (Including Countertop and Load on Countertop): 320 lb/ft. (480 kg/m).
 - 4. Wall Cabinet (Upper Cabinet) Load: 160 lb/ft. (240 kg/m).

2.03 CASEWORK, GENERAL

- A. Casework Product Standard: Comply with SEFA 8 M, "Laboratory Grade Metal Casework."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.04 METAL LABORATORY CASEWORK

- A. Steel Sheet: Cold-rolled, commercial steel (CS) sheet, complying with ASTM A1008/A1008M; matte finish; suitable for exposed applications.
- B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. CIF Laboratory Solutions.
 - 2. Hamilton Laboratory Solutions, LLC.
 - 3. Hanson Lab Solutions.
 - 4. ICI Scientific.
 - 5. Kewaunee Scientific Corporation.
 - 6. Mott Manufacturing Ltd.
- C. Nominal Metal Thickness:
 - 1. Sides, Ends, Fixed Backs, Bottoms, Tops, Soffits, and Items Not Otherwise Indicated: 0.048 inch (1.21 mm). Except for flammable liquid storage cabinets, bottoms may be 0.036 inch (0.91 mm) if reinforced.
 - 2. Back Panels, Doors, Drawer Fronts and Bodies, and Shelves: 0.036 inch (0.91 mm) except 0.048 inch (1.21 mm) for back panels and doors of flammable liquid storage cabinets and for unreinforced shelves more than 36 inches (900 mm) long.
 - 3. Intermediate Horizontal Rails, Table Aprons and Cross Rails, Center Posts, and Top Gussets: 0.060 inch (1.52 mm).
 - 4. Drawer Runners, Sink Supports, and Hinge Reinforcements: 0.075 inch (1.90 mm).
 - 5. Leveling and Corner Gussets: 0.105 inch (2.66 mm).

2.05 AUXILIARY CABINETS

- A. Tempered Glass for Glazed Doors: Clear tempered glass complying with ASTM C1048, Kind FT, Condition A, Type I, Class 1, Quality-Q3; not less than 5.0 mm thick.

2.06 CABINET HARDWARE

- A. General: Provide laboratory casework manufacturer's standard, commercial-quality, heavy-duty hardware complying with requirements indicated for each type.

- B. Hinges: Stainless-steel, five-knuckle hinges complying with BHMA A156.9, Grade 1, with antifriction bearings and rounded tips. Provide two for doors 48 inches (1200 mm) high or less and three for doors more than 48 inches (1200 mm) high.
- C. Hinged-Door and Drawer Pulls: Stainless steel, back-mounted pulls. Provide two pulls for drawers more than 24 inches (600 mm) wide.
 - 1. Design: As selected from manufacturer's full range.
 - 2. Overall Size: 1 by 4-1/2 inches (25 by 114 mm).
- D. Door Catches: Nylon-roller spring or Dual, self-aligning, permanent magnet catches. Provide two catches on doors more than 48 inches (1200 mm) high.
- E. Drawer Slides: ANSI/BHMA A156.9.
 - 1. Heavy Duty (Grade 1HD-100): Side mount or Undermount.
 - a. Type: Full extension.
 - b. Material: Epoxy-coated polymer slides.
 - c. Motion Feature: Soft close dampener.
 - 2. General-purpose drawers; provide 100 lb (45 kg) load capacity.
- F. Locks: Cam or half-mortise type, brass with chrome-plated finish; complying with BHMA A156.11, Type E07281, Type E07261, Type E07111, or Type E07021.
 - 1. Tumbler: Disc.
 - 2. Lock Locations: Provide on drawers and doors.
 - 3. Keying: Key locks as directed by Owner.
 - 4. Key Quantity: Minimum of two keys per lock.
- G. Label Holders: Stainless steel, aluminum, or chrome plated; sized to receive standard label cards approximately 1 by 2 inches (25 by 50 mm), attached with screws or rivets. Provide on drawers.

2.07 COUNTERTOPS

- A. General: Provide laboratory countertops with integral sink as indicated on Drawings.
- B. Epoxy: Factory-molded, modified epoxy-resin formulation with smooth, nonspecular finish.
 - 1. Physical Properties:

- a. Flexural Strength: Not less than 10,000 psi (70 MPa).
 - b. Modulus of Elasticity: Not less than 2,000,000 psi (1400 MPa).
 - c. Hardness (Rockwell M): Not less than 100.
 - d. Water Absorption (24 Hours): Not more than 0.02 percent.
 - e. Heat Distortion Point: Not less than 260 deg F (127 deg C).
2. Chemical Resistance: Epoxy-resin material has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.4.5:
- a. No Effect: Acetic acid (98 percent), acetone, ammonium hydroxide (28 percent), benzene, carbon tetrachloride, dimethyl formamide, ethyl acetate, ethyl alcohol, ethyl ether, methyl alcohol, nitric acid (70 percent), phenol, sulfuric acid (60 percent), and toluene.
 - b. Slight Effect: Chromic acid (60 percent) and sodium hydroxide (50 percent).
3. Color: As selected by Engineer from epoxy manufacturer's full range.
- C. Countertop Support Bracket:
- 1. Equal to Rakks Surface Mounter EH Counter Support Bracket
 - 2. Support brackets fabricated by welding miter cut extruded aluminum sections, grinding and deburring sharp edges and welds, drilling holes for field attachment, and factory finishing.
 - 3. Capacity: Up to 450 lbs/bracket.
 - 4. Material: Fabricate components from extruded aluminum sections complying with ASTM B221, 6063-T5 alloy and temper.
 - 5. Finish: Black Powder Coating

2.08 METAL CABINET FABRICATION

- A. General: Assemble and finish units at point of manufacture. Use precision dies for interchangeability of like-size drawers, doors, and similar parts. Perform assembly on precision jigs to provide units that are square. Reinforce units with angles, gussets, and channels. Except where otherwise specified, integrally frame and weld cabinet bodies to form dirt- and vermin-resistant enclosures. Where applicable, reinforce base cabinets for sink support. Maintain uniform clearance around door and drawer fronts of 1/16 to 3/32 inch (1.5 to 2.4 mm).

- B. Flush Doors: Outer and inner pans that nest into box formation, with full-height channel reinforcements at center of door. Fill doors with noncombustible, sound-deadening material.
- C. Glazed Doors: Hollow-metal stiles and rails of similar construction as flush doors, with glass held in resilient channels or gasket material.
- D. Hinged Doors: Mortise for hinges and reinforce with angles welded inside inner pans at hinge edge.
- E. Drawers: Fronts made from outer and inner pans that nest into box formation, without raw metal edges at top. Sides, back, and bottom fabricated in one piece with rolled or formed top of sides for stiffening and comfortable grasp for drawer removal. Provide drawers with rubber bumpers, polymer roller slides, and positive stops to prevent metal-to-metal contact or accidental removal.
- F. Adjustable Shelves: Front, back, and ends formed down, with edges returned horizontally at front and back to form reinforcing channels.
 - 1. Provide base cabinets with one adjustable shelf, and wall cabinets with 2 adjustable shelves.
- G. Toe Space: Fully enclosed, 4 inches (100 mm) high by 3 inches (75 mm) deep, with no open gaps or pockets.
- H. Utilities: Provide space, cutouts, and holes for pipes, conduits, and fittings in cabinet bodies to accommodate utility services and their support-strut assemblies.
 - 1. Provide base cabinets with removable backs for access to utility space.
- I. Filler and Closure Panels: Provide where indicated and as needed to close spaces between casework and walls, ceilings, and equipment. Fabricate from same material and with same finish as casework and with hemmed or flanged edges unless otherwise indicated.

2.09 LABORATORY CASEWORK SYSTEMS

- A. Provide casework manufacturer's standard integrated system that includes support framing, suspended modular cabinets, filler and closure panels, undercabinet task-lighting fixtures, countertops, and fittings needed to assemble system. System includes hardware and fasteners for securing support framing to permanent construction.
 - 1. Cabinets can be removed and reinstalled without use of special tools for relocation within system.
 - 2. Base cabinets can be removed without providing temporary support for, or removing, countertops.
 - 3. Sinks are supported independent of base cabinets.

4. System includes filler and closure panels to close spaces between support framing, cabinets, shelves, countertops, floors, and walls unless otherwise indicated. Fabricate panels from same material and with same finish as metal cabinets and with hemmed or flanged edges.

- B. Countertops: Provide in modular lengths indicated, without seams.

2.10 METAL CABINET FINISH

- A. General: Prepare, treat, and finish welded assemblies after assembling. Prepare, treat, and finish components that are to be assembled with mechanical fasteners before assembling. Prepare, treat, and finish concealed surfaces same as exposed surfaces.
- B. Preparation: After assembly, clean surfaces of mill scale, rust, oil, and other contaminants. After cleaning, apply a conversion coating suited to organic coating to be applied over it.
- C. Chemical-Resistant Finish: Immediately after cleaning and pretreating, apply laboratory casework manufacturer's standard two-coat, chemical-resistant, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
 1. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8 M. Acceptance level for chemical spot test shall be no more than for Level 3 conditions.
 2. Colors for Metal Laboratory Casework Finish: As selected by Engineer from manufacturer's full range.

2.11 COUNTERTOP FABRICATION

- A. Countertops, General: Provide units with smooth surfaces in uniform plane, free of defects. Make exposed edges and corners straight and uniformly beveled. Provide front and end overhang of 1 inch (25 mm).
- B. Sinks, General: Provide sizes indicated or laboratory casework manufacturer's closest standard size of equal or greater volume, as approved by Engineer.
 1. Outlets: Provide with strainers and tailpieces, NPS 1-1/2 (DN 40), unless otherwise indicated.
 2. Overflows: For each sink except cup sinks, provide overflow of standard beehive or open-top design with separate strainer. Height 2 inches (50 mm) less than sink depth. Provide in same material as strainer.
- C. Epoxy:

1. Countertops: Fabricate with factory cutouts for sinks, holes for service fittings and accessories, and butt joints assembled with epoxy adhesive and concealed metal splines.
 - a. Marine-Edge Configuration: 5/8-inch (16-mm) minimum thickness, with integral or applied raised edge.
 - (1) Edges and Corners: Rounded.
 - (2) Backsplash: Integral coved.
 - b. Construction: Uniform throughout full thickness.
 - c. Product Option: Phenolic-composite countertops may be substituted for epoxy countertops at Contractor's option.
2. Sinks: Molded in one piece with smooth surfaces, coved corners, and bottom sloped to outlet; 1/2-inch (13-mm) minimum thickness.
 - a. Provide with polypropylene strainers and tailpieces.
 - b. Provide integral sinks in epoxy countertops, bonded to countertops with invisible joint line.
 - c. Provide sinks for drop-in installation in phenolic-composite countertops with 1/4-inch- (6-mm-) thick lip around perimeter of sink.
 - d. Provide sinks for underside installation with manufacturer's recommended adjustable support system for table- and cabinet-type installations.

D. Cup Sinks: Provide in material indicated, 5-inch (127-mm) diameter.

1. Epoxy Cup Sinks: Provide with polypropylene strainers and integral tailpieces.

2.12 LABORATORY ACCESSORIES

- A. Reagent Shelves: Provide as indicated, fabricated from same material as adjacent countertop unless otherwise indicated.
- B. Burette Rods: Aluminum or stainless steel rods, 1/2 inch (13 mm) in diameter and 18 inches (450 mm) long, threaded on one end to fit tapered plug adapter for flush socket receptacle. Provide with tapered plug adapter and receptacle.
- C. Lattice Assembly: Aluminum or stainless steel, vertical and horizontal rod lattice assembly with 3/4-inch- (19-mm-) diameter rods at approximately 12 inches (300 mm) o.c. with two flush socket receptacles for mounting.
- D. Resin Pegboards: Epoxy pegboards with removable polypropylene pegs and stainless steel drip troughs with drain outlet.

2.13 WATER AND LABORATORY GAS SERVICE FITTINGS

- A. Service Fittings: Provide units that comply with SEFA 7, "Recommended Practices for Fixtures." Provide fittings complete with washers, locknuts, nipples, and other installation accessories. Include wall and deck flanges, escutcheons, handle extension rods, and similar items.
- B. Materials: Fabricated from cast or forged red brass unless otherwise indicated.
 - 1. Reagent-Grade Water Service Fittings: Polypropylene, PVC, or PVDF for parts in contact with water.
- C. Finish: Chromium plated.
 - 1. Provide chemical-resistant powder coating in laboratory casework manufacturer's standard metallic brown, aluminum, white, or other color as approved by Engineer.
- D. Water Valves and Faucets: Provide units complying with ASME A112.18.1, with renewable seats, designed for working pressure up to 80 psig (550 kPa).
 - 1. Vacuum Breakers: Provide ASSE 1035 vacuum breakers on water fittings with serrated outlets.
 - 2. Aerators: Provide aerators on water fittings that do not have serrated outlets.
 - 3. Self-Closing Valves: Provide self-closing valves where indicated.
- E. Hand of Fittings: Furnish right-hand fittings unless fitting designation is followed by "L."
- F. Handles: Provide three- or four-arm, forged-brass handles for valves unless otherwise indicated.
 - 1. Provide lever-type handles for ground-key cocks. Lever handle aligns with outlet when valve is closed and is perpendicular to outlet when valve is fully open.

2.14 ELECTRICAL AND COMMUNICATION SERVICE FITTINGS

- A. Service Fittings, General: Provide units complete with metal housings, receptacles, switches, pilot lights, data communication outlets, cover plates, accessories, and gaskets required for mounting on laboratory casework.
- B. Electrical Wiring Devices: Comply with requirements in Section 26 27 26 "Wiring Devices" for receptacles, switches, pilot lights, cover plates, and accessories.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of reinforcements, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF CABINETS

- A. Comply with installation requirements in SEFA 2. Install level, plumb, and true in line; shim as required using concealed shims. Where laboratory casework abuts other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical. Do not exceed the following tolerances:
 - 1. Variation of Tops of Base Cabinets from Level: 1/16 inch in 10 feet (1.5 mm in 3 m).
 - 2. Variation of Bottoms of Upper Cabinets from Level: 1/8 inch in 10 feet (3 mm in 3 m).
 - 3. Variation of Faces of Casework from a True Plane: 1/8 inch in 10 feet (3 mm in 3 m).
 - 4. Variation of Adjacent Surfaces from a True Plane (Lippage): 1/32 inch (0.8 mm).
 - 5. Variation in Alignment of Adjacent Door and Drawer Edges: 1/16 inch (1.5 mm).
- B. Base Cabinets: Fasten cabinets to utility-space framing, partition framing, wood blocking, or reinforcements in partitions, with fasteners spaced not more than 16 inches (400 mm) o.c. Bolt adjacent cabinets together with joints flush, tight, and uniform.
 - 1. Where base cabinets are installed away from walls, fasten to floor at toe space at not more than 24 inches (600 mm) o.c. and at sides of cabinets with not less than two fasteners per side.
- C. Wall Cabinets: Fasten to hanging strips, masonry, partition framing, blocking, or reinforcements in partitions. Fasten each cabinet through back, near top, at not less than 16 inches (400 mm) o.c.
- D. Install hardware uniformly and precisely.
- E. Adjust operating hardware so doors and drawers align and operate smoothly without warp or bind and contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.

3.03 INSTALLATION OF COUNTERTOPS

- A. Comply with installation requirements in SEFA 2. Abut top and edge surfaces true in plane with flush hairline joints and with internal supports placed to prevent deflection. Locate joints where indicated on Shop Drawings.
- B. Field Jointing: Where possible, make in same manner as shop-made joints, using dowels, splines, fasteners, adhesives, and sealants recommended by manufacturer. Shop prepare edges for field-made joints.
- C. Fastening:
 - 1. Secure epoxy countertops to cabinets with epoxy cement, applied at each corner and along perimeter edges at not more than 48 inches (1200 mm) o.c.
- D. Provide holes and cutouts required for service fittings.
- E. Provide scribe moldings for closures at junctures of countertop, curb, and splash with walls as recommended by manufacturer for materials involved. Match materials and finish to adjacent laboratory casework. Use chemical-resistant, permanently elastic sealing compound where recommended by manufacturer.
- F. Dress joints smooth, remove surface scratches, and clean entire surface.

3.04 INSTALLATION OF SINKS

- A. Comply with installation requirements in SEFA 2.

3.05 INSTALLATION OF LABORATORY ACCESSORIES

- A. Install accessories in accordance with Shop Drawings, installation requirements in SEFA 2, and manufacturer's written instructions.
- B. Securely fasten adjustable shelving supports, stainless steel shelves, and pegboards to partition framing, wood blocking, or reinforcements in partitions.
- C. Install shelf standards plumb and at heights to align shelf brackets for level shelves. Install shelving level and straight, closely fitted to other work where indicated.
- D. Securely fasten pegboards to partition framing, wood blocking, or reinforcements in partitions.

3.06 INSTALLATION OF SERVICE FITTINGS

- A. Comply with requirements in other Sections for installing water and laboratory gas service fittings and electrical devices.
- B. Install fittings in accordance with Shop Drawings, installation requirements in SEFA 2, and manufacturer's written instructions. Set bases and flanges of sink- and countertop-

mounted fittings in sealant recommended by manufacturer of sink or countertop material. Securely anchor fittings to laboratory casework unless otherwise indicated.

3.07 CLEANING AND PROTECTING

- A. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Engineer.
- B. Protect countertop surfaces during construction with 6-mil (0.15-mm) plastic or other suitable water-resistant covering. Tape to underside of countertop at a minimum of 48 inches (1200 mm) o.c.

END OF SECTION

SECTION 12 36 61.16

SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Solid surface material countertops.
 - 2. Solid surface material backsplashes.
 - 3. Solid surface window stools.

1.02 ACTION SUBMITTALS

- A. Product Data: For solid surface materials.
- B. Shop Drawings: Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
 - 1. Show locations and details of joints.
 - 2. Show direction of directional pattern, if any.
- C. Samples for Initial Selection: For each type of material exposed to view.
- D. Samples for Verification: For the following products:
 - 1. Solid surface material, 6 inches (150 mm) square.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For solid surface materials to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.05 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.

- B. Installer Qualifications: Fabricator of countertops.

1.06 FIELD CONDITIONS

- A. Field Measurements: Verify dimensions of countertops by field measurements before countertop fabrication is complete.

1.07 COORDINATION

- A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.01 SOLID SURFACE COUNTERTOP MATERIALS

- A. Solid Surface Material: Homogeneous-filled plastic resin complying with ISFA 2-01.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Avonite Surfaces.
 - b. Du Pont Company.
 - c. Formica Corporation.
 - d. Wilsonart LLC.
 - 2. Type: Provide Standard type unless Special Purpose type is indicated.
 - 3. Colors and Patterns: Refer to Drawings.

2.02 FABRICATION

- A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
 - 1. Grade: Custom.
- B. Configuration:
 - 1. Front: Straight, slightly eased at top.
 - 2. Backsplash: Straight, slightly eased at corner.

- C. Countertops: 1/2-inch- (12.7-mm-) thick, solid surface material with front edge built up with same material.
- D. Backsplashes: 1/2-inch- (12.7-mm-) thick, solid surface material.
- E. Window Stools: 1/2-inch- (12.7-mm-) thick, solid surface material, eased edge.
- F. Fabricate tops with shop-applied edges unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 1. Fabricate with loose backsplashes for field assembly.
- G. Joints: Fabricate countertops without joints.
 - 1. If joints are required, minimize joint locations as much as possible.
 - a. Joint Locations: Not within 18 inches (450 mm) of a sink and not where a countertop section less than 36 inches (900 mm) long would result
 - 2. Plan material cuts in advance so that joints will appear seamless. Match material color, tone, and pattern across joints.
- H. Cutouts and Holes:
 - 1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
 - 2. Counter-Mounted Plumbing Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
 - 3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

2.03 INSTALLATION MATERIALS

- A. Adhesive: Product recommended by solid surface material manufacturer.
- B. Sealant for Countertops: Comply with applicable requirements in Section 07 92 00 "Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with

requirements for installation tolerances and other conditions affecting performance of countertops.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install countertops level to a tolerance of 1/8 inch in 8 feet (3 mm in 2.4 m), 1/4 inch (6 mm) maximum. Do not exceed 1/64-inch (0.4-mm) difference between planes of adjacent units.
- B. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Predrill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
- C. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
- D. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- E. Apply sealant to gaps at walls; comply with Section 07 92 00 "Joint Sealants."

END OF SECTION

SECTION 21 10 00
FIRE PROTECTION SYSTEMS

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Provide fire protection systems as indicated and in compliance with Contract Documents.

1.02 REFERENCES:

- A. American Society of Mechanical Engineers (ASME):
 - 1. B16.4: Gray Iron Threaded Fittings Classes 125 and 250.

1. 13: Standard for the Installation of Sprinkler Systems

2. 14: Standard for the Installation of Standpipe and Hose Systems

3. 20: Standard for the Installation of Stationary Pumps for Fire Protection

I. International Building Code 2018

J. International Fire Code 2018

1.03 DESIGN REQUIREMENTS:

A. Fire protection work is to be designed by an accredited fire protection company.

B. Fire protection system work is to be designed in accordance with NFPA and Provincial Codes, and where required, local building and fire department requirements and the standards of the Owner's Insurer.

C. Provide all additional working drawings and/or load calculations required and submit with shop drawings.

D. Water Supply: Conduct Municipal main water flow and pressure tests at the nearest fire hydrant to obtain criteria to be used in fire protection system design. Include hydrant location and flow and pressure test data with system design calculations.

E. Sprinkler System Occupancy – Hazard Design Requirements: The following NFPA 13 occupancy – hazard density requirements are, unless otherwise specified, to be adhered to when designing the sprinkler work:

1. Ordinary Hazard Group 1 Occupancies to be designed for 6.1 L/min./m² (0.15 usgpm/square feet) density over the hydraulically most remote 139.4 m² (1500 square feet) plus 15.77 L/s (250 usgpm) for fire hose allowance, to be used for the following areas:

a. LOWER LEVEL 001

b. PROCESS ROOMS 123-127

2. ESFR Areas: Size the pipe by hydraulic calculation to meet at least the minimum pressure requirements with the minimum number of sprinklers flowing. Use a sprinkler discharge coefficient (k-factor) of 14.0. Design all systems to supply the minimum needed sprinkler discharge pressure from the most hydraulically remote twelve sprinklers, flowing four sprinklers on three branch lines. When branch lines

contain less than four sprinklers, flow whole branch lines and any needed additional sprinklers on an adjacent branch line to achieve a 12-sprinkler total. With this design, it is unnecessary to limit flow velocity in overhead sprinkler piping. Also, when additional sprinklers are installed beneath obstructions, conveyors, or walkways, include all such sprinklers located within the design areas in the total water demand. Add hose demand to sprinkler demand at the point of connection. Use for the following areas:

- a. LOWER LEVEL 001
- b. PROCESS ROOMS 123-127

- 3. Sprinkler Head Locations: Sprinkler head locations must be carefully coordinated with all Drawings, including architectural reflected ceiling plan Drawings, where applicable, electrical Drawings, and process Drawings. Unless otherwise approved, the location and arrangement of "head end" equipment is to remain generally as shown, and final layout is to maximize space within the area while facilitating proper access to equipment. Maintain clearance at the front of electrical panels in accordance with Hydro One Inc. and Ontario Electrical Safety Code requirements, and locate all piping so as not to restrict access or movement in the room housing the head end equipment.

- F. Standpipe System Design Criteria: All standpipe system piping is to be hydraulically sized.

1.04 SUBMITTALS:

- A. Submit the following shop drawings in accordance with Section 01 33 00.
- B. Shop Drawings: Submit fire protection system shop drawings to the regulatory authority for review and approval prior to submitting to the Consultant. Conform to the following requirements:
 - 1. Submit shop drawings for all products specified in this Section except pipe and fittings.
 - 2. Submit complete fire protection systems layout drawings indicating source of water supply, "head end" equipment piping schematic, pipe routing and sizing, and zones, all signed and sealed by a qualified professional mechanical engineer registered/licensed in the Utah.
 - 3. Submit copies of all Seismic and Hydraulic calculations signed by the same engineer who signs the layout drawings, and a listing of all design data used in preparing the calculations, system layout and sizing. Provide calculations to both Mechanical Engineer on the project and FM Global representative at least two weeks prior to construction.

4. In addition to submitting shop drawings to the regulatory authority as specified above, shop drawings must be approved by the Owner's insurer prior to being submitted to the Consultant for review.

C. Test Data: Submit the following test data prior to application for substantial performance:

1. Pipe leakage test sheets and test data as specified in Part 3 of this Section.
2. A copy of a certification letter from the fire pump set supplier in accordance with Part 3 of this Section.

D. Certificates: Submit certificates and documentation specified in this Section.

1.05 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01 43 00.
- B. Sprinkler work is to be performed by a sprinkler company who is a member in good standing of the Canadian Automatic Sprinkler Association.
- C. All site personnel are to be under the continuous supervision of a foreman who is an experienced fire protection system installer and a journeyman pipefitter.
- D. Check and verify all dimensions and conditions at the site and ensure that the Work can be performed as indicated.
- E. Coordinate fire protection Work with all trades at the site and accept responsibility for and the cost of making adjustments to piping and or spacing to avoid interference with other building components.
- F. Verify the working condition of all existing fire protection equipment which has direct interface with the new Work and is to remain. Replace with new equipment where necessary.
- G. All system components must be ULC listed and labelled.
- H. Manufacturer of valves, sprinklers and related components shall provide a limited warranty of ten (10) years against defects in materials and workmanship.

1.06 DELIVERY STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01 66 10.

PART 2 - PRODUCTS

2.01 PIPE, FITTINGS AND JOINTS:

- A. PVC: Ipex "Brute Brute" Class 200, DR14, rigid, hub and spigot pattern PVC pipe and CSA certified fittings to CSA B137.2 and B137.3, ULC listed and FM approved and complete with gasketed joints.
- B. Schedule 40 Steel - Grooved Coupling Joints: Schedule 40 mild black carbon steel, ASTM A53, Grade B, complete with mill or site roll grooved ends, and Victaulic "Fire Lock" or "FIT Style 960 fittings", Gruvlock Fig. #7105 "Sock-It" fittings, Tyco Fire Suppression & Building Products Mechanical Outlet Tee Fig. 730 and Victaulic Style 005, Tyco Fire Suppression & Building Products #772, Gruvlok Rigid-Lite #7400, Shurjoint "Speed" or "Z05" rigid coupling joints or approved equivalent. Snap-Let type or strap type fittings are not acceptable.
- C. Schedule 40 Steel - Screwed and Welded Joints: Schedule 40 mild black carbon steel, ASTM A53, Grade B. Screwed piping is to be complete with Class 125 cast iron screwed fittings to ANSI/ASME B16.4. Welded piping is to be complete with factory made seamless carbon steel butt welding fittings to ASTM A234, Grade WPB, long sweep pattern wherever possible.
- D. Schedule 10 Steel - Grooved Coupling Joints: Schedule 10 mild black carbon steel, ASTM A53, Grade B, complete with mill or site roll grooved ends, and Victaulic "Fire Lock" fittings, Tyco Fire Suppression & Building Products grooved fittings and Victaulic Style 005, Tyco Fire Suppression & Building Products #772, Gruvlok Rigid-Lite #7400 rigid coupling joints or approved equivalent. Snap-Let type or strap type fittings are not acceptable.
- E. Schedule 10 Steel - Screwed Joints: Schedule 10 mild black carbon steel, ASTM A53, Grade B, complete with mill or site threaded ends, Class 125 cast iron screwed fittings to ANSI/ASME B16.4, and screwed joints.
- F. "Lightwall" Steel - Grooved Coupling Joints: Allied "XL" commercial quality rolled mild carbon steel pipe to ASTM A135, Grade A, ULC listed, complete with a galvanized exterior, factory or site roll grooved ends, and Victaulic "Fire Lock" or Tyco Fire Suppression & Building Products grooved fittings and Victaulic Style 005, Tyco Fire Suppression & Building Products #772, Gruvlok Rigid-Lite #7400 rigid coupling joints or approved equivalent.
- G. "Lightwall" Steel-Screwed Joints: Allied "XL" commercial quality rolled mild carbon steel pipe to ASTM A135, Grade A, ULC listed, mill or site threaded, complete with galvanized exterior, Class 125 cast iron screwed fittings to ANSI/ASME B16.4, and screwed joints or approved equivalent.
- H. Schedule 5 Steel - Victaulic "Pressfit" Joints: Schedule 5 mild black carbon steel, ASTM A135, ASTM A795 or ASTM A53, complete with Victaulic "Pressfit" system synthetic rubber O-ring sealed 2005 kPa (175 psi) rated rigid carbon steel fittings and

Style 505 couplings for indented groove installation by means of a portable 115 volt plug-in electric tool.

2.02 INDICATOR POST VALVES AND INDICATOR POSTS:

- A. Valve: Cast iron, bronze trim, resilient seat, OS&Y gate valve with non-rising stem in accordance with AWWA C509, minimum 1380 kPa (200 psi) cold water rated and complete with a square operating nut and ends to suit connecting piping. Acceptable products are:

1. Mueller Co. ULC-FM resilient seat gate valve
2. Clow Canada Inc. Fig. No. F-6120
3. Nibco Series 609 RW

2.03 SERVICE MAIN DOUBLE CHECK VALVE ASSEMBLY:

- A. Minimum 2005 kPa (175 psi) rated, ULC listed and FM approved dual check valve backflow preventer assembly (less shut-off valves) to CAN/CSA B64, complete with test cocks. Acceptable products are:

1. Watts Regulator #709LF
2. Zurn/Wilkins #375 Series
3. Combraco 40-200 Series

2.04 SERVICE MAIN DOUBLE DETECTOR CHECK VALVE ASSEMBLY:

- A. Minimum 2005 kPa (175 psi) rated, ULC listed and FM approved dual check valve backflow preventer assembly (less shut-off valves) to CAN/CSA B64, complete with test cocks, and piping by-pass assembly with water meter. Acceptable products are:

1. Watts Regulator Series 07F with additional check valve
2. Zurn/Wilkins #375 Series
3. Combraco 40-600 Series

2.05 SHUT-OFF VALVES:

- A. Minimum 1205 kPa (175 psi) rated ULC listed and FM approved lug body or grooved end type ball or butterfly valves. Acceptable products are:

1. National Fire Equipment/GEC Alsthom butterfly type

2. Victaulic Series 728 "FireLock" ball type. (All Victaulic Firelock butterfly valves are not acceptable including, but not limited to Series 7A2, 7B2, 707C, 702, 705, 705W, 766, and 765.)
3. Tyco Fire Suppression & Building Products model BFV-N
4. Tyco Fire Suppression & Building Products Butterfly valve "Butterball" Model BB-SCS01
5. Anvil International Fig. AN-7722-3A
6. Nibco Fig #3510-8, Fig #GD-4765
7. Gruvlok Fig. AN-7722-3A
8. Global Safety Products Model BV
9. Kennedy Valve Co. #01G
10. Shurjoint #SJ-700W

2.06 CHECK VALVES:

- A. Minimum 1205 kPa (175 psi) rated, resilient seat, ULC listed and FM approved check valves. Acceptable products are:
 1. Victaulic "VIC-CHECK" Series 717/716
 2. Tyco Fire Suppression & Building Products Model CV-1F
 3. Tyco Fire Suppression & Building Products Model CV-1FR Riser Check Valve
 4. Nibco #F-908-W, G-917-W, KW-900-W, KT-403-W or T-480
 5. Kennedy Valve Co. #426
 6. Shurjoint #RCV
- B. Check valves associated with fire department connection(s) and fire pump test connection are to be tapped for site installation of a 20 mm (3/4-inch) diameter ball drip.

2.07 BALL DRIPS:

- A. A. National Fire Equipment Ltd. Model #58-2, Nibco Model #RG 22100, Tyco Fire Suppression & Building Products Model F789, 20 mm (3/4-inch) diameter automatic ball drip or approved equivalent.

2.08 SHUT-OFF VALVE SUPERVISORY SWITCHES:

- A. ULC listed and FM approved, tamper-proof, 24 volt or 115 volt AC supervisory switches, each arranged to activate a fire alarm trouble alarm condition if the valve is closed or tampered with, and with each complete with all required mounting and connection hardware. Acceptable products are:
 - 1. Potter Electric Signal and Manufacturing Ltd. Model "OSYSU" or "PCVS"
 - 2. System Sensor #P1BV2 or OSY2
 - 3. Victaulic Style 737

2.09 FIRE DEPARTMENT CONNECTION:

- A. Wall mounting polished brass Storz type connection with 6 inch diameter inlets threaded to Fire Department hose requirements and equipped with snoots, swivels, caps and chains, an outlet sized as shown, and a faceplate.
- B. The faceplate is to be complete with "AUTO-SPKR" cast-in raised lettering.
- C. All exposed metal parts of the fire department connection are to be chrome plated.
- D. Acceptable Manufacturers:
 - 1. American Fire Supply Model #SZ6
 - 2. Crocker #6350

2.10 FIRE PROTECTION MAIN "LOSS OF PRESSURE" ALARM SENSOR:

- A. ULC listed piping mounted adjustable pressure sensor designed to actuate an alarm upon sensing a loss of pressure in the fire protection main. The switch is to be low voltage or line voltage as required. Acceptable products are:
 - 1. Potter Electric Signal & Manufacturing Ltd. Model PS10-1A or 2A as required
 - 2. The Viking Corp #09470

2.11 WATER FLOW ALARM SWITCH:

- A. Pipe mounting water flow alarm switch, minimum 1725 kPa (250 psi) rated, designed to actuate two 7 ampere rated (at 125/250 VAC) SPDT snap action switches when water flow exceeds 0.758 L/second (10 gpm), complete with a tamper-proof cover with conduit connection opening, a piping saddle and U-bolt, and an automatic reset pneumatic retard device with field adjustable (0 to 70 second) switch actuation delay to reduce false alarms caused by a single or series of transient water flow surges. Acceptable products are:

1. The Viking Corp. Model VSR-F
2. System Sensor Model 10/40
3. Potter Electric Signal & Mfg. Model VSR-F
4. Victaulic Style 736

2.12 SPRINKLER SYSTEM ALARM CHECK VALVE:

- A. Enameled cast iron check valve assembly designed for either vertical or horizontal mounting and to actuate alarms when the wet type sprinkler system is activated. The assembly is to be minimum 2005 kPa (175 psi) cold water rated with all moving parts constructed of brass, bronze, stainless steel or EPDM, and is to be complete with:

1. A flanged inlet, and a flanged or grooved outlet as required.
2. Pipe fittings and accessories for site connection of an excess pressure pump.
3. Basic trim including piping materials and check valve for an external by-pass, potable water supply and system water supply pressure gauges with gauge test ports and shut-off valves, an angle type main drain valve, and fittings for mounting an alarm test by-pass.
4. Alarm test by-pass piping with ball valve to permit alarm testing without operation of the alarm valve.
5. Alarm trim with pipe and fittings for connection to a water motor alarm, and an adjustable pressure switch for electrical connection to an alarm system upon flow through the valve.

- B. Acceptable products (with specified trim and accessories) are:

1. The Viking Corp. Model J-1
2. Tyco Fire Suppression & Building Products Model AV-1-300
3. Reliable (Vipond Fire Protection) Model E
4. Victaulic Series 751 with trim

2.13 SPRINKLER ZONE FLOW ALARM AND INSPECTOR'S TEST VALVE ASSEMBLIES:

- A. Factory assembled sprinkler zone flow alarm switch, test and drain valve, sight glass, and pressure gauge. Acceptable products are:

1. Tyco Fire Suppression & Building Products F350 Series

2. Victaulic Style 720 "Test Master" with pressure gauge and Style 736 water flow alarm switch

2.14 SPRINKLER ZONE FLOW ALARM AND INSPECTOR'S TEST VALVE CABINETS:

- A. Flush wall mounting steel cabinets, each sized to contain a flow alarm switch, inspector's test valve with sight glass, pressure gauge, and associated piping, and complete with a hinged door with keyed lock, full length semi-concealed stainless steel piano hinge, adjustable trim, and "SPRINKLER ZONE ALARM & INSPECTOR'S TEST" permanent identification wording on the door.
- B. The interior of each cabinet and the backside of the door are to be factory finished in white enamel. The face of the door and the trim is to be prime coat painted.

2.15 SPRINKLER HEADS:

- A. Provide ULC listed heads as presented in Schedule 21 10 00-1.
- B. Sprinkler heads in finished areas are to be chrome plated unless otherwise specified.
- C. Where exposed pendent heads occurs in areas with suspended ceilings, they are to be complete with chrome plated escutcheon plates. Similarly, sidewall heads with concealed piping are to be complete with chrome plated escutcheon plates.
- D. Sprinkler heads which are exposed in areas where they may be subject to damage are to be complete with wire guards, chrome plated where in finished areas.
- E. Sprinkler heads located in areas or over equipment where high ambient temperature is present are to be, unless otherwise specified, 74 degrees C (165 degrees F) heads. All other heads, unless otherwise specified or required, are to be 57 degrees C (135 degrees F) rated.

2.16 SPARE SPRINKLER HEAD CABINET:

- A. Surface wall mounting, red enameled steel, identified cabinet with hinged door, shelves with holes for mounting sprinkler heads, a wrench or wrenches suitable for each type of sprinkler head, and a full complement of spare sprinkler heads.
- B. The cabinet is to be sized to accommodate a minimum of four spare heads for each type of head used on the Project, however, each cabinet is to be full of spare heads.

2.17 FIRE HOSE CABINETS:

- A. National Fire Equipment Ltd. ULC listed and FM approved fire hose cabinet assemblies, each complete:

1. A Model A-156, 40 mm (1-1/2 inch) forged brass, adjustable, pressure restricting angle hose valve.
 2. A Model A-156, 65 mm (2-1/2 inch) forged brass, adjustable, pressure restricting, Fire Department angle hose connection valve with cap and chain.
 3. A Model A-7-B 40 mm (1-1/2 inch) forged brass combination nozzle adjustable for fog, straight stream and shut-off.
 4. 30 m (100 feet) of 40 mm (1-1/2 inch) diameter "Polyfex" hose with Model F-4 forged brass couplings, a Model S-4 stationary hose rack with independently swiveling pins, and a Model S-5 automatic water stop.
 5. A Model C-21 "Trinal" spanner wrench.
 6. A Model ABC-050 HW, multipurpose, 3A:10BC rated dry chemical fire extinguisher.
- B. Recessed cabinets are to be "Knight" Series 200 mm (8 inch) deep cabinets complete with:
1. A 1.27 mm thick (18 gge) cold rolled steel tub with universal knockouts and a white enamel finish.
 2. A 1.98 mm thick (14 gge) steel door and adjustable trim assembly with rounded corner, full length semi-concealed piano hinge, prime coat finish, full panel of 6 mm (1/4-inch) thick "Duo-Lite" safety glass, and a flush stainless steel door latch.
- C. Surface mounted cabinets are to be Model C5-800 cabinets, each 200 mm deep and complete with:
1. A 1.27 mm thick (18 gge) cold rolled steel tube with universal knockouts and a white enamel interior finish and prime coated exterior.
 2. A 1.98 mm thick (14 gge) steel door with full length semi-concealed piano hinge, white enamel inside finish, primer coat exterior finish, full panel of 6 mm (1/4-inch) "Duo-Lite" safety glass, and a flush stainless steel door latch.
- D. All brass items in recessed cabinets are to be polished and chrome plated.
- E. Acceptable manufacturers are:
1. National Fire Equipment Limited
 2. Wilson & Cousins

PART 3 - EXECUTION

3.01 SPRINKLER SYSTEM PIPING INSTALLATION REQUIREMENTS:

- A. Perform all required sprinkler system Work.
- B. All pipe sizes, sprinkler head locations, head quantity, and layout of Work shown on the Consultants' Drawings are to assist you during the tendering period. Ensure adequate head coverage, head quantities and pipe sizing as specified in Part 1 of this Section. Do not reduce the size of the sprinkler main or re-route the main unless approved.
- C. Do all piping work in accordance with requirements of NFPA No. 13, "INSTALLATION OF SPRINKLER SYSTEMS", Provo Utah Regulations, and "reviewed" shop drawings.
- D. Pipe, unless otherwise specified, is to be as follows:
 - 1. For underground pipe inside or outside the building - Ipex "Blue Brute" Class 200, DR14 rigid PVC, braced and secured at bends and tees with concrete blocks in accordance with Municipal standards and details, and complete with No. 14 gge solid copper plastic insulated wire secured to the top of the pipe for the entire length of the pipe fastened with plastic type ties for pipe location tracing purposes. Lay pipes true to line and grade with bells up/grade. Fit sections together so that, when complete, the pipe has a smooth and uniform invert. Keep pipe thoroughly clean so that jointed compound will adhere. Inspect the pipe for defects before being lowered into the trench. Do not use defective pipe. All non-ferrous piping shall be changed to ferrous piping prior to entering the building using an Ebaa Iron Inc. Mega-Coupling Series 3800 or equivalent (i.e., changed before passing through basement floor or slab on grade).
 - 2. For piping inside building and above ground from service connection to discharge side of alarm valve, etc. - Schedule 40 grooved end black steel with Victaulic fittings and coupling joints, or, for piping to and including 50 mm (2 inch) diameter, screwed fittings and joints or piping 65 mm (2-1/2 inch) diameter and larger, welding fittings and welded joints.
 - 3. For pipe inside building and above ground to exterior pump test hose valve header and for fire department connection - Schedule 40 black steel as above.
 - 4. For piping downstream of "head end" alarm valve(s) and equipment – Schedule 10 or "Lightwall" black steel pipe with Victaulic fittings and coupling joints or screwed fittings and joints, or Schedule 5 black steel pipe with Victaulic "Pressfit" System fittings and coupling joints.
- E. Slope all horizontal piping so that it drains completely through risers, equipment, or through valved drainage branches. Provide capped hose end drain valves at all low points.

- F. Provide piping flushing connections consisting of threaded and capped 32 mm (1-1/4 inch) diameter, 100 mm (4 inch) long nipples on the end of mains where required.
- G. Provide non-freeze, glycol-water solution filled sprinkler piping where shown. Install the piping, complete with a CSA certified reduced pressure backflow preventer, valves and glycol solution fill facilities in accordance with requirements of Chapter 3 of NFPA 13. Fill the piping with a solution of 50 percent Union Carbide Canada Ltd. "UCAR THERMO-FLUID 17" or Dow Chemical Co. "Dowtherm SR1" or approved equivalent propylene glycol with corrosion inhibitors, and 50 percent clean water. Prior to filling the piping, check the specific gravity of the solution using a hydrometer with proper scale. Specific gravity is to be approximately 1.069 at 15.6 degrees C.
- H. When sprinkler work is complete, test system components and the overall system(s) and submit completed test certificate and other documentation in accordance with Chapter 14 of NFPA No. 13.

3.02 INSTALLATION OF DOUBLE CHECK VALVE ASSEMBLY:

- A. Provide a double check valve assembly in the sprinkler/standpipe main inside the building where shown.
- B. Equip the assembly with inlet and outlet supervised shut-off valves.
- C. Support each end of the assembly from the floor by means of flanged pipe supports with saddles.

3.03 INSTALLATION OF DETECTOR CHECK VALVE ASSEMBLY:

- A. Provide a detector check valve with water meter and connecting piping in the sprinkler main where shown. Confirm exact location prior to installation.
- B. Equip the assembly with inlet and outlet supervised shut-off valves.
- C. Support each end of the assembly from the floor by means of a flanged pipe support with saddles.

3.04 INSTALLATION OF SHUT-OFF VALVES AND CHECK VALVES:

- A. Provide shut-off valves and check valves in piping where shown.
- B. Locate all valves for easy operation and maintenance.
- C. Confirm exact locations prior to roughing-in.

3.05 INSTALLATION OF SHUT-OFF VALVE SUPERVISORY SWITCHES:

- A. Unless otherwise specified, equip each shut-off valve with a supervisory switch.

- B. Identify each supervised valve with a 150 mm (6 inch) square engraved laminated red-white plastic tag to correspond with supervised valve numbering specified and/or shown as part of the electrical work fire alarm system.

3.06 INSTALLATION OF FIRE DEPARTMENT CONNECTION:

- A. Provide a fire department connection for the fire protection system where shown. Confirm exact location prior to rough-in. Confirm finish prior to ordering.
- B. Equip the fire department connection with a check valve. Equip the check valve with a ball drip to drain the piping between the fire department connection and the check valve, and extend drainage piping from the outlet of the ball drip to the nearest suitable floor drain.

3.07 INSTALLATION OF "LOSS OF PRESSURE" SENSOR:

- A. Supply and mount a pressure sensor in the fire protection piping main to activate a "LOSS OF PRESSURE" trouble alarm should Municipal water service pressure fall below the acceptable level.
- B. Locate the sensor for easy access and maintenance, and set the alarm pressure to suit site conditions. Confirm setting on site.
- C. Identify the pressure sensor and its normal setting with a 150 mm (6 inch) square red-white laminated plastic tag engraved to read "LOSS OF WATER PRESSURE SENSOR - NORMAL SETTING 210 kPa". Confirm wording prior to manufacture.

3.08 INSTALLATION OF FLOW ALARM SWITCH(ES):

- A. Provide water flow alarm switch(es) in accessible location(s) in zone piping where shown. Install in accordance with the manufacturer's instructions and connect with piping as indicated.
- B. Adjust to suit site water pressure conditions. Check and test operation.
- C. Identify each switch with a 150 mm (6 inch) square red-white laminated engraved plastic tag. Confirm wording prior to manufacturer.

3.09 INSTALLATION OF ALARM CHECK VALVE(S):

- A. Provide alarm check valve(s) in wet zone sprinkler piping where shown. Install in accordance with the manufacturer's instructions and connect with piping as indicated.
- B. Check and test operation of valve(s) and adjust as required to suit site water pressure conditions.

3.10 INSTALLATION OF INSPECTOR'S TEST CONNECTIONS:

- A. Provide inspector's test connections with drain piping where required. Terminate drainage piping over a funnel and floor drain unless otherwise shown or specified.
- B. Where drainage pipe discharge cannot be seen from the test connection valve assembly, provide a sight glass.

3.11 INSTALLATION OF FLOW ALARM - TEST CONNECTION CABINETS:

- A. Where shown on the Drawings, install flow alarm switches and inspector's test connection assemblies in flush wall mounted identified cabinets. Confirm locations prior to roughing-in.
- B. Provide all required drainage piping, and, unless otherwise shown or specified, terminate drainage piping over a funnel and floor drain.

3.12 INSTALLATION OF SPRINKLER HEADS:

- A. Provide all required sprinkler heads.
- B. Unless otherwise specified, sprinkler heads are to be as follows:
 - 1. In equipment rooms and rooms in unfinished areas without a finished ceiling - pendant or upright heads.
 - 2. In finished areas without a suspended ceiling - chrome plated pendant or upright heads.
 - 3. In finished areas with suspended ceilings -chrome plated semi-recessed pendant type.
- C. Maintain maximum headroom in areas with no ceilings.
- D. Provide guards for heads where they are subject to damage.
- E. Provide high temperature heads in equipment rooms and similar areas over heat producing or generating equipment.
- F. Coordinate sprinkler head locations in areas with suspended ceilings with the location of lighting, grilles, diffusers, and similar items recessed in or surface mounted on the ceiling in accordance with the reflected ceiling plans. In areas with lay-in tile, centre the sprinkler head both ways in the lay-in tile wherever possible. Confirm locations prior to roughing-in.

3.13 INSTALLATION OF SPARE SPRINKLER HEAD CABINET:

- A. Supply a full complement (to fill cabinet) of spare sprinkler heads of the types used (minimum 4 of each type) and place in a wall mounting storage cabinet located adjacent the sprinkler system "head end" equipment where later directed.

3.14 STANDPIPE SYSTEM PIPING INSTALLATION REQUIREMENTS:

- A. Perform all required standpipe system Work.
- B. All pipe sizes, quantity of fire hose cabinets, and layout of Work shown on the Consultants' Drawings are to assist you during the tendering period. Do not reduce the size of the fire main or re-route the main unless approved.
- C. Provide all required standpipe system piping. Do all piping work in accordance with requirements of NFPA No. 14 "STANDPIPE AND HOSE SYSTEMS", Utah Regulations, and "reviewed" shop drawings. Pipe, unless otherwise specified, is to be as follows:
 - 1. For underground pipe inside or outside the building - Ipex "BLUE BRUTE" Class 200 DR14 rigid PVC, FM approved pipe and fittings, braced and secured at bends and tees with concrete thrust blocks in accordance with Municipal standards and details. All non ferrous piping shall be changed to ferrous piping prior to entering the building (i.e., changed before passing through basement floor or slab on grade).
 - 2. Piping inside building and above ground - Schedule 40 grooved end mild black steel with Victaulic fittings and couplings, or with screwed fittings and joints for pipe to and including 50 mm (2 inch) diameter, and with welded fittings and joints for pipe 65 mm (2-1/2 inch) diameter and larger pipe.
- D. Slope all horizontal piping so that it may be completely drained. Provide capped drain points.
- E. Provide a pressure gauge at the highest outlet in each standpipe riser. Locate gauges so that they can be read easily. Where possible, locate gauges in fire hose cabinets. See Section 20 05 00 for pressure gauge requirements.
- F. When standpipe Work is complete, test the system in accordance with requirements of Chapter 11 of NFPA No. 14, and complete and submit documentation specified in Chapter 11.

3.15 INSTALLATION OF FIRE HOSE CABINETS:

- A. Provide fire hose cabinets where shown.
- B. Confirm exact cabinet locations prior to roughing-in.

- C. Install fire hose cabinets 1372 mm (54 inches) above finished floor to top of cabinet unless otherwise noted on drawings.
 - D. Install surface mounted fire hose cabinets in the parking garage area on floor to ceiling prime coat painted structural steel frameworks where shown.
- 3.16 CLOSEOUT ACTIVITIES:
- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 21 13 00

WET-PIPE FIRE SUPPRESSION SPRINKLER SYSTEM

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Design and provide new automatic wet pipe fire suppression sprinkler systems for the areas indicated and in compliance with Contract Documents.
- B. Design and provide new fire water service entrance for wet-pipe system.
- C. The Work of this Section shall include all labor, materials, tools, equipment and appurtenances, and performing all operations necessary to furnish and install complete and operable systems in accordance with this Section of these Contract Specifications, the Contract Drawings, and the codes and standards listed herein.
- D. Coordinate with the Local Water Department & Utility as to any Local restrictions or requirements relative to backflow prevention devices and metering.
- E. Provide a licensed Fire Protection Professional Engineer to design the systems.

1.02 REFERENCES:

- A. Except as specified herein, the latest edition of the standards listed below form a part of this Specification to the extent referenced in this Section. Where earlier editions of standards are adopted as referenced in applicable codes, those shall govern. The publications are referred to within the text by the basic designation only.
- B. In each of the standards referred to herein, consider the advisory provisions to be mandatory, as though the word, "shall" had been substituted for "should" wherever it appears.
- C. ASTM International (ASTM):
 - 1. A36: Carbon Structural Steel
 - 2. A47: Malleable Iron Castings
 - 3. A53: Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless
 - 4. A536: Ductile Iron Castings
 - 5. A795: Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use
- D. American Society Of Mechanical Engineers (ASME):

1. A17.1/CSA B44: Safety Code for Elevators and Escalators
 2. B1.20.1: Pipe Threads, General Purpose (Inch)
 3. B16.1: Standard for Cast Iron Pipe Flanges and Flanged Fittings, 125 lb.
 4. B16.3: Malleable Iron Threaded Fittings
 5. B16.4: Cast Iron Threaded Fittings
 6. B16.9: Factory-Made Wrought Steel Butt- Welding Fittings
 7. B16.11: Forged Fittings, Socket-Welding and Threaded
 8. B16.21: Nonmetallic Flat Gaskets for Pipe Flanges
 9. B18.2.1: Square and Hex Bolts and Screws Inch Series)
 10. B18.2.2: Square and Hex Nuts (Inch Series)
 11. B31.1: Power Piping
 12. B40.1: Gauges - Pressure Indicating Dial Type
 13. BPV X: Boiler Pressure Vessel Code – Welding and Brazing Qualifications
- E. American Society Of Sanitary Engineering (ASSE):
1. 1013: Reduced Pressure Principle Backflow Prevention Assemblies and Reduced Pressure Principle Fire protection Backflow Prevention Assemblies.
 2. 1015: Double Check Backflow Prevention Assemblies and Double Check Fire Protection Backflow Prevention Assemblies
 3. 1048: Double Check Detector Fire Protection Backflow Prevention Assemblies
- F. American Welding Society (AWS):
1. D10.9: Qualification of Welding Procedures and Welders for Piping and Tubing
- G. American Water Works Association (AWWA):
1. C104: Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water
 2. C105: Polyethylene Encasement for Ductile-Iron Pipe Systems
 3. C111: Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings
 4. C151: Ductile-Iron Pipe, Centrifugally Cast, for Water or Other Liquids

5. C500: Metal Seated Gate Valves for Water Supply Source
 6. C651: Disinfecting Water Mains
 - H. FM Global (FM):
 1. P7825: Approval Guide
 2. Data Sheet 2-2: Installation Rules for Suppression-Mode Automatic Sprinklers.
 3. Data Sheet 2-8: Earthquake Protection for Water-Based Fire Protection Systems.

 3. 668: Hose Valves For Fire Protection Service
 4. 789: Indicator Posts for Fire-Protection Service
 5. Fire Prot Dir: Fire Protection Equipment Directory
- 1.03 SYSTEM REQUIREMENTS:
- A. General:
1. Wet-pipe sprinkler system shall be provided in areas indicated on the Drawings. The system shall comply with the requirements indicated on the Drawings and NFPA 13 edition adopted by Provo Utah. Connection to the water supply line shall

be as shown on the drawings. Design automatic fire suppression sprinkler systems in accordance with the required and advisory provisions of NFPA 13, hydraulic calculations using the area/density method for uniform distribution of water over the design area. Each system shall include materials, accessories, and equipment inside and outside the building to provide each system complete and ready for use. Design and provide each system to give full consideration to blind spaces, piping, electrical equipment, ducts, and other construction and equipment in accordance with detailed working drawings to be submitted for acceptance. Locate sprinkler heads in a consistent pattern with ceiling grid, lights, and air supply diffusers. Devices and equipment for fire protection service shall be UL Fire Prot Dir listed or FM APP GUIDE approved for use in wet pipe sprinkler systems.

B. Location of Sprinkler Heads:

1. Sprinkler heads shall be uniformly spaced to ensure full area coverage. Spacing of sprinklers and position and orientation of sprinklers in relation to the ceiling, walls, and obstructions shall conform to NFPA 13 for the hazard occupancy indicated. Maximum sprinkler head spacing shall not exceed limits specified in NFPA 13 for the corresponding hazard occupancy.

C. Water Distribution:

1. Distribution shall be uniform throughout the area in which the sprinkler heads will open. Discharge from individual sprinklers in the hydraulically most remote area shall be not less than 100 percent of the specified density.

D. Density of Application of Water:

1. Size pipe to provide the indicated density when the system is discharging the specified total maximum required flow.

E. Sprinkler Discharge Area:

1. Sprinkler discharge area shall be the hydraulically most remote area as defined in NFPA 13.

F. Outside Hose Allowances:

1. Hydraulic calculations shall include the indicated allowance for outside hose streams.

G. Friction Losses:

1. Calculate losses in piping in accordance with the Hazen-Williams formula with 'C' value as specified in NFPA 13 for the piping material employed. Velocity in the sprinkler piping shall be limited to a maximum of 20 ft/sec (0.0061 km/s).

H. Water Supply:

1. Base hydraulic calculations on the indicated static pressure, available flow and corresponding residual pressure at the indicated fire hydrants. Provide the indicated pressure cushion between total calculated demand and the water supply.

I. Seismic Design Requirements:

1. Conform to the seismic design requirements specified in NFPA 13. Hangers, supports and through -penetrations shall be designed to protect piping and valves from earthquake damage.

1.04 SUBMITTALS:

A. Submit the following in accordance with Section 01 33 00. Provide duplicate submittals to the Engineer & CM and the Owner's insurance underwriter for review and acceptance.

1. Certificate of Design: Submit a completed certificate of design prior to start of design work. See Section 01 33 00 for certificate form.
2. Shop Drawings
 - a. Working Drawings - Prepare 24 by 34 inch detail working drawings of sprinkler heads and piping system layout in accordance with NFPA 13, "Working Drawings (Plans)." Show data essential for proper installation of each system. Show details, plan view, elevations, and sections of the systems supply and piping. Drawings shall clearly show location of sprinkler heads with spacing dimensions as well as orientation of sprinkler heads in relation to obstructions; piping system layout including valve risers and trim, inspectors test connections, fire department connection, gauges, system drains, isolation valves, water flow alarms; and support and hangers. Building sections shall show typical branch line, main line and sprinkler head elevation above the floor. Show point to point electrical wiring diagrams. Submit Working Drawings stamped and signed by the Fire Protection Engineer.
 - b. Coordination Drawings - Prepare as specified in Paragraph "Cooperation and Coordination with Other Trades" of this Section.
3. Product Data - Annotate descriptive data to show the specific manufacturer, model, type, size, capacity, curves, wiring diagrams, options, etc. of each item.
 - a. Pipe, fittings and mechanical couplings
 - b. Valves
 - c. Post indicator valves
 - d. Valve boxes

- e. Buried utility warning and identification tape
 - f. Sprinkler heads
 - g. Alarm check valves
 - h. Fire department connections
 - i. Sight drains
 - j. Backflow preventers
 - k. Pressure gauges
 - l. Audible alarms
 - m. Alarm initiating devices
 - n. Pipe hangers and supports
 - o. Access panels
 - p. Identification signs
 - q. Paint
4. Hydraulic Calculations
- a. Sprinkler system design - Prepare computer program generated hydraulic calculations in accordance with NFPA 13 to substantiate compliance with hydraulic design requirements. Submit name of software program used. Submit hydraulic calculations stamped and signed by the Fire Protection Engineer.
 - b. Provide hydrant flow test data less than one year old conforming to NFPA 291. In case of a winter test, provide comparison to local water department tests or estimates of minimum summer flow and pressure for basis of design. The lesser combined flow and pressure test results shall be used for the hydraulic design of the system.
5. Certification - Submit documentation certifying completion of the following items in compliance with this Section.
- a. Preliminary tests
 - b. Flushing
 - c. Manufacturers' services

- d. Disinfection
- 6. Spare Parts and Special Tools:
 - a. Include a list of spare parts as recommended by the manufacturer of each system component, where applicable. Each spare part shall be listed with the current unit price.
 - b. Include a list of special tools and test equipment required for maintenance and testing.
- 7. Record Drawings
 - a. 24 x 34 inch Record Drawings of each system for record purposes, stamped and signed by the Fire Protection Engineer, shall be submitted not later than 30 days after the final system test is successfully completed. The drawings shall be on bond paper with title block.
- 8. Test Procedures:
 - a. Procedures for hydraulic test, alarms test and final acceptance test shall be submitted 14 days prior to the corresponding test.
- 9. Test Reports - Prepare as specified in Part 3 of this Section.
 - a. Formal tests and inspections
 - b. Backflow preventer tests.
- 10. Certificates and Licenses - Prepare as specified in Part 1 of this Section.
 - a. Qualifications of Installer
 - b. Qualifications of Construction Supervisor
 - c. Qualifications of Fire Protection Engineer.
- 11. Operation and Maintenance Manuals - Prepare manuals in accordance with Section 01 78 23. Submit a certified list of qualified service organizations for support of the equipment which includes their addresses and qualifications.
 - a. Sprinkler heads
 - b. Valves
 - c. Alarm check valves
 - d. Audible Alarms

e. Alarm initiating devices

f. Backflow preventers

12. Closeout Submittals

a. Record Drawings - Prepare as specified in Part 1 of this Section.

1.05 QUALITY ASSURANCE:

A. Provide in accordance with Section 01 43 00 and as specified.

B. Comply with requirements of authority having jurisdiction for submittal, approvals, materials, hose threads, installation, inspections, and testing.

C. Comply with requirements of Owner's insurance underwriter for submittal, approvals, materials, installation, inspections, and testing.

D. NFPA Standards: Equipment, specialties, accessories, installation, and testing complying with the following:

1. NFPA 13.

E. Qualifications of Installer:

1. Prior to installation, submit data showing the name and license of the installing contractor and that he has successfully installed systems of the same type and design as specified herein. Data shall include names and locations of at least five installations of similar size and scope that are in compliance with the requirements of the authority having jurisdiction. Indicate type and design of each system and certify that each system has performed satisfactorily in the manner intended for not less than 18 months. The installing contractor shall be licensed to perform applicable fire protection systems installation and alterations and service such systems in the state in which the project is located.

2. Qualifications of Welders: Piping shall be welded in accordance with qualified procedures using performance qualified welders and welding operators. Procedures, welders and welding operators shall be qualified in accordance with ASME BPV IX. Welding procedures qualified by others, and welders and welding operators qualified by another employer may be accepted as permitted by ASME B31.1. The Authority Having Jurisdiction shall be notified 24 hours in advance of any required testing and the tests shall be performed at the work site. The welder or welding operator shall apply his assigned symbol near each weld he makes as a permanent record. Prior to installation, submit data for acceptance showing the name and certification of each welder and welding operator to be used on the project. Submit each welder's identification symbols, assigned number, or letter, used to identify work of the welder. Welders making defective welds after

passing a qualifications test shall be given requalification test and, upon failing to pass this test, shall not be permitted to work on the Contract.

- a. Each welder shall have a copy of a certified ASME qualification test report. Conduct a qualification test for each welder and submit results for acceptance.
- b. Submit welding procedure specifications for metals included in the Work.

F. Qualifications of Construction Supervisor

1. Provide a Construction Supervisor with a minimum of 5 years of experience in fire protection construction supervision who shall be responsible for the installation of the Work of this Section of the Contract Specifications. The Construction Supervisor shall be licensed to perform applicable fire protection systems supervision in the state in which the project is located. Prior to installation, submit data for acceptance showing the name and license of the Construction Supervisor.

G. Fire Protection Engineer Qualifications: Hydraulic calculations, working drawings, record drawings, and installation inspection reports shall be prepared by, or under the supervision of, an individual who is experienced with the types of work specified herein, and is currently licensed as a Fire Protection Professional Engineer in the state where the Project is located. Submit data for acceptance showing the name and license of Fire Protection Engineer with such qualifications at, or prior to, submittal of hydraulic calculations and working drawings.

H. Tests shall be conducted in presence of authorities having jurisdiction. Contractor shall notify the authorities having jurisdiction and Engineer & CM minimum five days prior to performing tests.

1.06 DELIVERY, STORAGE AND HANDLING:

A. Provide in accordance with Section 01 66 10 and as specified.

B. Shipping:

1. All equipment, material and spare parts shall be shipped, stored, handled and installed in such a manner as not to degrade quality, serviceability, or appearance. Equipment and material warranties shall not be voided by actions of the Contractor.
2. Ship equipment, material and spare parts complete except where partial disassembly is required by transportation regulations or for protection of components.
3. Pack spare parts in containers bearing labels clearly designated contents and pieces of equipment for which intended.

4. Deliver spare parts at same time as pertaining equipment. Deliver to Owner after completion of work.

C. Receiving:

1. All equipment, material and spare parts shall be delivered to the site in original packages or containers bearing the manufacturer's labels and product identification.
2. Inspect for damage and correctness, and inventory items, upon delivery to site.
3. Store equipment, material and spare parts protected for the weather, humidity and temperature variations, dirt and dust or other contaminants. Store and safeguard in accordance with manufacturer's recommendations.

1.07 SPECIAL REQUIREMENTS:

A. Refer to applicable sections of Division 1 with regard to providing the following:

1. Submittal of manufacturer's specifications, catalog data, descriptive matter, illustrations, diagrams, etc., including complete motor data for all equipment
2. Nameplates
3. Foundations, installations, and grouting
4. Operating and maintenance instructions and parts lists
5. Lubricants
6. Special tools
7. Bolts, anchor bolts, and nuts
8. Concrete inserts
9. Sleeves

1.08 COOPERATION AND COORDINATION WITH OTHER TRADES:

- A. Work shall be performed in cooperation with other trades on the project and so scheduled as to allow efficient completion of the project. Materials and equipment shall be installed as fast as conditions will permit, and installed promptly.
- B. Furnish to all other trades advance information on location and size of all concrete pads, chases, frames, boxes, sleeves, and openings needed for the Work, and also furnish layout information and shop drawings necessary to permit other trades affected by the Work to install their work properly coordinated and without delay.

- C. Where there is evidence that Work installed interferes with the work of other Sections, assist in working out space conditions to make satisfactory adjustments.
 - D. With the acceptance of the Engineer & CM and without extra cost to the Owner, make reasonable modifications in Work specified under this Section of the Contract Specifications required to coordinate with normal structural interference's, or for proper execution of specified work.
 - E. If work is installed before coordinating with other trades so as to cause interference with the work of such trades, make all necessary changes in Work under this Section of the Contract Specifications at no additional cost to the Owner.
 - F. Protect all materials and work of other trades from damage that may be caused by the Work required under this Section of the Contract Specifications and be responsible for repairing any damages caused by such work without any additional cost to the Owner.
 - G. Follow Contract Drawings in layout work. Check Contract Drawings of, and coordinate with, other trades to verify special provisions, installation requirements and spaces in which Work provided under this Section of the Contract Specifications will be installed. Maintain maximum headroom or space conditions at all points. Where headroom or space conditions appear inadequate, notify the Engineer & CM before proceeding.
 - H. Prepare and submit for acceptance 3/8-inch = 1 foot-0 inches scale or larger working plans and sections, clearly showing how this Work is to be installed in relation to the work of other Sections. Coordination Drawings shall be based upon accepted equipment submittals. [The Sheetmetal Ductwork Trade will prepare ductwork shop drawings used to work out the coordination of all work of all trades as specified in each applicable Section. Show and coordinate the Work of this Section on said Coordination Drawings.
 - I. Attend regular coordination and job progress meetings required.
- 1.09 PRODUCTS FURNISHED BUT NOT INSTALLED UNDER THIS SECTION:
- A. Access panels shall be furnished under this Section and installed by the trade responsible for the appropriate Section of the Contract Specifications for the surface upon which the panels are mounted. Prepare a schedule showing location, size and function of all required access panels and deliver schedule to representatives of all installing trades.
 - B. Inserts and anchor bolts shall be furnished under this Section and installed under Section 03 30 00. Prepare a schedule showing location, size and function of all required inserts and anchor bolts and deliver schedule to representative of the installing trade.
 - C. Pipe sleeves shall be furnished under this Section and installed by the trade whose finished interior surfaces will be penetrated. Prepare a schedule showing location, size and function of all required pipe sleeves and deliver schedule to representatives of all installing trades.

1.10 PRODUCTS INSTALLED BUT NOT FURNISHED UNDER THIS SECTION:

1.11 REMOVAL WORK:

- A. Particular care shall be taken to avoid creating hazards on the site or causing disruption of service of unaffected spaces and/or systems.

1.12 ELECTRICAL WORK:

- A. All electrical apparatus and controls associated with equipment installed under this Section will be furnished and mounted under this Section. All wiring of electrical apparatus and controls to the fire alarm control panel will be furnished and installed by Division 26.
- B. When motors and other associated electrical apparatus furnished are larger than sizes indicated on the Contract Drawings, the cost of additional electrical service and related work shall be included under the Section that furnished that motor.
- D. Provide wiring in conduit as specified in Division 26.

1.13 CODES, PERMITS AND FEES:

- A. Except for additional requirements as specified or indicated under the Work of this Section, materials, workmanship and equipment shall conform with the governing edition of the following regulations, and agency requirements. In the Sprinkler Code referred to herein, the advisory provisions shall be considered to be mandatory, as though the word "shall" had been substituted for "should" wherever it appears.
 - 1. State and Local Building Codes including, but not limited to, NFPA 13 as adopted by the State of Utah, the Utah Building Code, and the Utah Plumbing Code.
 - 2. Utah Department of Environmental Protection
 - 3. Local Fire Department
 - 4. Local Water and Sewer Authority or Department
 - 5. Occupational Safety and Health Administration (OSHA)
 - 6. Any other local codes or requirements of Authorities Having Jurisdiction.
- B. Pay for all fees and give all notices, file all plans, obtain all permits and licenses, and obtain all necessary approvals from Authorities Having Jurisdiction. Deliver all certificates of inspection to the Authorities Having Jurisdiction. No work shall be covered before examination and approval by Authorities Having Jurisdiction. Replace imperfect or condemned work to conform to inspectional requirements, satisfactory to the Owner, Engineer & CM and Authorities Having Jurisdiction without extra cost to the

Owner. If Work is covered before inspection and acceptance, pay costs of uncovering and reinstalling the covering, whether it meets contract requirements or not.

1.14 RECORD DRAWINGS:

- A. Prepare and maintain Record Drawings to meet the requirements of this Section of the Contract Specifications.
- B. As work progresses and for the duration of the Contract, maintain a complete and separate set of prints of Contract Drawings at the job site at all times. On a daily basis, record work completed and all changes from original Contract Drawings clearly and accurately, including work installed as a modification or addition to the original design such as change orders, instructions issued by the Engineer & CM, or conditions encountered in the field. Record valve tags as they are installed. In addition, take photographs of all concealed equipment in gypsum board ceilings, shafts, underground (buried) piping routes and supports and other concealed, inaccessible work. At completion of work, make copies of photographs with written explanation on back. These shall become part of Record Drawings.
- C. Record Drawings shall show as-built condition of all items required by NFPA 13 for Working Drawings (Plans). Remove all superceded data to show the completed work.
- D. The Record Drawings will be used as a guide for determining the progress of the Work installed. They shall be inspected on a regular basis and shall be corrected immediately if found inaccurate or incomplete. Requisitions for payment will not be authorized until the Drawings are accurate and up-to-date.
- E. At completion of Work provide a complete set of cad-drafted Record Drawings on bond paper showing all systems as actually installed. The Contract Drawing electronic CAD files will be made available for this Contractor's use to serve as backgrounds for the Record Drawings. Provide all drawings necessary to show the required record information. Submit three sets of cad-drafted prints to the Engineer & CM for comments as to compliance with this Section. Make all modifications so noted by the Engineer & CM. Final Record Drawings shall be on bond paper.
- F. Certify the accuracy of the record drawings. Record Drawings shall be stamped and signed by the Fire Protection Engineer. Record Drawings shall become the property of the Owner.
- G. When required by jurisdiction, submit the Record Drawings for approval by the Authority Having Jurisdiction in a form acceptable to the jurisdiction.

1.15 MAINTENANCE ACCESSORIES AND TOOLS:

- A. All special tools necessary for the operation and maintenance of the Fire Protection system and equipment shall be furnished. Wrenches for the removal of each type of

sprinkler head installed shall be furnished within the spare sprinkler head cabinet at the Alarm Check Valve assembly or where directed by the Engineer & CM.

PART 2 - PRODUCTS

2.01 GENERAL:

- A. Material and equipment for fire protection service shall be UL 04 Fire Prot Dir listed and/or FM P7825 approved for use in wet pipe sprinkler systems where such classes of material and equipment are available as listed or approved by these organizations. Where the terms “listed” or “approved” appear in this Section, such shall mean listed or approved in the aforementioned directories.
- B. Where applicable, all products requiring approval by the Utah Department of Public Safety shall be so approved.
- C. All components subject to pressure shall be rated for minimum 175 psig working pressure.

2.02 BURIED PIPING SYSTEMS:

A. Pipe and Fittings:

- 1. Provide pipe and fittings conforming to NFPA 24 for piping under the building and outside of building walls. Minimum pipe size shall be 6 inches (DN 150). Minimum depth of cover shall be 5 feet (1.5 meter) at finish grade. Piping beyond 5 feet (1.5 meter) outside of building walls shall be provided under Section 33 10 00.
- 2. Piping shall be AWWA C151/A21.1, Class 52, outside coated, double cement line ductile iron pipe and fittings. Fittings shall have 250 psig rating. Lining shall be seal coated and shall conform with AWWA C104/A21.4. Coat exterior of buried piping and fittings with coal tar pitch varnish coating. Provide mechanical type push on joints with AWWA C111/A21.11 gaskets for buried piping and AWWA C111/A21.15 flange joints with full ring gaskets for above ground piping at termination of buried piping inside the building. Gaskets shall be suitable in design and size for the pipe with which such gaskets are to be used.
- 3. Provide socket clamps with tie rods at each change in direction, coat with asphaltum. Anchor joints in accordance with NFPA 24. Provide concrete thrust block at all changes in direction and at the elbow where the pipe turns up toward the floor. Restrain the pipe riser with steel rods from the elbow to the flange above the floor.

B. Valves:

1. Provide as required by NFPA 24. Valves shall be gate valves conforming to AWWA C500 or UL 262. Valves shall have cast iron body and bronze trim. Valves shall open by counterclockwise rotation.

C. Wall Indicator Valves

1. Provide with operating nut located about 3 feet (1 meter) above finish grade with lever lockable in the open valve position. Gate valves for use with indicator post shall conform to UL 262. Indicator posts shall conform to UL 789. Provide each indicator post with one coat of primer and two coats of red enamel paint. Provide padlock and three (3) keys.

D. Valve Boxes

1. Except where indicator posts are provided, for each buried valve, provide adjustable cast-iron or ductile-iron valve box of a suitable size. Provide cast-iron or ductile-iron cover for valve box with the word "WATER" cast on the cover. The box shaft diameter shall be suitable for the valve on which the box is to be used, but not less than 5.25 inches (134 mm). Coat cast-iron and ductile-iron boxes with bituminous paint applied to a minimum dry-film thickness of 10 mils.

E. Buried Utility Warning and Identification Tape

1. Detectable aluminum foil plastic backed tape or detectable magnetic plastic tape manufactured specifically for warning and identification of buried piping. Tape shall be detectable by an electronic detection instrument. Provide tape in rolls, 3 inches (76.2 mm) minimum width, color coded for the utility involved with warning and identification imprinted in bold black letters continuously and repeatedly over entire tape length. Warning and identification shall read "CAUTION BURIED WATER PIPING BELOW" or similar wording. Use permanent code and letter coloring unaffected by moisture and other substances contained in trench backfill material.

2.03 ABOVEGROUND PIPING SYSTEMS:

- A. Provide fittings for changes in direction of piping and for connections. Make changes in piping sizes through tapered reducing pipe fittings; bushings shall not be permitted. Perform welding in the shop; field welding shall not be permitted.

B. Pipe, Fittings and Mechanical Couplings:

1. NFPA 13, except as modified herein. Plain-end fittings with mechanical couplings and fittings which use steel gripping devices to bite into the pipe when pressure is applied will not be permitted. Steel piping with wall thickness less than Schedule 30 shall not be threaded. Side outlet tees using rubber gasketed fittings shall not be permitted. Welding shall not be permitted on galvanized pipe.

2. All empty piping that may be periodically filled with water including, but not limited to, drain piping, test piping, and fire department connection piping up to the check valve and piping from alarm check valve to water motor gong shall be hot dipped galvanized inside and out.
3. Schedule 40 black steel pipe shall be ASTM A53, Type E, Grade A or B, or ASTM A795, Type E, Grade A. Schedule 10 black steel pipe shall be ASTM A135, Type E, Grade A. Steel piping shall be Schedule 40 for sizes 1 inch and smaller, Schedule 40 for sizes 1-1/4 to 6 inch (DN 32 to 150). Unless otherwise specified to be hot-dipped galvanized, pipe shall be black steel pipe and shall be pre-oxidized with a suitable protective coating.
4. Stainless steel piping shall be ASTM A312, Schedule 40, series 300 stainless steel pipe and fittings, with screwed joints in accordance with specification ASME B1.20.1.
5. Pipe 1 inch (DN 25) and smaller shall be joined by screwed joints in accordance with specification ASME B1.20.1.
6. Schedule 40 pipe 2-1/2 inch (DN 65) and larger shall be joined by flanged joints, welded joints, or by mechanical couplings. For mechanical couplings, pipe ends shall have cut grooves. Roll grooving shall not be permitted. Schedule 40 pipe 2 inch (DN 50) and smaller shall have screwed joints.
7. Schedule 10 pipe 1-1/4 inch (DN 32) and larger shall be joined by welded joints in accordance with AWS D10.9 or by mechanical couplings. For mechanical couplings, pipe ends shall have rolled grooves. Cut grooving shall not be permitted.
8. Screwed fittings shall be cast iron, class 125, black, and in accordance with ASME B16.4 or malleable iron, class 150, black, and in accordance with ASME B16.3.
9. Welded fittings shall be steel, standard weight, black, and in accordance with ASME B16.9 and ASME B16.11.
10. Flanged fittings shall be cast iron, short body, class 175 and in accordance with ASME B16.1, ASME B16.21, ASME B18.2.1, and ASME B18.2.2. Provide hexagon head machine bolts, hexagon head nuts, and washers, all heavy finished cadmium plated.
11. Rubber gasketed grooved mechanical couplings and fittings shall be NFPA 13 listed and approved and consist of combination housings and gaskets. Housings shall either be malleable iron ASTM A47 or ductile iron ASTM A536 and shall be hot-dipped galvanized where galvanized piping is specified to be used. Gasket material shall be Listed for the intended service and shall be Grade "E", EPDM.

Fittings, mechanical couplings, and rubber gaskets shall be supplied by the same manufacturer.

- a. Mechanical couplings shall be Victaulic Style 07 "Zero Flex" couplings for rigid connections in equipment rooms; Style 77 standard flexible couplings at pumps and vibration producing equipment; Style 77 at flexure points in equipment rooms and Style 75 at flexure points elsewhere (to meet seismic requirements); Style 72 outlet couplings; Style 750 reducers; and Style 741 "Vic-Flange" adapters at all valves and equipment connections 2-1/2 inch (DN 65) and larger.
 - b. Victaulic "installation-ready" couplings may be substituted Style 107 for Style 07, and Style 177 for Styles 77 and 75.
12. Expansion: When crossing building expansion or seismic joints, expansion or seismic loops, as required by NFPA 13, shall be installed with the appropriate couplings to allow for expansion in agreement with that as provided for by the building joint. Piping shall be securely anchored to the building structure on both sides of the building expansion and/or seismic joint.

C. Sprinkler Heads

1. Provide nominal 1/2-inch (12.7 mm) or 3/4-inch (19.1 mm) orifice sprinkler heads, 175 psig (1,207 kPa) working pressure. O-rings will not be permitted in sprinkler heads. Release element of each head shall be of the ordinary temperature rating or higher as required by NFPA 13. Provide corrosion-resistant sprinkler heads and sprinkler head guards as required by NFPA 13. Sprinklers shall be used in accordance with their listed and approved coverage limitations.
2. Unless otherwise specified or indicated, sprinkler heads shall be of conventional design, standard response or quick response, standard coverage, upright style. Extended coverage sprinklers shall not be used.
3. Sprinkler heads located in uninhabited areas without ceilings (mechanical rooms, storage rooms, etc.) and combustible concealed spaces above ceilings shall be of conventional design, upright style, and shall have a rough brass finish.
4. Sprinkler heads located in inhabited areas without ceilings shall be of conventional design upright style and shall have a polished chrome finish.
5. Sprinkler heads in suspended ceilings shall be of conventional design, recessed pendent style, low profile ceiling plate (escutcheon) and shall have a polished chrome finish.
6. Sprinkler heads located at skylights shall be conventional design, polished chrome finish, style to suit, upright, pendent or sidewall.

7. Sprinkler heads to protect unheated spaces shall be individual dry sidewall, pendent or upright style each connected separately to the wet-pipe sprinkler piping.
8. All recessed sprinkler heads shall be of the adjustable type.
9. Provide wax-coated heads in corrosive areas.
10. Sprinkler Head Guards: Provide head guards on all sprinkler heads in mechanical rooms, in storage rooms, in pump rooms, on all pendent-mounted sprinkler heads within 7 feet-0 inches (2.1 meters) of any floor or stair, and elsewhere where susceptible to accidental damage. Guards shall be constructed of galvanized wire with locking device to permit authorized removal for sprinkler and head repair. Do not provide guards on sidewall heads.
11. Spare Heads Cabinet: Provide metal cabinet with extra sprinkler heads, and two sprinkler head wrenches for each type of head adjacent to each alarm valve riser. The number and types of extra sprinkler heads shall be as specified in NFPA 13.

D. Valves

1. NFPA 13. Provide valves of types approved for fire service. Gate valves shall open by counterclockwise rotation.
 - a. Gate Valves 2-1/2 Inch (DN 65) and Larger: Outside screw and yoke indicating type, iron body, bronze mounted gate valves, straightway pattern, flanged ends, 175 psig (1,207 kPa) working water pressure, Jenkins Figure No. 825CJ or equivalent acceptable product.
 - b. Gate Valves 2 Inch (DN 50) and Smaller: Outside screw and yoke indicating type, bronze body, straightway pattern, screwed ends, 175 psig (1,207 kPa) working water pressure, Jenkins Figure No. 820J or equivalent acceptable product.
 - c. Butterfly Valves: Indicator type, built-in double pole/double throw tamper switch, 175 psig (1,207 kPa) working water pressure. Butterfly valves of sizes up to 6 inch (DN 150) shall have locking type handles. Butterfly valves 8 inch (DN 200) size shall have gear operators, Victaulic No. 708-W. Butterfly valves may be substituted for gate valves except where NFPA/Underwriter specifically requires an outside screw and yoke gate valve.
 - d. Ball Valves 3 Inch (DN 80) and Smaller: Brass body, chrome plated brass ball with nylon seat, cadmium plated vinyl insulated handle, female NPT inlet and outlet, 600 psig (4137 kPa) working water pressure, Potter Roemer 4400 Series or equivalent acceptable product.

- e. Check Valves 2-1/2 Inch (DN 65) and Larger: Iron body, bronze mounted, flanged ends, swing type for placement in the horizontal position, 175 psig (1,207 kPa) working water pressure, Jenkins Figure No. 477J or equivalent acceptable product. Provide flanged inspection and access cover plate for check valves 4 inch (DN 100) and larger.
- f. Check Valves 2 Inch (DN 50) and Smaller: Iron body, stainless steel trim, EPDM seal, screwed ends, silent check type, 200 psig (1,379 kPa) working water pressure, Mueller Steam Specialty Figure No. 303-AT, or equivalent acceptable product.
- g. Drain and Inspectors Test Valves: Copper alloy ball valve with integral tamper resistant test orifice, sight glass, tapped and plugged port, and locking kit, suitable for 300 psig non-shock cold water, AGF Manufacturing Inc. Model 1000 or equivalent acceptable product. Orifice size shall be noted on indicator plate and shall equal smallest sprinkler orifice installed in the hydraulically remote area of the sprinkler zone served. Valves shall be line size.
- h. Backflow Preventer Test Valves: 2-1/2 inch (DN 65) hose gate valve, iron body, bronze mounted, straightway or angle pattern, flanged end, 175 psig (1,207 kPa) working water pressure. Provide hose threads to suit local fire department with cap and chain.
- i. Automatic Ball Drip Valve: 1/2-inch (DN 15), bronze body, corrosion resistant metal ball and spring, threaded ends, 175 psig (1,207 kPa) working water pressure.
- j. Pressure Reducing Valves: Pressure control valves shall be designed for use on sprinkler systems to reduce a higher inlet pressure to a lower delivery pressure and automatically maintain that pressure within a close limit, regardless of fluctuations in the higher pressure inlet line. Pressure control valves shall be factory-assembled consisting of a flow control valve, a speed control valve, a pilot operated pressure regulating valve, and complete with trim piping, valves, fittings, pressure gauges, and other ancillary components. Flood valve shall be quick opening, differential diaphragm flood valve with a spring loaded floating clapper, field-replaceable diaphragm and seat rubbers, and flanged connections. Pressure regulating valve shall be direct-acting, single-seated, spring-loaded diaphragm valve with spring range to suit indicated discharge pressure setting. Entire assembly shall be designed for installation in the horizontal or vertical position with minimum 250 psig working water pressure and minimum 150 degrees F operating temperature. Entire assembly shall be factory painted and tested.

E. Alarm Check Valves

1. Provide alarm check valve complete with [variable pressure retarding chamber,] alarm test valve, alarm shutoff valve, check valves, drain valves, pressure gages, and all other appurtenances for the proper operation of the system.
- F. Riser Swing Check Valves
1. Provide riser check valve approved for use in fire service systems complete with drain connection and pressure gauge connections. Valve shall be rated for 250 psig (1,724 kPa) water working pressure and have ductile iron body, ad rubber-faced clapper hinged to access cover.
- G. Fire Department Connections:
1. Provide listed and approved 6 inch single Storz type connections approximately 3 feet (1 meter) above finish grade. Fire department connections shall have hose threads to suit local fire department with brass pin lug caps and chains, and identifying fire department connection escutcheon plate. Provide polished chrome plated finish.
 2. Provide listed single inlet type connections approximately 3 feet (1 meter) above finish grade. Fire department connections shall have hose threads to suit local fire department with pin lug cap and chain, polished brass snoot with rigid end NPT by pin lug hose thread swivel, and identifying fire department connection round brass escutcheon plate. Provide polished chrome plated finish.
- H. Sight Drains
1. Reliable Model B, one inch, to suit.
- I. Backflow Preventers
1. Provide listed and approved double check backflow preventer with OS&Y gate valve on both ends and strainer on inlet. Body shall be epoxy coated cast iron with rubber check valve disks, bronze seats, stainless steel trim, and bronze test cocks. Backflow prevention assemblies shall have current "Certificate of Approval from the Foundation for Cross-Connection Control and Hydraulic Research, FCCCHR . Listing of the specific make, model, design, and size in the FCCCHR shall be acceptable as the required documentation." Double check backflow preventers shall be tested and certified under ASSE 1015.
 2. Provide listed and approved double check detector assembly backflow preventer with OS&Y gate valve on both ends and strainer on inlet. Unit shall be equipped with auxiliary line complete with backflow preventer and water meter. Body shall be epoxy coated cast iron with rubber check valve disks, bronze seats, stainless steel trim, and bronze test cocks. Meter shall read in Cubic Feet per Minute or Gallons per Minute as required by the local water company. Backflow prevention assemblies shall have current "Certificate of Approval from the Foundation for

Cross-Connection Control and Hydraulic Research, FCCCHR [. Listing of the specific make, model, design, and size in the FCCCHR shall be acceptable as the required documentation." Assembly shall be tested and certified under ASSE 1048.

3. For backflow preventer testing, provide downstream of the backflow prevention assembly UL 668 hose valves with National standard male hose threads with cap and chain.

J. Pressure Gauges

1. Pressure gauges shall be listed and approved for fire protection service, ASME B40.1, 3 percent accuracy or better, with wetted parts consisting of bronze bourdon tube and brass socket, and corrosion-resistant ABS case and heat-resistant polycarbonate window. The movement shall be designed to provide shock and vibration resistance. Gauges shall withstand temperatures of minus 40 to 150 degrees F (-40 to 66 degrees C).
2. Gauges shall have a minimum 3-1/2 inch (88.9 mm) diameter face. Dial gradations reading in "PSIG" (bar) shall be such that the normal operating pressure of the system installed shall be indicated near the middle of the scale.
3. Select gauges for use on "wet" systems with pressurized water piping.
4. Gauges shall be equipped with a ball valve shutoff and snubber. An outlet, at least 1/4-inch (6.4 mm) size, plugged for the installation of the inspector's gauge shall be located between each valve and gauge.
5. Provide Dwyer Model 35W or equivalent acceptable product by American, Mueller, Terice, or Ashcroft.

2.04 ALARM SYSTEMS:

A. Audible Alarms

1. Provide alarms of the approved weatherproof and guarded type. Mount alarms outdoors on the exterior walls of each building at the location(s) indicated.
 - a. Provide electric alarm bell(s) to sound locally upon the flow of water in any sprinkler system and/or fire detection system.

B. Alarm Initiating Devices:

1. Provide switches with circuit opener or closer for the automatic transmittal of an alarm over the facility fire alarm system and electric alarm bell where so indicated. Connection of switches to the fire alarm system shall be under Section 28 31 00. Switches shall be listed and approved. Do not install a shutoff valve in the piping between the alarm check valve and any pressure switch.

2. Pressure Switches: Provide pressure actuated adjustable switches designed for use in wet-pipe automatic fire sprinkler systems which shall actuate at 4 to 8 psig. Provide two set[s] of snap action single pole double throw (SPDT) Form C contacts for the automatic transmittal to the fire alarm system. Minimum contact ratings shall be 2.0 amps at 30 VDC. Switches shall have NEMA 4 enclosure with tamper resistant fasteners and be designed for upright mounting (threaded connection down) either indoors or outdoors. Potter-Roemer PS10A Series, Reliable, Gem, Autocall, or equivalent acceptable product.
3. Low Water Pressure Supervisory Switches: Provide pressure actuated adjustable switches designed for use in automatic fire sprinkler systems water supply piping which shall actuate by a low pressure supervisory signal as indicated. Provide one set of snap action single pole double throw (SPDT) Form C contacts for the automatic transmittal to the fire alarm system. Minimum contact ratings shall be 2.0 amps at 30 VDC. Switches shall have NEMA 4 enclosure with tamper resistant cover and be designed for upright mounting (threaded connection down) either indoors or outdoors. Potter-Roemer PS40-1, Reliable, Gem, Autocall, or equivalent acceptable product.
4. Flow Switches: Provide vane-type water flow switches designed for use on Schedule 10 to Schedule 40 steel pipe in wet-pipe automatic fire sprinkler systems. Each flow switch shall be equipped with plastic paddle. Alarm actuating device shall detect a flow of 10 gallons per minute or more, and have mechanical diaphragm controlled retard device adjustable from 10 to 90 seconds and shall instantly recycle. Provide two sets of snap action single pole double throw (SPDT) Form C contacts for wiring to the fire alarm system. Minimum contact ratings shall be 2.0 amps at 30 VDC. Switches shall have NEMA 4 enclosure with tamper resistant fasteners and be designed for vertical or horizontal mounting either indoors or outdoors. Potter-Roemer VSR-F Series, Gem, Reliable, Autocall, or equivalent acceptable product. Flow switches shall be sized for the piping in which installed to ensure proper fit.
5. Tamper (Supervisory) Switches: Provide on all control valves except post indicator valve, closed circuit supervisory tamper switches mounted in accordance with UL standard. Provide supervision against valve closure or tampering of valve. Provide two sets of snap action single pole double throw (SPDT) Form C contacts [for wiring to the fire alarm system. Minimum contact ratings shall be 2.0 amps at 30 VDC. A signal shall be initiated during the first 1/5 of travel distance of the valve/stem from the full open position. Switches shall have NEMA 4 enclosure with tamper resistant fasteners and shall be suitable for indoor installation (outdoor location for post indicator valves), and have sealed and gasketed enclosures. Potter-Roemer OSYSU Series, Gem, Reliable, Autocall, or equivalent acceptable product.

2.05 PIPE HANGERS AND SUPPORTS:

- A. Provide in accordance with NFPA 13.
- B. Attach to steel joists with MSS SP-58, Type 19 or 23 clamps and retaining straps. Attach to Steel W or S beams with Type 21, 28, 29, or 30 clamps. Attach to steel angles and vertical web steel channels with Type 20 clamp with beam clamp channel adapter. Attach to horizontal web steel channel and wood with drilled hole on centerline and double nut and washer. Attach to concrete with Type 18 insert or drilled expansion anchor.
- C. Hangers, supports, rods and fasteners shall be steel. Hangers, supports, rods and fasteners shall be hot-dipped galvanized where located in the following rooms: CI Storage 123.

2.06 SUPPLEMENTARY STEEL AND CHANNELS:

- A. Unless otherwise indicated on the Structural Drawings, Provide all supplementary steel and factory fabricated channels required for proper installation, mounting and support of all equipment and systems provided under this Section.
- B. Channels and supplementary steel shall be of sufficient strength and size to allow only a minimum deflection in conformance with the manufacturer's requirements for the specific loading on the system installed herein.
- C. All supplementary steel shall be ASTM A36 factory-formed standard mill finished structural shapes. Channels shall be steel. [Supplementary steel assemblies shall be hot dipped galvanized after fabrication and channels shall be hot dipped galvanized where located in the following rooms: CI Storage 123.

2.07 PIPE SLEEVES:

- A. Sleeves in Masonry and Concrete Walls, Floors, Ceilings, and Flat Roofs: Schedule 40 hot dipped galvanized, standard weight ductile-iron or cast-iron pipe sleeves. Sleeves available from the manufacturer of mechanically adjustable segmented elastomeric seals shall be permitted subject to acceptance by the Engineer & CM. Provide minimum 2 inch high waterstop for sleeves in exterior walls and floors.
- B. Sleeves in Non-Masonry or Non-Concrete Walls, Floors, and Roofs: Hot-dip galvanized steel sheet, 26 gage minimum thickness.
- C. Mechanically Adjustable Segmented Elastomeric Seals: Seals shall have EPDM seal elements and steel hardware with corrosion inhibiting coating.

2.08 PIPE ESCUTCHEONS:

- A. General: Provide pipe escutcheons at all pipe penetrations where penetration is exposed to view as specified herein with inside diameter closely fitting pipe outside diameter.

Select outside diameter of escutcheon to completely cover pipe penetration hole in floors, wall, or ceilings; and pipe sleeve extension, if any. Escutcheons shall be held in place by internal spring tension or set screws.

- B. Provide pipe escutcheons in finished spaces. Pipe escutcheons shall be of stainless steel, anodized aluminum or chrome-plated brass, solid or split hinged.

2.09 DRIP PANS

- A. Examine all Contract Drawings and in cooperation with the Electrical Trade confirm the final location of all new electrical equipment to be installed in the vicinity of new and existing piping. All overhead piping containing liquid or vapor shall be no closer than 3 feet from a vertical line to electrical equipment including, but not limited to, electric motors, controllers, switchboards, panelboards, and similar equipment. Piping is not permitted in Electrical Rooms.
- B. Where the installation of new and existing automatic sprinkler systems piping does not comply with the requirements of the foregoing paragraph, where feasible the piping shall be relocated. Where not feasible, provide drip pans as specified below, except as otherwise indicated on the Contract Drawings.
- C. Provide drip pans fabricated from 14 gauge steel sheet and with edges turned up 2-1/2-inches (63.5 mm). Reinforce top edge, either by structural angles or by rolling top over 1/4-inch (6.3 mm) rod made of same material as drip pan sheet metal. Provide hole and 1 inch (25.4 mm) threaded half coupling for low point drain. Provide hanging brackets of sufficient quantity made of same material as drip pan sheet metal for connecting threaded rods used for suspended drip pans. All joints shall be welded watertight and entire welded assembly sandblasted, degreased and hot dipped galvanized after fabrication. Drip pans in chemical areas shall be 1/4 inch (6.3 mm) thick plastic material that is corrosion resistant against the chemicals present.
- D. Locate drip pans under piping passing over or within 3 feet (0.91 meters) horizontally of material and equipment defined above, and elsewhere as indicated. Hang from structure with rods and building attachments, fasten rods to brackets on sides of drip pan. Carefully pitch to the drip pan low point for drainage. Brace to prevent sagging or swaying. Drip pans shall be installed within 12 inches (304.8 mm) below piping.
- E. Provide 1 inch (25.4 mm) schedule 40 hot dipped galvanized steel drain line from each drip pan and terminate 6 inches (152.4 mm) above the floor at nearest floor drain. In chemical areas, drain lines shall be plastic material same as drip pan material.

2.10 ACCESS PANELS:

- A. Access panels shall give access to each valve and sprinkler in concealed spaces above non removable (hard) suspended ceilings, and to all other concealed parts of the system. Access panels shall be located where indicated on the Contract Drawings, or where

otherwise require accessibility for the proper inspection, operation and maintenance of the system.

- B. Access panels shall be Milcor Type M, 16 inch by 16 inch minimum, as manufactured by Inryco, Inc., or equal. Door shall be constructed of 18 gage galvanized steel with frame constructed of 16 gage galvanized steel. Casing bead shall be galvanized steel. Hinge shall be continuous steel with stainless steel pin. Locks shall be flush, screwdriver operated, with metal cam. Galvanized steel sleeve shall be welded to panel for access to cam lock control. Prime coat shall be factory applied rust-inhibitive light grey paint.

2.11 IDENTIFICATION SIGNS:

- A. Signage shall be safety sign manufacturer standard signs furnished and installed under this section. Comply with NFPA 13. Attach properly lettered and approved metal signs to each audible alarm, control valve and test valve.

2.12 PAINT:

- A. Paint all items specified in Part 3 of this Section.
- B. Paint shall be high solids epoxy with following characteristics:
 - 1. Type: Polyamidoamine, self priming
 - 2. Solids by Volume: Minimum 69 (+/- 2) percent
 - 3. VOC Requirement: Maximum 2.79
 - 4. Number of Coats: Two (2)
 - 5. Dry Film Thickness: 4 to 8 mils per coat
 - 6. Color: Safety Red
- C. Surface preparation, mixing, application, and safety requirements shall be in accordance with the paint manufacturer's printed instructions.

PART 3 - EXECUTION

3.01 INSTALLATION:

- A. Installation, workmanship, inspection, and testing shall be in accordance with NFPA 13 and NFPA 24, with the additions specified herein. Install piping straight and true to bear evenly on hangers and supports. Keep the interior and ends of new piping and existing piping affected by the Work thoroughly cleaned of water and foreign matter. Keep piping systems clean during installation by means of plugs or other accepted methods. When work is not in progress, securely close open ends of piping to prevent entry of water and

foreign matter. Inspect piping before placing into position. Provide Teflon pipe thread paste on male threads.

- B. Piping shall not be permitted in Electrical Rooms unless otherwise indicated.
- C. Piping and other apparatus shall not be installed in such a manner so as to interfere with the full swing of doors, movement of personnel and equipment, and access to other equipment.
- D. Install aboveground pressurized piping to permit draining of all sections of each piping systems without traps. Pitch piping back to system low points. Provide drain valves at all piping low points.
- E. Make provisions for pipe expansion and contraction with suitable anchors and offsets, expansion joints, or expansion loops. Make provisions in buried piping for differential settlement. Install piping to allow freedom of movement in all planes without imposing undue stress on any section of the main piping, branch piping, equipment and structure.
- F. Buried Piping
 - 1. Pipe bedding and compacted backfill to a point 12 inches (305 mm) above crown of buried pipe shall be provided under this Section of the Contract Specifications in accordance with the requirements of Section 31 22 00. Depth of cover shall be as indicated on the Contract Drawings.
 - 2. Pipe bedding shall be minimum 6 inches (152 mm) deep. Bedding and compacted backfill shall be non-corrosive material such as cleaned, washed sand.
 - 3. Install buried lines in a single trench. Trenches shall be wide enough to permit at least 6 inches (152 mm) spacing between lines and the sides and floor of the trench.
 - 4. Terminate buried piping not more than 6 inches above finished ground surface or floor slab-on-grade.
 - 5. Completely encase buried piping with polyethylene tube or sheet in accordance with AWWA C105.
 - 6. Bury utility warning and identification tape with the printed side up at a depth of 12 inches (305 mm) below the top surface of earth or the top surface of the subgrade under pavements.
- G. Sprinkler Heads Locations
 - 1. Sprinkler head locations shall be coordinated with all surface mounted items, such as cornices, curtains, low soffits and lighting fixtures and shall be located accordingly. Extended escutcheons may be utilized where heads cannot be moved, if accepted by the Engineer & CM.

2. Sprinkler heads and piping locations shall be determined by actual field measurements. Care shall be taken to avoid obstruction of structural members, equipment, fixtures, lighting, ducts, other piping, ceiling tile supports, etc.
3. When sprinkler heads are shown on the reflected ceiling plan, they shall be so located. Unless specifically indicated otherwise, sprinkler heads shall be installed in the centers of tiles.
4. Sprinkler heads are to be provided above suspended ceilings in combustible concealed spaces with 6 inches (153 mm) or greater space between the bottom of joists and ceiling assembly. Sprinklers in these concealed spaces shall be located with deflectors a minimum of 1 inch (25.4 mm) and maximum of 6 inches (153 mm) below the bottom of the joists. Head spacing within these spaces shall not exceed 130 ft² per head. Provide additional heads in concealed spaces not identified on the Contract Drawings or where ducts, equipment, etc. create obstructions.

H. Test Connections

1. Inspector's Test Connections: Provide inspector's test valve approximately **6** feet above the floor in readily accessible location for each sprinkler system or portion of each sprinkler system equipped with a flow or pressure switch. Pipe from the end of the hydraulically most remote part of each system. Provide test connection piping to a drain location that can accept full flow where the discharge will be readily visible and where water may be discharged without property damage. Discharge to janitor sinks or similar fixtures shall not be permitted. Provide smooth bore corrosion resistant discharge orifice of same size as corresponding sprinkler orifice giving flow equivalent to one sprinkler. Provide a precast concrete splash block under each exterior discharge orifice.
2. Backflow Preventer Test Connection: Provide test valves downstream of the backflow preventer assembly. Provide one valve for each 250 gpm (15.8 L/sec) of system demand or fraction thereof. Provide a permanent sign in accordance with paragraph entitled "Identification Signs" which reads, "Test Valve."

I. Main Drains

1. Provide separate drain piping to discharge at safe points outside each building **or to** sight drains of adequate size to readily receive the full flow from each drain under maximum pressure. Provide auxiliary drains as required by NFPA 13. Provide precast concrete splash block under each exterior drain discharge.

J. Pipe Hangers and Supports

1. The hanging and supporting of all piping and equipment shall conform to the requirements of NFPA 13 and the manufacturer's recommendations.

2. Furnish and install safe and substantial means of support for all parts of the piping system. Attach all pipes securely to the structure in correct alignment and pitch, to prevent vibration and to effectively care for expansion and contraction.
3. All piping shall be hung to true alignment, using appropriate hanger arrangements. Wire and strap hangers shall not be permitted. Hangers shall be located so that piping and hangers will be minimum 6 inches (152 mm) clear from other piping, hangers, conduits, lighting fixtures, equipment, ceiling suspension systems, ductwork and other obstructions.
4. Supplementary steel and channels shall be firmly connected to the building construction in a manner accepted by the Engineer & CM, or as otherwise shown on the Contract Drawings. Equipment and piping shall not be supported from metal decking or plaster ceilings.
5. Seismic Pipe Hanging Requirements:
 - a. Seismic protection of all fire suppression piping shall comply with the requirements of NFPA 13. Seismic bracing shall be provided for all piping larger than or equal to 2-1/2 inch (63.5 mm). All feed mains regardless of size shall be braced.
 - b. The Contractor shall submit seismic supports and anchors accompanied by calculations and shop drawings signed and sealed by the Fire Protection Engineer. The calculations are to be provided both to Engineer and FM Global representative at least 2 weeks prior to beginning of construction.
 - c. All mechanical materials and equipment including all pipes shall be supported and anchored to resist the external seismic forces for seismic hazard exposure Group IV. Force shall be resisted without failure or permanent displacement when it is applied in any direction, and shall conform to the specified Building Code.
 - d. The ends or all branch lines shall be provided with an acceptable method of lateral restraint. The use of a wrap around "U" hanger, or band hanger at 45 degree angle is acceptable.
 - e. Acceptable manufacturers of seismic bracing are: TOLCO Incorporated; Corona, California.
 - f. All seismic braces shall be Listed for tension and compression service.
 - g. All braces shall utilize ordinary black steel piping as the prime support member.
 - h. Structural connection
 - (1) All bracing shall be connected to the building's structural members.

- (2) All means of connection to the building's structure and sprinkler pipe shall be Listed for the intended use.
- i. At a minimum, the bracing shall be provided a maximum of 40 feet (12.2 meters) between lateral braces and 80 feet (24.4 meters) between longitudinal braces. However, if the pipe installation positioning selected by the Contractor requires additional bracing, these locations and types of braces shall be submitted for review and shall be provided as part of the base bid.

K. Pipe Through-Penetrations

1. Furnish pipe sleeves where piping passes through walls, floors, ceilings, roofs, and partitions. Holes will be made and sleeves will be installed, and secured in proper position and location during construction by the trade whose element will be penetrated. Such trades include concrete, masonry, steel siding in the case of a steel building, and dry wall in the case of framed construction. Core drilling of concrete may be provided by this Section in lieu of pipe sleeves when cavities in the core-drilled holes are completely grouted smooth. Furnish sleeves of sufficient length to pass through entire thickness of walls, floors, ceilings, roofs, and partitions.
2. Pipe Penetrations Through Building Interior Construction: Provide not less than 1/2" space between exterior of piping or pipe insulation and interior of sleeve or core-drilled hole. Firmly pack space with mineral wool insulation.
 - a. For non-fire rated assemblies, seal at both ends of the sleeve or core-drilled hole with silicone.
 - b. Seal both ends of penetrations through fire rated assemblies to maintain fire resistive integrity with UL listed fill, void, or cavity material. Install firestopping assembly in accordance with UL FRD systems, and as recommended by manufacturer. Completely fill voids flush with the surface. Firestopping for filling voids in floors in which smallest dimension of a void is 4 inches (101.6 mm) or more shall support the floor design load or be protected by a permanent barrier. Damaged, disrupted, or removed firestopplings shall be replaced with new firestopplings as specified in this Section.
3. Pipe Penetrations Through Building Exterior Construction: Provide a mechanically adjustable segmented elastomeric seal, with sleeve sized as recommended by seal manufacturer.
4. Extend sleeves in floor slabs 2 inches above the finished floor. Sleeves through walls shall terminate flush with the finished surface on either side of the wall.
5. Seismic-braced pipe

- a. Proper clearances between penetrating sprinkler system piping, including drains and fire department connections, and any barrier shall be provided. The penetration holes shall be sized such that the hole diameter is 2 inches (50.8 mm) larger for pipe diameters 1-inch nominal to 3-1/2 inch nominal (DN 25 to DN 90), and 4 inches larger for 4 inch (101.6 mm) and larger nominal diameter pipe.
- b. All open space around seismically braced through-penetrations shall be protected by a Listed, flexible through-penetration seal system.

L. Cross Connections and Interconnections

1. No equipment, devices or piping shall be installed which will provide a cross or interconnection between a distribution water supply and a drainage, soil or waste pipe which will permit or make possible the backflow of sewage, polluted water or waste into the water supply system.

3.02 FIELD QUALITY CONTROL:

- A. After piping installation has been completed and prior to initial operation, inspect piping systems for compliance with Contract Drawings, Contract Specifications, and accepted submittals. As part of inspection, perform tests and flushing in compliance with the specified requirements. Have piping tested, and approved by the Fire Protection Engineer before insulating or otherwise concealing. Comply with NFPA 25.

B. Preliminary Tests

1. Perform pressure tests specified herein. Prior to application of test pressure, remove or valve off piping components which may be damaged by test and install a calibrated pressure gage in each system. In the even of leakage, locate and repair leak by remaking joints and/or replacing piping sections and repeat test. Material and equipment used in testing shall be subject to inspection by the Engineer & CM. Provide electricity, instruments, connecting devices, and personnel for the tests. Correct defects in the Work and repeat tests until the Work is in compliance with contract requirements. Owner will furnish water for piping testing up to 10 percent of piping volume to be tested. Pay for test water losses greater than 10 percent. Pressure test each system hydrostatically at 200 psig (1,379 kPa) for a 2 hour period with no leakage or reduction in pressure.
2. Provide alarm tests for each alarm initiating device and audible alarm. Test the audible alarms by flowing water through the inspector's test connection.
3. Provide flow tests for each riser, backflow preventer, and zone.

C. Backflow Preventers Test Report

1. Backflow preventers shall be tested by a locally approved and certified backflow assembly tester. A copy of the test report shall be provided to the Engineer & CM and Owner prior to placing the domestic water system into operation, or no later than 5 days after the test.

D. Formal Tests and Inspections

1. Do not submit a request for formal test and inspection until the preliminary test and corrections are completed and accepted. Submit a written request for formal inspection at least **15** days prior to inspection date. An experienced technician regularly employed by the system installer shall be present during the inspection. At this inspection, repeat any or all of the specified preliminary tests. Correct defects in Work, and repeat tests until Work is in compliance with contract requirements. Furnish equipment, water, electricity, instruments, connecting devices, and personnel for performing tests. The Fire Protection Engineer shall witness formal tests and approve systems before they are accepted. When tests have been completed and corrections made, submit a signed and dated test report, similar to that specified in NFPA 13.

E. Flushing

1. After completion of testing and before placing in operation, flush all new sprinkler piping including feed mains in accordance with Factory Mutual Loss Prevention Data Sheet 2-81, Sprinkler System Maintenance, Section 9.5 using the hydraulic method. Flush entire sprinkler system to remove all foreign matter, under pressure as specified in NFPA 13. Use the permanent fire water service at its maximum available pressure for the source of flushing water. Flush piping through each sprinkler head outlet before sprinkler heads are installed. Flush until water runs clean. Discharge used water to sanitary sewer.

3.03 MANUFACTURERS INSTRUCTIONS:

- A. Obtain instructions from the manufacturer for the proper method of installation and connection of the equipment that is to be installed. Obtain all information that is necessary to facilitate the Work and to complete the project.

DISINFECTION:

- B. Disinfect the new water piping in accordance with the specified Plumbing Code with the additions specified herein or AWWA C651 whichever is more stringent. Fill piping systems with chlorine solution and allow solution to stand. Following the required standing time, flush solution from the systems with domestic water until maximum residual chlorine content is within the range of 0.2 to 0.5 ppm, or the residual chlorine content of domestic water supply. Obtain at least two consecutive satisfactory bacteriological samples from new water piping, analyzed by a certified laboratory, and submit results prior to the new water piping being placed into service. Disinfection of systems supplied by nonpotable water (service water) is not required.

- C. Where it is not possible to disinfect a potable water storage tank as specified above, the entire interior of the tank shall be swabbed with a solution which contains 200 parts per million of available chlorine; and the solution shall then be allowed to stand **3** hours before the tank is flushed and returned to service.
- D. For a potable water filter or similar device, the dosage shall be determined by the Utah Department of Environmental Protection.

3.04 PAINTING:

- A. Provide field painting or shop painting system, under this Section, of the following.
 - 1. Pipe, fittings and valves in all aboveground locations. Color of finish coat shall be safety red.
 - 2. Supplementary steel and channels in chemical areas. Color of finish coat shall match color of structure to which attached.
- B. Field touch-up all damaged shop applied coatings for material and equipment furnished under this Section in accordance with the paint manufacturer's recommendations.
- C. Prepare all surfaces in accordance with the paint manufacturer's recommendations.
- D. Cover all sprinkler heads within areas in which any painting is to take place. Remove covers upon completion of painting.
- E. Do not apply any field painting, including field touch-up, until after installation and testing is completed and system accepted.

3.05 CONTRACT CLOSEOUT:

- A. Provide in accordance with Section 01 77 00.

END OF SECTION

SECTION 22 00 00
PLUMBING SYSTEMS

PART 1 - GENERAL

1.1 DESCRIPTION:

- A. Provide new plumbing systems as indicated and in compliance with Contract Documents.
- B. The Work of this Section shall include all labor, materials, tools, equipment and appurtenances, and performing all operations necessary to furnish and install complete and operable systems in accordance with this Section of these Specifications, the Drawings, and the codes and standards listed herein.
- C. Coordinate with the Local Water Utility as to any Local restrictions or requirements relative to backflow prevention devices and metering.
- D. Limits of Work shall be as indicated on the Drawings. Items of Work shall consist of the following:
 - 1. All plumbing removals indicated.
 - 2. Domestic hot and cold-water piping to plumbing fixtures.
 - 3. Domestic tempered water piping to emergency eyewash/showers.
 - 4. Provide backflow preventers where indicated in domestic water piping for connection by other Sections to process equipment and hydronic heating systems
 - 5. Drain-waste-vent sanitary piping from plumbing fixtures and floor drains.
 - 6. Storm drain piping from roof drains.
 - 7. Domestic water heaters, electric water heaters, potable water well tanks, plumbing fixtures, roof drains, floor drains. Furnish roof drains to roofing trade for all roofs.
- E. Section includes:
 - 1. Piping materials and installation instructions common to most piping systems
 - a. Drain, Waste and Vent (DWV) piping
 - b. Domestic (Potable) Water Piping
 - c. Natural Gas Piping

2. Piping Accessories

- a. Valves, Valve Boxes, Strainers, Water Hammer Arresters, Trap Primers

3. Plumbing Equipment

- a. Backflow Prevention Assemblies
- b. Meters
- c. Circulation Pumps
- d. Expansion Tanks
- e. Water Heaters

4. Plumbing Fixtures

- a. (Accessible) Water Closets, (Accessible) Lavatories, Mop Sink Basins, Countertop Sinks, (Accessible) Electric Water Cooler and Drinking Fountains, Hose Bibbs, (Accessible) Combination Emergency Shower and Eyewash, Non-freeze Wall Hydrant, Trench Drains.
- b. Pipe Hangers and Supports
- c. Joining Materials
- d. Transition fittings
- e. Dielectric fittings
- f. Mechanical sleeve seals
- g. Sleeves
- h. Escutcheons
- i. Grout
- j. Drip Pans
- k. Access Panels

1.2 REFERENCES:

- A. Except as specified herein, the latest edition of the standards listed below form a part of this Specification to the extent referenced in this Section. Where earlier editions of

standards are adopted as referenced in applicable codes, those shall govern. The publications are referred to within the text by the basic designation only.

- B. In each of the standards referred to herein, consider the advisory provisions to be mandatory, as though the word, "shall" had been substituted for "should" wherever it appears.

 2. 310: Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary Drain, Waste, and Vent Piping Applications
 3. HSN-85: Neoprene Rubber Gaskets for Hub and Spigot Cast Iron Soil Pipe and Fittings
- L. Foundation For Cross-Connection Control And Hydraulic Research (FCCCHR):
1. FCCCHR List: List of Approved Backflow Prevention Assemblies
- M. Institute of Electrical and Electronic Engineers (IEEE):
1. C37.90.1: Sure Withstand Capability (SWC) Tests for Relays and Relay Systems Associated with Electric Power Apparatus.
- N. Manufacturers Standardization Society of the Valve and Fittings Industry (MSS):
1. SP-58: Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application and Installation
 2. SP-70: Cast Iron Gate Valves, Flanged and Threaded Ends
 3. SP-71: Gray Iron Swing Check Valves, Flanged and Threaded Ends
 4. SP-80: Bronze Gate, Globe, Angle and Check Valves
 5. SP-85: Cast Iron Globe & Angle Valves, Flanged and Threaded Ends

6. SP-110: Ball Valves Threaded, Socket Welding, Solder Joints, Grooved and Flared Ends
- O. National Sanitation Foundation (NSF):
 1. 61: Drinking Water System Components
- P. Plumbing and Drainage Institute (PDI):
 1. G 101: Testing and Rating Procedure for Grease Interceptors with Appendix of Sizing and Installation Data
 2. WH 201: Water Hammer Arresters
- Q. Sheet Metal and Air Conditioning Contractors National Association (SMACNA):
 1. SMACNA Seismic Restraint Unit: Seismic Restraint Manual: Guidelines for Mechanical Systems
- R. Underwriters Laboratories (UL):
 1. 430: Waste Disposers
 2. 795: Commercial-Industrial Gas Heating Equipment
 3. 1453: Electric Booster and Commercial Storage Tank Water Heaters
- 1.3 DEFINITIONS:
 - A. The following phrases shall have the following meanings for the purposes of the Work of this Section:
 1. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
 2. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
 3. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
 4. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
 5. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.
3. "Domestic water" shall mean potable drinking water.
4. "Tempered water" shall mean domestic water heated between 60 and 100 degrees F.
5. "Drain" piping shall mean sanitary drain piping. Refer to Section 22 14 13 for Storm Drain Piping.

1.4 SUBMITTALS:

A. Submit the following shop drawings in accordance with Section 01 33 00:

1. Shop Drawings:
 - a. Coordination Drawings - Prepare as specified in Paragraph "Cooperation and Coordination with Other Trades" of this Section.
 - b. Backflow preventers - Submit a layout drawing indicating the location of all backflow preventers to the Utah Department of Environmental Protection (DEP) for their approval prior to submitting to the Engineer.
2. Product Data: For each product, provide descriptive data to show the specific manufacturer, model, type, size, capacity, curves, wiring diagrams, options, etc. of each item. Where products are available with Energy Star labeling, they shall be provided
3. Certification - Submit documentation certifying completion of the following items in compliance with this Section.
 - a. Tests
 - b. Flushing
 - c. Manufacturers' services.
 - d. Disinfection
4. Test Reports - prepare as specified in Part 3 of this Section
 - a. Pressure tests
 - b. Backflow preventer tests
 - c. Functional testing

5. Certificates and Licenses - Prepare as specified in Part 1 of this Section.
 - a. Qualifications of Installer
 - b. Qualifications of Construction Supervisor
 6. Operation and Maintenance Manuals - Prepare manuals in accordance with Section 01 78 23.
 7. Closeout Submittals
 - a. Record Drawings - Prepare as specified in Part 1 of this Section.
 - B. Welding certificates.
- 1.5 QUALITY ASSURANCE:
- A. Provide in accordance with Section 01 43 00.
 - B. Provisions:
 1. Drawings and specification direct attention to certain features of equipment, but do not purport to cover all details entering into design and construction of the equipment, controls, or appurtenances.
 2. Consideration shall be given only to products of manufacturers who demonstrate successful experience in manufacture, operation, and servicing equipment of type, size, performance, and reliability equal to that specified. Equipment and components shall be the product of a single manufacturer insofar as possible.
 3. Equipment furnished to fit within the space allocated with adequate clearance for proper operation and maintenance.
 - C. Workmanship and Design:
 1. Provide equipment such that all parts are designed for continuous and uninterrupted service, and such that lubrication, adjustment, or replacement of parts is possible without manufacturer's assistance. Corresponding parts of multiple units shall be interchangeable.
 2. Install equipment that complies with state, local and federal codes and regulations.
 - D. Alternate Equipment and Arrangement:
 1. If any equipment submitted for acceptance requires arrangement differing from that indicated or specified, Contractor to prepare and submit for review, detailed structural, mechanical and electrical drawings, and equipment lists showing all necessary changes and all special features of equipment proposed. Changes are at no additional compensation to the Contractor.

E. Qualifications of Installer:

1. Prior to installation, submit data showing the name and license of the installing contractor and that he has successfully installed systems of the same type and design as specified herein. Data shall include names and locations of at least two installations of such systems. Indicate type and design of each system and certify that each system has performed satisfactorily in the manner intended for not less than 18 months. The installing contractor shall be licensed to perform applicable plumbing systems installation in the state in which the project is located.

F. Qualifications of Construction Supervisor:

1. Provide a Construction Supervisor with a minimum of 5 years of experience in plumbing construction supervision who shall be responsible for the installation of the Work of this Section of the Specifications. The Construction Supervisor shall be licensed to perform applicable plumbing systems supervision in the state in which the project is located. Prior to installation, submit data for acceptance showing the name and license of the Construction Supervisor.

G. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

H. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."

I. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

J. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.6 DELIVERY, STORAGE AND HANDLING:

A. Provide in accordance with Section 01 66 10 and as specified.

B. Shipping:

1. Equipment, material and spare parts are to be shipped completely assembled except where partial disassembly is required by transportation regulations or for protection of components.

C. Receiving:

1. Inspect and inventory items upon delivery to site.

2. Store and safeguard equipment, material and spare parts in accordance with manufacturer's recommendations.
3. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
4. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7 SPECIAL REQUIREMENTS:

A. Refer to applicable sections of Division 1 with regard to providing the following:

1. Submittal of manufacturer's specifications, catalog data, descriptive matter, illustrations, diagrams, etc., including complete motor data for all equipment
2. Nameplates
3. Foundations, installations, and grouting
4. Operating and maintenance instructions and parts lists
5. Lubricants
6. Special tools
7. Bolts, anchor bolts, and nuts
8. Concrete inserts
9. Sleeves
10. Electric motors
11. Voltage rating of motors
12. Equipment drive guards

1.8 COORDINATION:

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces.

- D. The Contractor shall coordinate with Owner for all new to existing connections, system shutdowns and restart-up.

1.9 COOPERATION AND COORDINATION WITH OTHER TRADES:

- A. Work shall be performed in cooperation with other trades on the project and so scheduled as to allow efficient completion of the project. Materials and equipment shall be installed as fast as conditions permit and installed properly.
- B. Furnish to all other trades advance information on location and size of all concrete pads, chases, frames, boxes, pits, sleeves, and openings needed for the Work, and also furnish layout information and shop drawings necessary to permit other trades affected by the Work to install their work properly coordinated and without delay.
- C. Where there is evidence that Work installed interferes with the work of other Sections, assist in working out space conditions to make satisfactory adjustments.
- D. With the acceptance of the Engineer and without extra cost to the Owner, make reasonable modifications in Work specified under this Section required to coordinate with normal structural interferences, or for proper execution of specified work.
- E. If work is installed before coordinating with other trades to cause interference with the work of such trades, make all necessary changes in Work under this Section of the at no additional cost to the Owner.
- F. Protect all materials and work of other trades from damage that may be caused by the Work required under this Section and be responsible for repairing any damages caused by such work without any additional cost to the Owner.
- G. Follow Drawings in layout work. Check drawings of, and coordinate with, other trades to verify special provisions, installation requirements and spaces in which Work provided under this Section will be installed. Maintain maximum headroom or space conditions at all points. Where headroom or space conditions appear inadequate, notify the Engineer before proceeding.
- H. Attend regular coordination and job progress meetings required.

1.10 PRODUCTS FURNISHED BUT NOT INSTALLED UNDER THIS SECTION:

- A. All electrical apparatus and controls associated with equipment installed under this Section but which are not integral with the equipment served, will be furnished under Division 26. All mounting and wiring of non-integral electrical apparatus and controls, and interconnecting wiring to equipment served will be done under Division 26. All electrical apparatus associated with equipment installed under this Section which are integral with the equipment served, will be field wired under Division 26.
- B. Access panels shall be furnished under this Section and installed by the trade responsible for the appropriate Section of the Specifications for the surface upon which the panels

are mounted. Prepare a schedule showing location, size and function of all required access panels and deliver schedule to representatives of all installing trades.

- C. Prefabricated flashing for plumbing vents, and roof drains shall be furnished under this Section.
 - D. Anchoring inserts shall be furnished under this Section and installed under Section 03 15 20. Prepare a schedule showing location, size and function of all required anchoring inserts and deliver schedule to representative of the installing trade.
 - E. Pipe sleeves shall be furnished under this Section and installed by the trade whose finished interior surfaces will be penetrated. Prepare a schedule showing location, size and function of all required pipe sleeves and deliver schedule to representatives of all installing trades.
- 1.11 PRODUCTS INSTALLED BUT NOT FURNISHED UNDER THIS SECTION:
- A. Water meters will be furnished by the Local Water Utility and shall be installed under this Section.
- 1.12 ELECTRICAL WORK:
- A. All electrical apparatus and controls associated with equipment installed under this Section but which are not integral with the equipment served, will be furnished under Division 26. All mounting and wiring of non-integral electrical apparatus and controls, and interconnecting wiring to equipment served will be done under Division 26. All electrical apparatus associated with equipment installed under this Section which are integral with the equipment served, will be field wired under Division 26.
 - B. All equipment furnished under this Section requiring motors shall have motors factory furnished and installed by the manufacturer of the equipment served and shall be mounted and aligned so as to run free and true. Provide internal wiring and motors for equipment as an integral part of the equipment. Disconnect switches, motor starters and contactors will be furnished, installed and wired by Division 26.
 - C. When motors and other associated electrical apparatus furnished are larger than sizes indicated on the Drawings, the cost of additional electrical service and related work shall be included under the Section that furnished that motor.
- 1.13 CODES, PERMITS AND FEES:
- A. Except for additional requirements as specified or indicated under the Work of this Section, materials, workmanship and equipment shall conform with the governing edition of the following regulations, and agency requirements. In the Plumbing Code referred to herein, the advisory provisions shall be considered to be mandatory, as though the word "shall" had been substituted for "should" wherever it appears.

1. State and Local Building Codes, including but not limited to, the Utah Plumbing Code, the Utah Energy Conservation Code, and Utah Building Code.
2. Utah Department of Environmental Protection.
3. Local Fire Department
4. Local Water and Sewer Authority or Department
5. Occupational Safety and Health Administration (OSHA)
6. Any other local codes or requirements of Authorities Having Jurisdiction.

- B. Pay for all fees and give all notices, file all plans, obtain all permits and licenses, and obtain all necessary approvals from Authorities Having Jurisdiction. Deliver all certificates of inspection to the Authorities Having Jurisdiction. No work shall be covered before examination and approval by Authorities Having Jurisdiction. Replace imperfect or condemned work to conform to inspectional requirements, satisfactory to the Owner, Engineer and Authorities Having Jurisdiction without extra cost to the Owner. If Work is covered before inspection and acceptance, pay costs of uncovering and reinstalling the covering, whether it meets contract requirements or not.

1.14 RECORD DRAWINGS:

- A. Record Drawings shall be provided under this Section in accordance with Division 00 requirements and as specified herein.
- B. As work progresses and for the duration of the Contract, maintain a complete and separate set of prints of Drawings at the job site at all times. On a daily basis, record work completed and all changes from original Drawings clearly and accurately, including work installed as a modification or addition to the original design such as change orders, instructions issued by the Engineer, or conditions encountered in the field. In addition, take photographs of all concealed equipment in gypsum board ceilings, shafts, underground (buried) piping routes and supports and other concealed, inaccessible work. At completion of work, make copies of photographs with written explanation on back. These shall become part of Record Drawings.
- C. Record Drawings shall show as-built condition of pipe routing and sizes, valve locations, details, sections, riser diagrams, control changes and corrections to schedules. Schedules shall show actual manufacturer and make and model numbers of final equipment installation. Remove all superseded data to show the completed work. Accurately indicate the location, size, type, and elevation of new buried piping and their relationship to existing buried piping.
- D. The Record Drawings will be used as a guide for determining the progress of the Work installed. They shall be inspected on a regular basis and shall be corrected immediately if found inaccurate or incomplete. Requisitions for payment will not be acted upon until the Record Drawings are accurate and up-to-date.

- E. At completion of Work prepare a complete set of cad-drafted Record Drawings showing all systems as actually installed. The Contract Drawing electronic CAD files will be made available for this Subcontractor's use to serve as backgrounds for the Record Drawings. Provide all drawings necessary to show the required record information. Submit mylars and three sets of cad-drafted prints to the Engineer for comments as to compliance with this Section. Make all modifications so noted by the Engineer
 - F. Certify the accuracy of the Record Drawings. Record Drawings shall become the property of the Owner.
 - G. When required by jurisdiction, submit the record set for approval by the Authority Having Jurisdiction in a form acceptable to the jurisdiction.
- 1.15 PERFORMANCE REQUIREMENTS – GENERAL:
- A. Piping Systems – Common Requirements:
 - 1. Install piping according to the following requirements and Division 22 sections specifying piping systems.
 - 2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, equipment sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
 - 3. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
 - 4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
 - 5. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.
 - 6. Install piping to permit valve servicing.
 - 7. Install piping at indicated slopes.
 - 8. Install piping free of sags and bends.
 - 9. Install fittings for changes in direction and branch connections.
 - 10. Install piping to allow application of insulation.
 - 11. Select system components with pressure rating equal to or greater than system operating pressure.

12. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
13. New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type with polished chrome-plated finish.
 - b. Chrome-Plated Piping: One-piece, cast-brass or stamped steel type with polished chrome-plated finish.
 - c. Insulated Piping at Wall and Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or stamped-steel type with polished chrome-plated finish.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or stamped steel type with polished chrome-plated finish.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or stamped steel type with polished chrome-plated finish.
 - f. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or stamped steel type with polished chrome-plated finish.
14. Sleeves are not required for core-drilled holes.
15. Permanent sleeves are not required for holes formed by removable PE sleeves.
16. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, concrete floors, and roof slabs.
17. Cut sleeves to length for mounting flush with both surfaces.
 - g. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
18. Install sleeves in new walls and slabs as new walls and slabs are constructed.
19. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
 - a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
 - b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.

- c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.

- (1) Seal space outside of sleeve fittings with grout.

- 20. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Section 07 92 00 for materials and installation.
- 21. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - a. Install steel pipe for sleeves smaller than 6 inches in diameter.
 - b. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
 - c. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- 22. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - a. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- 23. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Section 07 84 00 for materials.
- 24. Verify final equipment locations for roughing-in.
- 25. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

B. Piping Joint Construction:

1. Join pipe and fittings according to the following requirements and Division 22 sections specifying piping systems.
2. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
3. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
4. Soldered Joints: Apply ASTM B813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B32.
5. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
6. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
7. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
8. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
9. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D2657.
 - a. Plain-End Pipe and Fittings: Use butt fusion
 - b. Plain-End Pipe and Socket Fittings: Use socket fusion
10. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

C. Transition Fittings:

1. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.

2. Manufacturers:
3. Cascade Waterworks Mfg. Co. (Special order required)
4. Dresser Industries, Inc.; DMD Division (Special order required)
5. Ford Meter Box Company, Incorporated (The); Pipe Products Division (Special order required)
6. JCM Industries (Special order required)
7. Smith-Blair, Inc. (Special order required)
8. Viking Johnson (Dewatering only)
9. Underground Piping NPS 1-1/2 and Smaller: Manufactured fitting or coupling.
10. Underground Piping NPS 2 and Larger: AWWA C219, metal sleeve-type coupling.
11. Aboveground Pressure Piping: Pipe fitting.

D. Piping Connections:

1. Make connections according to the following, unless otherwise indicated:
 - a. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
 - b. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
 - c. Dry Piping Systems: Install dielectric coupling and flanges to connect piping materials of dissimilar metals.
 - d. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

E. Equipment Installation – Common Requirements:

1. Install equipment to allow maximum possible headroom unless specific mounting heights are indicated.
2. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
3. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

4. Install equipment to allow right of way for piping installed at required slope.

F. Painting:

1. Painting of plumbing systems, equipment, and components is specified in Division 09.
2. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

G. Concrete Bases:

1. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 - a. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
 - b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
 - c. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 - d. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - e. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - f. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 - g. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03.

H. Supports and Anchorages:

1. Erection of Metal Supports and Anchorages:
 - a. Refer to Division 05 for structural steel.
 - b. Refer to painting requirements as specified in Division 09 sections.

- c. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- d. Field Welding: Comply with AWS D1.1.

2. Erection of Wood Supports and Anchorages:

- a. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- b. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- c. Attach to substrates as required to support applied loads.
- d. All wood products shall be treated to be fire resistant.

I. Grouting:

- 1. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- 2. Clean surfaces that will come into contact with grout.
- 3. Provide forms as required for placement of grout.
- 4. Avoid air entrapment during placement of grout.
- 5. Place grout, completely filling equipment bases.
- 6. Place grout on concrete bases and provide smooth bearing surface for equipment.
- 7. Place grout around anchors.
- 8. Cure placed grout.

PART 2 - PRODUCTS

2.1 GENERAL:

- A. Where applicable, all products requiring approval by the State Department of Public Safety shall be so approved. Where product types are available with Energy Star labeling, they shall be provided.

- B. All potable water piping components shall comply with NSF 61 test standards via third-party testing and certification. Potable water piping components under the jurisdiction of the Federal Reduction of Lead in Drinking Water Act shall comply with NSF 372 test standards via third-party testing and certification.

2.2 DRAIN, WASTE AND VENT (DWV) PIPING:

- A. Fittings shall be long radius fittings, except fittings in vent piping may be short radius fittings. Minimum size piping shall be 2 inch (50 mm) for buried piping and 1-1/2 inch (40 mm) for aboveground piping.

- B. Buried Piping:

- 1. Cast-Iron Hubless Pipe and Fittings:

- a. CISPI 301, with CISPI 310 couplings composed of rubber sleeves and corrugated stainless steel bands and tightening devices.

- 2. Cast-Iron Hub and Spigot Pipe and Fittings:

- a. ASTM A74 with ASTM C564 or CISPI HSN-85 rubber compression gasket joints, service weight.

- 3. Copper Tubing (for Trap Primer Piping Only):

- a. ASTM B88, Type L, soft annealed copper tubing with brass compression fittings at connections to trap primer device and fixture trap. Provide minimum number of intermediate joints in buried copper tubing. For intermediate joints, provide ANSI B16.18 or ASME B16.22 solder joint fittings.

- (1) Intermediate joints shall be brazed. Brazing filler metal shall conform to AWS A5.8, Type BAg-5 with AWS Type 3 flux, except Type BCuP-5 or BCuP-6 may be used for brazing copper-to-copper joints. Braze joint fittings shall be specifically designed for brazing.

- (2) Where copper tubing is indicated to be embedded in concrete, sleeve the entire length of embedded copper tubing with flexible low density polyethylene tubing. Sleeving shall be minimum two sizes larger than the copper tubing.

- C. Aboveground Piping:

- 1. Cast-Iron Hubless Pipe and Fittings for Piping 1-1/2 inch (40 mm) and Larger:

- a. CISPI 301, with CISPI 310 couplings composed of rubber sleeves and corrugated stainless steel bands and tightening devices.

2. Copper Tubing for Piping 2 inch (50 mm) and Smaller:
 - a. ASTM B306, with ANSI B16.23, ASME B16.29, or ASME B16.32 solder joint fittings using ASTM B32, 95-5 tin-antimony or Grade Sn96 tin-silver solder, and flux containing not more than 0.2 percent lead.
3. Grooved-End Steel Piping (for Roof Drainage Only):
 - a. ASTM A53, Schedule 40, hot-dip galvanized, cut grooved-end steel pipe; ASTM A47 or ASTM A536, hot-dip galvanized, grooved-end fittings, and mechanical couplings; ASTM A183 coupling nuts and bolts; ASTM D2000 rubber gaskets for water service. Fittings, mechanical couplings, and rubber gaskets shall be supplied by the same manufacturer.
4. Galvanized Steel Pipe (for Equipment Drainage Only):
 - a. ASTM A53, hot-dipped galvanized steel pipe, Schedule 40 with ASME B16.12 galvanized cast iron threaded drainage fittings.
5. Sump Pump Discharge and Sewage Ejector Discharge:
 - a. For sizes 2-inch (50 mm) and smaller: ASTM B88, Type L, hard drawn copper tubing with ANSI B16.18 or ASME B16.22 solder joint fittings. Provide ASTM B42 copper pipe nipples with threaded end connections. Provide ASTM B32, 95-5 tin-antimony solder, or provide Plumbing Code approved lead-free solder.

D. Cleanouts:

1. ANSI A112.36.2M; provide threaded bronze cleanout plugs.
2. Floor Cleanouts:
 - a. Provide coated cast-iron or ductile-iron floor cleanout with flange; threaded outlet; adjustable height polished bronze, nickel bronze, stainless steel, or chromium-plated copper alloy top and scoriated floor plate with "CO" cast in the plate; and countersunk screws for installing floor plate flush with finished floor.
3. Wall Cleanouts:
 - a. Provide threaded bronze cleanout plugs and polished stainless steel or chromium-plated copper alloy cover plate and secure to cleanout plug with countersunk stainless steel screw.
4. Cleanouts Exterior to Buildings:

- a. Provide cast-iron cleanouts and countersunk plugs. Provide cleanouts flush with finished grade or concrete slab.

E. Drains:

1. ASME A112.21.1M unless otherwise specified; coated cast-iron or ductile-iron drains with membrane clamp rings for use with membrane waterproofing.
2. Floor Drains:
 - a. Provide with double drainage flange; threaded adjustable round top with cast bronze, nickel bronze polished stainless steel, or chromium-plated copper alloy strainer; non-puncturing flashing collar with weep holes; 1/2-3/4 inch (15-20 mm) trap primer connection; and bottom outlet to suit specified piping. Drains of sizes 2, 3, and 4 inch (50 80, and 100 mm) shall have strainers with minimum free drainage area of 5, 11, and 18 square inches (3,226, 7,097, and 11,613 mm), respectively.
 - b. Provide 4" funnel equipped strainer where called for on the Contract Drawings.
 - c. Provide deep seal P-traps for each floor drain. (P-traps not required upstream of drain sump in High Service Pump Station.)
3. Roof Drains:
 - a. ASME A112.21.2M; furnish hot-dip galvanized cast-iron or ductile-iron drains, with minimum of 10 inch (250 mm) diameter body, non-puncturing flashing clamp device with integral gravel stop and deck clamp, and removable cast-iron or ductile-iron or polypropylene locking dome. Free area of dome shall be not less than two times the free area of drain outlet. Coordinate with installing trade to install drain flashing ring seat flush with adjacent roof deck, and secure rigidly in place with deck clamp. Provide 4-lb (1.55 mm thick) sheet lead flashing.
 - b. Downspout nozzles shall be cast bronze units with loose wall flange and threaded connection, Josam Mfg. Co., No. 25010; Wade Inc., No. W-3940; Zurn Industries, Inc., No. Z-199; or acceptable equivalent product.
4. Floor Sinks (Drains):
 - a. Provide cast-iron body with white acid-resisting porcelain enameled or epoxy interior, double drainage flange, nickel bronze rim and slotted grate, removable stainless steel or aluminum slotted buckets, and deep seal P-trap.
5. Air Gap Drains:

- a. Air gap drain shall provide unobstructed physical separation between the discharge end of a potable water connection and drainage facilities.
- b. Air gap drain shall be bronze or cast iron.
- c. Manufacturer:
 - (1) Watts

F. Backwater Valves:

- 1. Ball float type, galvanized cast iron body, ball float with copper alloy bushing and replaceable neoprene seat, threaded or no-hub inlet by no-hub outlet.

2.3 DOMESTIC WATER PIPING AND SERVICE WATER PIPING:

A. Buried Piping:

- 1. Copper Tubing for Piping 2 inch (50 mm) and Smaller:
 - a. ASTM B88, Type K, soft annealed copper tubing with ASME B16.50 brazed joint fittings. Provide minimum number of joints in buried copper tubing.
 - (1) Joints shall be brazed. Brazing filler metal shall conform to AWS A5.8, Type BAg-5 with AWS Type 3 flux, except Type BCuP-5 or BCuP-6 may be used for brazing copper-to-copper joints.
- 2. Copper Tubing for Piping 3 inch (80 mm) and Smaller
 - a. ASTM B88, Type K, hard drawn copper tubing with ASME B16.50 braze joint fittings; or with ASME B16.26 flared joint fittings. Provide minimum number of joints in buried copper tubing.
 - (1) Joints shall be brazed. Brazing filler metal shall conform to AWS A5.8, Type BAg-5 with AWS Type 3 flux, except Type BCuP-5 or BCuP-6 may be used for brazing copper-to-copper joints.
- 3. Ductile-Iron Piping for piping 4 inch (100 mm) and Larger
 - a. AWWA C151 ductile-iron pipe, outside coated, AWWA C104 cement mortar lined, AWWA C111 rubber gasket joints, and AWWA C110 fittings. Provide concrete thrust blocks at the elbow where the buried piping turns up toward the floor, and restrain the pipe riser with steel rods from the elbow to the flange above the floor. Aboveground piping shall have flanged end connections conforming to AWWA C115 for flanged pipe and AWWA C110 for flanged fittings.
- 4. Trap Primer Piping:

- a. ASTM F876/877, NSF 14 and 61, cross-linked polyethylene tubing with oxygen diffusion barrier, minimum 150 psig (1,034 kpag) and minimum 180 degree F (82 degrees C) rated, compression fitting or mechanical insert fitting joints. Provide minimum number of joints in embedded tubing.

B. Aboveground Piping:

1. Copper Tubing:

- a. ASTM B88, Type L, hard drawn copper tubing with ANSI B16.18 or ASME B16.22 solder joint fittings; or with ASME B16.26 flared joint fittings. Provide ASTM B42 copper pipe nipples with threaded end connections. Provide ASTM B32, 95-5 tin-antimony solder, or provide Plumbing Code approved lead-free solder.

C. Flanges:

1. ASME B16.22 or ANSI B16.24 for use in copper tubing.

2. Flange Accessories:

- a. Gaskets: Provide one piece, factory cut, 1/16 inch (2 mm) thick, synthetic rubber gaskets suitable for use with potable water. Gaskets shall be rated for 32 to 180 degrees F (0 to 82 degrees C) service temperature. Provide full-face gaskets for flat-face flanged joints, and ring gaskets for raised-face flanged joints. Dimensions for gaskets shall be in accordance with ASME B16.21.
- b. Bolting: Material for bolts and studs ASTM A307, Grade-B and for nuts ASTM A194/A194M, Grade-2. Dimensions of bolts, studs and nuts ANSI B18.2.1 and ASME B18.2.2 with threads conforming to ASME B1.1 coarse type, with Class 2A fit for bolts and studs, and Class 2B for nuts.

D. Valves:

- 1. Provide valves suitable for minimum of 125 psig (862 kpag) and minimum of 180 degrees F (82 degrees C) hot water. Valves shall have flanged end connections, except sizes smaller than 2-1/2 inch may have threaded end connections with a union on all but one side of the valve, or solder end connections for connections between bronze valves and copper tubing. For gate, globe and angle valves, provide blue finish, and red finish on handwheels for valves in domestic cold water piping, and domestic hot water piping respectively. Ball valves may be provided in lieu of gate valves.
- 2. Gate Valves (3 inch (80 mm) and Smaller):
 - a. MSS SP-80, Class 125 bronze valves

3. Gate Valves (4 inch (100 mm) and Larger):
 - a. AWWA C500, AWWA C509, or UL 262. Unless otherwise specified, valves conforming to:
 - (1) AWWA C500 shall be outside-screw-and-yoke rising-stem type with double-disc gates and flanged ends,
 - (2) AWWA C509 shall be outside-screw-and-yoke rising-stem type with flanged ends, and
 - (3) UL 262 shall be outside-screw-and-yoke type, shall have double-disc or split-wedge type gate and flanged ends, and shall be designed for a hydraulic working pressure of 125 psi. Materials for UL 262 valves shall conform to the reference standards specified in AWWA C500. Provide valves with handwheels that open by counterclockwise rotation of the valve stem. Stuffing boxes shall be bolted and constructed so as to permit easy removal of parts for repair. In lieu of flanged ends, valves may have grooved ends suitable for grooved type joints, as specified in paragraph entitled "Ductile-Iron Piping." Valves shall have gearing and indicator, AWWA C500. Provide valve with bypasses, AWWA C500. Valves shall be of one manufacturer.
4. Check Valves:
 - a. MSS SP-80, Class 125, swing check, except sizes 2-1/2 inch (65 mm) and larger shall conform to MSS SP-71, Class 125, swing check, cast-iron or bronze body.
5. Ball Valves:
 - a. MSS SP-110, full port design, copper alloy, except sizes 2-1/2 inch (65 mm) and larger shall be ductile-iron body or cast-iron body. Valves shall have lever handles, stainless steel ball and PTFE seats and seals.
6. Safety Relief Valves:
 - a. Combination Pressure and Temperature Relief Valves: ANSI Z21.22 copper alloy body, automatic reseating, test lever, and discharge capacity based on AGA temperature steam rating.
 - b. Pressure Relief Valves: ANSI Z21.22 copper alloy body, automatic reseating with test lever.
7. Vacuum Relief Valve (for Water Heater):

- a. ANSI Z21.22 rated and CSA certified, copper alloy body with an integral protective cover, 15 psig (103 kpag) WSP. Valve may be vertical or horizontal mounting type.
8. Water Temperature Regulating Valves:
- a. Copper alloy or cast-iron body valve with adjustable range thermostat to allow settings between 110 (43) and 160 degrees F (71 degrees C).
9. Mixing Valves:
- a. General: Factory assembled and tested, thermostatic type, pressure-balanced or combination thermostatic and pressure-balanced. Each valve shall be constructed to control the mixing of hot and cold water and to deliver water at a desired temperature regardless of pressure or input temperature changes. The control element shall be of an acceptable type. The body shall be of heavy cast bronze, and interior parts shall be brass, bronze, corrosion-resisting steel or copper. The valve shall be equipped with necessary stops, check valves, unions, and sediment strainers on the inlets. Valves shall have 125 psig (862 kpag) minimum rated inlet pressure.
 - b. Emergency Eyewash/Shower Mixing Valves: ASSE 1071, ANSI Z358.1. Mixing valve shall control and maintain the temperature of the tempered water to plus/minus 3 degrees F (2 degrees C). Unit shall be self-contained and include a thermostatic water mixing valve with adjustable high temperature limit stop factory set for 90 degrees F (32 degrees C), union angle checkstops on the inlets, top or bottom inlets and top outlet, bypass inlet, wall mounting bracket, and all piping and fittings for a complete unit. Unit shall be able to be set to the correct temperature for the specific contaminant but locked in place to prevent changing of the temperature by accident; unit shall be factory set for 85 degrees F (27 degrees C) outlet temperature. Unit shall be able to flow a minimum of 30 gpm (114 l/m) at 30 psig (207 kpag). Unit shall close down upon failure of cold water supply and include cold water bypass capable of 40 gpm (151 l/m) at 30 psig (207 kpag) upon failure of hot water supply. Unit shall have temperature override protection via a redundant thermostatic control valve on the outlet that opens on temperature rise above 90 degrees F (32 degrees C) to introduce cold water and maintain tepid flow. Valves shall have rough bronze finish.
 - (1) Valves shall have rough bronze finish without plating, and a dial thermometer on the inlet thermometers, and shall be mounted in a recessed stainless-steel cabinet].
 - c. All Other Mixing Valves: ASSE 1017; adjustable high temperature limit stop factory set for 120 degrees F (49 degrees C). Mixing valves shall maintain water temperature within 5 degrees F (3 degrees C) of any setting.

Unit shall be able to flow a minimum of 1.0 gpm (3.8 l/m) at 30 psig (207 kpag). Valves shall have integral wall support and cast lever handle.

- (1) Valves shall have rough bronze finish without plating and test connections.

10. Water Pressure Reducing Valves:

- a. ASSE 1003; non-sticking rolling diaphragm design; bronze body, replaceable stainless steel seat and elastomer disc, union connection, and integral stainless steel strainer; pressure gauge tapping; integral thermal expansion bypass to permit flow of water back through the valve into the main when pressure due to thermal expansion on the outlet side of valve exceeds the pressure in the main; minimum 35 to 150 degree F (2 to 66 degrees C) operating temperature, 150 psi (1,034 kpa) minimum rated inlet pressure, 25 to 75 psig (172 to 517 kpag) adjustable outlet pressure. Parts shall be serviceable without removing the valve from the line.
- b. Valve shall be rated for 0 to 90 gpm (0 to 341 l/m) minimum.

11. Trap Primer Valves:

- a. ASSE 1018 automatic trap primers; all bronze body with integral vacuum breaker, non-liming internal operating assembly, and gasketed bronze cover; plain finish.

12. Solenoid Valves:

- a. Electric solenoid valves designed to operate on 120 VAC, single phase power, normally open or normally closed as indicated. Solenoid valves shall be packless, direct acting with cushioned closing and have an epoxy-resin molded waterproof coil. Valves shall have copper alloy body for use in potable water applications and be rated for 150 psig.

E. Water Meters:

1. General: NSF 61 certified, minimum 150 psig rated operating pressure and 35 to 100 degree F operating temperature, with registration measuring in U.S. gallons or cubic feet as required by the local water authority. Meter cases shall be no-lead copper alloy. Meter cases constructed of plastic shall not be accepted. Provide direct reading register at each meter. Register boxes and register box lids shall be bronze or an approved plastic material. Meters shall be designed for easy removal of all interior parts without disturbing the connections to the pipeline. The manufacturer, model, and serial number shall be marked permanently on both meter casings and registers. Size and direction of flow through the meter shall be marked permanently on all meters. Provide strainer integral with meter or separate plate type strainer. Provide remote reading registration.

2. Meters 3/4-Inch to 2-1/2Inch Size: AWWA C700, positive displacement type with nutating disc, magnetic drive, and sealed register. No oscillating-piston style meters will be accepted.
3. Meters 3-Inch to 6-Inch Size: AWWA C702, compound meters consisting of a combination of a main-line meter of the turbine type for measuring high rates of flow and a disc type meter for measuring low rates of flow. Turbine meter shall be in-line, horizontal-axis, high-velocity type with AWWA Class II turbine measuring element. Disc meter shall be positive displacement type with nutating disc and magnetic drive. No oscillating-piston style meters will be accepted. The compound meter shall have an automatic valve mechanism for diverting low rates of flow through the bypass meter. Both metering devices with sealed registers shall be contained in the same case.
